Thankfully though, owing to hurried discussions conducted by the state government with the agitating employees the week-long anti-roster system strike was called off. The government wisely decided to concede to the demands of the striking employees including the acceptance of the main recommendations of the Sachawani Committee report which has recommended the abolition of the caste-based roster system, suspension of police officers responsible for lathi-charge of the Sachivalaya staff, on April 29, and conduction of a judicial inquiry into the incident. With the calling off of what might have been the proverbial last straw in the Solanki ministry's cup of troubles, attention has once again shifted to the anti-reservation agitation. Whatever its outcome, the stir has at least succeeded in awakening the Centre to the pitfalls of the controversial reservations issue. And, to avert any similar agitation in any other state it has asked state governments not to increase the reservations quota till a national consensus emerges on this issue. For now, however, all efforts are being made to resolve the jinxed Gujarat agitation.

SRI LANKA

IN DIRE STRAITS

Reports of killings, bloodshed, atrocities are pouring in ceaselessly from across the Palk Strait. For Sri Lanka solution to the Tamil issue continues to be as elusive as ever. That Jayewardene is in no mood to contemplate a political solution has been made abundantly clear. During the British PM Margaret Thatcher's visit in the course of a six-nation Asian tour, Jayewardene was openly critical of India's stance and more particularly its alleged aid to terrorists. The UK is already giving aid to the island to cope with the Tamil militants and Thatcher reiterated Britain's stand. She too, however, rejected a military solution and expressed the hope that Jayewardene would continue to work for a peaceful solution, and for reconciliation of the terrorist problem, which could, according to her, be achieved by joint efforts with India.

Neither the Sinhalese, the Sri Lankan army nor the Tamil militants obviously approve of a peaceful solution. And now the attack on the island nation's Tamil population has become three-pronged with the Muslims joining hands with the army. Communal clashes between Tamils and Muslims have already resulted in considerable loss of life and property. And thanks to the assistance provided by the army the Muslims have an upper hand. Dusk to dawn curfew has been imposed in parts of the troubled eastern province to quell the Tamil-Muslim clashes but has been ineffective in curbing the violence so far. Apparently the Muslims, who are also Tamil speaking but are considered a different race, had been adverse to the Tamil demand for Eelam, a separate nation, as well as the proposal for regional councils. But what triggered off the Tamil-Muslim communal clashes was the killing of a few Muslims by the Tamil militants. A rift has thus been created within the Tamil-speaking population and violence has swept over the hitherto relatively unaffected eastern region as well.

India's growing concern at the continuing stalemate is understandable. Not only is it having to cope with an ever-increasing influx of refugees but also with the growing unemployment of fishermen in the state of Tamil Nadu who have stopped venturing into troubled waters to earn their livelihood. Then the reported induction of foreign agencies—both security and intelligence—is also causing concern to onlookers in New Delhi. And in a bid to continue efforts to find a speedy and final solution of the Tamil problem, on a political basis, acceptable to all parties concerned (sic) New Delhi has also set up a six-member committee headed by the Union Home Minister, S.B. Chavan. The committee includes ministers and top brass of the Home ministry and the External Affairs Ministry. And to demonstrate the credibility of its intentions India has now decided to pursue the problem of the plight of Tamils in Sri Lanka with the Human Rights Commission of the UN. An international emergency committee comprising of people with experience of human

rights and rule of law in the island and render assistance to the victims. This committee has been organised under the auspices of the forum on ethnic conflict, development and human rights (SIFEC) recently established by the Norwegian Peace Research Institute and the Netherlands Institute of Human Rights.

For the moment though the Tamils live under a constant threat of life and property amidst an animosity-ridden majority. Not all are lucky enough to flee either. And each new day is sounding the death knell for them—steadily reducing the number of unlucky ones, too.

NAM MEET

TAKING A STAND

As chairperson of the non-aligned movement, PM Rajiv Gandhi is going places. On Apr 20 an extra ministerial meet of the non-aligned coordinating bureau was held at New Delhi to demonstrate solidarity with oppressed Namibia. South Africa's continued illegal occupation of Namibia, its massive militarisation and use as launching pad for aggression against other independent African states has become a cause for concern for various countries of the world as it poses a serious threat to global peace and security. The recent developments in South Africa helped to reinforce the suspicions of the international community regarding its bonafides with regard to the security council's resolution on the subject of Namibian independence. There is a continuing impasse in the implementation of the internationally accepted plan on this matter. And the latest turn in the Pretorian regime's con game to set up a transitional government with a so-called multi-party conference is obviously designed to fabricate possibilities of unilateral declaration of independence on the part of the puppet government.

The meet played South Africa's latest overt conspiracy and rejected outright the doctrine of constructive engagement with Pretoria, essentially designed to delay Namibian independence. The Pretorian government's continued defiance of the UN resolution also came under sharp attack. Also the non-aligned movement's growing impatience with western duplicity was also clearly reflected. The non-aligned nations also gathered to express support for the South West African People's Organisation (SWAPO) as the sole and authentic representative of the Namibian people. They also rejected any linkage between Namibian independence and the extraneous issues with which the West and South Africa were both trying to blur the importance of the main issue.

The meet emphasised the need for increased moral and material support for non-aligned countries to SWAPO. And, in a surprise welcome move, PM Rajiv Gandhi announced India's decision to accord full diplomatic recognition to the local SWAPO office. Following India's example Iran also did the same. The non-aligned nations collectively decided to reactivate the security Council on the issue and also exhorted the international community to drive the racist South African regime into diplomatic and economic isolation to make it end its occupation of Namibia. It was also decided that 19 member-states of the UN would send ministers to the Council meet likely to be held in June to present the Namibian case. But the non-aligned initiative has already yielded the desired result as on May 4 the UN security council rejected South Africa's move to set up an interim government in Namibia and also asked the Pretorian regime to rescind its decision. Heartening news for SWAPO, Namibia and the entire non-aligned world!

HBJ PIPELINE

TOEING A NEW LINE

With regard to the Hazira-Bijapur-Jagdishpur (HBJ) gas pipeline the government obviously believes that too many conks would spoil the broth. In a turn about over its earlier decision to sub-contract the project to various vendors, mostly public sector enterprises, including Bharat Heavy Electricals Limited (BHEL), Electronics Corporation of India Limited (ECIL) and Telecommunications India Limited (TCIL) the government has now decided to invite fresh global tenders on a turnkey basis. With this the government has gone back on its commitment to the public sectors as the role of public sector units has suffered substantial reduction by this decision. Also the proposed boost which the new government was planning to give to indigenisation stands to suffer by this.

The HBJ pipeline project is by far the largest project of its kind which India planned to undertake. The construction of the 1,760 km pipeline costing more than Rs 1,700 crores is indeed a massive job and India is new to such an experience. Earlier the government had considered

however, many doubts about the expeditious completion of the project and efficacy of those executing them arose. Numerous pitfalls were also envisaged. Later conscious decisions were taken based on considerations like the relative inexperience of Indian companies in laying such lengthy pipelines and the disadvantages of putting all the eggs in one basket. According to the government project coordinating and monitoring would have been difficult in case of several vendors. Also it was felt that turnkey proposals would be costlier, result in delays and hinder indigenous efforts. Therefore, single point responsibility for project execution, construction, commissioning and coordination was decided upon. Now, barring the procurement of line pipe, all other components of the project including pipeline material, construction of pipeline, setting up of a compressor station and telecommunication facilities will be entrusted to one agency on the basis of tenders.

The decision has come in for expected criticism from all quarters. The public sector undertakings for which the government professes great concern are the ones which are facing enormous difficulties on account of the turnkey approach. It has also limited their roles to mere evaluation and superficial supervision, even companies like the Engineers India Limited (EIL) and Gas Authority of India Limited (GAIL) are now in tight spot, because prior to the decision they had already contracted various foreign companies to assist them in their job. The Centre is still justifying the controversial decision by saying that adequate weightage will be given to bidders who will use indigenous capabilities so that domestic manufacturers in relevant areas would get an opportunity to participate in the project.

The turnkey decision has also jeopardised India's financial position. Japan, which had earlier agreed to give a 55b yen (over Rs 250 crores) credit for the project is now having second thoughts. The amount had been offered by Japan under its Overseas Economic Cooperation Finance (OECF) programmes to finance the 36 inch linepipes for the 640 km Hazira-Guna sector. Its decision to review the offer has injected an element of uncertainty regarding the financing of the project. The World Bank is also believed to be having serious reservations about financing the project. And, in the probable absence of World Bank aid, even the 15% price preference will not be available for domestic suppliers. If so, the government will find it extremely difficult to live up to its optimistic claim that construction of the HBJ pipeline will commence by the end of this year, leave alone its commissioning, in March 1987, under the revised schedule drawn up by the Ministry of Chemicals and Fertilisers.

BY-ELECTIONS

SOME EARLY SETBACKS

Already the verdict of the people is showing signs of reversal. Congress(I) suffered a setback in the by-elections to the three Lok Sabha and 26 Assembly seats spread over 11 states. The by-elections to the Assembly seats were necessitated either due to the countermanding of polling during the March elections or ordering of repoll on account of irregularities. The Baramati Lok Sabha seat, (Maharashtra) had been rendered vacant following Sharad Pawar's resignation in order to enter the state Assembly; elections in Ladakh could not be held with the rest of the country in December last because it was snow-bound while the Lok Sabha seat of Tiruchendur in Tamil Nadu had become vacant owing to the death of its sitting Congress(I) member.

Thus, on Apr 24, about 41m voters exercised their franchise. The 26 Assembly seats including four in Rajasthan, three in UP, five in Bihar, three in West Bengal, three in Orissa, two in Karnataka, one MP and five in Andhra Pradesh. The results were a jolt for the ruling party. Emotional and national issues took a back seat and what probably contributed to Congress(I)'s failure were the rising prices, improper choice of candidates and an overall disenchantment with the government over its ineptitude to deal with major domestic issues. Perhaps the only saving grace was that it bagged two of the three Lok Sabha seats, viz., those of Tiruchendur and Ladakh while that of Baramati went to the Progressive Democratic Front.

In Andhra Pradesh, an NTR domain, the Telugu Desam won two of the five assembly seats while the Congress(I), Majlis-e-Ittehadul and Janata Party won one each. In Karnataka, the Janata Party continued on its winning spree winning both the seats contested for. Even in PM's home state, UP, the Congress(I) lost two of the three Assembly seats; while in Orissa it could manage only one seat, the other two went to Janata and Independents respectively. In Bihar, where polls were

of the five seats contested. The Congress(I) emerged the sole winner in MP where Ajay Singh, son of the former CM, Arjun Singh, won the single contested seat. It also bagged two of the four contested seats in Rajasthan while the BJP and Independents won one each. And in the left Front stronghold of West Bengal the Congress(I) suffered humiliating defeat once again—all three seats went to the Left Front.

But perhaps the most ignominious defeat for the Congress(I) was at the hands of the much criticised Shiv Sena in the Bombay Municipal Corporation elections. The Shiv Sena won a record 74 seats in the 170-member corporation, just 12 short of the total majority. The Congress(I) could pick up a meagre 37. And while it may be a little premature to assume Congress(I)'s declining popularity on the basis of the by-election results, it would be equally foolhardy to ignore the subtle warning signals for the ruling party to shrug off its growing indifference.

DEFENCE

PACKING A PUNCH

In the light of Western sources showing sophisticated weapon systems to India's neighbourhood at concessional prices as also Pakistan's relentless pursuit of nuclear weapons, a constant reassessment of India's battle environment is being carried out by the Centre. At the moment a perspective plan is being drawn up keeping in view the long term requirements in various fields including communications. The self-reliance in India's case is vital because being a non-aligned country it has to struggle harder to get assistance from external sources. Due consideration is being given to modernisation also and the defence expenditure has been going up accordingly. The navy has been allocated increased funds and highly sophisticated submarines are being manufactured. Development of an indigenous engine for India's main battle tank Arjun are also continuing. At the moment this tank is being tried out with an imported West German engine. A search is also on for a new power pack for the Vijayantha tank.

Apart from this it has also been decided that the strength of the National Cadet Corps (NCC) will be increased by the recruitment of an additional 10,000 cadets every year. The welfare and settlement of ex-servicemen will also be given due importance. In addition to this India has made a defence deal with Italy. Under a memorandum of understanding signed with Italy for cooperation in defence research the two countries will exchange information in selected areas of defence research that is mutually beneficial to both. Italy will provide information of equipment in exchange for data that will help the country topicalise its weapons systems.

Quite surprisingly the US too is showing signs of interest in India and might just extend its armed tentacles to this country also. Perhaps Washington believes that the best way to build a durable, close relationship with India is to forge arms supplies links. Already marginal changes have been made in the US export law to enable American arms manufacturers to strike direct deals with countries like India in certain specified areas of weaponry. In early May the US Under-Secretary of Defence Policy, Fred Ikle, was in New Delhi for the sale of two C-130 planes for the Indian Antarctica mission. Apparently the sale of arms and artillery and sophisticated missiles was discussed though no specific deal was made. It is believed that the US might even offer to sell sensitive defence items, too. Nothing has been decided yet and in view of past experiences with the US, when it withdrew its sale of defence equipment offers at the last minute, it would be unwise to pin too many hopes on their surprise moves. Meanwhile, the government at the moment is seeking the opinions of the Opposition before finalising its nuclear policy in view of Pakistan's frantic acquisition of nuclear arms.

PRICES

METEORIC RISE

The euphoria created by the announcement of the general budget 1985-86 has evaporated within the four-week post-budget period. Essential commodities have shown a steep rise of 2.3% contrary to the government's assertions that the inflationary impact of the budget would be minimal and prices of essential commodities would rise only marginally, if at all. As it is, the recent rise has been attributed to budgetary levies and increase in freights.

In fact, before the budget prices had stabilised with some improvement in the overall price situation, the annual rate of inflation as in March 1985 had declined to 5.8% from 9.2% in the same month of the pre-

(Continued on page 60)

CURRENT EVENTS

NICARAGUA

SCAPEGOAT FOR SUPERPOWERS

Recently, President Reagan invoked his emergency powers under the International Emergency Economic Powers Act and announced that the US was imposing a total trade embargo on Nicaragua. He also announced a ban on Nicaraguan ships and planes landing in the US and an early termination of the treaty of friendship with that country. He said that this was being done because "an emergency situation had been created by the aggressive activities of the Nicaraguan government in Central America." He, however, gave no details of the "aggressive activities".

The actual reason for taking economic sanctions against Nicaragua can be explained in the context of the failure of Congress to go along with Reagan in his efforts to resume US aid, both humanitarian and military, to the Nicaraguan contras who are trying to overthrow the Marxist Sandinista regime which has been ruling Nicaragua since 1979. The Democrats in Congress are interested in restricting aid for articles like food and medicine.

Funding for the contras was started through the CIA in 1981, but was cut off last summer, when it was revealed that the CIA had participated in the mining of Nicaragua's harbours. However, the pressure has been continued through various other strategies like the staging of large scale "training exercises" with Nicaragua's pro-US neighbour, Honduras. Faced with growing opposition to his plan to give more direct aid, President Reagan recently went on a personal crusade to get \$14m in assistance to the contras. He compared the anti-Sandinista guerrillas to America's Founding Fathers and said that "the US cannot walk away from one of the greatest moral challenges in post-war history".

The last straw which induced him to pass the economic sanctions was Nicaraguan President Ortega's visit to Moscow, where he was assured of increased economic aid by the Soviet leader, Mikhail Gorbachev. Actually, the sanctions will not hurt the country very much because it mainly exports bananas and a few other farm products and imports fertilisers, agricultural implements and pesticides from the US. This trade can easily be transferred to Europe and the Soviet Union. The Nicaraguans, however, plan to take the issue to the World Court, where they have already filed a case against America.

LEBANON

AS BAD AS EVER

After 15 hours of fighting in Beirut, the PM, Rashid Karami, announced the resignation of his government of national unity. The government had been formed with the aim of bringing together the country's diverse political and religious factions. However, two of the crucial leaders, Walid Jumblatt of the Druzes and Nabih Berri of the Shia Amal militia, had long abandoned it. After a talk with Syrian leader Hafez Assad, Karami agreed to lead a caretaker government. Syria has been a sponsor of Lebanon's national unity government and would not like to see its total collapse.

Meanwhile, the fighting in Beirut ended in the victory of the Amal militia, who are Shiite. With the help of the Druze, they succeeded in crushing the Sunni Muslim militia known as Mourabitoun, and became the unchallenged masters of West Beirut. The fighting in the south, too, has been increasing as the Israelis slowly withdraw. The Maronite militiamen, who call themselves the Lebanese forces have rebelled against President Gemayel because of his close links with Syria and have joined up with the Israeli-backed South Lebanese Army and are attacking Lebanese army bases and residential areas.

After a brief hands-off period, the US again appears to be moving back into the local game. Recently, Assistant Secretary of State Richard Murphy visited Jordan, Israel, Egypt and Iraq with the aim of finding some way to promote direct talks between the Arabs and Israel over the West Bank. Hopes of achieving an accord are dim, as Jordan's King Hussein pointed out to Murphy that the Palestine Liberation Organisation's (PLO) Yasser Arafat still refuses to recognise Israel's right to exist (UN Resolution 242). However, one good portent was that after a visit by Israeli Cabinet member Ezer Weizman to Cairo, the Egyptians have tentatively agreed to a summit meeting later this spring between Israeli Prime Minister Shimon Peres and Egyptian President Hosni

INTERNATIONAL

Mubarak. Egypt opposed the Israeli invasion of Lebanon in 1982 and after the massacre at the Sabra and Shatila Palestinian refugee camps in Beirut, withdrew its ambassador from Tel Aviv. The summit meeting could signal the end of the three-year-old "cold peace" between the two countries and could eventually lead to a West Asian accord.

SOUTH AFRICA

HEADING FOR TROUBLE

Despite the fact that President P.W. Botha's government is slowly inclining towards more social and constitutional reforms, South Africa appears to be heading towards a civil war. On the positive side, South Africa decided to scrap its laws prohibiting mixed marriages and inter-racial sex. This law had been one of the corner stones of apartheid, because it was concerned with the preservation of "national Afrikaner identity". Removing this law, therefore, indicates an important shift in Afrikaner policy. However, it is not likely to have much effect because the Group Areas Act and the Population Registration Act which enforce separate living areas and racial classification, both remain unaltered. The question of how to classify children under mixed marriages is also unresolved. Another positive act was Pretoria's withdrawal of its last 500 combat troops from Angola.

But thereafter, the negative side showed up. South Africa announced shortly afterwards that it would set up its own interim administration in Namibia, much to the dismay of the rest of the world. Racial tension, too, escalated in the country when an Afrikaner teenager who had driven into a black township, Neon Uitenhage, was burnt by a group of blacks. Since last August, over 300 blacks and one white infant have been killed in racial violence. On Mar 20, blacks were killed by the police in eastern Cape Province and in April, 17 more were killed.

Intra-racial strife is also on the upswing. In many townships the local police force is almost entirely made up of blacks, often from distant regions and hostile tribes. These ancient tribal animosities have been encouraged by the government and this has served to aggravate the friction which is endemic in the country. Botha laid the blame for the current strife on the United Democratic Front (UDF), a coalition of more than 600 groups, which is the leading anti-apartheid organisation. The UDF is already under a limited three-month ban on indoor meetings and Botha's recent attack on the group raised concern that the government may outlaw it altogether. Actually, Botha does want to negotiate with the black majority. The blacks have to be more wary of the conservatives, whose leader Andries Treurnicht recently declared: "We do not wish to share power with blacks".

PAKISTAN

FRIENDS AND FOES

President Jayewardene of Sri Lanka paid his first state visit to Pakistan at a time when Indo Pak and Indo-Sri Lanka relations were in a state of flux. In Pakistan, he took a bold anti-Soviet, pro-Pakistan stand on Afghanistan, lustily saying, "Free Afghanistan Zindabad!" to a large group of Afghan refugees at Jhelai camp near Peshawar. During his exchange with President Zia, both leaders covertly criticised India, accusing it of "regional hegemonism" and "hegemonistic ambitions". They also said that the Indian Ocean Peace Zone concept, originally a Sri Lankan idea, was "idealistic" and if implemented, would make the Indian Ocean an "Indian Lake".

It is believed that the two leaders also privately discussed specific proposals for joint moves in the South Asian Regional Council (SARC). The two countries have tried to work together against India in the SARC in some earlier meetings also. Jayewardene is expected to visit Bangladesh in the near future. One recent trend visible in Sri Lankan foreign policy is an attempt by it to forge closer links with Bangladesh and Pakistan and have joint position on regional issues with these countries.

On another front, Islamabad's relations with Moscow plunged to a new low shortly after Mikhail Gorbachev assumed charge as the new Soviet leader. Zia was told that Pakistan's policy of collaborating with the resistance guerrillas and cooperating with the US could lead to a deterioration of relationship between Pakistan and the Soviet Union. Recently, Soviet activity along the Pak-Afghan border has intensified. Last year there were 81 incidents in which the Pakistanis claimed their territory had been violated by the Soviets. In the first four months of this

him Pakistan and to stem the flow of weapons to these groups from China, the US and some Muslim countries. Alamists in Islamabad are, however, crying "wolf" in the belief that the Soviet Union is about to launch a "full scale" war on Pakistan. The US, on the other hand, sees it as an attempt on the part of Moscow to bully Zie into withdrawing his demands which include a Soviet pull out from Afghanistan, the return of the refugees to their home country and free elections in Kabul.

JAPAN

IT'S A RICH MAN'S WORLD

The impending trade war between Japan and the US finally precipitated PM Yasuhiro Nakasone on to the television screen—a rather unconventional thing for a Japanese Prime Minister to do. Nakasone's aim was to reduce tensions by encouraging the Japanese to "buy foreign". He told the public: "If each Japanese buys \$100 in foreign goods, the increase in imports from that would amount to \$12b, and foreign countries would be happy". He added that he would simplify regulations, standards and other restrictions to encourage imports.

This came in the wake of an announcement by Japan that it would increase exports of cars to the US by 25% over the old quota level, to 2.3m units a year. The result of this announcement was an increase in protectionist fervour on Capitol Hill. US had a trade deficit of \$36.8b with Japan in 1984, which was nearly one-third of its deficit with all its trading partners. This year the trade gap was \$4.3b in February alone, and it is estimated that it will increase to \$50b by December. If the US decides to retaliate with more protectionism, it would mean loss of exports and unemployment in the Japanese market. It is because of this that Nakasone has decided to ignore Japanese norms and go to the public in a big way to convince them that foreign goods are not always bad.

On another front, however, the US may soon face problems with Japan. Of late, the anti-nuclear movement which has been led by the Japanese Communist Party, the Japanese Socialist Party and the Democratic Socialist Party, has taken on a new life. More and more cities and prefectures have begun to campaign for "non-nuclear zones" in their respective areas. The local anti-nuclear movements are largely non-partisan and are being organised by housewives, teachers and municipal workers. Although generally peaceful, there are pockets of militancy; for instance in Yokosuka city which is situated close to a US naval base. The local leaders feel that the only way to ensure the absence of nuclear weapons from its "territory" is to end visits to the base by US nuclear-powered submarines which may or may not be carrying nuclear weapons. Since such visits average two a week, it may portend stormy times ahead.

LATIN AMERICA

NEW RULES FOR OLD

Only hours before his due swearing in as President of Brazil's first elected civilian government in 21 years, Tancredo Neves, the President-elect, became seriously ill. There is many a slip 'twixt the cup and the lip and after his death in April, the leadership passed on to the Vice-President, Jose Sarney. Whereas Neves' election had led to much jubilation, Sarney's rise has led to much speculation. Neves was the "great unifier" and was regarded as a father-figure in Brazil. Many of the members of his party, the Brazilian Democratic Movement Party (PMDB), had been deprived of their political rights by the military regime and feel that civilian rule has been hard won. Sarney, on the other hand, is a conservative, who had loyally supported the military regime. He had switched his allegiance because he did not approve of the presidential candidate of the generals' Democratic Social Party. He had been accepted as the vice-presidential candidate only because it meant more electoral college votes for the party. Many of the PMDB are less enthusiastic about his becoming the President. It is only because rejection could mean return to military rule, and could also reduce Brazil's chances of setting an agreement with its creditors to delay payments on its \$112b foreign debt, that Sarney has been unanimously accepted.

Peru, too, had a new government in April. The election winner was the leader of the American Popular Revolutionary Alliance (APRA), Alan Garcia, who is regarded by conservatives as the leader of a radical party. However, he was not moved absolutely left, because the real radicals are in the U. and Left, an alliance of Marxist groups, which got the second largest number of votes. A run-off is expected to be held in

economy. Only one-third of its workers hold steady jobs. Inflation stands at more than 100% and the country is behind in paying off its foreign debt of \$13.8b. Although the APRA did not specify its plans for revitalising the economy, it is expected that it would encourage more protection for Peruvian industry and would hold down the amount paid each year to service the foreign debt. Garcia has also declared that he would by-pass the International Monetary Fund (IMF) which tried to introduce financial discipline, with little success, during the last administration.

ALBANIA

EMERGING FROM THE COCOON

April saw the death of one of those great men who rebuilt their nations in the traumatic years following the destruction of World War II—Enver Hoxha of Albania. But Hoxha who ruled Albania for 41 years, longer than any other leader in the Communist bloc, was not an ordinary leader: under him, the country just dropped out of history. In 1948, he sided with Stalin against Marshal Tito and cut off relations with Yugoslavia; in 1961, during the de-Stalinisation campaign, he broke with Moscow and in 1978, at the time when Peking was opening its doors to Washington; he expelled several hundred Chinese technicians from Albania. He also made Albania a fortress by mixing its borders with Greece, jailing thousands of Greek exiles, and building countless pill boxes to prepare for an invasion.

Although a staunch ideological follower of Hoxha, the new leader, Ramiz Alia, who has been the titular head of the state for the last three years, may favour some sort of a change. Moscow has already made it clear that it would like the strategically important country to return to its fold, but Alia is not playing: he even returned a telegram expressing condolences on Hoxha's death to Moscow, saying that it was unacceptable. Alia is also unlikely to make any pro-American moves. Instead, he has shown a tendency to look towards Europe—in recent times, a rail line was opened to Yugoslavia, and a road to Greece and ferry to Italy were also inaugurated. Albania is Europe's least developed country, but it mines copper and nickel and is the world's third largest producer of chrome after Russia and South Africa. Other European countries may, therefore, be interested in establishing trade links with Albania.

However, certain matters have to be cleared before the country can come out of its diplomatic cocoon, that is, if it wants to. It has no diplomatic relations with West Germany, because of a dispute over war-time reparations. It does not have diplomatic links with Britain either, because the British have refused to return the Albanian gold that fell into Allied hands at the end of World War II. They want to use it to settle western claims against Albania. Alia, however, has suggested that such difficulties can be overcome and western analysts feel that under Alia, Albania's isolation may end.

US-EUROPE

DIGGING THE GRAVES

President Reagan visited Europe in early May to attend the 11th economic summit of the seven nation non-communist industrial countries (the US, UK, France, West Germany, Japan, Italy and Canada). He also visited Spain and Portugal and addressed the European Parliament in Strasbourg, France. It was, however, his visit to West Germany that set off an acrimonious debate at home. It coincided with the 40th anniversary of V.E day, May 8. Chancellor Kohl who had been hurt at not being invited to celebrate the D-Day celebrations marking the anniversary of the Normandy invasion last year, took this opportunity to suggest that the victor should join hands with the vanquished. Reagan agreed to join him in appearing at a German military cemetery. The one problem was the choice of the cemetery: Bitburg, where 47 of Hitler's crack SS-troops are buried along with 2,000 other German soldiers who were killed during the Battle of the Bulge which had resulted in 100,000 German and 81,000 allied casualties. At first, it was assured that American soldiers, too, were buried at Bitburg, and White House aide, Michael Deaver who went to West Germany in February to work out the details did not spot the SS graves which were buried in snow or check the credentials of the dead.

It was only when reporters brought these graves to the notice of the American public that the cover was blown off Reagan's trip. American Jews and many World War II veterans including the American Legion were furious at the itinerary. Elie Wiesel, a Jewish scholar and former inmate of the Buchen Wald concentration camp, who received a Con-

the Nazis and the sufferings during the Jewish Holocaust, went before national television, with Reagan sitting by his side and expressed the sorrow of his community: "[We] implore you to do something else, to find another way, another site. That place, Mr President, is not your place. Your place is with the victims of the SS".

The President, however, stuck to his word although it meant the destruction of his support from American Jews, at least for the time being. To assuage their feelings, he added a visit to the concentration camp at Bergen-Belsen, where 50,000 Jews died under the cruelties of the SS. Kohl had earlier suggested a visit to another camp, Dachau, but the Americans had turned it down. The stop-over at Bergen-Belsen only served to increase the ire of the American Jews because they felt that it was a token gesture.

In Germany, too, the controversy created ill-feelings. The Mayor of Bitburg expressed their sentiments when he said: "Let the dead finally rest in peace". The Germans have borne a war guilt for 40 years and they feel that German soldiers, too, were victims of the Nazi dictatorship. The economic summit was conducted amidst the strictest security. The danger of an untoward event was real: just two days before, the police defused a six-kilo explosive device in the diplomatic area of Bad Godesburg. There were bomb explosions in two other German towns also. On the eve of the summit, two persons were killed and 13 injured when a van loaded with explosives was blown up in Brussels. Within the US, protests have begun in another sphere. The campuses, which had remained relatively quiet in the 70s are again stirring.

BRITAIN

THATCHER'S GLOBETROTTING

During the Easter week, PM Thatcher was out making a whirlwind tour of southern Asia, a region which had once played a key economic role in the British Empire. Britain is still interested in the economy of the region, and Thatcher's mission was to strengthen her political bonds with the heads of state and lay the groundwork for selling British contracts. Her ten-day tour took her through Malaysia, Singapore, Brunei, Indonesia, Sri Lanka, India and Saudi Arabia. Malaysia was perhaps her worst stop. Since Dr Mahathir Mohamad took over power in 1981, Anglo-Malaysian relations have reached a new low. Although the two leaders reached an agreement giving the Malaysian state airline an additional fifth flight to London, in return for easing Malaysia's discriminatory airport taxes on foreign carriers, Mahathir later threatened to pull his country out of the Commonwealth. In Indonesia, President Suharto warned her that trade restrictions in the industrialised world could lead to political unrest in the developing regions.

On the whole, however, the tour was judged successful for Britain and many leaders agreed to "Buy British". As for Thatcher, the Sultan of Brunei presented her with a five-piece solid silver service and a gold bracelet studded with diamonds and rubies; in return, she presented him with a silver salver—a good beginning for trade between the two countries.

PHILIPPINES

INCREASING INSURGENCE

Recently, Richard Armitage, the US Assistant Secretary of Defence warned that the Filipino New Peoples Army (NPA) could fight government to a 'strategic' stalemate. The insurgents operate on 59 "fronts" spread throughout the archipelago's 73 provinces. There are about 10,000 regulars and 10,000 part-time militiamen in the NPA. From their "fronts" or regions of influence, the guerrillas penetrate into government-held territories on "arms-grabbing" raids. Although its supporters are mainly peasants, the National Democratic Front (NDF), the political umbrella group that represents the insurgents has also recently begun attempts to attract the more affluent Filipinos to join the group.

Officially, President Marcos has tried to play down the threat from the insurgents. In April, he assured a group of visiting US Congressmen that there was no danger of a communist takeover in the Philippines. But at the same time, he has mounted a major counter-offensive and has earmarked \$55m to improve government services in rural areas where the insurgents are strongest. He has also launched a drive to improve the military image which was tarnished after the murder of opposition leader Benigno Aquino. Acting Chief of Staff Lt. Gen. Fidel Ramos has set up special committees to investigate reports of military abuse. So far 265 cars have been investigated and 85 soldiers punished.

The Reagan administration wants to support Marcos' efforts by giv-

ing. Affairs Subcommittee on Asian and Pacific Affairs has approved the administration's request. In March it voted to increase economic aid to the Philippines from \$95m to \$155m, but offered only \$25m, in military funds. In another area, too, there is speculation about US military aid. Recently Son Sann, the leader of Khmer People's National Liberation Front and Norodom Ranariddh, leader of Kampuchea's Sihanoukist National Army guerrillas visited Washington to ask for help against the Vietnamese. After a meeting with Secretary of State George Shultz, Son Sann said that "The pipeline has been opened". However, what the US actually hinted at was that weapons may be forthcoming for the non-communist guerrillas, but not from the US. It is felt that the more likely sources would be Thailand and Singapore. America does not want to be directly involved in arms-supply in the region and thus jeopardize its relationship with Hanoi.

US-USSR

GLIMMER OF HOPE?

"He's a master of words and a master in the art of politics and diplomacy", said US House Speaker, Thomas P. O'Neill after he met Soviet leader Mikhail Gorbachov at a Kremlin conference recently, and indeed, Gorbachov has moved with remarkable speed since he took charge of the Soviet Union. In the diplomatic field, where he has relatively little experience, he took the White House unawares by launching a new peace offensive with his announcement of a six-month moratorium on the deployment of intermediate range missiles in Europe. He dared the US to join the Soviet missile freeze for the duration of the ongoing arms talks and said that this would halt the deployment of US medium-range missiles in Europe and stop research on the Strategic Defence Initiative ("Star Wars") of President Reagan. He also announced that the USSR would cut its nuclear armory by 25% if the US called off its "Star Wars" programme. If the Americans do not respond positively to this initiative, they will risk alienating their West European allies.

Meanwhile, East-West relations faced tensions as a result of the slaying of an American, Major Arthur D. Nicholson, Jr., by a Soviet soldier. The officer was on duty in East Germany as part of an agreement between Washington and Moscow that each side can maintain military observers in the two Germanys. The East bloc accused Major Nicholson of being a spy and offered no apologies. However, they did offer one concession: a ban on the "use of force or weapons" against American liaison mission patrols or personnel.

Despite tensions, the planned summit between Gorbachov and Reagan has not been called off although the time and place have not yet been specified. Recently, Reagan's son, Ronald Reagan, Jr., was in Moscow on a "private" visit, but analysts felt that the visit was significant in view of the agreement on holding a summit meeting. At the home front, too, Gorbachov has been moving fast. He has inducted three new members to the Politburo—Victor Chebrikov, Yegor Ligachev, and Nikolai Ryzhkov—who are all relatively younger technocrats like Gorbachov. In late April, he also submitted the outlines of the kind of reforms he would like to introduce to a plenum meeting of the central subcommittee. He emphasised cutting out bureaucratic waste through greater discipline and incentives for good work at the work place. He also wants to upgrade Soviet technology to international standards, partly through greater trade with Japan and West Europe.

EEC

EXTENDING THE UMBRELLA

The European Economic Community will welcome two new members, Spain and Portugal on Jan 1, 1986, raising the total membership to 12. Besides its economic impact, the decision is politically significant because it means that the two Iberian countries will become more firmly linked to the West European camp. Spain and Portugal will be given a transition period of seven to ten years, allowing them to adapt to the community's policies promoting the free movement of workers, capital and manufactured goods. Spain will receive a decreasing rebate of its value-added-tax contributions over six years, with the aim of limiting the initial cost of membership. Portugal was given \$900m by way of rebates and industrial loans to help it to correct its balance of payments deficit and to modernise industry.

Financially, integrating the two new members will prove a burden for the EEC. It had an estimated deficit of \$2b last year; it will have to come up with an additional \$1b every year to finance the membership of Spain and Portugal.

YOU ASK, WE ANSWER

BY SHIV KUMAR

Who is Aga Khan? Why is he so popular? Please give detailed information about him.

Ramesh, Ranchi

Aga Khan is the title held by the spiritual leader (Imam) of the Ismaili sect of Shi'ite Muslims. Hasan Ali Shah (1800-81) was the first Aga Khan. The title was given to him by the King of Persia when Hasan was the Governor of Karman in Persia. Later, owing to differences between the Aga Khan and the King, the former left Persia and settled in India. The subsequent Aga Khans were Aga Khan II (died 1885), Aga Khan III (1877-1957). The present Aga Khan, Aga Khan IV (1936-), is President of the UN High Commission for Refugees.

What is (i) McCarthyism; (ii) Ku-Klux-Klan movement?

S. Krishnan, Madras

(i) **McCarthyism:** It is named after Joseph Raymond McCarthy (1909-1957), an American politician who investigated alleged communist influence and infiltration of the United States Government. McCarthyism refers to the practice of persecuting people who allegedly indulged in pro-communist activity. The accusation of disloyalty was often based on doubtful evidence.

(ii) **Ku-Klux-Klan:** It was a secret organisation formed in southern US after the American Civil War (1862-65) to suppress the newly acquired powers of the Negroes. The members of the Klan (Ku-Klux) tried to prevent Negroes from voting and even threatened sympathisers of Negroes. Soon some more groups committed crimes on Negroes in the name of the Klan. Another organisation of the same name was formed in 1915 in Georgia, professing Americanism as its objective and directing its activities against Negroes, Jews, Roman Catholics and others. Even in the early sixties they reappeared. The US Government in 1871 got enacted a bill called Forces Bill, enabling the President to suppress the Klan.

Explain the differences between (i) reserve forest; (ii) sanctuary and (iii) national park.

Manoj Sinha, Patna

(1) Reserve or protected forests are for the preservation of the climatic and physical conditions of the country. (2) Sanctuary is an area in which killing, hunting, shooting or capturing of any bird or animal is banned. (3) National Park is an area demarcated by law for all time for the conservation of scenery and natural and historical objects of national significance and also the wild life therein, and to provide for the enjoyment of the same without damaging it.

In Washington DC, what does DC stand for?

Subhash Bora, Yavatmal

DC stands for District of Columbia.

Are the World Bank, IMF and IBRD one and the same thing?

Banshi D. Shripa, Jaipur

The World Bank was created in 1944 to assist its member countries in their reconstruction and development by extending loans to them. It is a specialised agency of the UN and its official name is International Bank for Reconstruction and Development. Hence the World Bank and IBRD are one and the same thing. The International Monetary Fund (IMF) is also a specialised agency of the UN but it promotes the stabilisation of world currencies and maintains a monetary pool from which member countries can draw loans to overcome their financial problems. Thus IBRD and IMF are two different institutions.

Are Delhi and Chandigarh capitals only or are they Union territories as well?

These two cities are Union territories as well.

What is Third World and how many countries are included in it? Are there any first and second worlds also?

Ramesh Pathania, Kullu (HP)

The term Third World denotes the under developed countries primarily from the Asian, the African and the South American continents (but does not include oil exporting countries of these three continents). The oil exporting countries are some times known as the fourth world but the term is not used frequently. The US and its allies are called the first while the communist block is called the second world.

What is the Bermuda Triangle?

It is an area off the southern coast of Florida in the Caribbean Sea. A number of aeroplanes and ships have disappeared in this area under mysterious circumstances. Only a few pilots or captains radioed distress signals. Bodies or wreckages were seldom found. It is believed that unexpected storms or downward air currents destroy the ships and the aeroplanes.

The Bermuda Triangle is scattered in a 1,140,000 km area. For detailed information, please read the book *The Bermuda Triangle Mystery Solved* written by Lawrence Kusche. The book was published in 1975 in the US.

Many books have included Ireland in the UK while some have shown Ireland as a separate country. Please explain.

J. Paricha, New Delhi

By the Act of Union, 1801, Great Britain and Ireland formed a union. But in April 1916, the southern part of Ireland declared itself an independent country with Dublin as its capital. The northern part of Ireland has remained with the UK till today.

Who was the British PM at the time when India, Burma and Sri Lanka got independence?

Sunil Gandhi, Kanpur

Sir C.R. Attlee (1945-51) was the British PM.

What does the sign KBK in almost all diagrams, graphs and statistical tables stand for?

MT Puttaraju, Bangalore

KBK is a Delhi based company making diagrams, graphs and statistical tables.

When was Sunday recognised as a public holiday?

Ravindra Amatya, Lucknow

It was recognised as a public holiday in 17th century England.

In which years were the CIA, RAW and KGB established?

The CIA was established in 1945, KGB in 1954 and RAW in 1967.

How does a deputy minister differ from a minister of state?

R. Sudhakaran, Nasik (Maharashtra)

A deputy minister functions under either a Cabinet rank minister or a minister of state, whereas a minister of state assists a Cabinet rank minister.

However, at present Rajiv Gandhi's Council of Ministers has only Cabinet ministers and ministers of state. There is no deputy minister in the Centre at present.

Please let me know about the national anthems of other countries and the names of the persons who wrote these.

N. Mahendra, Coimbatore

For your query please consult the book *National Anthems Of The World* edited by Martin Shaw & Others and published by Blandford Press, Great Britain.

BIO-MEDICAL ENGINEERING

BY UDAY K. CHAKRABORTY

More than a year has passed since Dr Barney Clarke was rushed to the University of Utah Medical Centre (US) for an artificial heart implant. Today, although a moratorium is in effect on the implanting of the device in a second human, researchers in many countries are working with renewed vigour to develop various artificial organs.

Artificial skin... bone replacement material... prosthetic devices for the disabled... mechanical and electronic aids for paralytic patients.... The spotlight is on these and other biomedical devices, techniques and materials scheduled for—or already undergoing—clinical trials. Some of the devices are even commercially available today, albeit on a limited scale. While 'superhuman' bionic people may not be on the horizon, certainly most of us can count on some of our worn-out parts being replaced with these artificial alternatives during our lifetime.

Behind the most recent crop of biomedical engineering developments are years of research efforts put in by professionals from different fields. Let's take a look at this fascinating art and the human replicas that have been created.

Left-Ventricular Assist Device (LVAD)

The LVAD is a duplicate of the left ventricle, the main pumping chamber of the

Above : Motionless rescue: A poliomyelitis victim demonstrates a multi-channel proportional unit. Above right : Stumped in : The myoelectric control system for below-and-above-the-elbow amputees consists of five electrodes, connected to the amputee's stump, which sense control signals from muscle contractions and thereby produce electrical activity.

four-chambered human heart. LVADs are essentially temporary devices designed to keep alive patients whose hearts are too weak to resume beating on their own when they are taken off the heart-lung machine after undergoing open heart surgery. When hooked up to the patient's heart, an LVAD takes over the blood pumping function, letting the heart muscle rest until it resumes its work spontaneously. This usually takes several days. Presently available devices are big, and operated by external power sources. Researchers are trying to develop self-contained miniaturised LVADs.

Artificial heart

Work on the artificial heart gained momentum in the beginning of the last decade, thanks to the efforts of American, European and Russian researchers. First trials were made on several calves which lived from 60 to 268 days. One is still alive one and a half years after the implantation. In May 1981 a team of doctors

implanted an artificial heart in a woman who had been declared 'brain dead'. The device kept the woman's kidneys functioning and maintained blood pressure for a few hours. Then came the spectacular breakthrough on Clarke a 61-year-old dentist. The success of the operation was above the expectations of even the most conservative experts. The operation was performed at the University of Utah Medical Centre, USA, by a medical team led by Dr Robert Jarvik and William DeVries. Clarke lived with the artificial heart for 112 days, before he died on Mar 23, 1983.

But, today, a lot of heart-searching is going on as a result of the climate of ethics that now guides medical research in Western countries. Even the institutional review board of the University of Utah Medical Centre placed a moratorium on the implanting of the next artificial heart in a second human, although private funds are assured for at least two more artificial heart experiments—the first cost more than \$250,000. In fact, the application of new therapies is no longer strictly a private medical problem but involves thorny social, economic, ethical and political factors. Few medical developments combine these elements in a more vivid way than does the artificial heart and in few or more is the price of error so high, or the urgency to get everything right the first time more pressing. The plastic heart implanted on Clarke, code named 'Jarvik 7', was driven by a 170 kg wheeled unit. All agree, however, that the development of a fully implantable and permanent artificial heart

source, longevity of the power source and reliability. The power source should have enough storage capacity to remain implanted without the need for frequent changes. If the power source must remain outside the patient, a way for transmitting energy to a motor inside the body must be found. Moreover, the device should be able to remain in body's saline environment for a long time and there should be some ways to dissipate and absorb heat released by such an implanted device.

Artificial bone

Much needed bone material to supplement the human body's limited potential for providing its own bone grafts is also a reality. The famous Battelle Columbus Laboratories in the US have developed biodegradable ceramic based on tricalcium-phosphate, which has been working as a scaffolding for bone cells during clinical trials. When the ceramic is set in place, cells from the surrounding bones migrate through its pores. Both sides are reconnected through ceramic, which functions as a structural support. The body's natural absorptive capacity degrades the material within one to one and half years, leaving new bone in its place. Not strong enough for use in long bones, the ceramic is being tested in skull repair and jaw rebuilding jobs.

Biomedical scientists have recently discovered that a coral-skeleton can be used as mould for casting versatile, super strong new material that may be just what is wanted for prosthetic devices that could replace damaged joint cartilage. Sufferers of some types of arthritis stand to benefit from the new material. Human bone cartilage cushions and lubricates joints. If a section of the cartilage is damaged by disease or accident, a replacement can be cut from a new material created by casting a coral skeleton. The new part, a two-faced prosthetic device, is surgically inserted. The lower half of the material permits bone ingrowth; the upper half, because it is cast with polymers, mimics cartilage providing cushioning and lubricating service.

Artificial blood

Perfluorochemicals—hydrocarbons in which fluorine has been substituted in place of each hydrogen atom—possess a characteristic value for the human body: they have an affinity for oxygen that is about two and a half times as great as that of whole blood. In addition, they are relatively inert, can be administered regardless of patient's blood type, and stored (albeit frozen) for extended periods.

Artificial skin

Human skin protects the body from invasion by such agents as bacteria and viruses, and regulates body temperature

especially from burns. Burned patients are in greater dangers than those resulting from injury itself. Skinlike protection during the healing process can be provided by grafts from the patient's own skin, or from cadavers or animals (usually pigs). But grafting the patient's skin requires surgery, and if the loss is extensive, there may not be enough skin left to graft. Cadaver skin is not always available and lasts three to four weeks before the body rejects it. And, animal skin lasts even less (about one week).

In a recently developed method, researchers close open burn-wounds with a two-layer artificial skin made of a silicone-rubber-like top layer bonded to a porous underlayer made of collagen and a synthetic material. When placed over a wound, the artificial covering acts as a barrier against bacteria, while allowing a moisture spread rate approximately the same as that of real skin. During healing, cells and fibroblasts migrate to an area between the artificial skin's two layers; the wound is closed when the bond between the layers is broken. At this point, the top layer peels off, while the bottom one is degraded by tissue enzymes.

Help for paralytic patients and the disabled

Biomedical engineers have also developed various control devices for restoring movement to paralysis victims. Even patients who are paralysed from neck downward would be able to use their hands with these sophisticated devices comprising electrically operated arm brace and tongue-switch control. One recently demonstrated device is controlled by a sensitive tongue pressure switch. The patient achieves complex movement and direction by touching with his tongue a series of protruding switches resembling large vitamin pill capsules.

In addition to this, research and development into producing electrically operated limb prostheses (arms, legs, knees, elbows, etc) for amputees and disabled persons is accelerating, with some prostheses now becoming commercially available for use.

Control drug release devices

Several implantable devices that automatically deliver controlled doses of medication over long periods of time are about to begin clinical trials. These devices will help in solving the problem of supplying concentrated drugs to a particular part of the body. These would also help avoid overdosing of drugs and its side effects on other parts of body. Among the potential uses are the delivery of birth control drugs, narcotic antagonists (to block the effects of narcotics in drug addicts), anti-cancer

encapsulated micro-sized pills coated with some sort of iron-based material. The doctor guides the pills, which travel through the bloodstream, with a magnetic device and takes it straight to the cancer-affected zone. Then, with a remote control device, the doctor makes it burst and release the concentrated dosing. This device will be very helpful for treating patients with cancer of liver, pancreas, etc.

Responding to the needs of diabetics, researchers have developed and implanted other types of systems, involving use of pumps and reservoirs, for insulin release. The patient can adjust the insulin release rate by using a switch. Enough insulin for more than a week is stored in a refillable reservoir. One drawback is the system's fixed delivery rate (the pancreas secretes varying amounts of insulin, depending on the blood's glucose content). Research is focusing on the development of a workable glucose sensor, but, meanwhile, efforts are being directed towards putting micro-chip circuitry in the delivery devices. This would allow a more sophisticated programming of varied dosage rates. Researchers are also trying to miniaturise the systems.

In addition to the above, researchers are also developing and taking clinical tests on many parts of the human body like artificial hip joints, the pancreas and replacement parts for the eyes and the ears. However, there are problems that have to be overcome. The insertion of foreign materials into the human body inevitably poses problems of biocompatibility or safety. Since the defences of the body are organised to remove or attack any foreign object in contact with internal body element, an acceptable biomaterial or replacement element in one that causes only minimal foreign body reactions. It must also be non-toxic and non-carcinogenic. Further requirements depend on the specific application. For cardiovascular use, for example, the material must not damage blood or encourage clotting. For resorbable implants, the biodegradation products must be non-toxic and readily eliminated from the body by normal metabolic and excretory processes.

Biomedical engineering today is a field that combines the skills of many professionals such as doctors of medicine, biologists, chemists, chemical engineers, mechanical engineers, electrical and electronic engineers. Through their concerted efforts, rapid progress has been made in the development of artificial materials and devices. And, prosthetic devices to supplement or replace the function of many parts of our body are expected to be a reality by the turn of this century.

CAREER COUNSELLING

BY G. J. UNNITHAN Director, Students Advisory Bureau, University of Rajasthan

I have done M.Sc. Physics with specialisation in Electronics. I want to do Television Engineering course from some reputed institution which gives adequate training facilities to its students. Kindly give details about such an institute, government or private, which conducts six to nine months training. Also give details about the admission criteria.

L.M. Kothiyal, Pauri Garhwal

Please contact Roorkee University, Roorkee-247 672 which conducts a postgraduate diploma in Television Technology.

I am a final year M.A. English student and wish to do M.Phil. in the subject. Which universities offer the course?

Bhupendra Kumar Patel, Bilaspur

Some of the universities in the north offering the M.Phil. course in English Literature are: University of Rajasthan; University of Delhi; Jawaharlal Nehru University, Delhi; Himachal Pradesh University, Simla; Maharshi Dayanand University, Rohtak; Guru Nanak Dev University, Amritsar; Punjabi University, Patiala; Panjab University, Chandigarh; Banaras Hindu University, Varanasi; Meerut University.

I want to pursue my postgraduate Engineering studies in West Germany. What's the procedure regarding entrance tests, scholarships, etc?

H.S.C. Shakhar, Pune

Write to the German Academic Exchange Service, 176 Golf Links, New Delhi-110 003 asking for a copy of the booklet *Academic Studies In The Federal Republic Of Germany*. Knowledge of German is a prerequisite for admission to German universities.

I am a 28-year-old Arts graduate from Bombay University and wish to study French in detail and take up a translator's job at home. Is it possible?

V. Varma, Bombay

Courses in French are offered by the Alliance Francaise in Bombay and upto the M.A. level at Bombay University, besides certain private institutions. For translation work advanced knowledge of French will be required plus an equally high level of English proficiency. The Central Institute of English and Foreign Languages, Hyderabad-500 007 has a translator's course in French. Translation work can be done on a private basis at home. Please contact the Alliance Francaise in Bombay for details of courses.

I am an M.Sc. Botany student with specialisation in Cytogenetics and Plant Breeding. What are my prospects of continuing study/research? Are there any scholarships offered by the government or universities?

Suman Rai, Mathura

In your subject there are facilities for research in most universities and agricultural research institutes. Scholarships are provided by the Indian Council of Agricultural Research (ICAR), Council of Scientific and Industrial Research (CSIR), University Grants Commission (UGC) and the universities themselves.

I wish to take up the job of a news reader or programme broadcaster, telecaster on Doordarshan or All India Radio.

Rajiv Srivastava, Kanpur

Please contact the nearest Doordarshan/Akashvani station and enquire about audition tests.

My brother wants to do postgraduation in Ophthalmology or Gynaecology from a reputed institution in India. Please mention the names of the institutions concerned.

Rupal Deka, Jalukbari (Guwahati)

The 1984 *Handbook Of Medical Education* may be obtained from the Association of Indian Universities, 16 Kotla Road, New Delhi-110 002 by sending an M.O. for Rs 18. This contains details on all postgraduate courses.

I am a student of Pre-Engineering. How can I join the Atomic Power Energy course?

Uttam Singh, Amritsar

This training is available at the post-B.E. or post-M.Sc. level at the Bhabha Atomic Research Centre, Trombay. Engineering graduates in Mechanical/Electrical/Electronics/Instrumentation/Chemical and Metallurgy with 655 marks or M.Sc. holders in Physics/Chemistry with 60% marks are eligible for a one-year orientation course in Nuclear Science and Engineering. After successful completion of the course, candidates will be appointed as scientific officers in any of the units/projects of the Department of Atomic Energy. A stipend of Rs 1,400 per month is offered during the training period.

I have passed class X exam but could not clear the class XI board exam conducted by the Central Board of Higher Secondary Examination. I am 28 years old and wish to pursue higher education through the open university

programmes offered by some universities.

G. Vijaykumar, New Delhi

The Andhra Pradesh (AP) Open University, 6-3-645 Somajiguda, Hyderabad-500 004, offers direct admission to B.A./B.Com. and B.Sc. courses, on the following conditions:

(i) If a candidate does not possess the formal educational qualification (intermediate or its equivalent) or as a matter of fact any educational qualification, he is eligible for admission, provided, he has completed 20 years of age. However, he has to pass the Eligibility Test conducted by the AP University held usually in May.

(ii) If a candidate has passed the Intermediate exam conducted by the Board of Intermediate Education, AP or its equivalent and has completed 20 years of age by Jun 1, he is eligible for direct admission to the B.A. and B.Com. courses. He need not appear for the Eligibility Test.

(iii) A candidate is eligible for admission to the B.Sc. course if he has completed 20 and passed the Intermediate exam with science subjects conducted by the Board of Intermediate Education, AP or its equivalent. There is no Eligibility Test for admission to the B.Sc. course.

I want to join the Indian Air Force. Kindly give me some details on Pilot Aptitude Test.

Manoharlal, Simla

The Pilot Aptitude Test is administered as one of the first tests during the Service Selection Board Exam for candidates desirous of joining the Air Force and who have passed the UPSC exam. This is an exacting manual test conducted to judge the candidate's required hand-eye coordination. Only one chance is given to pass this test.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many readers ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

DISABILITY AT THE HELM-2

BY M.S. VENKATARAMANI

A head of state or government takes a solemn oath to discharge the powers and duties of his high office in a prescribed manner. If his physical or mental faculties get impaired, the issue concerns not only his family and the doctors with whom he takes counsel, but the people and the entire machinery of the government. The case of President Woodrow Wilson brings into sharp focus the complexities of the problem that a country would confront in the absence of well-established procedures.

Mrs Wilson claimed many years later that she had acted during the period of the President's illness in the best interests of the American people and in full consonance with the advice tendered to her by the eminent specialist who had been brought in by Wilson's personal physician. The specialist told her that her husband's recovery could not be hoped for unless he was "released from every disturbing problem". Resignation from the presidency should not be considered since that would remove "the greatest incentive to recovery" and also prevent the completion of the great tasks that the President had undertaken. The doctor's "prescription" deserves to be cited in full:

"Madam, it is a grave situation but I think you can solve it. Have everything come to you; weigh the importance of each matter and see if it is possible by consultation with the respective heads of the departments to solve them without the guidance of your husband. In this way you can save him a great deal. But always keep in mind that every time you take him a new anxiety or problem to excite him, you are turning a knife in an open wound. His nerves are crying out for rest, and any excitement is torture to him."

Mrs Wilson apparently did not require much persuasion to accept the counsel of the doctor. Thus it came to pass that Cabinet members were forced to communicate only with Mrs Wilson and to receive instructions which, according to her, came from the President.

When after a lapse of eight months a Cabinet meeting was finally held in the White House with the President in the chair, no meaningful business could be transacted. "It was enough to make one weep to look at him," one Cabinet member recalled subsequently. The President appeared to be unable to take the initiative and, when bewildered Cabinet members began discussing a problem, Wilson appeared to have difficulty in fixing his

suggestion that we had better go," according to the Cabinet member. It was to become a familiar routine in the few desultory Cabinet meetings that were held during the remaining months of the Wilson administration.

The Garfield and Wilson episodes led to infructuous efforts by some members of Congress to push for legislation to deal with the problem of presidential disability. Eventually it was left to President Dwight J. Eisenhower to demonstrate a manly sense of responsibility to the country and the people. Reflecting sombrely on his own spells of partial incapacitation, Eisenhower wondered about the predicament in which the country could be placed if a President were to be, as he put it, even partially "incapable of analysing difficult problems and making reasonable decisions concerning them." He posed squarely to himself the question whether it was not possible that an ailing President could become "unable to express his thoughts... unable even to express a decision to resign". He decided that he should forthwith spell out the arrangements that should be followed in case he were to become seriously or permanently disabled. He embodied his suggestions in a letter to Vice-President Richard Nixon.

Eisenhower said that if at any point he could clearly recognise his own inability to discharge the duties of the presidency, he would immediately so inform Nixon. It would then be Nixon's exclusive responsibility to determine whether the disability of the President was such as to make it necessary for the Vice-President to discharge, as "acting President" the powers and duties of the presidency. Eisenhower expressed the hope that in taking his decision, the Vice-President would consult the Secretary of State, the President's senior-most special assistant, his personal physician, and a group of medical experts. The arrangement would end whenever Eisenhower decided that it was proper for him to resume the powers and duties of the presidency.

Eisenhower's integrity is shown by the fact that he proceeded in his letter to instruct Nixon on the action to be taken if the President were to be so disabled as not even be in a position to communicate anything to the Vice-President. Ike wrote:

"If any disability of mine should, in the judgement of any group of distinguished medical authorities that you might assemble, finally become of a permanent character, I would, of course, accept their decision and promptly resign my position. But if I were not able to do so, and the same group of consultants would so state, then you should take over not only powers and duties but the perquisites of the pre-

sidency, and set off a drive for a constitutional amendment to deal with the issue of presidential disability. The 25th Amendment, enshrined in the US Constitution in 1967, contains the following provisions: 1. The Vice-President will become acting President whenever he, and a majority of the Cabinet or such body as Congress may set up; transmits to the President, pro tem of the Senate and the Speaker of the House of Representatives a written declaration that the President is unable to discharge the powers and duties of his office.

2. The Vice-President's role as acting President will end when the President sends a written declaration to the same two congressional presiding officers that no disability exists.

3. However, if within four days of such a presidential communication, the Vice-President and a majority of the Cabinet or such body as Congress may set up, file a written declaration with the congressional presiding officers contradicting the President's claim, Congress is required to convene within 48 hours.

4. Congress is further required to decide the issue within 21 days. If by a two-thirds majority of both Houses, the written declaration submitted by the Vice-President is endorsed, he will continue as acting President. Otherwise the President will resume the powers and duties of his office.

Since the American people have become used to the existence of the 25th Amendment and aware of its provisions, uncertainty and confusion did not grip the nation when President Ronald Reagan was seriously injured by an assassin's bullet a few years ago. The hasty assertion by Secretary of State Alexander Haig that he was "in charge", only brought derision on his head and put him on the slippery slide towards oblivion. It was not Haig but the Constitution of the US that was seen by the American people to be "in charge".

It may be argued that ours is a parliamentary system where a CM or a PM does not hold office for a fixed, constitutionally-prescribed term. The legislature party that elected him as its leader could replace him with another if he were to become disabled. While the system is expected to function in this fashion, the confused situation that developed in Tamil Nadu recently is a danger signal. A similar state of uncertainty in the event of a prime ministerial disability may subject our system to enormous strain. If the country is to be safeguarded against that kind of a problem, we must evolve and adopt unambiguous procedures appropriate to our parliamentary system.

(Concluded)

THE RIGHT APPROACH TO MENTAL ABILITY AND QUANTITATIVE APTITUDE

BY EDGAR THORPE

Come off it exam-takers, be reasonable and face facts. Mere book knowledge is no knowledge. At least not in today's world which rotates on the axis of applied knowledge. All your theoretical study would seem to have educated you only if you have the ability to see through reason; can tackle problems in a jiffy; and are able to take snappy decisions. Hence this exercise in intelligence, comprising the theory and practice of problems on arithmetical reasoning and time sequence, coding and decoding, completion series, verbal analogies, table and graph reading, etc, which should mentally prepare you, reasonably well, for any forthcoming exam.

Taking the right decision, at the right time and place is important, particularly for those in top administrative positions. Quick decision-making requires mental alertness and the ability to quickly interpret data, establish logical relationship, arrive at the correct conclusion, make the right judgment and also plan carefully for the future. Therefore, mental ability and quantitative aptitude tests are being extensively used by the UPSC, Central/Regional Banking Recruitment Boards and other recruitment agencies hired by various private and public sector organisations, while selecting candidates for top administrative posts. These tests are known by various names, viz, Intelligence Tests, IQ Tests, Reasoning Tests, Mental Ability and Quantitative Aptitude Tests. However, all these tests are meant to judge the candidate's intelligence and his degree of mental ability.

Meanwhile, one's mental ability is not like measuring the length of a road or the size of a plot, because when tested at different times the same person can score differently. Also, an individual often scores very differently in different types of intelligence tests. Hence, it is not fair to judge an individual's mental ability on the basis of one type of intelligence testing scale or one set of intelligence questions. True, a person may have general intelligence 'g' which affects his score in any kind of test. But aptitudes vary from person to person. Some have scientific or technical ability and others verbal ability and numerical ability. One who has numerical or verbal ability will excel in solving problems involving quick calculations,

graph and diagram interpretation, etc. This is a special ability. But it is his general ability which will enable him to solve other problems.

It is for this very person that most of the intelligence tests, used for selection purposes, attempt to mix different kinds of problems in order to test a candidate's general ability 'g' and at the same time judge his numerical and verbal abilities. Indirectly, these tests measure the candidate's intelligence and aptitude.

Intelligence is directness of thought, capacity for making adaptations, and auto-criticism. It is the ability to adapt oneself to new situations and to carry on abstract thinking. Plato was the first to debate on this important attribute. He said that everyone had an appetitive part in him, an impulsive side to his nature. There was also an element of thought or reasoning in people. This also involved the ability to learn and denote an innate ability, which was present right from birth in an individual, viz., to react to different problems and find ways and means of solving them in the shortest possible time. The last two attributes of intelligence are measured through intelligence tests.

Aptitudes are special skills, knowledge and interests. Aptitude tests attempt to measure the potential of these special abilities. An aptitude is a combination of characteristics indicative of an individual's capacity to acquire (with training) some specific knowledge or skill, e.g., ability to do technical work, accounting work, etc. An aptitude test, therefore, is one which is designed to measure a person's potential ability in an activity of a specialised kind and within a

restricted range. The Quantitative Aptitude tests, which are very common for administrative positions, are used to measure the candidate's ability to reason through and understand quantitative concepts and relationships, while verbal ability is indicative of his general academic standard.

Therefore, Mental Ability tests are designed to measure intelligence whereas Quantitative Aptitude tests are designed to measure special skills, knowledge and interest of the candidate.

In this feature an attempt has been made to include all possible kinds of verbal and non-verbal Mental Ability and Quantitative Aptitude tests which can form a part of the Mental Ability and Quantitative Aptitude test papers in the IAS of Bank exams, including competitive exams conducted by the Defence Forces Recruitment Boards. To be successful in any exam, it is essential to familiarise oneself with the pattern of the respective test papers. It is not necessary that all those questions included in these sample test papers would be asked in your exam. However, by critically analysing the previous years' test papers, an effort has been made to project the trend that is prevailing in these exams. It is noticed that except for one or two items (which are added or deleted), the general format and types of questions asked remain more or less the same. Based on this conclusion, we have included here all such questions which may be expected in the competitive exams. Methods of solving these questions quickly and correctly have also been worked out along with solutions.

MENTAL APTITUDE

NON-VERBAL TESTS

Non-verbal tests are those tests in which use of words, figures, digits and letters of alphabets are not freely made. Here the knowledge of words, their meanings and usage is not required but one's power of logical reasoning, quickness of thinking and the ability to differentiate or find correlations between given objects/figures is of great importance. In these tests, diagrams, figures and designs are extensively used which helps to evaluate the candidate's mental set-up and ability rather than his academic knowledge and performance.

Originally these tests were designed by Prof Binet. He designed non-verbal intelligence tests to judge one's power of memory, the nature of mental images, imagination, attention, comprehension, suggestibility, aesthetic feelings or sense of appreciation and visual judgment. In 1905, Binet and his colleague, Simon, devised the Binet-Simon scale which was used to identify differences in mental development—in degree of brightness or dullness—with differences in the fields of development as represented by the average group of people. Most of the competitive exams today use non-verbal intelligence tests which are fundamentally based on the Binet-Simon scale.

The most commonly used non-verbal tests are: Analogies: Series completion; Spotting similar patterns; Arranging figures in proper sequence; Spotting the odd one out; Pattern completion; Spotting hidden figures; and miscellaneous verbal tests.

ANALOGIES

The dictionary defines 'analogy' as similarity or process of reasoning from parallel cases. These are also called relationship tests. The figures are presented in two sets: one is called Problem Figure and the other Answer Figure. The problem figure consists of two sets; the first set has two units marked 1 and 2 (sometimes separated by the sign:) and the second set (which is sometimes separated from the first set by the sign::), also has two units marked 3 and 4 (sometimes separated by the sign:). The figures in the first set bear a certain analogy or relationship with each other. The same relationship is reflected in the third figure of the second set. The fourth unit is either blank or contains a question mark (?). You have to choose from the set of answer figures marked A, B, C and D (sometimes E also), one figure bearing the same analogy as in first unit to fill the blank column or replace the question mark.

Directions: Study the first two figures of Unit 1 in Problem Figure set. Establish the relationship between them, which may be of: size/shape/direction/rotation/numbers/or sequence. Study the first figure of Unit 2 of Problem Figure. Compare it with first figure of Unit 1 and then try to find out the relationship by comparing it with figure 2 of Unit 1. Find the suitable figure having all those qualities/characteristics which are in figures 1, 2 and 3, from the Answer Figure choice. See example below:

Find the relationship/analogy in the first set of Problem Figure. Based on the same analogy find the suitable figure from Answer Figure to fit into the blank space.

Problem Figure.

Answer Figure

Answer: B—In the first two columns you will note that the number of circles have increased from 1 to 2 and in the second column one of

Classification

Non-verbal analogies may be further classified as follows:

Rotative relationship: The various elements given in the diagram (dots, arrows, circles, squares, triangles, etc.) rotate in a certain specific direction, e.g., clockwise; anti-clockwise; once clockwise and then anti-clockwise and vice versa; turn left to right or right to left; or once to left and then to right or vice versa. See example below:

Problem Figure

Answer Figure

Answer: The dot is moving clockwise inside the triangle from one angle to the other.

Directional relationship: The elements in the diagrams move from one direction to the other: left to right or vice versa, up and down and vice versa, from one side to the other, etc. See example below:

Problem Figure

Answer Figure

Answer: C and E—The arrow is moving from right to left.

Quantitative relationship: In such analogies, the relationship of increasing/decreasing (addition/subtraction) exists. The elements in the diagram either increase consecutively or decrease or alternately increase/decrease. See example below:

Problem Figure

Answer Figure

Answer: C—The small circles inside the large circle are increasing or decreasing in a specific direction.

Qualitative relationship: In such analogies, the diagrams (symbols) have a certain relationship. For instance:

- Angles/Circles/Squares/Parallel/Perpendicular
- Nature of diagrams (mathematical signs, geometrical figures, designs of plants/animals, road signals, alphabet/Arabic numbers, etc.)

Problem Figure

Answer Figure

Answer: D—All figures in the problem unit are different in characteristic and figure A in the answer unit presents that relationship.

Positional analogies: In such analogies the position of the elements change or interchange in a specific direction/order. See example below.

Answer Figure

Answer: D—The position of circle/triangle changes and interchanges.

Multi-relational analogies: In such questions there are several terms in the diagrams which change in a definite relationship with each other (qualitatively/quantitatively/directionally/natural etc). See example below.

Problem Figure

Answer Figure

Answer: D—Note the movement of smaller circle within the square, direction of the arrow inside and outside the large circle, increasing and decreasing number of dots outside the large circle.

SERIES COMPLETION

In this type of non-verbal tests, two sets of figures pose the problem. The sets are called Problem Figure and Answer Figure or Answer Pattern. Each Problem Figure changes in design to the preceding one. The Answer Figure set contains four or five figures marked A, B, C, D and/or E. The candidate is required to choose the correct answer figure which would best continue the series. These tests are based on Pattern Perception Tests originally devised in England by L.S. Penrose.

Directions: Study the Problem Figures carefully and try to establish the relationship between various units. From the answer choice, pick out the figure which is appropriate to complete the series. For example:

Answer Figure

Answer: D—Note the movement of the arrow in alternate figures. The movement of the dot in the circle is rotating clockwise leaving one column blank each time. The dot in the upper portion is moving from right to left alternately. Based on these parameters, figure D fits in the blank column in the Problem Figure.

Classification

Series completion tests may be classified as follows:

Quantitative type: In such questions, the items/elements decrease consecutively, increase consecutively, increase/decrease consecutively, or alternative quantitative relationship exists. In other words, the numbers of various items increase/decrease. See example below.

Problem Figure

Answer Figure

Answer: D—The dots are constant but small circles are decreasing one by one.

Qualitative series: The qualitative characteristics of various elements change to complete the series. See example below.

Answer Figure

Answer: C—All figures have lines which are increasing in subsequent figures, i.e., one line is being added in each subsequent figure.

Rotative/directional series: In each figure of the series, the various elements (items) move in a specific rotation or direction. The blank column has to be completed keeping in view the movement/sequence.

Answer Figure

Answer: D—The dot is moving in a specific direction.

Ratio-based series: The first and second figures in the Problem Figure are the same. The third and fourth figures should have the same ratio to complete the series. See example below:

Problem Figure

Answer Figure

Answer: A—The ratio of figures here is 1:2:3 and it should follow the same pattern to complete the series. Hence, 1 should come after 1:2:3.

Structural series: There exists a structural relationship in figures of the series. The figure from Answer Figure should bear the same structural relationship to fit into the blank column of the Problem Figure. See example below:

Problem Figure

Answer Figure

Answer: C—The figures have structural relationship, i.e., triangle, square, pentagon and hexagon. Other figures in Answer Figure are different in characteristic except C.

Multi-relational series: In such questions, there are several elements (items) in the diagrams which keep on changing in a definite pattern. There can be additions/reductions of elements. See example below:

Problem Figure

Answer Figure

SPOTTING SIMILAR PATTERNS

Quickness of thinking and mental ability to differentiate between forms is essential to solve these problems. There are three blocks of designs given in each question marked Block A, Block B and Block C. Figures in Block B bear some similarity to figure in Block A, but have an essential point of difference as well. The candidate has to select two figures in Block C which bear maximum similarity to figures in Block A, with the help of block B. See example below.

There are three blocks marked A, B and C. Two figures in Block C have some similarity with the figure/pattern in Block A. In Block B there are some figures that match those in Block A or have similarity/same analogy. Select two figures in Block C which bear similarity to or are based on the same analogy as those in Block A. Block B will help in determining the correct answer.

Answer: B & D—In Block A squares are becoming smaller in each figure. In Block B circles are becoming smaller in size in each column. In Block C, squares in columns B and D have the same correlation.

ARRANGING FIGURES IN SEQUENCE

In such questions, a set of five group of figures is given. Each set has figures which have some similarities but there is some difference in their natural sequence. Study the pattern in each block and arrange them in a complete series. See example below:

Name the serial number of the two figures in the following questions which are out of place and require interchanging of positions, in order to put the entire series in order.

Answer: Figure D should go in column E and figure E should come to column D; because in the preceding figures the shaded area is increasing in each subsequent figure and the size of the circle is decreasing. The last column should then be completely shaded.

SPOTTING THE ODD ONE OUT

Here, the Problem Figure and Answer Figure are the same. There is generally a battery of six figures marked serially 1 to 5 or A to E. Out of these six figures five are similar in some way and one is dissimilar. You have to cross out the one which is not matching or irrelevant or is different from the others in the series. See example below:

part from amongst a number of choices. In this example, the pattern is that in the first figure it moves from the circle inside the square and again in the third figure it moves inside the circle, i.e., taking the shape of the first figure A. Figure E does not follow the pattern of the preceding figures and as such it is odd.

Classification

Basically odd-one-out tests can be categorised as under:

Qualitative type: Here the diagrams have qualitative relationship, e., they pertain to one particular class and the one which is different in that characteristic is to be spotted out. See example below:

Answer: All the signs represent a mathematical relationship, except for the last figure which is a punctuation.

Quantitative type: In these diagrams the number of elements/items have a certain correlation. One of the figures does not bear that relationship. See example below:

Answer: All the diagrams have a certain number of lines which are decreasing consecutively, except for the last one.

Directional type: Here the direction of figures or their various elements have a certain relationship and one figure which is different from the remaining is to be spotted out. See example below:

Answer: 5—One line is horizontal whereas in the other diagrams all lines are inclined.

Divisional type: Each figure is divided into smaller divisions. These divisions are in a certain order which is missing in one of the diagrams. See example below:

Answer: 5—It has lesser number of divisions.

Formative type: The diagrams resemble each other in one form or the other. The figure with a difference is to be spotted out. See example below:

Answer: 5—All other diagrams are made of straight lines.

FIGURE COMPLETION

These are based on the Raven Progressive Matrices Tests (1938-56). They were developed in England and used during World War II. They are non-verbal scales developed to judge the candidate's ability to comprehend correlations between geometric figures and diagrams and to

part from amongst a number of choices. In this example, the pattern is that in the first figure it moves from the circle inside the square and again in the third figure it moves inside the circle, i.e., taking the shape of the first figure A. Figure E does not follow the pattern of the preceding figures and as such it is odd.

A pattern/figure is given, a portion of which is left incomplete. A few choices in the answer pattern are also given. Select the figure which fits into the blank space in the incomplete figure so that the original pattern is complete.

Answer: C.

SPOTTING HIDDEN FIGURES

These non-verbal tests judge the candidate's sense of observation and analytical aptitude. In such questions, the Problem Figure comprises just one figure. The Answer Figure contains four or five different blocks. The Answer Figure has a hidden figure of the Problem Figure, which is to be spotted out. See example below:

There is a block X which has the basic design. The four blocks that follow, i.e., A, B, C and D have a group of more complex figures. In one of these figure X is hidden.

Answer: B—This figure contains the pattern X.

MISCELLANEOUS NON-VERBAL TESTS

Analytical ability: Two of the designs shown below will fit in together to form a perfect square without leaving any gaps. They have to be selected. See example below:

Answer: Figures 4 and 3 will fit in to form a perfect square.

Lateral inversion: One main diagram X is given followed by several choices. The figure which will appear like the question figure X, when seen in a mirror or which represents the lateral inversion of X, has to be spotted. See example below:

Answer: Figure 2 is the lateral inversion of X.

HIGH-SPEED DIAGNOSIS

It will take precisely 15 sec to diagnose a patient's eyesight, thanks to an automatic eye refractometer developed by the associates of the Leningrad Optical Institute. The patient has only to look into its ocular and the data on the state of his eyesight immediately appear on a special display board. And to top it all, the computer attached to the refractometer, if necessary, will also print the prescription for eyeglasses. It will not be long before the familiar tables with letters disappear from eye-doctors' clinics.

1. P/1 (the numerical sequence is the squares of 1, 2, 3, and 4 and mark the position in the alphabet of the letters A, D, I and P)
2. H and 5 (the numbers in the dominos represent the position in the alphabet of the letters above)
3. U/6 (the vowels go from numerator to denominator. Their position backwards from Z in the alphabet is opposite)

VERBAL CLASSIFICATION

These questions are based on similarity that exists between the objects, words and alphabet. Items are grouped together on the basis of similarity and the one which does not belong to the group or which differs in some respect from the others has to be picked out (odd-one out). In Verbal Classification questions, words as well as letters can be used. Word classification can be based on: (i) Meanings; (ii) Characteristics and (iii) Common prefixes/suffixes or middle letters. In the case of letters classification, there can be questions based on (i) Position of letters in the alphabetical order; (ii) Capital and small letter relationship; (iii) Vowel and consonant relationship; and (iv) Repetition and omission of letters/consonants/vowels etc.

Directions: 1. Carefully observe the possible relationship between words (in their meanings/characteristics/common prefixes/suffixes or middle letters, etc.) and letters (with regard to their position in the alphabetical sequence, capital and small letter relationship or consonant/vowel relationship).

2. Observe if there is any repetition, omissions, etc.

3. Separate (tick) the word or letter combination which is odd or un-related to the remaining ones. See examples below:

Find the odd-one out in the following.

1. (a) Letter (b) Box (c) Book (d) Pot (e) Orange
Answer: (e) All letters end in a consonant but Orange ends in a vowel.

2. (a) London (b) Moga (c) Delhi (d) Bombay (e) Calcutta
Answer: (e) All contain two vowels except (e) which contains 3 vowels.

3. (a) Eye (b) Ear (c) Eat (d) Oats (e) Nose
Answer: (e) All start with vowels except (e) which starts with a consonant.

4. (a) abCD (b) EFgh (c) RStu (d) MNop (e) Ukl
Answer: (a) Starts with two small letters, whereas all others end in two small letters.

5. (a) Dear (b) Fear (c) Peel (d) Poor (e) Date
Answer: All have 2 vowels in the middle, except (e) which has two vowels which are alternating.

6. (a) Holiday (b) Monday (c) Sunday (d) Tuesday (e) Wednesday
Answer: Except (a) all are names of the days of the week.

7. (a) When (b) Who (c) Whom (d) Whose (e) Whosoever
Answer: (a) All refer to a person, except (a) which refers to time.

8. (a) When (b) Who (c) Whom (d) Whose (e) Whosoever
Answer: (a) All refer to a person, except (a) which refers to time.

9. (a) When (b) Who (c) Whom (d) Whose (e) Whosoever
Answer: (a) All refer to a person, except (a) which refers to time.

10. (a) When (b) Who (c) Whom (d) Whose (e) Whosoever
Answer: (a) All refer to a person, except (a) which refers to time.

11. (a) When (b) Who (c) Whom (d) Whose (e) Whosoever
Answer: (a) All refer to a person, except (a) which refers to time.

12. (a) When (b) Who (c) Whom (d) Whose (e) Whosoever
Answer: (a) All refer to a person, except (a) which refers to time.

CODING & DECODING TESTS

Codes are used for conveying secret messages from one place to another, especially in the Defence Services. These codes are based on various principles/patterns and are to be

correct message. These tests can be broadly classified into the following categories:

Letter Coding

Letters of the alphabet are used in the coding method. The letters do not stand for themselves but are allotted an artificial value based on some logical pattern. Questions on letter coding can be of various types.

Analogical letter coding: These codes are based on the analogy of one given example: If 'S P T F A' stands for 'B L A D E', how will you code the word 'B A L E'? No rule is involved. Only analogical relationship exists, i.e. S=B, P=L, T=A, F=D, A=E. Hence 'B A L E' can be coded as 'STPA'.

Coding on specific pattern: Letters are allotted an artificial value but in a specific pattern. If 'MAILED' is coded as 'NBJMFE', how will you code the word 'ACTED'? Here the letters stand for the next in sequence, i.e., A stands for B, B stands for C, D for E and so on. Therefore the answer should be 'BDUFE'.

Coding With Numerical Digits

Here the letters are allotted numerical values and vice versa. This is done in various ways, like:

Analogical coding with numerical digits: This is done by correlating a letter with numerical values: from the given example: If 'L O D E S' is coded as '4 6 3 2 1', how will you code 'D O E S'?

Answer: 3621—Here L=4, O=6, D=3, E=2 and S=1.

Coding with specific pattern: There are several types, e.g.,

- Forward sequence (A=1, B=2, C=3, and so on)
- Backward sequence (Z=1, A=26)
- Random sequence (A=2, B=3, or A=4, B=6, C=8)
- Circular sequence (D=1, E=2, and Z=23 A=23)

Here numbering can start from any letter: See example below:

1. If A C E are coded as 1, 3, 5, how will you code ACTED?

Answer: 1 3 20 5 4

2. If DATE is coded as 23 26 7 22, how will you code ZEAL?

Answer: 1 1 22 26 15

3. If CABLE is coded as 6-4-5-15-B, how will you code 'BACK'?

Answer: 5-4-6-14: here letter A=4 and subsequent pattern follows, i.e. B=5 and C=6 etc).

Adding up of numerical values: Here the values allotted to the alphabet are added up to form a code. The allocation of numerical values are based on the above pattern, i.e., forward/backward/random/circular sequence. For example: If LATE is coded as 58, how will you code Make?

Answer: 30—In late L=12, A=1, T=20, E=5, when added up become 38, therefore when M=13, A=1, K=11 and E=5, when added up will be 30

Mixed Coding:

Here letters along with Arabic numerals or Roman numbers are used to form codes. For example: If 'A 3 T 5 D' stand for 'A C T E D' and 'D 1 T 5 D' for 'DATED', how will you code 'FADED'?

Answer: F 1 d 5 d.

If 1 3 9 D is decoded it stands for A C I D.

These tests are based on blood and family relationship. At the outset they seem difficult and quite confusing. However, the best method to attempt them is to quickly draw a diagram depicting each relationship given in the question. For example:

- (a) A is the brother of B
- (b) C is the sister of A
- (c) D is the brother of E
- (d) E is the daughter of B

Who is the uncle of D?
A—brother of—B (statement a)
E—daughter of—B (statement d)
D—son of—B (statement c)

Hence D is the son of—B and A is the uncle of D.

Symmetrical relationship tests

In these questions either the age, height, sitting position or other symmetrical relationship attributes are to be discovered. For example:

- (a) A is richer than B
- (b) C is richer than A
- (c) D is richer than C
- (d) E is the richest of all

If they are made to sit in the above degree of richness, who will have the medial position?

E is the richest of all. Therefore, he is richer than D. Denote the above relationship by following the diagram and you will get the correct answer:

E > D > C > A > B

The sign > denotes richer than.

Answer: C

DIRECTION TESTS

For solving Direction tests, a candidate should have a knowledge of the direction of the analogy of map reading. He has to keep in mind the directions given in the question and the distance covered, and the right hand or left hand turnings.

Several types of questions based on direction reading can be framed as illustrated in the following examples:

Example 1: Sham travels 7 km to the north. Then turns to the right and walks 3 km. Then again he turns to his right and moves 7 km forward. How many kilometers away is he from the starting point?

place of stay at A and after travelling 25 km finds that she has driven in the wrong direction. She then turns to her right & travels 2 km and then she again turns to the right and drives straight another 25 km. How much distance has she now to cover to go back to the starting point?

Example 3: Rana travels to the north 10 km, turns left and travels 4 km and then again turns right and covers another 5 km and then turns right and travels another 4 km. How far is he from the right starting point?

Example 4: Seeta and Ram both start from a point towards north and walk 10 km. Seeta turns to her left and Ram turns to his right. Seeta waits for some time and then walks another 5 km in the same direction in which

3 km. Seeta then turns towards her left and Ram turns towards his right. Both now walk 15 km forward. How far is Seeta from Ram?

Example 5: A taxi driver commenced his journey from a point and drove 10 km towards north and turned to his left and drove another 5 km. After waiting to meet one of his friends, he turned to his right and continued to drive another 10 km. He has covered a distance of 25 km so far but in which direction would he be now?

Example 6: There is a ring road connecting points A, B, C and D. The road is in a circular form but having several *kutcha* approach roads leading to the centre of the circle. Exactly in the centre of the ring there is a tree which is 20 km from point A on the circular road. Presuming that one has gone round the circular road starting from point A and finishing at the same point after touching points B, C and D, if the person drives 20 km interior towards the tree, from

between B & C on the ring road, how much distance would he have to travel from the tree to reach the point between B & C on the ring road?

Example 7: A tourist drives 10 km towards east and turns to the righthand side and takes a drive of another 3 km. Then he drives towards west (turning to his right) another 2 km. Afterwards, he turns to his right and travels 7 km. How far is he from his starting point and in which direction would he be?

Answer choice

Example 1: (a) 7 km (b) 3 km (c) 6 km (d) 14 km

Example 2: (a) 25 km (b) 2 km (c) 4 km (d) 50 km

Example 3: (a) 15 km (b) 4 km (c) 5 km (d) 10 km

Example 4: (a) 15 km (b) 10 km (c) 8 km (d) 12 km

Example 5: (a) North (b) East (c) West (d) South

Example 6: (a) 20 km (b) 15 km (c) 80 km (d) 40 km

Example 7: (a) 10 km, east (b) 9 km, north (c) 8 km, west (d) 5 km west.

LOGICAL REASONING TESTS

The mental recognition of cause-and-effect relationship is called reasoning. It may be the prediction of an event from an observed cause or the inference of a cause from an observed event. Logical reasoning is a process of passing from the known to the unknown. It is the process of deriving a logical inference from a hypothesis through reasoning. This type of reasoning involves three important attributes, viz. What? Why? and How? Another important factor in logical reasoning is logical deduction. Deriving an inference from units of arguments which are called proposition in logic or deducing an inference from statements, is called logical deduction. For example:

(a) Man is mortal

(b) Ram is a man

Therefore, Ram is mortal

From statements (a) and (b) we derive a logical conclusion that Ram is mortal.

BASIC CONCEPTS IN LOGIC

Term means the *subject* or *predicate* of a

logical proposition. A *proposition* is the statement of a certain relation between two terms. All propositions either assert or deny something. The subject is that about which an assertion is made and whatever is asserted is called the predicate. The sign of relation between subject and predicate is called *copula*. For example:

"Man is mortal" is a proposition, the term Man is a subject and Mortal is predicate and both terms are joined by copula "is".

Proposition may be classified as follows:

(a) **Universal:** what is asserted applies to whole of the subject. Usually "ALL" is prefixed to such propositions. "All religious men are good" is a universal proposition.

(b) **Particular:** only part of the subject is covered. Usually "Some" is prefixed in a such propositions. "Some steaks are tough" is a particular proposition.

Universal & Particular propositions are based on quantity. They are further classified on the basis of *quality*, viz: **Affirmative** (e.g., Ram is an Indian) and **Negative** (Ram is not Indian).

Based on quality and quantity, propositions are further classified into:

(a) **Universal affirmative:** "All testotolers are short-lived" affirms something of the whole subject. This is represented by "A".

(b) **Universal negative:** "No politician is rancorous". Something is denied of the whole subject. This is represented by "E".

(c) **Particular affirmative:** "Some professors are hard-working". Something is affirmed of a part of the subject. This is represented by "I".

(d) **Particular negative:** "Something is denied of a part of the subject. "Some writers are professionals". This is represented by "O". Symbols A, E, I and O, above are adapted from first two vowels of "Affirmo" and "Nego". A & I are therefore affirmative and E & O are negative.

Distribution of terms

• A term is distributed when reference is made to all. A term is undistributed when reference is made to an indefinite part of the whole.

proposition, the subject is undistributed.

● The predicate in A proposition is undistributed and the same is true for I proposition. Hence affirmative propositions do not distribute their proposition.

● In E proposition the predicate is distributed and this also applies to O proposition.

The universal proposition distributes the subject, while particular proposition does not distribute the subject. On the other hand, the predicate is distributed in negative propositions but undistributed in affirmative ones. This can be diagrammatically described as follows:

A Proposition: "All Indians are religious-minded."

E proposition: "No birds are mammals". The classes are mutually exclusive.

I proposition: "Some birds are web-footed". Two classes are partially included in one another.

O proposition: "Some birds are not able to fly"

The shaded part of Circle (A) represents "Some birds". The circle (B) refers to all those who are not able to fly. The subject "Some" is undistributable but circle represents substances that are unable to fly; it means it covers All. So in O proposition predicate is distributed but not the subject.

Logical Relationship

The relation between propositions which are logically relevant are those in which the possible truth or falsity of one or more proposition limits the possible truth or falsity of others. For instance:

- Art cannot be taught
- If art is not knowledge, then art cannot be taught
- If art is knowledge, then it can be taught
- Art can be taught
- Art is knowledge
- Art is not knowledge

In (a) and (d) both cannot be true, since one affirms what the other denies and both cannot be false for the same reason. Same relation applies between (e) and (f). Such propositions are **contradictories**. In (b) and (c) there is no contradiction because art can be taught under certain contingencies. There is no mutual limitation upon the possible truth/falsity of these two propositions. They are called **independent**. (a) and (f) asserted jointly form a **conjunctive proposition** and ask for the relation with (e). This is, if both (b) and (f) are true, (e)

propositions so related that if the first is true the second is also true; but if the second is true, the first is **undetermined** or **not thereby limited** in its truth value are said to be in the relation of **superaltern** to **subaltern** is also called **superimplication**. The truth-value of a proposition in logic means either truth or falsity. For example: If p is true, q is true (here p symbolises any proposition and q any other). If p is false q is undetermined. If p is true, q is undetermined, if p is false, q is false.

Contradictories of two propositions both cannot be true, but one of them must be true. **Contraries** are extreme opposites, and do not between them exhaust all possibilities. They cannot both be true but they may both be false. **Sub-contraries** are precisely reverse of each other.

Logical Inference

Inference is a mental process of arriving at a conclusion from more than one proposition. Inferences are of two types. They are **deductive**: when we move from the general to the particular and **inductive** where the conclusion is wider in extent than the premises. In Intelligence testing mostly deductive inference ability is judged. Deductive inference may be further classified as (1) Immediate Inference and (2) Mediate Inference

Immediate Inference

Here the conclusion is derived from a single-premise. It is a process of directly coming to a conclusion from one premise. For example: Statement: Some students are not bright. Conclusion: Some bright persons are not students.

Statement: Industrial workers are paid well. Conclusion: Some well paid persons are industrial workers.

Questions on immediate inference can be set in two ways:

- A correct statement is given and then it is asked whether the inference can be derived from that or not.
- An incorrect statement (false) is given and then it is asked whether the inferences are correct or not.

The results obtainable by immediate inference process are termed **Conversion**; **Obversion**; **Contraposition**; and **Inversion**.

Conversion

From a given proposition we infer another proposition by interchanging or transposing the subject and predicate thereby:

- Subject and predicate interchange their places
- Quality does not change;
- Quantity (the denotation of the term) also does not change; and
- The converse of A is I, of E is E, I is I but O cannot be converted. For example:

Therefore, some bright people are students.

- (i) (Valid)
2. No man is virtuous (E)
Therefore, no virtuous being is a man (E) (Valid)
3. Some men are intelligent.
Therefore, some intelligent beings are men (I) (Valid)

But proposition O cannot be converted as it will become an invalid inference. For example:

4. Some men are not wise (O)
Some who are wise are not men. (Invalid).

Obversion

Conclusion is drawn by interchanging the quality without changing its meaning. Thereby:

- The subject of the given premise remains the subject in conclusion.
- The predicate of the conclusion will be contradictory to the given proposition by adding the word 'non'.
- Quantity does not change; and
- Quality changes: affirmative to negative, and vice versa. For example:

1. All men are free (A)
Therefore, no man is not free (E) Valid
2. No man is perfect (E)
Therefore, all men are non-perfect (A) Valid
3. Some businessmen are rich (I)
Therefore, some businessmen are not rich (O) Valid
4. Some men are not good (O)
Therefore, some men are not good (I)

Contraposition

Here a double change takes place. First the change is to obverse and then to converse. For example:

- All men are mortal (A)
- No non-mortal is man (E). Therefore no man is non-mortal (E)

Inversion

There are two types of inversions: Partial; in which the subject is contradictory of the original and the predicate same as the original. The inverse of: All physicists are mathematicians is either "some non-physicists are non-mathematicians", or "some non-mathematicians are non-physicists". The former is partial and the latter is full inversion.

Only universal propositions A and E can be inverted. The inverse of A and E is always a particular proposition I or O.

Here are some examples of Immediate Inferences

1. Statement: Industrial workers are hard-working.
Conclusion: Some hard-working persons are industrial workers.
Conclusion is True because converse of A is I.
2. Statement: Lady doctors are not less paid than male doctors.
Conclusion: Some male doctors are less paid than lady doctors.
3. Statement: No man is perfect.
Conclusion: Some imperfect persons are men.
Conclusion is True, contraposition of E, first obvert then convert:
4. Statement: All men are mortal.
Conclusion: No man is non-mortal.
Valid because obverse of A is E.
5. Statement: Some men are wise.
Conclusion: Some men are not unwise.
Conclusion is valid as obversion of I is O.

MEDIATE INFERENCE (Syllogism)

Here two premises are given on the basis of which the inference has to be drawn. For example:

1. All men are mortal.
 2. All teachers are men.
- Therefore, all teachers are mortal.

1. All men are good.
 2. Ram is a man.
- Therefore, Ram is good.

Syllogism may be further classified as follows:

Categorical: The given propositions or the premises are categorical. The conclusion is also categorical. For example:
All men are strong.
He is a man.

Therefore, he is strong.

Hypothetical-categorical: The major premise is hypothetical (conditional assertion) and minor premise is categorical. Inference (conclusion) remains categorical. For example:
If you come in time, you will meet him.
You came in time.

Therefore, you met him.

Disjunctive-categorical: The major premise is disjunctive (conditional proposition) and the minor premise is categorical. Inference also remains categorical. For example:
Either he is intelligent or you are teaching him.
He is intelligent.

You are teaching him.

Dilemma: The major premise is a compound hypothetical, the minor premise is disjunctive and the conclusion is either categorical or disjunctive. For example:

1. If A is B, C is D, and E is F, C is D.
2. Either A is B or E is F.
3. C is D.

Fallacies

In logical reasoning questions validity of the conclusion is to be determined. Fallacies are misleading arguments (sophism) and their validity, depends on certain rules and their violation amounts to committing a fallacy. There are various kinds of fallacies:

Syllogistic Fallacies

Undistributed middle: Study the following example:

All fruits are good for health.
Iron tonic is good for health.

Therefore iron tonic is good.
The middle term "good for health" is undistributed and, therefore, the conclusion is fallacious.

Illicit process: When the term undistributed in its own premise is distributed in the conclusion, an illicit fallacy occurs.

Some intelligent persons are liars. Of major premise.
Ram is a liar.
Therefore, Ram is intelligent.

Fallacy of two middle terms: Study the following examples:

Nothing is better than wisdom.

A loaf of bread is better than nothing.

Therefore, a loaf of bread is better than wisdom. In this example there are four terms: "Nothing", "better than nothing", "Wisdom" and "a loaf of bread".

Fallacies of Diction: Here the use of ambiguous words in statements amounts to a

Verbal Fallacies

Apples are good.

Good is the aim of man's life.

Therefore, the aim of man's life are apples.

Use of ambiguous phrases also leads to fallacies, or when the construction of the sentence is misleading. These fallacies are called 'fallacy of amphibology'. For example:
Gavaskar, Bedi will lead.

In this it is not clear as to who will lead-whether Gavaskar or Bedi.

Fallacies of composition and division: An argument becomes erroneous in composition when what is true of certain things, each taken separately, is assumed to be true of them collectively in the conclusion. For example:

Three and two are odd and even. Three and two are five. Hence, five is odd and even. An argument becomes erroneous in division when what is true of certain things collectively is taken to be true of them separately in the conclusion. For example:
Red Indians are disappearing.

He is a Red Indian.
Hence, he is disappearing.

In addition, there are fallacies relating to wrong accent, 'false causes' and arguing beside the point which can be easily made out from the given statement.

Relational Arguments

The properties of relation involved in a piece of argument also govern the validity of the conclusion. These relations are classified as follows:

Symmetrical: Where if the premise is correct, the conclusion is also correct.

Asymmetrical: Where if the premise is right, the conclusion is false.

Non-symmetrical: Where if the premise is true, the conclusion may or may not be true.

Transitive: Where relation travels from A to C via B or X to Z via Y.

Intransitive: Where relations do not travel from X to Z via Y.

Non-transitive relations: Where a relation may or may not travel through a media.

Reflexive: When the relation holds between a term and itself.

Irreflexive: When it cannot hold between a term and itself.

Non-reflexive: These may or may not hold between a term and itself.

The following examples are illustrative of relational arguments

1. A is equal to B
∴ B is equal to A (symmetrical-hence valid)

2. A is greater than B
∴ B is greater than A (Asymmetrical-hence invalid)

3. A is brother of B
∴ B is brother of A (non-symmetrical-not or may not be-hence may or may not be valid)

4. A is equal to H
B is equal to C
∴ A is equal to C (Transitive-hence valid)

5. A is father of B
B is father of C
∴ A is father of C (Intransitive-hence invalid)

Verbal Fallacies

B is good to C

A is good to C (Non-transitive-hence invalid-may or may not be good.)

7. Sham is as tall as Ram
Ram is as tall as Rajan
∴ Sham is as tall as Rajan (Valid-possess reflex-iveness, symmetrical and transitivity)

Forcefulness of Arguments

In such questions, a problem is posed in an interrogative sentence followed by two arguments, one of which begins with Yes and the other No. To arrive at a correct answer, the following points are to be borne in mind.

- (a) The argument should be factual-based on facts and not an assumption.
- (b) The argument should be specific and not generalised.
- (c) The argument should be in conformity with the prevailing ideas and truth and should support the current thinking of the majority.
- (d) There should not be any kind of ambiguity in the arguments.

The question below, an example of question format is followed by two arguments I and II. You have to decide which of the two arguments is strong and which is weak and mark the answer choice based on the following:

- (a) Only I is strong;
- (b) Only II is strong;
- (c) Both I and II are strong;
- (d) Either I or II is strong;
- (e) Neither I nor II is strong.

Statement: Computerisation in offices is a must to provide efficient services to the citizen.

Arguments: (i) Yes, because the work is done quickly and time is not wasted.
(ii) No, it will generate more unemployment.

Answer: (a) the Argument I is quite strong to support computerisation in offices.

LOGICAL REASONING vs COMMON SENSE REASONING

In logical reasoning you have to base the validity or falsity of the conclusion on the given premises. You are not concerned with the truth or falsity of the given premises. You have to presume they are correct, which in fact they may not be.

For example:

Statement:

Some men are cars. Ram is a man
Conclusion I: Some cars are men
Conclusion II: Some men are not cars.

From the above statements, we conclude that some men are cars because some cars are men and some men may not be cars. Actually, no man can be a car and no car can be a man. However, from logical deduction this can be concluded though actually it is wrong.

In common-sense reasoning, no doubt logical rules are helpful but you cannot arrive at a 100% correct answer. In such questions the answer choice is more than two, i.e., (a) True, (b) Probably True and (c) Probably False or Irrelevant. Here first you have to ascertain

is more than 50%, the probability is probably true, for reason that it is nearer to 100 than to zero. If it is less than 50%, then it is probably false because in that case it is nearer to zero. If it is zero, then it is absolutely false and if it is 100% true, then it is absolutely true. For instance:

Statement: All students of this class secured 1st division.
Roshan is a student of this class.
Roshan secured first division.

Answer : True: "All" includes Roshan and thus 100% true.

DIRECTIONS:

- When there is greater probability of being true, the answer should be marked probably true. In such cases following words/phrases support the decision:
Almost all, Nearly all, Mostly, Generally, Many, Normally, To a large extent, etc.
- When there is greater probability of being false, the answer should be marked probably false. In such cases following words/phrases support the decision:
Rarely, Nearly none, Almost never, Hardly, Only a few, Very few, Very little, Once in a while, etc.
- When there is no probability of being false, the answer should be marked true. Here generally qualifying words/phrases as follows help to decide:
All, Always, Whole, Everyone, Everybody, Each.
- When there is no probability of being True the answer should be marked false. In such cases following qualifying words support the conclusion:
None, Not at all, Never, Not even one, Not even once.

REASONING LOGICAL DIAGRAMS

In such questions, candidates are expected to establish a relationship among three or more items represented by diagrams. This requires a logical understanding and careful observation of the diagrams. The items represented by the diagrams may be individuals, groups, class/category of individuals, cities-district-state relationship or some other phenomenon. Generally two types of logical diagrams reasoning tests are used.

- Single diagrammatic relationship:** Here a diagram is given of which a few parts are numbered. The candidate is asked to point out which number represents a particular statement. For example: This diagram represents 3 segments of society overlapping each other, viz:

Circle=Educated youth Triangle=Unemployed youth, and Square=Employed youth.

Based on the above relationships given in the diagram, you have to point out which represents the following statements.

- Some educated youths are employed.
(1) (2) (3) (4) (5) (6) (7)

- Some educated youths are not employed.
(1) (2) (3) (4) (5) (6) (7)
- Some employed youths are not educated.
(1) (2) (3) (4) (5) (6) (7).

Answers

- 3 Figure 3 is both in circle and square, which shows educated youth and employed youth, respectively.
- 6 -Figure 1 is only in triangle which represents unemployed youth.
- 1 -Figure 1 is in part of the circle as well as in the triangle which means educated employed youth are included in that part of the diagram.
- 7 -Figure 7 is only in the square which shows employed youth who are not educated as the part of diagram is overlapping, the circle which represents educated youth.

Multi-diagrammatic relationship: In such questions, there are several diagrams (triangles/circles/squares etc) which represent different relationships. The candidate has to pinpoint a portion in the diagram that represents the particular statement. See example below:

Based on the above diagrams one has to find out which of the diagrams represent the relationship given in the following statements:

- Ludhiana, Punjab, North India
(A) (B) (C) (D) (E)
- Criminals, Police, Force
(A) (B) (C) (D)
- Educated People Employed People
(A) (B) (C) (D) (E)

ERRATA

In *History: Down the Ages* (Mar '85), the victor in the First Battle of Tarain was Prithviraj Chauhan and not Muhammad Ghori as published (*The Victor And The Vanquished*).

Amir Khusrau belonged to the medieval period of Indian history, having been born during the rule of Sultan Balban and having died during the rule of Sultan Muhammad-bin-Tughlaq, and not to the Mughal period, as published (*History Makers*).

The errors are regretted.—Editor

5. Rural Population, Agricultural Labourers, Businessmen

- (A) (B) (C) (D) (E)

Answers

- (C) Ludhiana is in Punjab and Punjab is in India i.e. Ludhiana = smaller circle, contained in little larger circle = Punjab which is contained in a bigger circle = India.
- (D) Criminals and Police Force are two different segments.
- (B) Some educated people are both employed and unemployed.
- (E) Man is a mammal and as such represented by the diagram E-1 and the crow is a bird, a separate category in the animal kingdom and as such represented by a separate circle.
- (A) Rural population can be businessmen as well as labourers.

Directions: To solve such questions generally the following relationship between various diagrams should be borne in mind:

- Represent 2 different items of population having no relationship with each other.

- Represent that one class/category of population is completely contained in the other.

- Represent that neither class/category is contained fully in each other but have members in common

- Represent that there are 3 groups/segments. None of them is fully contained within the other but they have members in common.

- Represent that two groups are completely contained in a bigger class of the population

These relationships can be further extended to include several other relations as well.

Quantitative Aptitude

This forms a part of Verbal Reasoning which requires the ability to reason with numbers, diagrams with numbers, and to deal with quantitative materials and ideas using commonsense as well as quick calculation techniques. In other words, you have to deal with figures for which you should have basic knowledge concerning quick calculations, geometry, Algebra and technique of interpreting data given in graphs, diagrams and tables.

This section involves:

- a) Questions of percentages, profit and loss, simple and compound interest, speeds, etc;
- b) Problems concerning geometry;
- c) Logical data interpretation;
- d) Interpretation of data given in the form of graphs, diagrams, tables, etc; and
- e) common-sense application, to solve general mathematical problems.

QUICK CALCULATION TECHNIQUES

For making quick calculations the following broad principles may be followed:

Vulgar and decimal fractions: For simplifying the fractions, remember the word 'BODMAS' where B, O, D, M, A and S stand for brackets of division, multiplication, addition and subtraction respectively.

Percentages: Method of expressing fractions or parts of an object. Hence 100% = 100 hundredths or 1 and 50% would be 50 hundredths or $\frac{1}{2}$. A decimal is converted to a percentage by moving the decimal point two places to the right. For example: 0.128 = 12.8%. To convert a percentage into a decimal, the decimal is moved two point places to the left. For example: 12.8 = 0.128. The following Table 1 should prove helpful.

Table 1

1% = 1/100	60% = 3/5
2% = 1/50	75% = 3/4
4% = 1/25	80% = 4/5
5% = 1/20	100% = 1
10% = 1/10	120% = 6/5
20% = 1/5	150% = 3/2
40% = 2/5	200% = 2
50% = 1/2	500% = 5

See examples below:

- The population of a state in a given year was 10,000. In one decade it increased by 15%. What is the increased population after the decade?
Answer: 15% = 115% increase. 115% of 10,000 = 11,500.
- What is 20% of 6,835 or 25% of 6,835?
Answer: Just divide the figure of 5 to get 20% and by 4 to get 25%, because:
a) 20 = $\frac{1}{5} \times 6835 = 5 + 6835 = 1367$
b) 25 = $\frac{1}{4} \times 6835 = 4 + 6835 = 1708.7$ or 1,709

Interest calculation

Interest = Amount \times Time \times Rate ($I = A \times T \times R$)

- Always assume rate of interest is annual rate of interest, unless otherwise men-

tioned in the problem.

- Assume simple rate of interest, if not specifically mentioned in the problem, as compound interest. See examples below:

At 6% rate of interest, calculate interest for 9 months on Rs 10,000?

9 months = $\frac{3}{4}$ of a year and 6% = $\frac{3}{50}$.

Hence $10,000 \times \frac{3}{4} \times \frac{3}{50} = \text{Rs } 450$.

Rs 5,000 increased to Rs 5,450 in 3 years.

Calculate the rate of interest.

Rs 450 added in 3 years, i.e. Rs 150 added annually. Hence: $150/5000 = 0.03$ or 3%.

If a certain sum of money doubles itself in 3 years at a certain simple rate of interest, in how many years will it become seven times at the same rate of interest? $3 \times (7-1) = 18$ years

Formula: No of years required for doubling the sum

\times
No. of times to be accumulated-1

These are examples of simple interest calculations. In compound interest calculations the interest is periodically added to the amount which is earning the interest. See examples below:

Calculate compound interest for 3 years on Rs 1,000 at 5% rate of interest per annum?

- Rs 1,000 @ 5% = Rs 1,050 (1st year)

- Rs 1,050 @ 5% = Rs 1,052.50 (2nd year)

- Rs 1,052.50 @ 5% = Rs. 1,157.63 (3rd year)

Answer: Total interest = Rs 57.63

Formula: Principal amount (P) \times interest rate (R) \times Time (T) = Interest (I)

For 1st year: $P \times R/100 = I_1$

$(P + I_1) \times R/100 = I_2$

$P + I_1 + I_2 \times R/100 = I_3$

Compound interest = $I_1 + I_2 + I_3$

Profit & Loss calculation

Formulae: PP = Purchase Price, SP = Selling Price

(1) PP = $\frac{SP}{(100 - \text{loss}\%)} \times 100$

(2) SP = $\frac{PP \times (1 + \text{Profit}\%) }{100}$

See examples below:

If Shyam incurred a loss of 15% by selling his goods for Rs 850, at what price should he sell it to get a profit of 70%?

$$PP = \frac{850}{(100 - 15\%)} \times 100 = \frac{850}{85} \times 100 = 1000$$

$$SF = 1000 \times (1 + \frac{70}{100}) = 1700$$

Answer: 1700

PP \times 100

Formula: SP = $\frac{PP \times 100}{100 - (\text{P\% on SP})}$ (P% stands

for Profit %)

Kishan buys an article for Rs 40 and sells it at a profit of 20% of the selling price.

What is the selling price?

$$40 \times 100 = \frac{40 \times 100}{100 - 20} \times 50$$

Answer: 50

Formula: SP = $\frac{PP \times (1 + P\%)}{100}$

You purchased a book for Rs 10 and sold it at a 5% profit. What was the selling price?

$$SP = \frac{10 \times (1 + 5)}{100} = 10.5$$

Discount calculations

See examples below:

What is the discount if a refrigerator which cost Rs 3,000 is discounted 7% on its price?

7% = 0.07 and discount = Cost (3,000) \times rate of discount (0.07)

Answer: Rs 210

Formula: Discount = Cost \times Rate of discount
If you sell an article for Rs 4,800 the price of which is Rs 5,000, what is the rate of discount?

$$\frac{5,000 - 4,800}{5,000} = \frac{200}{5,000} = \frac{1}{25} = 0.04 = 4\%$$

Answer: 4%

Formula: Rate of discount = $\frac{\text{Cost-price}}{\text{Cost}}$

Areas

1. Rectangle

Area = Length \times Breadth

Length = Area divided by breadth

Breadth = Area divided by length

Perimeter = 2 (Length + Breadth)

If AB = 5 ft and AD = 8 ft then area ABCD is 40 sq. ft.

2. Square

Area = side squared or side \times side

Perimeter = side \times 4

Side = Area

If AD = 5 inches, the area of ABCD is 25 sq inches.

3. 4-walled room

Area of 4 walls = 2 (Length + Breadth) \times height.

4. Parallelogram

Area = base \times height

If AD = 6 inches and BE = 4 inches, then the area of parallelogram ABCD is $6 \times 4 = 24$ sq. inches

Area = Avg. of the base \times height
 If $AB = 3$ yards, $AD = 7$ yards and $CE = 2$ yards, then the area of trapezoid ABCD is $(3 + 7) / 2 \times 2 = 10$ sq yards

Triangle

Area = $\frac{1}{2}$ (base \times height)
 If $AC = 5$ inches and $BD = 4$ inches, then area of the triangle is $\frac{1}{2} \times 5 \times 4 = 10$ sq. inches.

Circle

Area = πr^2
 Where r is the length of a radius
 Since $d = 2r$ where d is the length of a diameter, $A = \pi (d/2)^2 = \pi d^2/4$. π is a number which is approximately $22/7$ or 3.14 .
 If $OP = 2$ inches, then the area of the circle with centre O is $\pi 2^2$ or 4π sq. inches.

LOGICAL INTERPRETATION OF DATA

Such questions require comprehension ability and quick calculation skill. Generally, the ability to make quick calculations concerning percentages is very essential. See examples below:

65% of the population surveyed read English newspapers, 40% of the population surveyed read Hindi newspapers, 25% read both Hindi and English newspapers. What percentage of the people surveyed read neither English nor Hindi newspapers?

(a) 75% (b) 80% (c) 15% (d) 0

Solution: Note the following diagram:

= 80% people read Hindi and English newspapers
 = 20% read neither Hindi nor English newspapers

As 25% of the people surveyed read both Hindi and English newspapers and 40% read only Hindi newspapers, $40 - 25 = 15\%$ are the people who read Hindi papers but not English

Who read English and Hindi newspapers.
 Therefore, $100 - 80 = 20\%$ are those who do not read any newspaper.

Study the following diagram in which:

A = Youth club members
 B = Women club members
 C = Family (couples) club members

If Club A has 100 members and Club C has 200 members, and 25% members of Club A and 50% members of Club C, are members of Club B; as well, what is the total membership of Club B?

(a) 125 (b) 75
 (c) < 125 (d) > 125

Solution: The space which is not overlapped by square A and circle C shows that there are some members who are not included in A and C. Hence the membership of B should be above 125. Therefore, the correct answer choice is (c).

In the following diagram, squares A, B and C represent three different groups. Group A and B have no direct correlation. They are related to group C as it has common members belonging to both groups A and B as is seen by overlapping of the diagram. If total members of group A = 460 and group B = 250 and 30% of the members of group C are also members of group A and 10% of the members of group C are also members of group B, what is the total membership of group C?

Solution: 10% of 250 = 25 and 30% of 460 = 138 which add up as $25 + 138 = 163$. 163 represents 40% of members of group C, the 60% should represent 228 and $60\% + 40\% = 100\%$, means $163 + 228 = 408$ total members of group C.

MATHEMATICAL-SYMBOL RELATIONSHIP

These tests require knowledge of elementary mathematics as well as skill of logical correlation of symbols. See examples below:

1. Some relationship has been expressed through mathematical signs as follows:

$+$ = Multiplication
 \times = Division
 $+$ = Addition (Plus)

= Minus (-)

Based on the above relationship or symbols, the following questions may be solved.

- (a) $(15 \div 4) + (3 + 6) - ?$
 (a) 90 (b) 99 (c) 0.99 (d) 45
 (b) $1/64 \div 1/16 - ?$
 (a) $2/64$ (b) $3/64$ (c) $3/80$ (d) $3/48$
 (c) $\frac{3}{4} \times (\frac{1}{3} + \frac{4}{5}) - ?$
 (a) $8/16$ (b) $9/16$ (c) $4/16$ (d) None of these
 (d) $2/7 \times 6/7$ of $1\frac{1}{3} - ?$
 (a) $\frac{1}{2}$ (b) $\frac{1}{4}$ (c) $\frac{3}{4}$ (d) $2/4$
 (e) $[(16 + 2) \div] + [(2 + 2) \div 3] - ?$
 (a) 20 (b) 30 (c) 35 (d) 15

2. Based on the following symbolic relationship, the questions that follow may be answered.

$+$ = equal to
 \neq = not greater than
 \times = less than
 \leq = not less than
 $<$ = greater than
 $=$ = plus
 \neq = not equal to
 $-$ = Minus
 $+$ = Plus
 \neq = not less than

- (a) $(a - b) (a = b)$
Answer: $a^2 \neq 0$
 (b) If $a \times b \times c$, it implies
Answer: $a + b \neq c$
 (c) If $a < b \neq c$, it follows
Answer: $b \neq a + c$
 (d) If $a < b < c$, it does imply that:
Answer: $a + b \times c$
 (e) If $x + y < z$, it implies that
Answer: $x + y \neq z$
 (f) $5 - 502 + 602 + 803 + ?$
Answer: t

FLYING LIGHT

The new aluminium-lithium alloys produced by British Alcan Aluminium (BA) will soon allow aircraft a 10 to 20% reduction in weight. Lithium, which is the lightest of all metals and very common, oxidises rapidly in the air and melts at a fairly low temperature. Once alloyed with aluminium however, lithium metal is stable and non-reactive. The advantages for the aircraft manufacturing industry are clear. There is substantial weight saving compared with other alloys, and its corrosion resistance is proving superior to that of the conventional alternatives.

Work on the new aluminium-lithium alloys started in the mid-1970s, when Britain's Royal Aircraft Establishment researched and discovered a novel advanced alloy of aluminium, lithium, copper and magnesium.

The cost of the new alloys is higher, but BA insists the effect is marginal. An aircraft builder who uses these materials does not incur the expense of acquiring new machines or training operators in different methods. The materials can be worked with existing equipment using conventional techniques. This contrasts with the alternative, reinforced plastics composites, which need investment in all these aspects.

The new alloys' stress fracture toughness, fatigue behaviour and resistance to fatigue crack propagation are all a considerable improvement on current materials. In the constant search for making the aircraft lighter, the new alloys are definitely a milestone.

Practice Tests

In these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to ensure that the questions which are of the same standard as those you'll face in your exam.

Rating: Evaluate your performance on the basis of the following:

100 questions in 60 min
60 questions in 60 minutes—Good
50 questions in 60 minutes—Fair
35 questions in 60 min

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problem some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

MENTAL ABILITY

FOR CIVIL SERVICES, GIC, ASSTS' GDE, POs, CAT...

Now that you have become familiar with intelligence testing and the various reasoning tests involved, attempt these practice tests (meant for Civil Services Prelims, Assistants' Grade, AAO Exam of the GIC, POs, CAT and other management entrance exams) to assess your performance and further eliminate any weak spots that come to light.

Time: 45 minutes

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer. 3. Then rate yourself as follows:

Excellent.. 93-98 Very Good 87-92 Good. 81-86 Fair 75-80 Poor .. Below 75

DIRECTIONS For each of the following questions tick mark the choice that best answers the question. Answers are given at the end of these tests

VERBAL TESTS

I **Directions** In questions 1 to 6 there is a group of five letters in each. Mark the one which is different or odd.

- | | |
|------------|------------|
| 1 (a) step | (b) stop |
| (c) stay | (d) blast |
| (e) steep | |
| 2 (a) book | (b) pencil |
| (c) copy | (d) ink |
| (a) blade | |
| 3 (a) bale | (b) fade |
| (c) load | (d) take |
| (e) rake | |
| 4 (a) loop | (b) fool |
| (c) peel | (d) deal |
| (e) kiln | |
| 5 (a) fear | (b) dear |
| (c) deer | (d) fork |
| (e) plot | |
| 6 (a) take | (b) takes |
| (c) table | (d) taking |
| (e) took | |

II **Directions** In questions 7 to 12, some letters are set in a specific order. Study the series carefully and fill in the blanks from the choices given under each question.

- 7 A D E H I L M —
(a) N (b) O
(c) P (d) Q
- 8 M P S V —
(a) U (b) Z
(c) W (d) Y
- 9 O P R S U V Z Y —

- (a) LM (b) NO
(c) OP (d) AB
- 10 Q N K H F —
(a) F (b) B
(c) F (d) A
- 11 E H K N Q —
(a) P (b) Q
(c) S (d) T
- 12 A C F J O —
(a) P (b) Q
(c) U (d) V

III **Directions** Questions 13 to 18 have disarranged letters serially numbered. By arranging the letters in proper order, meaningful words can be formed. The choices under each question contain serial numbers of the letters. Mark the choice which contains the serial number of a meaningful word.

- 13 R S S E F R O P O
1 2 3 4 5 6 7 8 9
(a) 867542391 (b) 876453219
(c) 154238789 (d) 915678342
- 14 H I S O O L F
1 2 3 4 5 6 7
(a) 3624571 (b) 4572613
(c) 7456231 (d) 4752613
- 15 S T T O O A M E
(a) 35762418 (b) 24762581
(c) 57362418 (d) 24762518
- 16 U R S O V L A F
1 2 3 4 5 6 7 8
(a) 86674213 (b) 13426587
(c) 86754123 (d) 68754213
- 17 N I G T N N E I D
1 2 3 4 5 6 7 8 9

- (a) 367624189 (b) 819764253
(c) 269714835 (d) 216748539
- 18 D T E N M C U O
1 2 3 4 5 6 7 8
(a) 18675432 (b) 18673542
(c) 18675342 (d) 18675342

IV **Directions:** In questions 19 to 24, disarranged letters are given. Each letter bears the alphabetic number of the letter (i.e. A=1, B=2, C=3, etc). Arrange the letters to make a meaningful word and mark the choice containing the correct serial number of letters that make a meaningful word.

- 19 N E E A M I X
(a) 5-14-9-13-24 5-1
(b) 14-5-9-24-13-1-5
(c) 5-24-1-13-9-14-5
(d) 5-24-1-9-13-1-5-14
- 20 S F H B R N A C
19 5 8 2 18 14 1 3
(a) 2-18-14-1-3-5-8-19
(b) 2 18 1 14 3-8-5-19
(c) 18-2 1 14-3 8 5-19
(d) 19-18 1 2-14 3-8-5
- 21 Y R U A D L N
25 18 21 1 4 12 14
(a) 12 1-21-4-14-25 18
(b) 12-1-21-4 14 18 25
(c) 12-1-21 14 4 18 25
(d) 12 1-21 14-18-4 25
- 22 H R A C S T
8 18 1 3 19 20
(a) 19-20-1 18-3-8
(b) 19-20-1-18-8-3
(c) 19-20-18-1-3 8
(d) 19-20-3-18-1 8
- 23 E T U O S D
5 9 20 21 15 19 9
(a) 15-21-20-19-9-5-4
(b) 15-21-20-19-9-4-5
(c) 15-21-20-19-4-9-5
(d) 15-20-21-19-4-5-9
- 24 E N R U A F C
5 14 18 21 1 6 3
(a) 6-21-18-14-1-5-3
(b) 6-21-18-14-1-5-3
(c) 6-21-18-14-1-3-5
(d) 6-21-14-18-3-5-1

V **Directions:** Questions 25 to 30 relate to CODING/DECODING. Find the principles taken for coding and mark the correct choice.

- 25 How will you code ACCOMMODATE if S and V are coded as 8 and 5?
(a) 26-24-24-12-14-14-23-22-26
(b) 26-24-24-12-14-14-23-26-22
(c) 26-26-26-12-14-14-23-26-22
(d) 26-24-12-14-14-23-21-26-22

- Given below?
- (a) 13-15-2-12-13 (b) 13-2-15-12-13
(c) 12-13-2-15-12 (d) 13-2-15-13-12
27. If 2-1-3-11-5-4 stand for BACKED, how will you write CARTONS?
- (a) 3-7-18-20-14-15-19
(b) 3-1-18-20-15-14-19

28. If 10, how will you write PESTICIDE?
- (a) 11-22-8-18-7-24-18-23-22
(b) 11-22-8-7-18-24-23-22
(c) 10-21-7-8-17-23-17-22-21
(d) 12-23-9-19-8-25-19-24-23
29. If FIRE is coded for a secret message to be teleprinted as EHQD, how is the answer

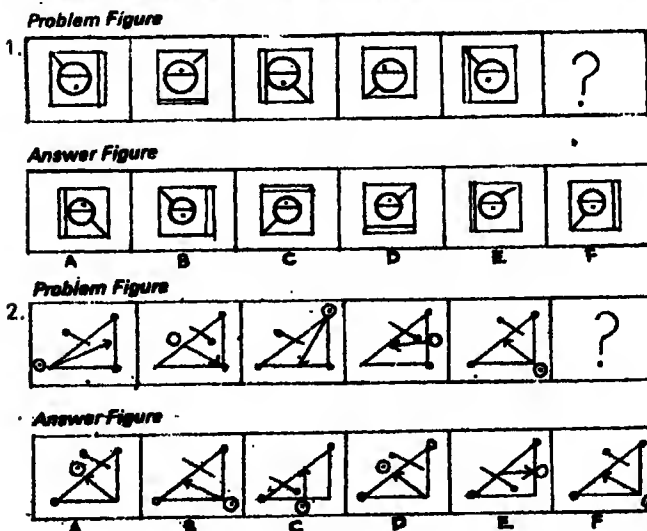

30. SEW is a secret code for MOVE. Take a reply DIFFICULT using similar code as for MOVE above.
- (a) E-J-G-G-J-D-V-M-U
(b) F-K-H-H-K-E-W-N-V
(c) E-J-G-G-J-E-V-M-U
(d) E-J-C-C-J-D-V-M-U

NON-VERBAL TESTS

I. Spot the odd one out among the following set of figures:

II. Name the serial number of the figure in the answer figures which will complete the series, i.e., fit in the last column of the problem figure:

Problem Figure

Answer Figure

Problem Figure

Answer Figure

Problem Figure

Answer Figure

III. Find the relationship/analogy in the first set (2 figures) of problem figure. Based on the same analogy, find the suitable figure from answer figure to fit in the blank space in the following questions:

Problem Figure

Answer Figure

Problem Figure

Answer Figure

Answer Figure

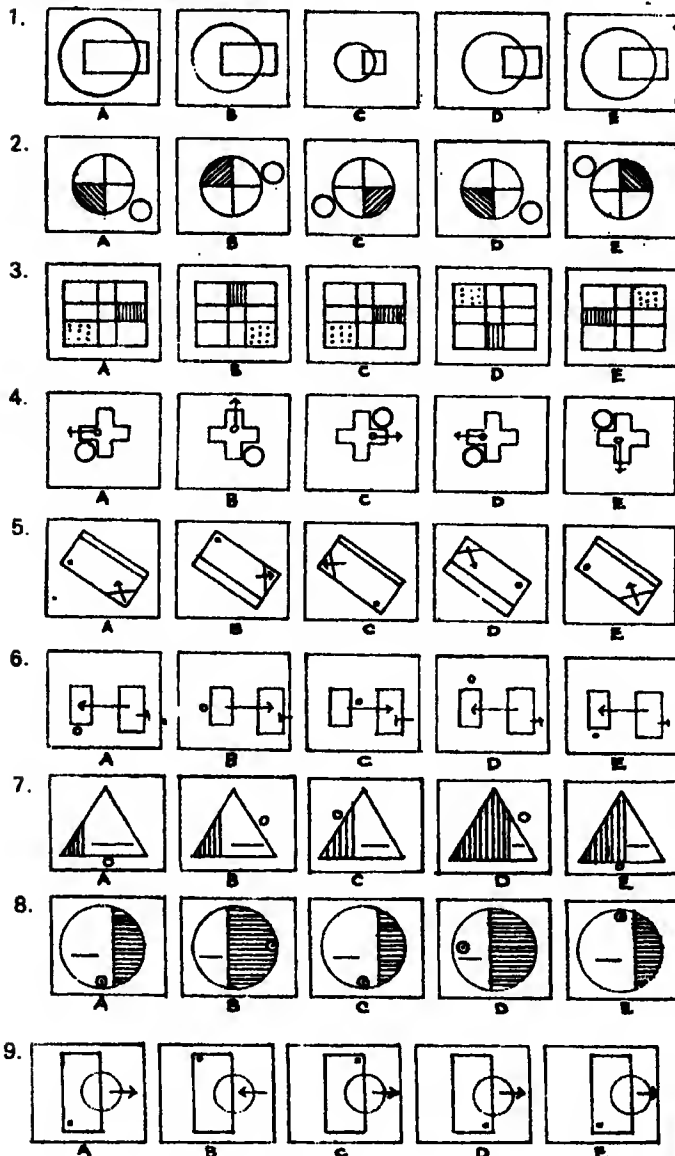

Problem Figure

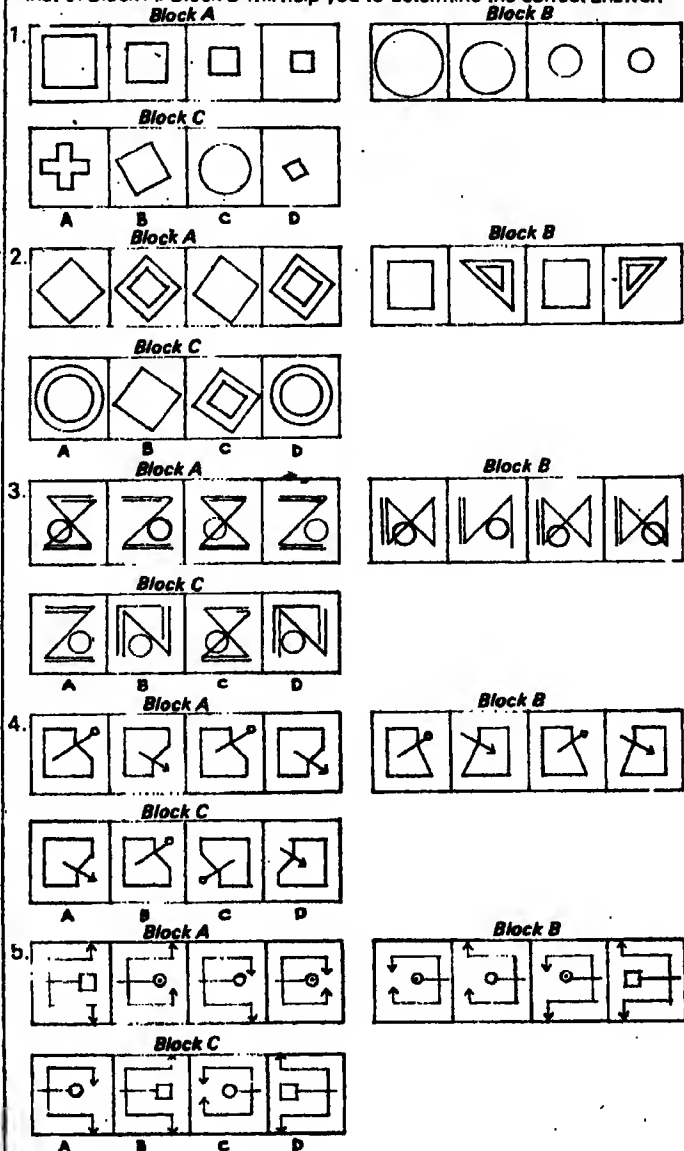

Answer Figure

IV. Name the serial number of the two figures in the following questions which are out of position/place and require interchanging of position to put the entire series in order:

V. In each of the following questions, there are three blocks of figures A, B and C. Two figures in Block C have some similarity with the figures/pattern in Block A. In Block B there are some figures that match with Block A or are similar/have same analogy. You have to select two figures from Block C which bear similarity or are based on the same analogy as that of Block A. Block B will help you to determine the correct answer.

I Choose from the figures given below the diagrams to represent the relation among the three categories/classes of objects that follow in the terms in questions 1-15:

(Size and designs have no correlation here)

1. Asia, India, Calcutta
2. Cement, bricks, building construction materials
3. Crow, parrot, hen
4. Crow, parrot, birds
5. Tables, chairs, furniture
6. Married, bachelor, businessmen
7. *Newsweek*, *Dharmayug*, magazine
8. Teachers, graduates, people
9. Boys, naughty, serious
10. Stenographers, typists, hockey players
11. Slim, females, dancers
12. Married man, husband, father
13. Doctors, educated, bachelors
14. Punjabis, Sikhs, doctors
15. Punjabis, Sikhs, Hindus

II The diagram below depicts the students of B.Sc. final year:

What does the shaded portion depict?

- (a) The students who study Chemistry and Physics
- (b) The students who study Physics and Maths
- (c) The students who study Chemistry, Physics and Maths
- (d) The students who study Chemistry and Maths

III The large square on the left represents Punjabis and the right represents Haryanavis. Which of the figures shows a correct representation of Sikhs and Christians?

IV The four diagrams below are of the same alphabet cube, which has a letter on each of its six faces. All faces from figure A to C have three letters visible, except figure D in which one face is blank. Which letter should appear on the blank face?

REASONING TESTS

I. In the following statements a situation is explained in two premises, followed by a conclusion. Decide whether

- (a) conclusion necessarily follows from the statements
- (b) conclusion is only a long-drawn one
- (c) conclusion definitely does not follow from the statements
- (d) conclusion drawn is doubtful

Draw your answer only from within the statements:

1. Statements

1. Milch cattle mostly live on grass.
2. Other animals also depend on grass.

Conclusion

Therefore, grass makes lawns look beautiful.

- (a) (b) (c) (d)

2. Statements

1. High calorific diet, full of carbohydrates, is good for labourers.
2. For desk-bound workers, excess sugar is harmful.

Conclusion

Therefore, for people who indulge in physical work, carbohydrates are not as harmful as for desk-bound workers.

- (a) (b) (c) (d)

3. Statements

1. Tuberculosis (TB) is a contagious disease but is curable.
2. Cancer is not contagious but is incurable.

Conclusion

- (a) (b) (c) (d)

4. Statements

1. Students, who study throughout the year, may succeed.
2. Both Ram and Sham are studying hard right from the beginning of the year.

Conclusion

Both of them must succeed.

- (a) (b) (c) (d)

5. Statements

1. Hard-working people come up in industries.
2. Hard-working people are generally well-paid.

Conclusion

Ramesh is hard-working and must be well-paid.

- (a) (b) (c) (d)

6. Statements

1. Happiness keeps a man away from diseases.
2. Ram keeps himself happy.

Conclusion

Therefore, Ram will never become sick.

- (a) (b) (c) (d)

II. In each of the following questions two or three statements are given, followed by a conclusion. Examine the conclusion separately in the context of the facts given and decide upon its degree of truth or falsity. Mark conclusions as follows:

- (a) Definitely true
- (b) Probably true
- (c) Data is insufficient
- (d) Probably false
- (e) Definitely false

1. Statements

1. When a gun fires, light and sound are both produced.
2. From a distance we see light first followed by sound

Conclusion

Therefore, light travels faster than sound.

- (a) (b) (c) (d) (e)

2. Statements

1. Patients of blood cancer become anaemic and show swelling on their feet.
2. There can be other reasons which make Ram anaemic.

Conclusion

Therefore, Ram is suffering from blood cancer.

- (a) (b) (c) (d) (e)

3. Statements

1. Chlorophyll gives green colour to plants.
2. It makes food for the plants by photosynthesis.

Conclusion

Therefore, chlorophyll is an essential component of the plant kingdom.

- (a) (b) (c) (d) (e)

4. Statements

1. There are several planets in our universe.
2. Some of them have the same atmosphere as earth.

Conclusion

Therefore, there may be possibility of human life elsewhere in our universe.

- (a) (b) (c) (d) (e)

QUANTITATIVE APTITUDE

FOR GIC, ASSTS' GDE, IES/ISS...

And now attempt this practice test meant for the AAO Exam of GIC, Assistants' Grade Exam, Indian Economic Service/Indian Statistical Service and other exams.

DIRECTIONS: For each question, tick mark the choice that best answers the question. Answers are given at the end of these tests.

DATA INTERPRETATION

I Study the following diagram which depicts household expenditure of a family on various main heads and answer the questions that follow:

HOUSEHOLD EXPENSES OF URBANITE FAMILY

A = Expenses on food

B = House rent/water and electricity

C = Children's education (school fee/books/stationery, etc)

D = Clothing (summer/winter dresses/soft furnishing, etc)

E = Miscellaneous (Medical/holidays, entertainment/guests, etc)

- 1 Take-home pay of a family is Rs 2,200. How much amount on an average are they paying towards clothing/soft furnishing per month?

- (a) Rs. 300 (b) Rs 396
(c) Rs 264 (d) Rs 330

The above family is able to cut down various ear-marked household expenditure and is able to save 5% every alternate month and put the same away for emergencies. In case they do not use this amount at all for four years, how much amount will they have saved?

- (a) Rs 1,320 (b) Rs 1,100
(c) Rs 2,640 (d) Rs 2,460

A family is spending Rs 1,700 towards house rent, electricity and water, and Rs 2,040 towards expenses on food/milk/fruits, etc. The remaining amount being spent on items "C", "D" and "E" based on the diagram. What is the monthly income of this family?

- (a) Rs 5,800 (b) Rs 6,000
(c) Rs 6,300 (d) Rs 6,800

A newly married couple is together earning Rs 3,500. If they spend their monthly earning based on the diagram, how much can they save during the first two years of their marriage?

- (a) Rs 2000 (b) Rs 10,000
(c) Rs 10,080 (d) Nil

If a family is earning Rs 6,800 per month, how much rent per annum would they be paying?

- (a) Rs 1,700 (b) Rs 20,000
(c) Rs 20,400 (d) Rs 20,200
6. If a family spends Rs 6,600 per annum towards house rent including other amenities (water/electricity, etc), what should be their monthly income (take home salary)?
- (a) Rs 3,500 (b) Rs 2,200
(c) Rs 6,800 (d) Rs 6,500
7. A family, earning Rs 3,500 per month, went on holiday for two weeks. How much could they have saved on food if they were staying with relations during the holidays?
- (a) Rs 9/5 (b) Rs 1,050
(c) Rs 525 (d) Rs 515
8. If a family is spending 30% towards food, 25% towards house rent and 15% on miscellaneous expenses, what should be their monthly earnings if they spend Rs 816 per month towards their children's education?
- (a) Rs 6,000 (b) 6,600
(c) Rs 6,800 (d) Rs 6,875

The following tests are designed to assess your ability to interpret data from graphs and diagrams and at the same time make simple calculations.

II The following graph represents aggressive sales activities undertaken by a food processing company during the period 1970-76. Study the graph carefully and answer questions that follow

- 1 In which year did the company's sales operations nearly double over 1970-71?
- (a) 1974-75 (b) 1975-76
(c) 1971-72 (d) 1972-73
- In the year 1973-74, the total sales outlets of the company as depicted in the graph were nearly 45,000. This represents an

percentage of the sales boosting programme undertaken by the company.

- (a) 3.5 (b) 2.0
(c) 4.0 (d) 4.5

3. The percentage increase achieved during 1973-74 over the period 1970-71 is

- (a) 400 (b) 300
(c) 200 (d) 450

4. In 1975-76 the growth over 1970-71 represents—times increase in the company's selling operations?

- (a) 4 (b) 5
(c) 4-1/2 (d) 5-1/2

5. During which year was the growth rate of distribution system the highest?

- (a) 1972-73 (b) 1973-74
(c) 1974-75 (d) 1971-72

6. During which year was growth rate the worst?

- (a) 1972-73 (b) 1974-75
(c) 1973-74

- (d) Progress was even during all the years

- III Study the following statement minutely and answer the questions that follow:

(Figures per 1000 persons)

Year	Birth rate	Death rate	Child ds
1978	80.7	71.3	20%
1979	51.8	41.7	19%
1980	54.3	44.2	20%
1981	60.7	50.6	19%
1982	75.2	65.1	21%
1983	79.2	60.1	17%
1984	78.3	66.4	22%

1. From the above table it follows that the maximum addition of population took place during the year—

- (a) 1980 (b) 1982
(c) 1983 (d) 1984

2. Which year had the minimum growth in population?

- (a) 1979 (b) 1984
(c) 1980 (d) 1978

3. Death rate remained static during—

- (a) 1979-1980 (b) 1979-1982
(c) 1981-1983

- (d) It did not remain static at all

4. Which year was the best from the over-all health/welfare point?

- (a) 1984 (b) 1982
(c) 1979 (d) 1983

IV The following diagram represents the domestic budget of a family. Study the various expenditures involved and answer the questions that follow:

DOMESTIC BUDGET OF FAMILY "X"

A = Expenditure of food

B = House rent

C = Entertainment

D = Education and maintenance of children

salary plus 10% as house rent subsidy on the monthly salary. If he pays 18% of his total emoluments as house rent, calculate the amount of house rent per month he is paying.

- (a) Rs 618 (b) Rs 600
(c) Rs 666 (d) 675
- The statutory deductions towards Provident Fund @ 12% per month of the basic salary works out to be Rs—per annum.
(a) Rs 4,854 (b) Rs 4,845.6
(c) Rs 44.85 (d) 4,485.6
- After Provident Fund deduction and payment of house rent, what is the take-home pay packet of the family X based on the above data?
(a) Rs 2,631 p.m. (b) Rs 2,600 p.m.
(c) Rs 2,355 p.m. (d) Rs 2,350 p.m.
- What is the total amount per month the family spends on food and entertainment expenses?
(a) Rs 1,100 (b) 1,144
(c) Rs 1,104 (d) Rs 1,140
- If the couple would have been newly married without children, what is the maximum amount they could have saved in addition to Provident Fund?
(a) > Rs 1,180.70 (b) > Rs 1,118.57
(c) - Rs 1,187.75 (d) (Rs 1,187.75
- If a 12.5% increase in the salary is given, what will be the gross emoluments per month?
(a) Rs 4,248.31 (b) Rs 4,240.31
(c) Rs 4,206.20 (d) Rs 4,206.25

ARTIFICIAL MAN

Scientists have finally manufactured an artificial substitute for man himself. This artificial human being, jointly developed by human functions laboratory of the Swedish Institute of Architectonics and UNIDO, is used in the institute's microclimate laboratory. 'Eti-man' as it is called is a life-sized doll equipped with micro-processor sensors in various parts of its body. The changes in temperature of its skin surface are recorded and processed by a computer. Evaluation of these provides the answer to the question of how a living human being would react to changes in any given situation.

PROBLEMS

In the shortest possible time, solve the following problems based on the following diagrams:

1. A is the centre of the circle. B A C D forms a rectangle. $CX = 12''$ and $AY = 10''$. What is the length of the dotted line AC?

- (a) $12''$ (b) $22''$
(c) $10''$ (d) $15''$
2. The following quadrant contains a rectangle A B D C. Figures between D C line are given. What is the length of B C?

- (a) $16''$ (b) $32''$
(c) $8''$ (d) $20''$
3. How many triangles and squares are there in the following diagram?

- (a) 16 & 12 (b) 12 & 24
(c) 24 & 12 (d) 12 & 16
4. The number of square units in the area of C A B is

- (a) 15.5 (b) 10.0
(c) 17.5 (d) 20
(e) 12.4
5. In terms of the square units in the diagram below, what is the area of the semicircle in the graph?

- (a) 2π (b) 4π
(c) 8π (d) 32π
(e) 16π

6. The area of the isosceles triangle ABC is 48. $AD = DC$ and $AE = EB$. Let x be the area of the rectangle DEFG. Then x equals—

- (a) 18 (b) 24
(c) 12 (d) 6
7. Triangle ABC is a right-angled triangle. If D is the mid-point of line BC and angle ACB = 40° , then angle BDA is equal to

- (a) 4 (b) 5
(c) 6 (d) 8
8. EFGH is a square. Outside it, ABCD is a rectangle. $EF = 3$, $AB = 4$, $BC = 6$. The area of the region outside of EFGH and inside of ABCD is

- (a) 16 (b) 15
(c) 10 (d) 24
9. What is the area of figure given below? Given: ABCD is a rectangle and BDE an isosceles right-angled triangle

- (a) ab (c) $b(a + b/2)$
(c) ab^2 (d) cab
10. DF is parallel to CB. $AF = FB$. DF and FB = 3. What is the length of CB?

1. (e) There is no repetition of any letter in others except in (e).
2. (e) All words are concerning writing/reading except (e).
3. (c) All words have letter E in the end except (c).
4. (d) All words have one letter repeated except (d).
5. (c) The only word having one letter repeated.
6. (c) All other words are various forms of TAKE whereas (c) refers to a piece of furniture.
7. (c) There is a two-letter gap in the alphabetical order i.e., after A comes D; B & C are omitted. After E comes H; F & G are omitted. Hence, after M will follow P; N & O are to be omitted.
8. (d) Two letters are omitted in the alphabetical order, i.e., after M, N & O are omitted; after P, Q & R are omitted. Hence, letter Y should follow V.
9. (d) After two consecutive letters of the alphabet, one is omitted. After Q & P Q is omitted; after R & S, T is omitted. Z & Y should be followed by AB because Z has to be omitted and in circular sequence after Z comes the letter A.
10. (b) In descending order after each letter two preceding ones are omitted, i.e., after Q the preceding letters Q & P are omitted and N is given.
11. (d) Two following letters after each given one are omitted, i.e., after E, F & G are omitted and H is given and so on.
12. (c) Omission of letters is increased by one after each letter, i.e., after A, B is omitted, after C two letters D & E are omitted, after F three letters G, H & I are omitted. Hence, after O; 5 letters are to be omitted, i.e., P, Q, R, S & T. Therefore, the next in the series is U.
- III 13. (a) professor 14. (c) foolish 15. (b) tomatoes
16. (c) flavours 17. (b) indenting 18. (b) document
- IV 19. (c) examine 20. (b) branches 21. (b) laundry 22. (a) starch
23. (b) outside 24. (c) fumance
- V 25. (b) 26. (b) 27. (b) 28. (b)
29. (c) C-N-M-D (Preceding letter is taken for coding following letter, i.e., B will be coded as A in this case).
30. (a) A is coded as B, C as D and so on. Hence D=E, I=J, etc.

Non-Verbal

- I 1. F-Note the direction of the arrow in the triangle and lines on the sides of the circle. Following the pattern of preceding figures, figure F is the odd one.
2. F-Note movement of dot. Figure F does not follow the pattern and as such is the odd one in the series.
3. C-There is a regular pattern in the movement of dots and changing of direction of arrows. Based on the preceding sequence, figure C is odd amongst other figures.
4. E-There is a regular pattern of movement of the circle across the square, movement of dots and increase/decrease in number of dots, and also the line in the centre of the square. Based on this pattern figure E is the odd one.
5. D-Movement of dots up and down, and direction of arrows differ each time and movement of vertical line on the base of the figure changes inside and outside. Based on the pattern in the preceding and following figures, figure D is odd here.
6. D-Note the movement of two lines inside the circle (one horizontal and the second vertical, movement of dot in alternate figures, and the movement of open triangle around the circle). Based on these parameters, figure D is the odd one here.
- II 1. D-The circle in the square is moving around the squares along with a line in clockwise direction. The dot in the circle is moving up and down from figure to figure. The square is having a double line in the first figure which is vertical and then, in the next figure, it becomes horizontal. Keeping the above correlation of movement of circle with line, movement of dot in the circle and horizontal and vertical line movement in succession, the figure in answer column D completes the series.
2. C-Keeping in view the movement of the small circle outside around the triangle, that is first circle having dot inside and second one blank and vice versa and the movement of the arrow inside the triangle and direction of pin and also movement of black dot on two sides of angle, the figure C accurately completes the series.
3. D-Note direction of arrows on top and pins at the bottom of the circle changing from one figure to the next and repeating the same half horizontal line is inside the circle. The figure in answer column D will complete the series keeping the above parameters in sequence.
4. E-Note changing direction of arrow and the dot inside and outside. There is a similarity of pattern and its change alternatively. Hence, answer figure E completes the series.
5. E-Note the movement of the dot from one angle to the other of the triangle and the direction of the arrow cutting across—the dot moving in clockwise direction from one angle to the other and the arrow moving once inside and once outside. Answer figure E fits in problem column to complete the series.
- III 1. D-Number of lines are increasing in the first two figures. In figure D lines have increased to 5 and the direction of arrows also match.
2. C-In the first two figures, number of lines are reducing. Based on this analogy, figure C has same relationship to figure 3 in problem figure. Dot and arrows have no correlation here.
3. C-In the first two figures, you will notice two circles with an arrow in figure one, and a circle with square inside in figure two. Based on this analogy, C fits in blank column.
4. A-Rectangular figures reduced to angular figure from figure 1 to 2 in problem figure. Keeping in view the arrow and the circle, figure A in answer column fits in the blank column.
- IV 1. Figures C and E interchange position. The size of the circle and the relevant rectangular figures are decreasing in size in each of the following columns.
2. Figures C, D & E interchange positions, i.e., figure E should replace figure C and figure C should go in column D and column D figure should come at the end. Reason: Shaded area is moving clockwise and the small circle outside is moving anti-clockwise.
3. Figure C should go in column E and figure E should go in column C. Reason: Dotted portion is moving anti-clockwise and the shaded column is also following the same movement pattern.
4. Figures D & E should interchange position. Reason: Smaller circle is moving around in an anti-clockwise direction and the arrow in clockwise direction. To set the sequence in proper order, figure D should come last.
5. Figures C & D should interchange position. Reason: the dot is moving around rectangular figure in a clockwise direction. The corner of the main rectangular figure is being cut following anti-clockwise movement and the arrow inside the triangle thus formed is moving inward and outward alternatively.
6. C & D should interchange. Reason: The small circle is moving around small rectangular figure in a clockwise direction, the arrow cutting both rectangular figures are changing directions alternatively. Similarly, the small nail-like figure is changing directions alternatively.
7. D & E should interchange. Reason: The small circle outside is moving in an anti-clockwise direction. The shaded portion of the triangle is increasing in each following figure.
8. C & E should interchange. Reason: The shaded area in the circle is increasing in each figure. The small circle inside the main circle is moving in an anti-clockwise direction.
9. D and E should interchange. Reason: The dot is moving in a clockwise direction inside the rectangular figure. The arrow is changing direction alternatively in the circle cutting across the rectangular figure.
10. C and D should interchange. Reason: The Circle is moving from one corner to another in an anti-clockwise direction. The arrow is changing direction alternatively in each subsequent figure. The horizontal line across the base line of the rectangular figure is once touching left line and then right line of the vertical sides of the rectangular figure alternatively.
11. D and E should interchange. The Small circle is moving across in a clockwise direction. The shaded column is moving also along with the circle in a clockwise direction.
12. D and E should interchange. Note the movement of the large circle outside which is in a clockwise direction. The same pattern is followed by the smaller circle. The direction of the horizontal line is changing alternatively.
13. C and D should interchange. Reason: The dot in the rectangular

- V. 1. B & C-In Block A the squares are becoming smaller in each figure. In Block B the circles are becoming smaller in size in each column. In Block C, squares in columns B & D have the same correlation.
2. B & C-The single square is followed by the double square (square inside another square). Same pattern is followed in Block B but here after a single square double triangles are given. In Block C, figures B & C follow the pattern of Block A.
3. A & C-Careful observation will reveal that Block C has similar figures in the same sequence as in Block A.
4. A & B-Direction of arrows and pins (line with circular head) has a specific pattern in Block A. Based on this, figures A & B follow the same pattern as in Block C.
5. A & B-Answer is obvious. Figures A & B in Block B follow a certain sequence which is obvious in Blocks A & B

Logical Diagrams

1. A Calcutta is in India. India is in Asia.
 2. B Cement and bricks are two different materials. But both are building construction materials.
 3. f All are different types of birds but both come in the category of birds.
 4. B All are different types of birds.
 5. B tables and chairs are two different items but both are included in the class of furniture.
 6. D Some married men and bachelors are businessmen. Some businessmen are not married and some are not bachelors.
 7. B Both are magazines, different in nature but are included in the category of magazines.
 8. C Some teachers are graduates and some graduates are not teachers and vice versa. But both teachers and graduates are included in the category of people.
 9. D Some boys are naughty and some are serious. But no naughty boy is serious and vice versa.
 10. C All stenographers are typists. Some typists and some stenographers are hockey players.
 11. F Some slim persons are females. Some females are slim. Some females are dancers. Some dancers are females and slim persons.
 12. G All husbands are married men. Some married men and boys are fathers.
 13. G All doctors are educated. Some doctors are bachelors. Some bachelors are educated, but are not doctors.
 14. F Some Punjabis are Sikhs. Some Sikhs are doctors and vice versa. Some doctors are Punjabi Sikhs and vice versa.
 15. B Sikhs and Hindus both profess different religions but belong to the same class, i.e., Punjabis.
- II. (c) The shaded portion is common to all the three circles. Therefore, it represents those students who are studying all the three subjects.
- III. (c) The Sikhs and Christians both live in Punjab and Haryana.
- IV. Letter V

Reasoning Tests

1. (c) 2. (a) 3. (c)
 4. (d) "may" in first statement brings a chance factor which makes the conclusion doubtful.
 5. (d) "generally" makes it doubtful.
 6. (b) Statement 1 is very general and cannot be applied to all cases. So the conclusion is a long-drawn one.
- II. 1. (a) Both scientifically and logically (based on arguments) it is true.
2. (c) Data is incomplete as Ram is showing only one symptom.
 3. (b) It can be true but we cannot arrive at 100% correct conclusion from the given statement.
 4. (c) Statements 1 and 2 do not support the conclusion and as such data is not enough.

QUANTITATIVE APTITUDE

Data Interpretation

1. (b) 2. (c) 3. (d) 4. (b)
4. (c) The newly married couple can save 12% (C), that is, expenses

- II. (c) 2. (c) 3. (b) 4. (a) 5. (d) 6. (b)
- III. (d) 2. (d) 3. (b) 4. (c)

Explanation: Death rate and child death rate are to be kept in mind. These two factors affect the growth of population in a given year.

- IV. 1. (c) Basic salary = Rs 3,365
10% house rent = 336.50
Total emoluments = Rs 3,365 + Rs 336.50 = 3,701.50
18% of total emoluments = Rs 666.27, round off to Rs 666
2. (b) $3365 \times 12 = 403.8 \times 12 = 4,845.6$
100
3. (a) Total emoluments = Rs 3,365 + 336.50 = 3,701.50
 $3,701.50 - 1,070.07 = 2,631.44$
* House rent Rs 666.27 + P.F. Rs 403.8 = 1,070.07 to be reduced from the total emoluments to get take-home pay packet.
4. (b) Expenses on food = 25% of 3365 = 841.25
Expenses of entertainment = 9% of 3,365 = 302.85
Rs 841.25 + Rs 302.85 = Rs 1,144.10
12% Provident Fund = Rs 403.80 23% education & children maintenance = Rs 773.95 Total Rs 1,187.75
As they would have no children being newly wedded. Some they can save from miscellaneous also. Hence more than Rs. 1,187.75 can be saved by them.
Total basic salary = 3,365 per month
12.5% increase = $3,365 \times 12.5/100 = 4,206.25 + 42.06 = Rs 4,248.31$
(*) 10% house rent subsidy on the basic salary

Geometrical Problems

1. (c) 2. (b) 3. (c) 4. (c)
- (b) 6. (b). See explanation

Explanation: Because is isosceles, the $\angle C = \angle B$. Draw a perpendicular from A to CB, intersecting DE at H. Then $\triangle ADH$, $\triangle AHE$, $\triangle DGC$ and $\triangle EFB$ are all congruent. So $DE = CG + FB$ or $1/2$ of BC. Also DG must be $1/2$ of the altitude of ABC. Since 48 is $1/2$ the altitude times BC, the area of DEFG is $1/4$ of BC times the altitude. The area of DEFG is half of 48 = 24.

7. (b) 8. (b) See explanation
- Explanation:** Since EFGH is a square, the area of the same is 3×9 . The area of the rectangle ABCD is length times width or $4 \times 6 = 24$. Thus the area outside the square and inside the rectangle is $24 - 9 = 15$.
9. (b) The area of a rectangle is length \times width. So area of ABCD is ab . The area of a triangle is one half of the height times base. Since BDE is an isosceles right angled triangle, the base and height both are equal to b . Thus area of BDE is $1/2 b^2$ or $b(b+b/2)$.
10. (d) Since DF is parallel to CB, the $\triangle ADF$ and $\triangle ACB$ are similar. Therefore the corresponding sides are proportional. So DF is to CB as AF is to AB. Since $AF = FB$, AF/AB is $1/2$. Therefore, CB is twice DF = 8.

Prepared by E. T.

NEWS CAPSULE

AWARDED

The 1985 **Asan World Prize for Literature**, instituted in the memory of Mahakavi Kumanan Asaan, to noted Indo-Anglian poet Kamala Das, the first Indian to receive the prize. Previous recipients of the award are Leopold Seoghor (Senegal), Nicholas Guillen (Cuba), Judith Wright (Australia).

The **Japan Prize for Technological Research** to John R. Pierce, visiting professor emeritus at Stanford University, and Ephraim Katchalski-Katzir, professor at the Tel Aviv University, Israel. Pierce was cited for his work in inventing the Pierce Gun, used in microwave and satellite communications, while the Israeli was honoured for his research in enzymes used in food additives and antibiotics.

The \$100,000 **Third World Award**, the developing nations' equivalent of the Nobel Prize, to former West German Chancellor, William Brandt. The award is conferred annually on individuals, or institutions for outstanding contribution to Third World development in economic, social, political and scientific fields.

The 1985 **Pulitzer Prize** for Journalism (public service) to The Fort Worth (Texas) Star-Telegram for work by Mark J. Thompson, for general news reporting to Thomas Turcol of Pilot and Ledger Star (Virginia); for investigative reporting to William Mallow of the Philadelphia Inquirer and Lucy Morgan and Jack Reed of St Petersburg Times, for explanatory journalism to John Franklin of the Baltimore Evening Sun, for specialised reporting to Randall Savage and Jackie Crosby of the Marion Telegraph and News, for national reporting to Thomas Keenan of the Des Moines Register, for international reporting to John Freeman, Dennis Boland and Omer Mukhammad of Newsday, Long Beach for Drama to Stephen Sondheim. **Sunday In The Park With George** for fiction to Stuart Clarke's **Foreign Affairs**; for general non-fiction to Stuart Clarke's **The Good War - An Oral History Of World War Two**; for biography to Kenneth Silverman's **Life and Times of Cotton Mather**.

The **Olympia Prize** for 1985, carrying a cash award of \$100,000, to K.K. Franjo, an irrigation expert, for his activities in bringing about major changes in planned water resources. Sharing the award, conferred annually by the Alexander Onassis Public Benefit Foundation of Greece is the Royal Academy of The Netherlands for their complete and authentic edition of the works of Erasmus.

APPOINTED

Amol Palekar, noted film and stage artiste, as Chairman of the Childrens Film Society (CFS), replacing V.S. Jala, Joint Secretary in the Information and Broadcasting Ministry, who has been looking after CFS since last August.

Admiral O.S. Dawson (ret'd) as the Indian High Commissioner to New Zealand. Dawson is expected to take up his post shortly.

Pranab Mukherjee, the former Finance Minister, as the President of the West Bengal unit of the Congress (I), replacing Ananda Gopal Mukherjee who is ailing.

Zaid Rifai, who headed three Jordanian governments during 1973-76, as the PM of Jordan following the resignation on Apr 4 of the incumbent Ahmed Obidat.

ELECTED

Congress (I) General Secretary **A.K. Antony**, Thomas Kuthiravattam of the Kerala Congress and N.E. Balaram, a member of the CPI national council, to the Rajya Sabha.

VISITED

British PM Margaret Thatcher on Apr 13 on a day's official visit during which she had a formal round of talks with PM Rajiv Gandhi. Besides bilateral issues, the two leaders discussed North-South issues, the world economy, the gulf war and disarmament.

New Zealand PM David Russell Lange on Apr 15 on a brief stopover during which he met President Zail Singh and PM Rajiv Gandhi and addressed a press conference. Lange told reporters that his talks with Indian leaders were "extraordinarily useful" and that he looked forward to expanding economic ties between New Delhi and Wellington.

Guo Qinglan Kotnis, the aging Chinese widow of the legendary Dr Dwarkanath Kotnis who undertook a medical mission to China in 1938, on Apr 1 on a three-week visit to India. Guo Qinglan said her visit was in connection with the inaugural function of a pictorial exhibition of the Indian medical mission on Apr 5.

SCIENCE

Quasars and galaxies: Astronomers have discovered strong evidence that many galaxies, including our own Milky Way, may have once been quasars, huge objects that once produced the light of billions of suns. The findings by Wallace Sargent of the California Institute of Technology are the first to clearly support a theory that several normal galaxies are actually dying quasars. Quasars, located upto 10b light-years from the earth, produced an intense, brilliant glow during the universe's infancy by sucking in enormous quantities of surrounding gas and dust. Some astronomers theorise that since quasars seem to have vanished a long time ago, they used up this fuel and began producing a waning light, eventually evolving into normal galaxies. In their study, Sargent and his assistants discovered 75 bright galaxies between 10m and 50m light-years from earth. They intend to examine 500 galaxies during the next few years using various telescopes, until the launching of the space telescope aboard a shuttle in 1986.

Genetic material from the ancient past: Scientists have extracted human genetic material from an year-old Egyptian boy mummified around 400 B.C. and grown it in tissue culture in a laboratory. This is the first time that scientists have been able to extract specimens

of Deoxy Nucleic Acid (DNA) from an ancient human or earlier primitive man and reproduce the material in a controlled environment. Scientists led by Svante Paabo of Sweden investigated 23 mummies for DNA content in a series of experiments studying evolution. Comparing DNA taken from living organisms and dead organisms might sort out relationships between species and help find out man's closest living relatives, such as the chimpanzee.

France designs Hermes: France is designing a manned space shuttle expected to be about half the size of its American counterpart, cheaper, more profitable and as reliable. The shuttle called Hermes, is expected to give Europe access to the lucrative extraterrestrial markets of the future. A test flight of Hermes is scheduled to take place by 1990 and by 1997, it should be in operation. It is expected to carry about six astronauts along with 4.5 tonnes of equipment, against the eight people and 32 tonnes carried by the American shuttles.

EDUCATION

New education policy: The Centre has fixed the academic year 1986-87 for implementing its new education policy. Education Minister, K.C. Pant, told the Lok Sabha on Apr 8. The preliminary document assessing the present state of education had already been prepared and the next step was a vigorous diagnostic exercise to find out the weaknesses of the present system. That would be followed by the enunciation of the new policy with a built-in strategy of action and implementation. Pant said the new policy would make education an effective instrument to take India into the 21st century. Pant told the house that some 64m additional children would be brought into schools during the Seventh Plan period, with at least 28m passing through the formal system and the rest through the non-formal system. Pant said he wanted to make adult education a people's movement and take measures to bring down the drop-out rate, now an alarming 76%.

Education report: The 1983-84 trend among students taking to higher education seems to favour arts rather than science or commerce subjects, only 1.3% of the students enrolled in universities and colleges opting for research. According to the annual report of the department of education, the enrolment of women in universities and colleges rose from 800,000 in 1982-83 to 977,000 in 1983-84. According to the report, Buddhist, Gandhian and Nehruvian studies have recently acquired growing importance. While Buddhist studies have been introduced in Pune, Andhra and Sagar universities, Gandhian and Nehruvian studies are to be promoted as a subject for research.

DEFENCE

The annual report of the Defence Ministry for 1984-85 has expressed concern at the induction of foreign security and intelligence agencies in Sri Lanka, and the island nation's unilateral declaration of a surveillance zone around its northern and eastern zones. At the

India's well-intentioned decision to erect a barbed wire fence along its border with Bangladesh had been made a political issue by Dhaka. In India's relations with China, there had been a significant change; the border issue had not been settled despite five rounds of talks and "China in the meantime has launched a massive programme of modernisation of its defence forces". The report expressed concern at Pakistan's relentless pursuit of nuclear weapons capability with the assistance and connivance of "certain countries". The likely nuclearisation of the region was one of the biggest problems confronting the sub-continent, it said. The increase in naval and military presence of big powers in the Indian Ocean area posed a great threat to the sovereignty and independence of the littoral states, it pointed out.

Battle tank christened: General A.S. Vaidya, Chief of Army Staff, on Apr 20, christened the country's Main Battle Tank (MBT), in the making for the last decade and a half, as Arjun after the legendary hero of the Mahabharata. It was earlier expected to be named Chetak after the wonder horse which carried Maharana Pratap after one of his feet was cut off in the battle of Haldighati. The MBT, which has been developed at a cost of Rs 600 crores, is equipped with a powerful gun with highly lethal fin-stabilised armour.

ENVIRONMENT

Long-awaited scheme: The Central government will shortly launch a massive afforestation scheme to prevent ecological damage and the national forest policy is being revised in favour of forest conservation. Guidelines have already been issued to the states and Union territories for the preparation of working plans to protect and promote forest wealth. An in-depth study is being made to work out the modalities for relieving the pressure on forests. Import of pulp and wood chips by user industries is to be totally exempted from customs duty, among others.

NEIGHBOURS

Ershad withdraws concessions: Bangladesh President, H.M. Ershad, on Apr 3 announced he was withdrawing all concessions offered to the opposition parties for their participation in the parliamentary elections because of their unwillingness to take part in the elections. Ershad said he would continue as President till the elections under the suspended Constitution were held. Incidentally, he has extended his tenure by another year. The concessions earlier offered were a phased withdrawal of martial law, release of all political detainees and scheduling of the parliamentary polls before the presidential election.

China-Bhutan reconciliation: China and Bhutan will make every effort to settle their border disputes, now 25 years old, according to a joint statement issued on Apr 7 at the end of the second round of Sino-Bhutanese talks in Thimpu. China and Bhutan have no formal diplomatic ties. In 1959, after China suppressed a rebellion in Tibet, Bhutan banned cross-border trade with China. The first round of border talks held in Beijing last year marked the first contact between them since then.

The Nepalese Government has announced by about 10% the royalty to be paid by foreign expeditions attempting to scale any Himalayan peak in the kingdom. The Everest, to scale which expeditions were paying Rs 50,000, will be costlier by 10%. All other peaks above 8,000 m will be available to expeditions for Rs 44,000 against Rs 40,000 earlier. This is the second enhancement announced by Kathmandu in less than a year and will be effective from the next fiscal year beginning Jul 16.

Afghan elections in 1985: Afghanistan has announced that the country's first elections in five years will be held sometime this year to choose a new National Assembly and the new body will try to halt the war now raging in the country. The Assembly will be composed of delegates from across the country, representative of various progressive professions and labouring groups, members of the Afghan Communist Party and the various wings of government. The proposal to create the National Assembly, made by President Babrak Karmal, has been approved by the revolutionary council of the Marxist Government.

Beijing-China satellite link: A satellite link will be set up between Kathmandu and Beijing, according to an agreement reached between Nepal and China. China has also promised Nepal other help in telecommunications development. A satellite link between Kathmandu and Lhasa has also been discussed and agreed to in principle.

ECONOMY—National

Sri Lanka has resumed import of Indian textiles after a one-year break. The fabrics will be converted into garments for export to the US and West European markets. Sri Lanka's import of Indian fabrics had fallen after the July 1983 ethnic violence and dried up completely by 1984.

Welcome instructions: Chiefs of nationalised banks have been instructed not to take cognisance of oral instructions from any ministry in regard to individual loans, personnel

and giving oral or written instructions concerning loans to individual parties or companies or in any manner influence the commercial judgement of the banks. The Finance Minister V.P. Singh, will personally monitor the implementation of these instructions.

NCAER's study: The Indian economy has moved from one phase of development to another where the present development strategy needs to be modified, says a study prepared by the National Council of Applied Economic Research (NCAER). The study discusses the trends in income, consumption and savings and points out that the structural change in these has been in directions that are not only desirable but contain "a whole lot of new stimuli" for a more promising growth potential. The savings rate will not reach the targeted 26% rate in 1985-86 as assumed in the approach paper to the Seventh Plan. Preliminary estimates put it at only 23.7%. With regard to consumption, the study finds an upward trend in consumer demand along the hierarchy of consumer goods that signify a major change in consumer behaviour. The production of consumer goods must be allowed more liberally in factory units of appropriate size. On income, the study says the share of industry and services in the GNP would be more than what is revealed in the national accounts.

Private traders to export wheat: The Centre is allowing private traders to export wheat for the first time in what is seen as a desperate bid to empty government godowns stocked with nearly 15m tonnes of wheat. The government has also removed all restrictions on accumulation of wheat stocks by traders. The steps come on the eve of the arrival of the rabi crop in the markets; storage space has to be found for new wheat procurement. The total foodgrain stock with the Centre and the states at the end of March stood at nearly 22m tonnes, of which rice accounted for nearly 7m tonnes. While the huge buffer stock helped stabilise prices, they also put a heavy financial burden on the government.

The Vice-President, R. Venkataraman, presenting the Jnanpith Award to Dr Masti Venkatesha Iyengar, renowned Kannada writer, in Bangalore on Apr 13. Others seen in the picture (left right) are the CM Ramakrishna Hegde, the Governor, A.N. Banerji, A.K. Jain, Managing Trustee, Bharatiya Jnanpith, S.P. Jain, Chairman, Bharatiya Jnanpith, and the Defence Minister, P.V. Narasimha Rao.

1985 as the year to catch tax-evaders and concentrate on high-quality assessments instead of wasting time on routine. Singh told a three-day annual conference of income-tax commissioners in New Delhi that he would closely watch the progress of the cases launched by them for prosecution. Singh said he believed that "if the rod is applied along with the tax reliefs, there will be higher revenue realisations". He assured the commissioners that he would not pardon anyone on whom they had applied the rod, however mighty the evader might be.

Import-export policy given a new look:

The government on Apr 12 announced a highly liberalised import and exports policy for three years ending March 1988, incorporating a large number of innovative procedural changes to make imports and exports easier for increased industrial production and to strengthen the base for exports. The policy, however, retained the licensing on an annual basis, abolished the category of automatic licenses and shifted items under the category to the Open General Licensing (OGL). In sum, the policy put a large number of items under the OGL to make their imports easier, and decentralised the decision-making in regard to imports. The policy introduced for the first time the import-export pass book scheme to provide duty-free access to imported inputs for export production.

Poised for growth: The economy is poised for an accelerated rate of industrial production aided by record agricultural production and favourable investment climate, according to the annual report of the department of industrial development. The general index of industrial production registered a much higher growth rate of 6.6% during April to November 1984, compared to 4.4% during the same period the year before. The rate of growth in the composite index of six infrastructure industries was 10.2% during April 1984 to January 1985. It was 6.2% in the same period of the previous year. The six infrastructure industries are electricity, coal, saleable steel, petroleum refinery industries, crude petroleum and cement. An analysis of growth of 18 major industries in the manufacturing sector shows that 11 groups registered a positive growth during April to October 1984. The public sector industries recorded a growth of 15.6% during the first nine months of 1984-85. The cumulative production of the public sector enterprises during April to October 1984 was valued at Rs 39,530.66 lakhs, 15.6% higher than during the same period of the year before. There was all-round progress in the small industries sector during 1983-84, with the value of production going up by 9.8%. The overall production in the khadi and village industries for 1984-85 was estimated at Rs 1,000 crores compared with Rs 874.92 crores during 1983-84.

THE QUARTERLY REVIEW

The vast readership of our magazine, which responded to the opinion poll on the popularity of our feature *The Quarterly Review*, was not in favour of continuing it. We, therefore, propose to discontinue the feature from June 1985. Our thanks to all those who responded to the poll.

period of the previous year. Exports during April-January 1985 are placed at Rs 9,258 crores compared to Rs 7,807.7 crores during the same period in 1983-84—an increase of 18.6%. Imports during the first 10 months went up by 8.4% to Rs 13,122 crores against Rs 12,102 crores during the corresponding period, last year.

ECONOMY—International

Role of small and medium industries in technology transfer: The UN Conference on Trade and Development (UNCTAD) has called for a more active role by medium and small enterprises of developed countries in global technology transfer. The slower rates of growth and the stagnating domestic demand encountered by industrialised countries since 1970 have spurred rationalisation and redeployment processes in their national economies acting as a major push-factor for small enterprises, UNCTAD says. Stricter national legislation and achievement of a host of technological breakthroughs have reduced some of the barriers faced by the small enterprises in entering international markets, the UNCTAD notes.

Energy crisis again? Though there is hesitancy in using the term energy crisis now, given the lull in the oil market, the present phase is only the proverbial calm before the storm, says *OPEC Review*, a quarterly published by the Organisation of Petroleum Exporting Countries (OPEC). Drilling activity worldwide has trailed off and there was a 34% decrease in the number of active rigs from 1981 to 1983 end. The periodical points out that from 1973 to 1982, an estimated 420b were spent outside the OPEC area for a gain of slightly less than 6m barrels per day. "This is one of the costly consequences of the OPEC price increase, or to put it another way, to do without OPEC," it added.

Task force to alleviate debt burden: The IMF has recommended the creation of a task force to consider ways of alleviating the debt burden of developing countries. While industrialised countries borrowed from their domestic markets for growth, the developing ones depended mainly on external borrowings.

Group of 24 concerned: The Group of 24 has expressed concern at the decline in flow of resources to the developing countries, the debt situation, the increase in protectionism, the high level of interest rates and the misalignment and volatility of exchange rates. At their 31st meeting in Washington on Apr 16, finance ministers of the group urged that resources of international financial institutions be further strengthened to enable them to play a more effective role in the development and adjustment process.

IMF-World Bank development committee sessions: Finance ministers and national bank governors attending the week-long IMF-World-Bank interim and development committee sessions in Washington, concluded their discussions on Apr 19 with favourable words for increased world trade and less protectionism and renewed faith in the international financial and economic institutions. But they were neither able to agree on any encouragement for the developing countries' hopes for

of the Group of 24 demands had managed to be inscribed in the agenda and the concluding communique of the development committee. Ministers representing the developing countries, led by Finance Minister, V.P. Singh, were unified in insisting that the industrial countries first implement their 1982 commitments regarding trade liberalisation and easier market access for developing nations' goods.

STATES

Himachal Pradesh has a particularly high incidence of cancer, with one out of 2,000 suffering the disease, according to a survey conducted by the Postgraduate Institute of Medical Education and Research, Chandigarh. Tobacco-chewing, and smoking and consumption of hot liquids and local brew are believed to be the main reasons. In certain parts, herbal plants commonly used to prepare tea or other drinks are also believed to have caused cancer. The survey also found that five out of 1,000 people also had pre-cancer lesions.

Sites and services to squatters in Maharashtra: The Maharashtra Government has taken up a massive housing project under which sites and services will be provided to squatters to build their own huts. The project, which will cover the low-income groups in the Thane and New Bombay areas, is being aided by the International Development Agency (IDA) which is lending the government Rs 138 crores. The total cost of the project, beginning May, will work out to Rs 282 crores.

Barbed wire fence to check Chakma influx: A barbed wire fence will be erected to prevent the influx of Chakma tribals into Mizoram from the adjoining Chittagong hill tracts. The Mizoram Government has endorsed the proposal for the fence mooted by the Central Government. The influx of Chakmas had led to a warning from former CM, Brig Sailo, that one day the foreigners, encouraged by Dhaka, could claim the encroached land as their own which would mean giving up a sizeable part of Indian territory to Bangladesh.

Miyabhoj commission's indictment of foreign students: The Justice Miyabhoj inquiry commission set up by the Gujarat Government to review the prohibition policy, has blamed foreign students for the widespread use of drugs in M.S. University, Baroda. The report of the commission directs the government to alert vice-chancellors of the state's universities to the problem and formulate measures to combat the problem. The commission attributed the failure of the prohibition policy to inadequate education and propaganda measures. It recommended that the state government start centres for the treatment of alcoholics and offer incentives to reformed drinkers.

EVENTS—National

Strategy to combat poverty: The government proposes to enable at least 4m tribal families to cross the poverty line during the Seventh Plan-period. The main points of the strategy, formulated by a working group, to achieve the target would be: raise productivity in agriculture, forestry, horticulture, animal husbandry and small industries; give high priority

CAREER NEWS

UWC SCHOLARSHIPS

Education is a force to unite nations and peoples. This is the basis on which the United World Colleges (UWC)—co-educational and residential—situated in the UK, Canada, Singapore, Africa, USA and Italy, conduct courses following the two-year International Baccalaureate (IB) curriculum, an internationally recognised school-leaving exam.

The college offers scholarships (around USD 10,000 per year) to cover all expenses for the two years of study. If the idea is attractive enough and you are going on 16 (though not more than 18), you may write to Captain R.B. Mohindra, Executive Director, United World Colleges, C/o Mohindra Ugino Steel Co Ltd, Balkhtawar, Nariman Point, Bombay-400 021.

Your request for application should be accompanied by a self-addressed envelope (23 cmX10 cm) affixed with stamps for Rs 1.50 and an IPO for Rs 10 drawn in favour of the Indian National Committee, United World Colleges, Bombay. Last date for submitting the completed forms is Jun 15. For details see *The Hindustan Times* of May B.

CERA '85

Are you in search of the unknown? Do you have a penchant for research work? Well then, be prepared to take the Common Examination for Research Admission (CERA '85) to be conducted by IIT Bombay/ Delhi/ Kanpur/ Kharagpur/ Madras on Jun 28, 1985 for admission to,

must hold a master's degree in Science, Humanities and Social Sciences. You are also considered eligible if you are in the final year of a master's degree programme.

It may be noted that those seeking admission to Master of Design, IIT Bombay or MS (Industrial Management), IIT Madras in the academic year 1985-86, should also take CERA '85.

For application form and information booklet, you may write to the Chairman, GATE of any of the IITs, alongwith an IPO for Rs 10 drawn in favour of the concerned institute alongwith an unstamped self-addressed envelope 17X27 cm. Last date for submitting forms is Jun 4. For details please see *Employment News* of May 4.

ITB Constables

Would you 'dare' to work as a constable with the Indo-Tibetan Border Police (ITB)? You just have to be a matric or equivalent and a male in the age-group of 18-23.

For application proforma and other details please see *Employment News* of May 4. Your completed application, accompanied by a crossed IPO for Rs 5 (Rs 1.50 for SC/ST candidates) payable to the Commandant, Transport ITB Police, should reach the Commandant, Indo-Tibetan Border Police, Seemanagar, P.O. Airport, Chardighat-160 003 on or before Jun 1.

Management Trainee Engineers

Bharat Aluminium Company Ltd (BALCO), a Government of India enterprise, offers excellent opportunities for graduate engineers (SC/ST candidates only) to be trained as Management Trainees, in their Kobra Aluminium Project.

India and the US have identified several new areas in science and technology for joint research and pledged to further strengthen existing cooperation. An agreement to this effect was signed in New Delhi on Apr 10 at the end of a three-day meeting of the Indo-US sub-commission on science and technology. About 200 delegates from both countries held discussions in six working groups on health, medical and life sciences, physical sciences, atmospheric earth and marine sciences, energy, environment and ecology during the meeting, the seventh in a series.

Separate administration for domestic airports: Construction, maintenance and management of domestic airports will be entrusted a separate administration under the Ministry of Civil Aviation; it will be on the lines of the International Airports Authority of India, (IAAI) which is in charge of the airports in Delhi, Bombay, Madras and Calcutta. The Civil Aviation Department is also contemplating steps to relieve the congestion at international airports and other airports may be brought under the purview of IAAI, according to Union Civil Aviation Minister, Ashok Gehlot.

The Bharat Heavy Electricals Limited (BHEL) has joined a select band of four top equipment manufacturing companies in the world in developing a new ignition system to reduce fuel oil consumption in coal-based thermal power plants. Its introduction is expected

to save Rs 400 crores annually. Additionally, BHEL is introducing the latest technology for gas turbine, high voltage direct current transmission system and gas booster system. Research and development expenditure of Rs 39 crores or 2.2% of the turnover, has been planned for 1985-86. BHEL's new areas of expansion include high voltage direct current transmission equipment, variable frequency controls, micro-processor-based controls and electronic automation for steam turbines among others.

University in Mechanical/Chemical/Metallurgical/Industrial Engineering and are 30 as on Jun 1, 1985, you may try your luck with the company. If you prove your worth during the one-year training period (when you will be given a consolidated stipend of Rs 1,648), you can rest assure that you will be absorbed as Executive with attractive emoluments.

For application format and other details, please look up *Employment News* of May 4. Hurry! The completed forms should reach the Personnel Offices (Recruitment), BALCO, 'Punj House', 18, Nahru Place, New Delhi-110 019, within 30 days of the publication of the ad, i.e., by Jun 4.

Happy Sailing!

Life can be smooth sailing with a career in the Indian Navy provided adventure and challenge are your forte. All you have to do is to take a permanent commission in the "three dimensional" Indian Navy General Service and Naval Aviation (Executive Branch). The monetary benefits are high, not to talk of the generous leave, leave travel concessions, etc.

The challenge is open to bachelors born between Jul 2, 1964 and Jul 1, 1967, who hold a graduate degree from a recognised university. But they have to appear in the Combined Defence Services Exam to be held by the UPSC on Oct 27, 1985. Application forms are available with the Secretary, UPSC, Dholpur House, Shahjahan Road, New Delhi-110 001 on payment of Rs 2 by cash/m.o./crossed IPO. For more details please see *Employment News* of May 4. Last date for submitting completed forms is Jun 24, 1985.

to education with stress on vocationalisation; eliminate exploitation in land transfer, agricultural tenancy, debt bondage and money lending; provide adequate infrastructure for welfare programmes; improve the quality of tribal environment and upgrade resources. According to the 1981 census, there are about 5.38m tribals in the country, representing 7.5% of the total population.

New NFDC-MPEAA agreement: The National Film Development Corporation (NFDC) and the Motion Pictures Export Association of America (MPEAA) have signed an agreement which will fetch an annual capitalisation fee of Rs 26.50 lakhs on American films imported to India. The new agreement, signed in New Delhi on Apr 1, is for annual import of 70 to 100 American films produced by the 10 members of the MPEAA. The last agreement expired in September 1983 and was renewed for varying periods upto January end. The new agreement takes effect retrospectively from Feb 1.

Ban on fresh appointment continues: The government has not lifted a ban imposed on fresh appointments to government posts; the ban was due to expire on Mar 31. First imposed in January 1984 as a measure of economy for nine months, it was extended for another six months. Special permission is required from the Finance Ministry if an appointment is to be made under "exceptional" circumstances.

EVENTS—International

Transfer of Hong Kong ratified: China National People's Congress, on Apr 10, ratified the agreement on the return of Britain's crown colony of Hong Kong to China to set up a commission to draft basic legislation for Hong Kong's planned self-administration and Chinese sovereignty, with the assistance of representatives of Hong Kong's more than 5 residents. Chinese Communist Party leader Li Yaobang assured Hong Kong journalists in Beijing that China would strictly adhere to the agreement and not interfere with the capital system of Hong Kong for 50 years.

A 13-day session of Sino-Soviet normalisation talks ended in Beijing on Apr 22. A joint statement issued at the end of the talks

SPORTS

Cricket

In the Golden Jubilee Year of the National Championship—the **Ranji Trophy**—the final which ended on Apr 6 at Wankhede Stadium in Bombay was just the kind of match which enriches this game of "glorious uncertainties". Delhi had the first innings lead over Bombay, which would have given the trophy to them in case of a draw. This result could easily have been achieved, but for their immature batting and some superb bowling by Ravi Shastri. The Delhi squad must have rued the absence of Mohinder Amarnath, their captain last year, who has since moved to join Baroda in the National Championship.

The entire Delhi innings crashed on the final day, with 12 minutes to go for tea interval. That left Bombay with a 90-run win, and proud holders of the trophy for an unprecedented 30th time.

Scores: **Bombay** 333 all-out and 364 for 7 declared. **Delhi** 398 all-out. (Shastri 8 for 91)

This was the fourth final between these two teams, and Delhi have won only once—in 1979-80 under Bishen Singh Bedi.

THE OLYMPIC ORDER

Primo Nebiolo (Italy), the President of the International Amateur Athletics Federation (IAAF) was decorated with the insignia of the Olympic Order, by the International Olympic Committee (IOC) President, Juan Antonio Samaranch (Spain), on Mar 30. This is the highest IOC award. The ceremony took place in the honour room of the Foro Italico Sports Complex in Rome.

Tennis

The \$380,000 **Fila Trophy** indoor tournament at the Stadio Sports Palace in Milan (Italy) was won by John McEnroe (USA) with a 6-4, 6-1 victory over Anders Jarryd (Sweden) in the final on Mar 31. Earlier, in the second round, Jarryd had beaten the Indian ace Vijay Amritraj 6-3, 6-4.

The \$110,000 Asian Nations Championship for the **Ghaffar Cup** ended at Kuala Lumpur on Apr 5 with victory for South Korea, over Indonesia by three matches to nil.

The European leg of the grand prix outdoor tournaments circuit began on the famous clay courts of the Monte Carlo Open, which ended on Apr 7. This tournament was won by the clay court exponent Ivan Lendl (Czechoslovakia) when he beat Mats Wilander (Sweden) 6-1, 6-3, 4-6, 6-4 in the final.

McEnroe won the \$315,000 Chicago Classic Grand Prix tournament on Apr 7, as Jimmy Connors (USA) suffering from severe back pain defaulted the final.

While at Palm Beach Gardens (Florida) the \$275,000 **'Ford' Challenge Cup** for women was won by Chris Evert Lloyd (USA) when she defeated Hana Mandlikova (Czechoslovakia) 6-3, 6-3.

The \$500,000 'Buck' sponsored WCT finals ended in Dallas (Texas) on Apr 14, in victory for Lendl. In an error-filled final he disposed of the young American Tim Mayotte

with a score-line of 7-6, 6-4, 6-1; for his second WCT finals title. Mayotte, who had earlier defeated Andrez Gomez of Ecuador, Mats Wilander and Joakim Nysstrom both of Sweden, to reach the last stage.

FIGHT OF THE DECADE

In what was dubbed as the 'Fight of the Decade', on Apr 14, 'Mervellous' Marvin Hagler retained his undisputed (i.e., both WBA and WBC recognised) world middleweight title, when he stopped fellow-American Thomas 'Hitman' Hearns in the third round of a scheduled 12-round bout at Las Vegas.

Chris Evert defeated 14-year-old Argentine Gabriela Sabatini 6-4, 6-0 to retain her title at the \$200,000 Family Circle Magazine Cup Tournament at Hilton Head Island (South Carolina), on Apr 14. Gariella is expected to be a force to reckon with, as she knocked out three of the top 10—Zina Garrison (USA), Pam Shriver (USA) and Manuela Maleeva (Bulgaria)—in the world on her way to the final.

Table Tennis

The 38th World Championships were held at Gothenburg in Sweden. Once again, the Chinese totally dominated the scene. In the last three world championships, the Chinese have won 19 out of the 21 titles available—all seven at Novisad in 1981, and six titles each at Tokyo (1983) and Gothenburg (1985).

Results: Team: Men: China b Sweden 5-0. **Women:** China b North Korea 3-0.

Individual titles: Men's singles: Jiang Jialiang (Chn) b Chen Long Can (Chn) 21-14, 23-21, 21-18. **Doubles:** Michael Appelgren & Ulf Carlsson (Sweden) b Milan Orlovski & Jindrich Pansky (Czechoslovakia) 21-15, 23-21.

Women's singles: Cao Yan, Hua (Chn) b Geng Li-Yuan (Chn) 21-12, 21-16, 10-21, 21-16. **Doubles:** Geng Li-Yuan & Dai Lili (Chn) b Cao Yan Hua & Ni Xialian (Chn) 21-8, 21-17. **Mixed doubles:** Cao Yan Hua & Cai Zhen Hue (Chn) b Marie Hrachova & Jindrich Pansky (Czechoslovakia) 9-21, 21-12, 21-8.

JUST REDS & BLACKS

The next TT World Championships will be held at New Delhi in 1987—as announced by the International Table Tennis Federation's re-elected President Roy Evans. He also said that under a new ruling reached by the ITTF Congress, **the colour of TT bats will be red and black only.**

Squash

World champion Jehangir Khan of Pakistan, won the British Open for the fourth time. In the final at Wembley, London on Apr 23, he demolished the Australian Chris Dittmar 9-2, 9-3, 9-5.

The women's title was retained by Susan Devoy of New Zealand, as she downed Martine Le Moignan of Guernsey, Channel Islands.

Khan, in fact, has remained unbeaten since the British Open final of 1981, when he lost to Geoff Hunt of Australia.

Weightlifting

The 37th National Championships were held

at the Khudiram Anusilan Kendra in Calcutta from Mar 20-24, in which the Services emerged winners claiming the **Burdwan Shield** for the team championship, scoring 419 points. This was the eighth title for them.

Results: 52 kg-class: K. Mahendran (Ser); **56 kg:** Parvesh Chander (Rly); **60 kg:** G. Davan (Rly); **67.5 kg:** Jagmohan Sapra (Rly); **75.0 kg:** Harnek Singh (Pun); *** 82.5 kg:** Daler Singh (Ser); *** 90.0 kg:** Maher Chand (Ser); *** 100.0 kg:** Tara Singh (Rly); **110.0 kg:** Neville Daroga (Rly); **Over 110.0 kg:** Balwinder Singh (Rly).

***National Record**

Jagmohan Sapra was adjudged the Best Lifter of the Meet.

WHAT'S IN A GOAL

Not many goals scored in football can compare with what happened in the Bavarian league match at Bamberg (West Germany) on Apr 16, between F.D. Bamberg and S.S.V. Jahn Regensburg. The S.S.V.J.R. Player Baumgartner upon being brought in as a substitute took a pass from a team-mate and headed full speed down the field. He then hammered the ball into the net and raised his arms in jubilation. And only when he turned to see the crestfallen faces of his team-mates, did he realise that it was his own goal, handing a 1-0 victory to Bamberg.

The 17th Asian Championships ended in Hang Hou (China) on Apr 18, with China emerging on top, as was expected. They amassed 10 gold, 11 silver and three bronze medals (medals were awarded for both types of lifts—snatch and clean and jerk, and also for the total of both, for each weight-class).

In second spot was South Korea (six golds, four silvers and eight bronze). India could only manage the seventh position, with four bronze medals, in the 12-nation competition.

South Korean Lee Min Woo carried away all the three golds in the over-110 kg class. He raised 170 kg in the snatch, then jerked 210 kg, to total 380 kg—becoming the **Strongest Man in Asia.**

Marathon Timings

The International Amateur Athletics Federation (IAAF) held its inaugural **World Cup Marathon** at Hiroshima in Japan. The women's race on Apr 13 was won by pre-race favourite Katrin Doerre of East Germany in 2:33:30 sec. It was the 23-year-old's sixth win in seven races since 1982. She produced a powerful burst in the closing stages to win from 33-year-old Zoia Ivenova of the Soviet Union, who clocked 2:34:17 sec.

Italy won the team championship; the Soviet Union and East Germany were second and third respectively. A total of 111 runners from 37 nations participated.

In the men's race on Apr 14, over the **26 miles and 385 yards course (42.195 km)** rank outsider Salah Ahmed of Djibouti staved off a challenge from Japan's Takeyuki Nakayama to win in 2:08:09 sec, just six seconds ahead. **These were the second and third fastest marathons in history.** Ahmed, who came 20th at the Los Angeles Olympics in

the first round to another battle last 7 km, and it was only in the last 500 m that victory was assured.

Djibouti won the team title, Japan and Ethiopia were second and third respectively.

India finished 36th among the 41 positioned countries.

At about the same time as the World Cup, three other popular city marathons also took place and produced some startling results:

The 89th Boston Marathon was won by defending champion Geoff Smith of Great Britain, who defeated his nearest rival by more than five minutes! He finished the race in 2:14:5.

Among the women, Lisa Larsen Weidenbach (USA) won by more than eight minutes in 2:34:06.

Greek athlete Yiannis Kourou won the gruelling 960-km "westfield" Sydney-to-Melbourne ultra-marathon which is billed as the world's longest foot race. Kourou, a 28-year-old sports

man, more than half pulled out, including two former winners.

At the Rotterdam Marathon, on Apr 20, the Olympic Champion and three-time world cross-country champion, Carlos Lopes of Portugal added yet another feather to his cap when he won in a world best time and became the first to clock less than 2 hours 8 minutes. The 38-year-old Portuguese set a blistering pace throughout to clock 2:07:11 sec to break the old record of 2:08:05 set by Steve Jones at Chicago in October last.

On Apr 21, Jones (Wales) himself participated in the 5th London Marathon and in an attempt to regain the record, he did manage to win, clocking 2:08:16, which was the best recorded in Britain.

In the women's section, 29-year-old Norwegian Ingrid Kristiansen did set a new world best time of 2:21:06, beating the old mark of 2:22:43 set by Joan Benoit (USA) at Boston in 1983.

SANJEEV GUPTA

WIMBLEDON THE MECCA OF LAWN TENNIS

Wimbledon is the premier tennis championship of the world and starts each year six weeks before the first Monday of August. It is the oldest tennis tournament and the competition lasts a fortnight. This year it will be staged from Jun 24 to Jul 7.

Love All

The Wimbledon tennis tournament is run by the All England Club. This unique club started in 1868 as the All England Croquet Club with its courts situated off Worple Road, Wimbledon. In 1873, a Major (ret'd) Walter Wingfield patented a form of tennis under the curious name of Greek origin, "Sphairistike". Commercially inclined, Major Wingfield sold the game to various parties on the pretext that it was a racquets and ball game played in ancient Greece. In 1875 the All England Croquet Club set aside part of their lush turf at Worple Road, Wimbledon for tennis activities.

The parent body of the now All England Croquet and Lawn Tennis Club was the Marylebone Cricket Club (MCC) which, looked after both cricket and tennis. In early 1877, the All England Club adopted the rules of lawn tennis as published by MCC and unanimously agreed that the world's first lawn tennis tournament should be launched at Wimbledon with all speed. This bold spring meeting decision led to the commencement of the inaugural lawn tennis championship from Jul 9, 1877 which, over the years has become the greatest tennis show on earth now known simply as WIMBLEDON. It is the championship which every tennis male or female player wants to win.

The inaugural Wimbledon championship had only one event—the men's singles. In all 22 players participated and S.W. Gore (UK) became the first Wimbledon champion. The popularity of Wimbledon made the organisers introduce the women's singles event in 1884.

The turn of the present century witnessed a

rapid boost in Wimbledon's popularity and the tournament became truly international. May Sulton of the US in 1905 became the first overseas competitor to win a Wimbledon title. Norman Brookes of Australia became the first overseas men's champion in 1907. By the time World War I (1914-1918) came Wimbledon was well established and crowds increased every year. Soon it was realised that the Worple Road ground was inadequate to cater to the surging crowds. The present site on Church Road was commissioned in 1922 after the war. Such is the popularity of Wimbledon that the allocation of tickets, by ballot has been in vogue for many decades.

The prestigious men's singles title has been won by representatives from Australia, Czechoslovakia, France, Great Britain, New Zealand, Spain, Sweden, and the US. The singles title has been claimed most times (seven) by William Renshaw (Britain). However, the best record of all time is that of the mercurial Swede Bjorn Borg, who won Wimbledon five years in a row from 1976 to 1980. Fred Perry (Britain) has won Wimbledon three in a row from 1933-1936. At present, John McEnroe, winner in 1983 and 1984, has a chance to win the coveted men's singles crown three in a row. The famous Australian left hander Rod Laver emerged victorious on four occasions, twice as an amateur (1961 and 1962) and twice as a professional (1968 and 1969). Gore became the oldest champion in the history of Wimbledon when he won the men's singles title for the third time in 1909 at the age of 41.

The longest-ever match was played over two days, a first round singles encounter between Americans, Pancho Gonzales and Charlie Pasarell in 1969. The match lasted 5 hours and 20 minutes. Gonzales emerged victorious with the score reading 22-24, 1-6, 16-14, 6-3 and 11-9, in a match going to 112 games.

Competitors from Australia, Brazil, Britain, France, Germany and the US have claimed the women's singles title. The most successful winners have been Helen Wills Moody (USA)—eight times, Susan Lengert (USA) and Billie Jean King—six times each. Martina Navratilova (formerly of Czechoslovakia, now a citizen of US) has won Wimbledon five times already (1978, 1979 and thrice in a row from 1982-84) and may well become the greatest women's player of all time.

Borg and McEnroe: The gladiators in the Wimbledon arena.

ratilova (formerly of Czechoslovakia, now a citizen of US) has won Wimbledon five times already (1978, 1979 and thrice in a row from 1982-84) and may well become the greatest women's player of all time.

In terms of audience response on television, Wimbledon ranks third in the world, narrowly behind the Olympics and the World Cup football tournament. However, Wimbledon is held annually unlike the other two events held after every four years. Again, Wimbledon has no government backing like the Olympics or World Cup. It is run exclusively by the All England Tennis and Croquet Club with a very select membership. There are exactly 325 male members and 75 women, excluding the champions, who become honorary members. Each year 9 members are elected on an annual basis.

The Championship Fortnight

Wimbledon is more than tennis. It is a complex composed of 15 grass courts, 10 hard courts, a bank, a police station, a post-office, a wine cellar and 15 restaurants open only during the championship fortnight. It is basically an undetectable spirit. The courts are surrounded by flowers, which emit aromatic whiffs. Annually 1,500 hydrangeas, 1,000 geraniums, 1,000 petunias, 500 French marigolds and 36 abutilon lilies are planted. On distant walls and trellises there is a cluster of panoramic roses. Yet Wimbledon does not have just a garden party atmosphere. They have a professional management which has revolutionised tennis.

In 1968, Wimbledon, defied the hypocritical attitudes of the world tennis body and the tournament was opened to professionals and amateurs. This revolutionised tennis. Discrimination ceased and players ceased to be professionals or amateurs, just tennis players, professional in attitude. Money poured into the game, as more tournaments got sponsored and more players took to the game.

participate in the tournament. The fortnight of tennis attracts a crowd of about 3,50,000 spectators. Wimbledon has assets of more than five million British pounds. On the stock market, shares in Wimbledon are fetching a staggering 8,000-9,000 British pounds. Exactly 128 men and 64 women annually vie for the men's and women's singles title. The winners of the men's and women's singles receive \$74,167 and \$66,750 respectively.

The Indian Round

India's performance at Wimbledon has been tentative. India started participating here since the 1930s. Only Ghouse Mohammed (quarter-finals), Ramanathan Krishnan (twice semi-finalist, 1960 and 1961, losing to ultimate winner Neale Fraser and Rod Laver on both occasions) and Vijay Amritraj (twice quarter-

finalist for India. Otherwise, Indian participants have been eliminated in the early rounds.

To improve tennis in India, Vijay along with sponsorship from Britannia Industries Ltd, an associate of NABISCO, has set up a tennis academy in Madras. Eight players (under 12 years) have been selected on the basis of their talent, mental attitude, potential and aggressiveness. Sponsorship to the tune of about Rs 40 lakhs has been obtained.

NABISCO are to donate equipment for the players who will receive intensive training from a foreign coach for five years. Education, diet, pocket money and travel allowances will be met by the tennis academy. In this way Vijay hopes to nurture young tennis talent in India who will soon make their mark at Wimbledon.

NOVY KAPADIA

OLYMPICS

THE FLAME BURNS ON

The Olympics are much more than the world's greatest spectacle of sport. They provide a rather bizarre testing ground for varying economic, political and social systems. What began as French nobleman Baron De Coubertin's dream to revive the games of the ancient Greeks, has grown into the most vital forum for international sporting supremacy. Understandably then the Olympic movement has faced an increasing number of problems of the kind that have invariably challenged the very survival of these Games. Growing Olympian ambitions have, however, enabled the movement to survive, and despite intervections such as the massacre of Israeli athletes in Munich in 1972 and the boycotts of 1976, 1980 and 1984, the Games have thrived and become more spectacular each succeeding four years.

The first of these modern Olympics were held in 1896 in Athens. Two hundred and sixty competitors and officials from 12 countries pioneered Olympic participation. An 80,000-strong crowd watched the US dominate athletics and the Germans gymnastics. Spindon Louis was the host nation's only winner in the marathon, while Calcutta-based Norman Pritchard representing India, won a silver for the 200 m. St Louis (USA) in 1904 hosted the next Olympics as a side-show to the World Fair with very thin attendance at various events, quite apart from the fact that only eight countries outside North America were able to participate in it. The IV Games held in London's White City stadium are historic for their association with the first of the 26 mile 385 yards marathon which is today the official distance for the race. The distance was fixed, oddly enough, to enable the runners to proceed from Windsor Castle to Shepherds Bush in London and run the last 385 yards so as to finish before the Royal Box at the stadium. These were the Games with as many as 20 events and where the US-Great Britain rivalry was probably at its closest and bitterest. In 1912 Stockholm provided an excellent blend of sports and the arts with the instituting of a cultural festival along with the sports events. World War I brought to a halt any further meetings until 1928 when Antwerp was the venue of the

revived Games minus the defeated countries. The Belgium metropolis saw the introduction of the Olympic flag and Olympic oath. The 1920 Olympics are also remembered for the achievements of the great Finnish runner Paavo Nurmi.

Olympics returned to Paris in 1924 with 5,533 competitors from 44 nations. Nurmi continued to reign supreme despite the successes of Johnny Weismuller in swimming and of British rivals Eric Liddel and Harold Abrahams in the sprints. 1928 in Amsterdam heralded India's spectacular debut in Olympic hockey. Berlin in 1936 provided Hitler with a magnificent opportunity to use the Olympics for Nazi propaganda. The superb organisation included the first-ever Olympic torch ceremony. Honours went, however, to American Jesse Owens for his phenomenal performance in the sprints and the long jump through which he collected four golds. From the Asian point of view Berlin marked the consolidation of Indian hockey superiority as well as Japan's terrific success in athletics and, in particular, in the marathon.

World War II again prevented the Olympics from being held until in 1948 when London staged a low-key, low-budget effort, and succeeded in getting 4,106 competitors from 59 countries at the Wembley stadium. Fanny Blankers-Koen, a Dutch housewife, was the outstanding success of the Games. These were the Olympics which also witnessed the first-ever Indian and Pakistani hockey teams after partition. Henry Rebell, the triple jumper from Madras was a leading qualifier in his event, but failed to record a jump in the final on account of a muscle injury.

The Olympics gained momentum in 1952 when Helsinki saw the return of the Soviet Union to the fold after 40 years. Emil Zatopek, the Czech distance runner, was the sensation of the Olympics when he won the 5,000 and 10,000 m as well as the marathon with wife Dana winning the javelin. K.D. Jadhav became India's first-ever medalist in wrestling when he finished third in the bantamweight section. Lavy Pinto in the 100 m and Sohan Singh in the 800 m reached the semi-finals.

The Olympics came to the Southern Hemisphere for the first time in 1956 at Melbourne. The Australians took full advantage of the season and home support to record their best-ever success in swimming.

1960 saw the Ethiopian Abebe Bikila run barefoot to win the marathon. It was the Olympics which saw India's Milkha Singh narrowly miss a medal in the 400 m final, when he finished fourth in a fastest ever Asian best of 46.73 sec. The Indian hockey team lost the final for the first time in Olympic history, but regained the title four years later in Tokyo.

The 1964 Olympics are known for the performance of two outstanding swimmers. Don Schollander (USA) and Dawn Fraser (Australia). Tokyo also provided the first-ever Indian finalist in the men's 110 m hurdles, where Gurbachan Singh Randhawa finished fifth in 14.09 sec. The controversial high altitude Games at Mexico City in 1968 are best known for the spectacular showing of the African athletes, quite apart from Bob Beamon's world record breaking leap of 8.90 m in the long jump. And Mexico City saw India move down to third place in Olympic hockey.

The 1972 Olympics in Munich were to mark the grand sporting revival of the Federal Republic of Germany. With regard to organisation it was near perfect. But it turned out to be the most tragic of Olympics on account of a terrorist shoot-out in which 11 members of the Israeli contingent lost their lives. Montreal in 1976 was beset not only by a financial crisis but also by the last-minute boycott by the African member nations. For once India did not figure among the hockey medallists. Sirmam Singh made history by becoming the first Asian to reach the final of the 800 m where he finished seventh in 1:45.77.

Moscow in 1980 provided yet another version of a boycotted Olympics this time at the insistence of American President Jimmy Carter. With the withdrawal of leading rivals, India had little difficulty winning the hockey title, which was surrendered at Los Angeles in 1984. The last Games marked, from the Indian viewpoint, a long leap forward by women athletes. P.T. Usha was the nation's leading performer and finished fourth in the 400 m hurdles, and later joined M.D. Valsamma, Vandana Rao and Shiny Abraham to reach the finals of the 4x400 m relay where they finished seventh.

By the end of 1984 it was clear enough that having survived three boycotts, the Olympics would continue to go from strength to strength, since the overall standard in most countries appeared to be showing a steady improvement in almost every sport. The next flame in Seoul in 1988 may, therefore, be bigger and grander with even more outstanding personalities than those at Los Angeles. With the Olympic Committee and the International Federations showing greater realism and flexibility, it is becoming possible for the elite sports people to prolong their 'active' career without financial worries. Thus Carl Lewis and his friends don't face the insecurity that had confronted the likes of Jesse Owens. The future of the Olympic movement is fairly rosy, and it thus becomes more important than ever for India to take it more seriously and produce world class performers.

RANJIT BHATIA

PERSONALITY DEVELOPMENT

WRITING A RESUME-2

A mismatched job is a curse. It runs the risk of both the employer and the employee constantly being at loggerheads. A well-developed resumé, containing the job seeker's relevant work experience related to the particular post he is seeking, should help reduce this grave risk. Hence, each detail of the process of resumé-writing should be attended to with meticulous care. This would also prove to be an additional guard against the stumbling blocks of the screening process.

The following set of sample resúmes—both biographical and functional (*CCTimes*, May '85)—should prove helpful to prospective job-seekers.

Biographical resúmes

- I. Post applied for : Chief Engineer (Public Sector undertaking) Director Regional Engineering College/Dept. Head of Research organisation.

1. Name
2. Date of birth
3. Citizenship
4. Qualifications
5. Experience

M.Tech, IIT, Kharagpur

- (a) About 25 years teaching experience in Mechanical Engineering Design; Prototype development; Import-substitution; Teaching and research at university level; Curriculum development; Laboratory development; Workshop planning and development; Planning and supervision of students' practical training in industries.

- (b) Carried out several R&D projects, guided thesis and published research papers.

6. Employment History: Senior Teaching Fellowship (Technical Teachers' Training Scheme) Govt. Of India Lecturer, Mechanical Engineering, IIT, Delhi Asst Professor, Mechanical Engineering, IIT, Delhi

7. Titles of Reports, Thesis and Papers published:

- (i) Practical Training in Hindustan Aircraft Ltd—a

report submitted for B.E. degree requirements, 1959.

- (ii) 'Effect of Tooth Form on Beam Strength of Spur Gear', M.Tech. Thesis, IIT Kharagpur, 1961.
(iii) 'Mechanical Components in Automatic Control Measurements' *The Designer*, Vol 8, Annual number, 1962.

- II. Post applied for
Name
Age

Education

Administrative-cum-Personnel officer.

M.A. Psychology, University of Bombay.
Diploma in Personnel Management.

Administrative and Management Skills:

- Supervised staff, budgets and facilities in business and non-profit organisations
- Directed programmes for university placement office, planned workshops, coordinated public relations and evaluated effectiveness
- Attentive listener, able to help people to "think out loud", reflect on experiences, identify problems and develop solutions.
- Seasoned interviewer, developed skills as stringer for newspaper

Work experience:

Assistant Manager For Inventories, Meat Wholesale Company (Mention place and dates). Enjoyed industrial side of management by assisting in maintenance of inventories, processing of orders and directing transportation strategies.

P.G.

vious financial year. And then in the four weeks ending April 13, 1985, the wholesale price index moved up by 2.3%. However, according to government sources, prices of only some commodities have gone up while those of others have moved down. The justification offered by the Centre, for the post-budgetary inflationary trends is that a conscious decision had been made to impose certain levies to raise resources for meeting the development needs of the country's economy. The impact of levies had, however, been compounded by the simultaneous increase in revenue collection efforts of state governments. But this still does not explain the fact that the subsequent price rise was disproportionate to budget estimates.

The price rise in certain urban areas has been to the tune of 15%, while that in far-flung rural areas has been much steeper—between a staggering 30-50%. This clearly reveals that the budget has affected the lower rings of society the most. On the other hand, prices of industrial inputs ranged between 40% and 10% higher than the statutory prices in case of steel and cement. But this at least can be explained away in terms of the increase in their administrative prices. In case of the disproportionate rise in prices compared to the levies imposed, obviously an artificial scarcity is being created through hoarding and black marketing. Perhaps the only feasible solution lies in the elimination of middlemen and strengthening of the public distribution system and a significant increase in production.

POWER GENERATION HIGHS AND LOWS

The situation on the country's power generation front seems to be fluctuating. While there was an impressive growth in power generation in 1984-85 from 5.7% in 1982-83, 7.6% in 1983-84 to 12% in 1984-85 the power shortage in the country continued to be acute. In fact the overall power deficit in the country increased to 11% from 10.8% in 1983-84 and 9.2% in 1982-83 and almost all regions showed deficit power supplies with a significant increase in deficits in the northern, eastern and north-eastern regions. In Haryana, Karnataka, Tamil Nadu, Rajasthan, Jammu and Kashmir, UP, West

As regards the growth, however, the growth of output in 1984-85 was supported by a sizeable increase in both thermal as well as hydel generation. Favourable rains gave a considerable boost to the latter in Karnataka, Tamil Nadu, Andhra Pradesh, Punjab, and the north-eastern region. In the Bhakra-Beas area, J & K, Himachl Pradesh, Gujarat, Orissa and Maharashtra hydel generation registered a decline. There was an impressive growth in thermal power output, too, owing to increased supplies of coal which facilitated an improvement in capacity utilisation of thermal plants. This was reflected in the Plant Load Factor (PLF) averaging 50.1% in 1984-85 against 47.9% in 1983-84. But even so capacity utilisation is far below the average norm of 58%. Also there was a glaring lag in investment and project implementation on the power front which was reflected by inadequate addition to new capacity. The aggregate new capacity was 30.5% less than the capacity added in 1983-84 and 28.4% short of the year's target.

Total power generation—thermal, nuclear and hydel—increased by 12% while the gross generating capacity rose by 7.8% compared to the preceding year. The bulk of this increase in capacity came from thermal power which spurted by a record 14.1%. With regard to generation for 1984-85 hydel power output increased by 7.9%. This improvement was supported by a marked increase in output in the southern region by 25.6%. As such the southern region accounts for 46% of total hydel power generation in the country. The northern region, which accounts for 34.2% of total hydel power registered a decline of 4%. The western region, accounting for 12.6% of total hydel power generation also registered a decline of 9.7% while in sharp contrast the eastern region, which accounts for 5.7% of the country's hydel power, registered a spurt of 65.3%. The north-eastern region also registered an increase of 56.3%. The nuclear power which accounts for a meagre 2.7% of total power generation in the country registered an increase of 16.4%.

Despite this growth in various sectors of power generation there was a lingering power deficit, too, in the country owing to a spurt in power requirement of 16.9%. Quite expectedly this has had an adverse effect on the industry. Karnataka is the only state which recorded a surplus of 11.8%, while in MP, Andhra Pradesh and Kerala and the Union territories of Delhi and Chandigarh no surplus or shortage was registered because supply matched the requirement.

JYOTSNA SHARMA

NEWS CAPSULE

(Continued from page 55)

said the meeting was "calm, businesslike and useful" and both sides will convene the seventh round of talks in Beijing next October. China's special envoy to the talks, meanwhile, admitted that the latest talks failed to substantially advance the normalisation process. China frequently mentions three obstacles to improvement of relations: the estimated 6,00,000 Soviet troops on China's borders, Moscow's intervention in Afghanistan and support for Vietnamese occupation of Kampuchea.

Reagan rebuffed by House of Representatives: The US House of Representatives on Apr 23 rejected by 248 votes to 180 President Ronald Reagan's proposal for 14m in aid to contra insurgents seeking to overthrow the leftist government of Nicaragua. The same resolution was approved by the Senate 53-46 only a few hours earlier. Combined, the two votes set up a continuing congressional debate on whether to allow Reagan to provide non-lethal assistance to the rebels.

Bandung conference of Non-aligned: Representatives of 80 Non-aligned nations ended a two-day conference in Bandung, Indonesia, on Apr 25, by issuing a wide-ranging declaration calling for closer cooperation and a revised world economic order. The conference, which was held to commemorate the 30th anniversary of the Bandung meet, called on industrialised nations to remove protectionist barriers, demanding a just distribution

of property and urged immediate emergency aid for the least developed nations. It also appealed to all nuclear powers to reduce arms immediately and condemned South Africa and Israel. But the conference was less specific in addressing conflicts in South-East Asia, Central America and the gulf, merely calling on nations in conflict to work towards speedy, just and peaceful solutions in accordance with NAM's objectives and the UN charter. The two-day session commemorated the meeting in 1955 by 29 nations which led to the creation of NAM.

Warsaw Pact extended: Leaders of the Soviet bloc, on Apr 26, signed an agreement extending the validity of the 30-year-old Warsaw Pact. The agreement was reached after a formal summit meeting that convened in the same 18th century palace in Warsaw where the treaty was first ratified. Signatories to the agreement were: Bulgaria, Hungary, East Germany, Poland, Romania, the Soviet Union, and Czechoslovakia.

MISCELLANY

The bullock-cart still constitutes two-thirds of rural transport, according to a survey conducted by the Indian Institute of Management (IIM), Bangalore. The survey, funded by the Ministry of Shipping and Transport, reveals that of the 15m bullock carts in the country, 12m are rural-based. Less than 10% of the carts were modernised during the last two years, the survey said.

National plan to combat killer cyclones:

A high-level committee has recommended the formulation of a national plan to combat more effectively the recurring killer cyclones; the committee, headed by Prof A.K. Saha, has also suggested the setting up of an apex body to constantly study all aspects of cyclones. On the basis of cyclones recorded during the last 100 years, the committee has identified 14 coastal districts in Andhra Pradesh, Orissa, Tamil Nadu, and West Bengal as highly cyclone-prone. It called for strengthening of standard ground observations from ground meteorological and ship observatories.

DIED

Basil Bunting, 85, considered by some critics to be among the greatest English poets of the century and once described as "spectacularly undervalued", on Apr 17, in Hexham, Northern England. In the 1920s, Bunting was part of the literary circle of authors who included Ernest Hemingway, and later moved to Italy where he befriended Ezra Pound and W.B. Yeats.

Tancredo Neves, 75, Brazil's President-elect who was thwarted from becoming the country's first civilian leader in 21 years by illness, on Apr 21, after undergoing seven operations since Mar 14. Neves, a centrist politician whose career spanned a half-century, was chosen by the electoral college in January to be the first civilian President since 1864.

A.P.

PROFILE OF A WOMAN ENTREPRENEUR

BY JYOTSANA KAPOOR

Prabha Chopra—winner of the 1985 IMM. CINNIFAN Gold Award for the best woman entrepreneur—is a classic example of what hard work, alertness and will-power can achieve for a person. As Executive Director, Didi Modes Pvt Ltd. Prabha is a business woman par excellence. Beginning modestly with the help of 18 tailors working in her own house, in 1973, she had about 1,800 people working for her in 1978; and has now about 700 workers working directly or indirectly for her garment industry. "When I went into the manufacturing line, I had no idea about the quality or even the proper measurement of garments. There was no one to guide me; I would just wear a dress and see how it looked on me. To arrange for the first tailor to cut the design according to my instructions was very difficult. So I just picked up people and trained them. Gradually the trade picked up," Prabha recalls.

Prabha was married way back in 1961 and felt "very restless" sitting at home. "It was my father-in-law who inspired me to learn shorthand and typing and help him in the joint family business of exporting handicrafts and various other items. Later I started designing and painting sarees at home and selling them in exhibitions" she explains.

Soon Prabha started learning the necessary managerial skills. This, combined with her will to succeed, set her company on the road to success. By 1978, Didi Modes came to occupy a position among the ten top garment exporting companies in the country. "One of the main reasons for my success could be my creativity," Prabha claims, "I was the one to develop 'ombre' dyeing (garments dyed in 3 or 4 different shades). I also discovered 'piece' dyeing, to give the garment a rustic look.

She also used fishnet (a development of handloom sector) for her garments. In 1976, she developed 60' crepe (a special textured handloom yarn) and in 1983, she introduced 'ragknit' sweaters in the market. These sweaters had a 'beggar' look—with the knots hanging out.

Wanting to turn her industry from a cottage industry into a large-scale industry, Prabha, in 1976, hired technical help from Belgium, Germany and Japan and set up a highly mechanised unit in Faridabad. But the labour let her down and she had to close down the unit after three years. Prabha lost heavily; but her fighting spirit sustained her and she was soon back in business. "In this kind of business if one makes a lot of money, one has got to face landslides too," warns Prabha. "It is highly competitive and survival is very important. Power failure or sudden shortage of fabrics can throw the entire schedule out of gear."

Bad labour, wrong buyers who do not pay or who do not pick up merchandise and discrepancies in letters of credit, are some of the major stumbling blocks. Sometimes an exporter's collection is not up to the mark and the market is lost. Then these goods have to be sold in the local market at very low rates. "The factors that augment the garment export business are timely delivery, good quality, right price and new designs," Prabha points out.

According to Prabha, export of garments is a highly personalised job. "We have to keep a year ahead of the coming fashion. I usually travel a lot and visit fashion houses, boutiques and read a lot of books by famous fashion designers. Once the samples are ready and the buyers make the selection, we go into production at once," she says. One of her companies is now a buying agency, through which small exporters are promoted. "We pass on the orders to them and they export the goods on their own, though we give them the designs and keep strict control over quality," she says.

Talking about the problems faced by exporters, Prabha says that there are several hassles with the government. "A lot of merchandise is left with us because of the quota fixed by the importing government and the cut off price fixed by the Indian government," she elaborates.

In 1978, Prabha Chopra was acclaimed as the first self-made woman industrialist of Delhi and hailed 'The First Lady of the Garment Industry and Exports'. "Being a woman I have never felt that I should get any kind of special treatment from anybody. Once I have come out of my home to make a dent in the male oriented area, I am willing to face problems as they do. To bring in modern technology, quality control and professionalism to the garment industry is of prime importance to me: Perfection in all spheres is my motto," she adds.

Economy

TOWARDS DENATIONALISATION

After World War II, nationalisation became a major thrust of the economic endeavour of many countries the world over. In recent years, however, a new wave of denationalisation is sweeping across. In Pakistan, the textile mills are being restored to the private sector. In Britain, Margaret Thatcher's administration has sold about a dozen industrial units. The telephone company was sold last November. Several other industries like shipping, ports, petroleum, hotels, automobiles and airways have also been denationalised. Bangladesh is selling its jute mills to private industrialists. France has also brought its public companies to the share market. The Japanese government has reduced its share in posts and telegraph and telephones and is threatening to sell the railways which are running at a loss. In China, the government of Deng Xiaoping is liberalising private farming and individual activities. Russia, too, is moving, albeit imperceptibly, in the same direction.

And India? The model which India adopted in the 50s for its development efforts is called the Mahalanobis model. No doubt, India has achieved many successes during the last 28 years. It would be a folly to say that if what is being done by Rajiv Gandhi today, were done in 1956, India would have attained higher scales of performance.

In 1956, when Jawaharlal Nehru concentrated on expanding the public sector for developing the economy, private capital in India did not have the capacity to reorient the economy on a very large scale. But now we have reached a point beyond which the road is closed. If Mrs Gandhi had been alive, India would have travelled in the same old path with increasing unwillingness. However Rajiv Gandhi is eager to do something new. His Finance Minister, Vishwanath Pratap Singh, jettisoned the Mahalanobis model in his first budget.

But how can we say that the road is closed? The evidence can be found in the government's dealing with the question of direct and indirect taxes in the last 28 years. Now the situation is that if more indirect taxes are levied, people would be burdened with back-breaking inflation. If direct taxes are raised, nobody would reveal his real income and nobody would pay his tax. On the other hand, the government is not benefitting even though

it is earning more money. The reason is that the non-plan expenditures of the Central and state governments have increased so much that not many resources are available for development activities. The effect is that most of the money goes towards payment of salaries and dearness allowances to government employees, maintenance of public sector undertakings, covering up their deficits, maintaining the army so much so that the government is not left with any surplus.

It is easy to say that if the Mahalanobis model is honestly followed, socialism can still be a success. If all the black money flows into the government treasury and government collects all the taxes, the road which is closed would open up automatically.

However, all these leftist desires have no base because these cannot be fulfilled unless a new state and a new politics appear on the Indian scene. Today, nobody has the power to change Indian politics. Therefore, every political leader has to bring about maximum progress within the limits of the existing situation.

In fact, a group of economists believe that only the earners of black money have done a great favour to India. They believe that 'black money' has been used not only for constructing luxurious houses, travelling by air or opening numbered accounts in Switzerland, but also for investing in industries and thus generating employment. If all the black money had been legal and all the land distributed according to the land reform legislation, nobody knows what the shape of the country would have been. Would we have become a backward and poor country like Burma?

FACT-NOT FICTION

A robot has been entrusted with the task of protecting from fire a masterpiece of wooden architecture, namely the 12-dome Church of Transfiguration and other unique monuments situated on Kizhi island in northern Russia. The latest electronics will make it possible to protect the buildings constructed in the medieval ages.

The robot designed by engineers from Petrozavodsk and installed at the architectural preserve, does not in the least look like a brave fire-brigade chief in a traditional brass helmet. It rather looks like a little gun. The robot is controlled by an electronic attachment. In case of fire its sensitive electrodes react instantly.

Or would we have become like Poland, and East European countries? It is difficult to answer. Needless to say, we have become a country of white laws and black practices.

The Seventh Plan proposes to spend Rs 1,80,000 crores in the public sector. Rajiv Gandhi wants to neither reduce this nor have a plan holiday. In one way he is right. Because if we discard the Mahalanobis strategy and planning is abolished, the worst affected programmes would be education, literacy, rural health, poverty eradication and drinking water. But honest intentions do not raise income. Therefore, it seems that during the first year of the Seventh Plan, the government would not be able to spend more than Rs 30,000 crores. This is what was spent last year. However, in real terms it would be less than that because of inflation.

Then what can be done? Much depends on how far the private capitalists utilise the benefits of the concessions provided by the Finance Minister. Can they convert the Indian economy into a fast moving dynamic one? If they can do so, they would be providing employment to productive labour. This may slowly abolish the 'babu' culture. Expansion of private wealth would send more money into the government treasury because the tax rates are such that taxes can be paid. However, the government has also to reduce its unproductive expenses. For example, the way electricity boards are working in unscientific and non-commercial ways has no parallel in the world.

In the states where the chief ministers were enthusiastic about socialism, they nationalised buses. But all public roadways corporations are running at colossal losses. A simple question is: why more money should be provided to cover the losses of the transport corporations by reducing the allocations for drinking water or rural employment projects. Is it not better to denationalise buses so that the bus operators can earn more profits by charging the same fare in investing a part of their earnings and new investments and rest of it in government taxes?

The government is abandoning the Mahalanobis strategy of development. However, it would take some time to develop an alternative strategy. All discussions in the following months should focus on what the new strategy should be.

IT'S A WOMAN'S WORLD

BY MRINAL PANDE

When the UN Decade of Women (UNDW) began in 1974, expectations were high and a sense of euphoria prevailed among the women activists. It was assumed that by identifying and tackling the areas of socio-economic inequality, women's status could easily be elevated, and their centuries of oppression wiped out. But it was not to be so. Experience has revealed that at the heart of the situation lay, not generic differences, but the issue of power; whether it was power within the family, or economic or political power. Patriarchy, which has enjoyed an unchallenged supremacy for centuries, definitely did not react favourably when asked to share its privileges.

At a recent meeting of the UN Commission on the Status of Women, Leticia Shahani, Assistant Secretary General Incharge of the UNDW, declared that in the field of politico-economic power, women still lagged far behind. Statistics provided by 123 world governments, in reply to a UN questionnaire, have revealed that access to political and professional life was still severely limited for women and male predominance in the choicest of jobs remained intact. Interestingly, in the UN itself, only three women out of a total of 50 rank as Assistant Secretary Generals (Leticia is one of them).

The replies to the UN questionnaire have brought to light another fact—that global recession and the traditional social

better the status of women even in the developed countries. While, due to recession, most governments were found to have curtailed resources allocated to solving women's problems, social conditioning had prevented the proper socialisation of even those women who had overcome illiteracy and financial dependence. Eminent sociologist, Veena Das aptly describes the '70s as the 'Age Of Global Innocence'. This realisation is in itself, ironically, the first step towards tackling the problem of women.

Research done during the decade has indicated that in a developing country like ours, increasing male emigration from the countryside had led to most rural women getting fully involved in agricultural labour. But, notwithstanding numerous proposals and recommendations focussing on rural women as key targets, national and international rural schemes have still not directed resources to women. Bereft of

LEGAL RESCUE

No longer are Indian women a class oppressed. Neither are they subservient slaves to the whims of their male counterparts any more. The modern Indian women are self-reliant, totally independent, exuding an aura of confidence and dynamism. This drastic change in social status came about gradually.

Women have been granted equal rights and privileges as men by the Constitution. Provision has also been made for their welfare. Due consideration has been given to the legal status of women from varied angles such as criminal law for protection of women, inheritance, marriages, abortion, divorce, guardianship, maintenance and matrimonial property. But owing to the absence of a uniform civil code, certain persisting outdated provisions in the criminal law, highly inadequate enforcement mechanisms which render most laws ineffective and, above all, failure of social organisations to educate women on their rights, the requisite legal assistance has not been effectively provided to women in distress. And, it is in order to overcome these hurdles that the National Plan of Action put forth specific recommendations for the reformation of numerous existing laws. This resulted in some important enactments to reduce disparities.

Personal Law and Minorities: Review and amendments of criminal law relating to crimes against women and their protection were referred to

the law commission in 1980, and subsequently enactments were made to make the law more effective.

Family Courts: The Committee on the Status of Women in India (CSWI) after making an assessment of the legal status of Indian women, made certain recommendations which resulted in the passing of the Family Courts Act, 1984. The CSWI recommended mutual consent as a ground for divorce whereupon the Hindu Law was amended accordingly in 1976. Cruelty as a ground for divorce has also been added as well as "Option of puberty" earlier available under Muslim Law only. Also the period of waiting after judicial separation has been reduced from two years to one year. Then, before 1976, marriages under the Special Marriage Act were governed for succession under the Indian Succession Act with a special provision that a Hindu who got married invoked a severance from his joint family and separation of his share. An amendment in 1976, however, removed this lacunae, specifying that the provision would not apply if both spouses are Hindus.

Law of Adoption: Radical changes were made in the Hindu Law of Adoption whereby equal rights were introduced for men and women. The right of a girl to be adopted was legitimised. Apart from this, the mother's right over the custody and guardianship of a minor child has been strengthened by the judiciary.

Dowry: The Parliament made the Dowry Prohibition Act, 1961, more stringent in 1984 through an amend-

ment following the recommendations of a joint committee appointed to review the Act. These included stress on the need to widen the definition of dowry, to impose ceilings on marriage expenditure, to make the offence of dowry cognisable and to appoint Dowry Prohibition Officers. New deterrent punishments in dowry cases have become a regular feature. Women's organisations have the right to move courts on dowry offences. If a woman dies within seven years of her marriage and a police report or complaint is lodged by the victim's family, the courts take cognisance of the offence. And a 1976 amendment has added a new chapter, Fundamental Duties, to the Constitution enjoining all citizens to renounce practices "derogatory to the dignity of women".

In order to generate legal literacy among women, the National Committee on Legal Aid (NCLA) is publishing several books and pamphlets. A national plan for legal literacy has also been framed and steps are being taken to include legal rights of women in Adult Education Programmes, NSS Programmes and Workers' Education Programmes. Legal Aid Camps have been set up to identify those in need of legal aid, and a programme for training women social workers on the use of law to protect women has also been initiated. And while much has already been done by way of uplifting women, a little more needs to be done even now. By the way things are progressing, the task does not seem to be insurmountable.

traditional male support in the fields and burdened with young children and elderly relatives, most rural women in India face multiple problems, the most acute being severe shortage of fuel and fodder. Also, mechanisation of agricultural methods has further relegated women to marginal jobs and they are now, more than ever before, at the mercy of their landlords. An estimated 230m women of the developing world suffer from severe nutritional anaemia, a classic poverty syndrome.

In the urban areas, industry absorbs about 30% of the working women. Most of them being in the unorganised sector, female industrial wage levels in all groups show wide disparity with men, ranging from 50 to 90% for comparable work. Women are conspicuous by their absence from managerial and supervisory positions. Since the 1960s, women of the developing world account for 70% of the growth rate of women. But, as any observer of worldwide industrial growth knows, the industrial plants in developing countries are often ancillary to the industrial plants of the developed world, and as such, are liable to be somewhat shifty. The

women employees in this sector thus live in a legal twilight zone, and have no say in determining priorities and allocation of resources.

The biggest service done by the decade to the cause of women is that it has made them visible, statistically and politically. It has made women's issues a concern of governments and legislatures, and boosted research to assess their actual status. Although most of the time, it is the bread and butter concern which lies at the heart of women's political mobilisation, we have also, here in India, seen them during the decade, propelled by moral outrage on stage, protesting against a whole lot of issues—from dowry deaths, to flawed court verdicts and pornographic posters. During the recent general elections, we also witnessed the unprecedented phenomenon of an actual assessing and recording of female voting trends. As a visible voter one may say the Indian woman has 'arrived'.

In response to the mounting militarisation of nations the decade saw the issue of peace becoming an important preoccupation with women. In Copenhagen in

1980, half a million women demonstrated their commitment to peace. In recent years, Islamic fundamentalism has begun to spread and whatever its doctrinal diversities, finally it has only one target, women. If it allies itself, as it has in Iran and Pakistan, with the power of the state, there might well be stiff authoritarian opposition to the decade's thrust. In this sphere, the voluble protest of the Pakistani women against *Chadar* and *Char diwari* (the veil and the four walls) is heartening indeed.

How has the UNW equipped women to face the increasingly brutal backlash of vested male interests? In their growing involvement with the politics of knowledge, women everywhere are challenging the well-entrenched male authority, for the first time in history, by becoming both visible and audible. Considering their invisibility and centuries-long silence on the subject, this itself is no mean achievement. As a woman analyst summed it up neatly, "In the '60s, development was two-thirds Utopia, today it is a mess to be studied empirically."

Answers to

TEST YOUR WORD POWER

- adjunct:** D: something extra but subordinate. Many people see athletics as merely an extra-curricular adjunct to higher education, which in some cases it is.
- apt:** C: well-suited; to the point, fitting; appropriate. Mahatma Gandhi saw khadi as the apt symbol for everything he wanted the country to stand for.
- cavern:** B: an underground chamber or cave. In chill caverns beneath the rolling vineyards of the hill town of Torgiano, Italy, towering rows of steel fermentation cylinders stand like huge rockets, each armed with 40,000 litres of some of the finest wine in Italy.
- chew:** A: to grind with teeth. The average West German chews his way through almost 90 kilos of meat a year compared with less than five kilos of fish.
- cohort:** A: companion or follower, number of persons banded together. From the beginning, Rajiv Gandhi built bridges with politicians whom Sanjay and his cohorts hated.
- concoct:** A: to prepare by mixing together; make up; invent, devise. Much of the research in food engineering has been concentrated on concocting high-protein, low cholesterol meat substitutes.
- deplore:** A: to regret; deprecate; complain of. However much academicians may deplore the lowering of standards resulting from hasty and ill-prepared spreading of university education, the growth of higher education cannot be stopped.
- dubious:** B: questionable as to value, quality or origin; of suspected character; not clear or decided; giving rise to doubt. Despite declarations of a clean administration from the Prime Minister, the ruling party continues to have within its ranks individuals of dubious reputations.
- farce:** B: absurd and useless proceedings; a ridiculous sham. The incidence of mass copying and of other unfair means has increased to such an extent that examinations in some of the universities are becoming a farce.
- frugal:** C: economical; careful; sparing. The quantity of food West Germans tuck away astounds visitors from more frugal nations.
- heap:** A: to pile or collect in great quantity, fill, load with. Despite the praise dieticians heap on it, consumption of fish in West Ger-

many has remained static and is tiny compared with meat.

- incinerate:** A: to burn to ashes; consume by fire. According to legend, the female Ganga was brought down from heaven with the connivance of Lord Shiva in order to purify the ashes of King Sagara's 60,000 sons, who had been incinerated by the wrath of a sage for overweening pride.
- lucra:** D: monetary gain; profit; money. In Kerala, as in other states, the alcohol business is known for its lucra and ruthlessness.
- oblivious:** B: unaware; having no memory. The men and women who dip into the Ganga, often drinking from it, are oblivious of how impure the river has become at this point (Haridwar) where it first enters the plains.
- overwhelm:** A: to engulf; destroy; crush; weigh down; overthrow; upset. When the Latin American debt crisis first struck in August 1982, it seemed like a virulent fever that might quickly overwhelm the world financial system.
- proselytise:** A: to convert from one religion, belief or party to another. As soon as they realised that it was Rajiv Gandhi's star that was on the ascendant, many Sanjay loyalists were proselytised to his cause.
- sloth:** A: laziness; idleness; habitual indolence; disinclination to exertion. The real surprise about the Japanese young is that affluence has not, so far anyway, led to rebellion or sloth.
- stew:** A: to cook, or be cooked, by slow boiling; to fret, worry or fuss. The liquor trade is a pressure cooker where morality turns into vapour and demand and supply stew in the quick fire of profit.
- vendetta:** D: prolonged feud marked by hostilities; hereditary feud between families in which members of each family commit murders in revenge for previous murders. Unlike his mother and brother who nurtured vendetta and planned retribution against their foes, Rajiv Gandhi began his career professing a politics of reconciliation.
- woe:** C: trouble; calamity; affliction; sorrow. After three days of closed-door talks of the policy-making committees of the IMF and the World Bank in April, the world's money men were no closer to a cure for the debt woes of Latin America.

Green Revolution: How Green?

Indian agriculture has undergone a total transformation in the last two decades. The performance of wheat and paddy in terms of yield per acre, particularly, has been very impressive. The three to four times increase in yield is attributable to the usage of dwarf variety of seeds, combined with increasing use of fertilisers and improved irrigation facilities. This dramatic change has been hailed as the 'Green Revolution'. Though there are divergent views on its extent and depth, no one doubts the sweeping nature of changes brought about by it.

Increased use of High Yielding Variety (HYV) seeds with greater use of fertilisers, manures and pesticides along with improved irrigation facilities, multiple cropping, modernised methods and implements of cultivation, better credit facilities, and improved infrastructural framework, are some of the important factors responsible for its transformation in agriculture.

The Green Revolution in India remains confined mainly to the north-western region consisting of Punjab, Haryana, Gujarat, Rajasthan and the western belt of UP. Punjab has been the bulwark of this revolution, so much so that the resultant changes have often been dubbed as the 'Punjab phenomenon'. The reasons for the success of the new package programme in Punjab are easily identifiable. The availability of extensive canal systems and good ground water resources with better infrastructure and seeds, have contributed significantly to the success of the 'Punjab phenomenon'.

In spite of the considerable improvement introduced by the New Agricultural Strategy, recent trends in agriculture clearly reveal that the erstwhile momentum is gradually petering out. The food grain output in the last five years has increased at the paltry rate of 1.5% per annum against a 4-5% annual rate required to feed the teeming millions in India. The yield per acre has not remained high and the per capita grain availability is still very low. To feed the rapidly multiplying population, the yield per acre has to rise and this appears to be more difficult today than it was in 1965, when the Green Revolution had its impact, creating regional imbalances. Half the country remained outside its pale and about one-fourth of India derived limited benefits

that the national Green Revolution was not managed in the right way and remained limited to two or three states, undermining agricultural progress in the country. Though Punjab represents the remarkable success of the new strategy, still it does not make a permanent macroscopic country-wide Green Revolution.

One of the factors which contributed to the success of the Green Revolution is the land-man ratio. In areas where this ratio was adverse, the New Agricultural Strategy failed to improve productivity in agriculture. In Punjab the land-man ratio was quite favourable and, therefore, the usage of the new inputs resulted in a dramatic transformation. The large holdings in Punjab also facilitated the use of the new package programme. In other regions the fragmented and scattered land holdings thwarted all attempts at increasing the yield per acre. This is quite unfortunate particularly when we find that the alluvium is more fertile in some of these regions. The lack of this basic ingredient has been one of the reasons for the limited success of the Green Revolution. Therefore, consolidation of small holdings before the use of new and improved seeds and fertilisers, becomes of paramount importance. This is particularly true for eastern UP, Bihar, Orissa, West Bengal and Rajasthan where the majority of the population is dependent on agriculture and living in conditions of abject poverty. Unfortunately, no progress has been made in this direction despite the six Five-Year plans. Though in areas like Punjab and Haryana attempts have been made for consolidation of holdings, even here there are wide gaps. This has resulted in the emergence of inequities in land ownership and has adversely affected the poor farmers.

The efforts for the extension of the Green Revolution thus bristle with difficulties, which are compounded by the conservative outlook of the people. The need is to introduce land reforms, optimise the farm size and spread the irrigation network. Only institutional reforms, in conjunction with the new input package, can facilitate a faster growth rate in agricultural production.

In conclusion, we can identify non-economic land holdings and pathetic dependence on monsoons as the prime factors responsible for the limited spread of the Green Revolution. Bold and imaginative planning is called for to overcome the bottlenecks. The introduction of institutional reforms, together with technological progress in the sphere of agriculture, is the prescription for the spread and continuation of the Green Revolution.

S.K. RAY

Preserve nature to preserve human beings. This is the succinct message from environmentalists the world over. The rationale behind it is simple. The ecological system is an integrated whole. Its components are inter-related and inter-dependent. So, when one part of the system, however small, is destroyed, the survival of many other species is endangered. And since man has been the main culprit in jeopardising the ecological balance, it is within man's power to remedy his own sins.

The urgent need for man to take immediate action was stressed upon recently by renowned environmentalist S. Dhillon Ripley, Secretary Emeritus, Smithsonian Institute, USA, in a highly illuminating lecture delivered by him at the National Museum of Natural History, New Delhi. One cannot help but agree with Ripley when he opines that the problem of ecology is essentially a human problem. The restoration of this vital balance would necessitate long range projects, involving a great deal of effort and dedication; it is not susceptible to high-speed mechanical solutions.

In explaining why ecology has always occupied a back-seat in man's scheme of affairs, Ripley posited two main arguments. For one, it is a very mysterious and much misunderstood subject. Consequently not much importance is given to it. It is not difficult to agree with him on this point, especially when one notices the frequent reference to the 'ecology of a room by people while deciding upon the decor of their homes. What is more important, however, is the fact that technology has acted as a blinder to the original and natural source of man's livelihood. Even on this point, agreement with Ripley is not difficult. One has only to stop and consider how accustomed man has become to the amenities of modern day living, so much so that he takes everything nature has to offer—the soil, the air, the water etc. for granted.

If man's present indifference to nature is allowed to continue, one cannot rule out the distinct possibility of a day when human beings would run out of water, rainfall, soil, air, etc., Ripley emphatically asserted. Here again, it is easy to agree with him. History is replete with examples of how man's indiscriminate destruction of forests brought about dramatic changes in climatic conditions.

Take a look at the Ganges, to many the symbol of India's spiritual fortitude, and what does one see? A mighty river being reduced at stretches to a polluted streak. Ripley pointed out that hydro-electric projects, which require large-scale deforestation, are fast destroying the natural

reducing the sediment rate of beneficial elements. Similarly, industrial effluents streaming into the Ganges are adversely affecting the natural purifying and filtering property of its minerals. The Ganges must be saved. But how? Ripley asserts that social consciousness is the key.

What is India doing for its environment and ecology? It would be a denial of fact to say that it is not doing anything. At the same time, one can confidently maintain that what it is doing is not enough, nor is it the best. In this connection, the example of Orissa can be cited. Here, mono-culture, the practice of growing particular types of trees (teak and sal), is the main thrust of the conservation effort; whereas, according to Ripley, poly-culture, the practice of growing a variety of trees, is absolutely essential for conservation. Diversity of approach to nature is what is required. Mono-culture makes the soil poor while poly-culture makes it rich. Apparently in Andhra Pradesh, there is much more respect for forest diversity than in Orissa.

All said and done, India needs to do a lot more on the ecological front. PM Rajiv Gandhi's Ganga project is a commendable step in this direction. Many more such long-range projects need to be undertaken because, as Ripley rightly points out, national security includes ecological security.

VIAIY KONWAR

Committed Judiciary

India has adopted parliamentary democracy and has a federal set up. Hence, the need for an independent judiciary in the country. It is believed that the separation of judicial power from the executive and legislative branches of the State is essential in a democratic set up. The Judiciary, therefore, is entrusted with the charge of preventing arbitrary use of government authority and safeguarding the rights and liberties of the citizens. In addition, the Judiciary also acts as the guardian of the Constitution. The makers of the Constitution have endeavoured to ensure the independence of the Judiciary through various constitutional provisions, e.g., as per the Constitution of India, a judge, once appointed, will hold office till he attains the age of 65 and cannot be removed earlier except for proved misconduct or incapacity, by a process analogous to impeachment. The Executive, thus, cannot remove him.

Right from the time of the promulgation of the Constitution in the 1950s, successive governments, in their eagerness to deliver the goods, have consistently endeavoured to play down the judiciary. This conflict between the executive and the judiciary, has mounted particularly

became the accepted wisdom in the ruling circles to hold the courts responsible for throwing spanners in the way of social change. This accusation was levelled against the Supreme Court in its judgment in the Bank Nationalisation case and the Privy Purses case. Though the judgments were nullified through Constitutional amendments, yet the feeling that the judiciary was trying to act as a super legislature took roots.

The appointment of Justice A.N. Ray as the Chief Justice of India, in 1973, superseding three senior judges, was perhaps the beginning of the executive's action to cow down the judges. This appointment was against the established convention of considering the senior-most judge for appointment to the highest seat in the Judiciary.

During the Emergency large-scale transfer of judges was effected, which demoralised the practitioners of justice. In 1980, when a judicial bench ordered the striking down of Sec 55, and Sec 4 of the 42nd Amendment, the fury of the government knew no bounds. New strategies were prepared by the government to 'teach a lesson' to the erring judiciary. It was decided that the time was ripe for inducting progressive judges into the courts. Another approach which was executed largely, was transfer of judges which included the Chief Justices of High Courts. This move was challenged, but the majority decision in the 'judges' case, curbed the independence of the Judiciary and also deflated the role of the Chief Justice of India in judicial appointments.

The new government has promised to restore the prestige of the judiciary and the PM Rajiv Gandhi claims that he is against the transfer of judges. All these are welcome signs but what is likely to transpire, only time will tell.

Reforms In China

China has entered a new and exciting phase in its development. With the recent reforms a new situation is emerging—after years of 'resolute, heroic and indomitable struggle' by the Chinese people against capitalist and imperialist forces. Presently, Chairman Deng Xiaoping is going full throttle in his crusade to modernise China. The experiments which began in 1978, with the advent of the new leadership, have till now proved successful, mainly because of their close proximity to the aspirations of the average Chinese citizen—who has always preferred a rising living standard to mouthing patriotic Maoist slogans urging him to sacrifice 'for the cause'. The reforms to reshape the urban economy, announced in Oct '84, reveal the determination and foresight of those at the helm in Peking. In

the approach to the poverty-stricken traditional economy is now to be set on the path of modernisation with the help of an 'open door' policy, foreign funds and modern technology.

The first round of changes were effected in the agricultural sector by the 'ultraleftist' Deng in 1978. The age-old commune system gave way, in the new scheme, to the family farm and the 'responsibility system'—cultivation of land by peasants individually or in groups under contract with their team. The consequent increases in the incomes of the peasants and the annual rise in the grain output has dramatically restructured rural China smoothly and in a short time.

All this while the urban factories were unable to keep pace with the growing demand for consumer goods emanating from the higher earnings of the peasants. This provided the basic motivation for the 'October 84 revolution' of Deng Xiaoping. The results could be more profound, longer lasting and more significant than Mao's cultural revolution. The landmark of economic plan, most likely to chart out a new course of development, was duly endorsed by the Central Committee of the Chinese Communist Party soon after the changes were announced. The measures include freeing the urban economy from the fetters of rigid state control. The state enterprises are to be cut loose from the strict production quotas and the heavy subsidies imposed by the central planners. Henceforth, Chinese industries will move distinctly along capitalist lines, as the market forces will now guide the various enterprises. The rise or fall of an enterprise, therefore, will depend on its ability to cope with the forces of demand and supply. Clearly the Central planning is the biggest casualty of the new approach. The factory managers, the strategy envisages, will be given more power autonomy to recruit and 'fire' employees without much bother about egalitarianism.

Another remarkable change in recent times is that 'profit' is no longer a dirty word. The surplus, as it is now called, will be taxed, with the balance being available for reinvestment. This is different from the earlier practice of the state taking away the entire surpluses for the common cause. The encouragement to consumerism and free enterprise is quite contrary to the Chinese ideological moorings but the new leadership is prepared to shed its traditional outlook for the betterment of the people. In fact, the *People's Daily*—Communist Party's newspaper—went to the extent of describing Maoism and Leninism as obsolete. But this was too much for the die hard Maoists to consume and hence the propaganda was stopped but the 'action' continued. The hopes are

open door policy will take a highly industrialised China into the 21st century.

In spite of all this liberalisation, the press and literature still continue to be under the strict control of the state machinery and the role assigned to them is that of extolling the virtues of the new changes creeping into the Chinese society. But voices are being heard for greater freedom to journalists and newspapers. More difficult would be the containment of the vices accompanying consumerism. Inflation could also endanger the new

and cutting down

soaring prices, at least initially. The highly disciplined and regimented Chinese may be baffled by the market mechanism as the recent panic buying in the shops indicates. Moreover the wage-price flexibility cannot be relied upon to correct distortions as the experience of other countries shows. Still we'll have to wait for some time before making any further comments. Another serious hurdle could be the reluctance of the foreign investors to 'block' their funds in the Special Economic Zones of a coun-

employment are likely to be mixed, but for the success of the new measures the leadership will have to contend with the hard-boiled Maoists.

Whatever the future unleashes on the Chinese, the new vigour and vitality in their economic policies is unmistakable. The confidence and courage with which they are willing to tread on an unknown path, which requires total reinterpretation of their ideology, is admirable.

J.V. A.K.

SRI LANKA

(Continued from page 14)

the island refugees, so much so that Athulathmudali, who visited India recently, went back with a good impression and the Sri Lankan press was optimistic about Rajiv's stand. The cause for this optimism was that Zaire Airways DC-8 cargo aircraft carrying arms and ammunition to Sri Lanka was forced to make an unscheduled refuelling stop at Trivandrum around the time that Athulathmudali was in New Delhi. Instead of the incident hampering talks between the two politicians, Rajiv personally saw to it that the aircraft was allowed to proceed to Colombo. The general feeling was that he would have detained the DC-8. On another occasion, a Sri Lankan gunboat, accused of terrorising Indian fishermen, was captured within Indian waters. Rajiv's government, instead of escalating the issue, opted for exchanging the vessel for 17 Indian fishermen held in Sri Lanka since last October on charges of poaching.

Cooling Off

Although Sri Lanka has reason to feel optimistic at the change in the attitude of the Indian Government, the atmosphere in India is one of doubt and gloom. Athulathmudali's visit was seen by the Indian press as of little importance as hardly any progress was made. Further, Jayewardene turned down Rajiv's request for a meeting on bilateral issues without any reason and sent Athulathmudali instead for a flying visit. Jayewardene made it clear through Athulathmudali that he was in no hurry to restart political discussions at home to resolve the problem, saying that a "cooling off" period is required before he could start a dialogue with the TULF. The only initiative Colombo has shown is a suggestion for the joint patrolling of the Palk Strait by both countries. It is also contemplating lifting the surveillance ban and permitting supervised fishing in the area which was declared as a 'surveillance' zone last year. This would help the Indian fishermen, many of whom have been harassed and even killed by Sri

Lankans, who accused them of fishing in Sri Lankan waters, or worse, of transporting arms of Tamil guerillas in Sri Lanka. However, unless the internal problem in the island is solved, the refugee influx into India will increase. It is, therefore, in India's interest to see that the issue is solved politically, at the earliest.

In fact, it is in Sri Lanka's interest, too, to solve the problem fast. The island paradise has a shattered economy at present. According to the Central Bank of Ceylon, factory industry and small industry showed a 2.2% growth against 9% the previous year; the manufacturing sector registered a growth rate of 0.8%; public sector production declined in real terms by 15% and real capital income registered a decrease from 3.3% in 1982 to 2.5% in 1983. Tourism, one of the leading industries in Sri Lanka has fallen to No. 4 position. Tourist arrivals dropped by 17% in 1983, and the figures registered a further 5.9% fall in 1984. Tamil businessmen and entrepreneurs have gone bankrupt following the 1983 anti-Tamil riots. According to official statistics, 122 industrial establishments suffered an estimated \$70m worth of damage and while 30 production units were totally destroyed, 15,000 manufacturing jobs were lost. Most significantly the Tamils were disproportionately prominent in key sectors like accountancy, engineering and medicine. Their sudden departure had left many businesses in disarray. Sri Lanka's fragile economic structure had therefore, been badly hit. Prices have risen 200% since 1978, the balance of payment is unfavourable again, there is an increasing gap between revenue and expenditure of the government and the foreign debt is over Rs 45,000,000,000.

At the same time, if the ethnic problem escalates further, the island may become the cause of increased superpower presence in the Indian Ocean. The US, Japan, Britain, Canada and W. Germany are among the chief donors of aid to Sri Lanka, and they can help to solve the issue by cutting down aid on the rationale of increasing human rights abuse by the army and the fact that little of the aid is chan-

nelled to the Tamil north. But the fact that so far they have ignored human rights abuse in the island would signify that they have other interests in the region. It is a fact that the Israeli Mossad and the British Special Air Services (SAS) have teams to train and equip the unruly armed forces in Sri Lanka. An Israeli spokesman frankly admitted recently that "this marks our return to Asia". More significantly, the US has erected a transmitter ostensibly for the use of the Voice of America (VOA) in Sri Lanka. It is the most powerful transmitter outside the US and defence analysts feel that it may be a communications relay facility between Diego Garcia and the Pine Gap communications centre in Australia. Colombo has no editorial control in the programmes. But what is important for India is that it is felt that the transmitter is capable of jamming the Indian defence communications system.

Although the US has made it clear that it is in favour of a political solution, it is also clear from various statements as to where its interests lie. Before a visit to Colombo, Reagan's ambassador at large, Gen Vernon Walters issued a statement deploring the Tamil guerilla attacks as a "serious and unwarranted challenge to the government of a practising democracy". Jayewardene's recent statement also implies that Western countries would give aid to tackle "residual terrorism" if an acceptable political arrangement could be forged. What "residual terrorism" would amount to in Sri Lanka, only Jayewardene and his army know. However, what is important for India is that a prolonged ethnic conflict would lead to increased superpower presence too close to India. In fact, to promote their own interests, it is not unknown that the superpowers would rather have a troubled region rather than a peaceful one.

All this brings us back to square one: the failure to solve the problem at an earlier stage has led to complexities which had not existed earlier. If the conflict continues, the complexities can only grow and not lessen. And, as the killings go on, Sri Lanka is becoming, or rather, has already become a classic case of paradise lost. ■

Coffee Break

JOYOSHREE ARORA:
TALENT HAS NO BOUNDS

Only a Bhagwanti for every Basasar will keep the family ship afloat...

She is young, ebullient and has talent in her blood. Any other woman in her place would have breezed through the labyrinth of success to scale the dizzy heights of fame. But Joyoshree Arora—the endearing *Hum Log* mother—has chosen differently. "My priorities are clearly chalked out and I have never allowed my potential talent to take the upper hand," she confided. The familiar wry smile on her lips was typically Bhagwanti's. "Taking up a full-time job would have been meaningless. So I decided to utilise my acting ability. I am happy and my family is equally happy as I get enough time for them," Joyoshree claimed, in a confident tone.

As a busy army wife, a mother of two schoolgoing girls, a schoolteacher herself till recently and an 'A' grade TV artiste, don't you ever find the ground slipping under your feet?

"I am an early starter and I do trespass a little on my resting time. But life is too beautiful and there is plenty to be done. I am used to home management ever since I was 18. Army life has taught me to race against time—postings, parties, doctors, friends and all the glamour that

goes with it. Sounds good alright but there isn't much money in it. So I took up teaching and a bit of television now and then. The timings are spaced out so that the family never goes unattended. Determination and a sense of organisation facilitate time-management."

Can you claim to have had a successful acting career before doing *Hum Log*? Are you simultaneously doing other TV series?

"*Hum Log* has definitely given me the kind of publicity one gets only after doing 10 films. At the moment my loyalty lies only with *Hum Log*. Which is why I am not working for other TV producers."

"We Bengalis are art lovers—be it dancing, music, drama or painting. I learnt dancing and was good at Rabindraki (dance form based on Rabindrasangeet). But I loved dramatics though I was never trained in acting. It just came off-hand right from the age of nine when I did *Abhyigyan Shakuntalam*. I try to keep my eyes and ears open, observe human behaviour and human reactions. I know several regional languages and dialects—a plus point of being posted anywhere in India."

"During our postings I kept my acting alive. Peter Ustinov's *Half Way Up The Tree* with a semi-professional group at the Wellington Staff College, in 1977, offered the kind of challenge I wanted to face. Besides, I had roles in *Chandelika*, *Chitrangana*, *Abhisar*, etc. In 1978 I compered my first school programme for Radio Jammu and joined Jammu TV in 1980. Subsequently I acted in TV plays in Jullundur. *Ittefaq Sa* was one of my popular plays where I played a sophisticated, young Girija. I also did a regular pre-recorded TV programme *Apne Likha*, for Jullundur TV. As leading lady in *Ajnabi* I enjoyed my role of a lively young college girl. The audience response to my role was encouraging. My entry into *Hum Log* is a result of previous stage performances where I devotedly worked hard to channelise my potential in a set direction."

How do you like the idea of mothering *Hum Log*?

"Bhagwanti is one of the most sensible characters in *Hum Log*, next to Dadaji. Am I proud to have bagged her role! She is the pivot around which the entire family wheel rotates. Bhagwanti is no *bechari*, mind you, as many people have misunderstood her to be, nor is she a martyr. She is tolerant, practical and balanced. She does not rebel against the injustice meted out to her by her indolent husband; nor is she affected by the spiteful remarks of her cunning mother-in-law. For, Bhagwanti is aware of the repercussions—total disharmony. She revolts only when her daughter-in-law is unjustly criticised. But, even in the worst

situations, she does not indulge in self-pity—the strongest element in her character."

"Bhagwanti is also well-informed. She knows the dangers of seeking jobs abroad, through agents. She wisely suggests that her son should set up his *dhandu* instead of going to Dubai. The *Hum Log* mother is also an intelligent woman who aspires for a better life for her children. '*Pakane walian khila kar khush hoti hain*,' she tells Badki who asks her mother to take care of her health."

"Now and then she makes an effort to reform her husband and wean him away from the bottle. When the hypocrite in him blurts out '*Tujhe to rang mahal me basana chaha*,' Bhagwanti promptly cuts him short: '*Ghar grihasti rang mahal me rehakar nahin chhalat jet...Gharwale bano aur gharwali mano!*'"

"In fact, I consider Bhagwanti to be a totally liberated woman. What if she isn't consistently vociferous? Isn't she aware and mature? As a traditional middle-class woman, she displays a sense of dignity in being soft-spoken, coy and even tight-lipped in the presence of her in-laws. Life's battles can often be won by silent interactions."

Can Bhagwantis exist in this era of liberated women?

"In the corner of every woman's heart there is a Bhagwanti. And every family which has a Basasar Ram, can survive only with the help of a Bhagwanti. Her sense of tolerance and dignity are essential pre-requisites for every woman who thinks in terms of family life."

What are your future plans?

"I have no doubts that *Hum Log* would fetch me more and better roles in TV serials and even TV films. But I am no more a novice in the line. And I am not out to grab roles—not even film roles—unless they are worthwhile. Recently I had an offer from T. Rama Rao to play Jackie Shroff's mother. I am not against a mother's role. The fact is that a brief sob-sob role in a commercial film wouldn't carry weight. It would just be an extension of the *Hum Log* mother. Even the monetary returns in Rama Rao's film were hardly attractive."

"I am game for any kind of role in art films. If directors like M.S. Sathyu, Satyajit Ray, Sai Paranjpe and Mrinal Sen were to give me a chance in their films, I would happily accept them even with minimum remuneration. The mother in *Saransh* is the kind of character I want to portray. After all, there is a sense of dignity attached to every profession. And if ever I move to films, I will make sure the roles have a significance."

"I am not in search of fame but in search of a versatile actress in Joyoshree Arora."

Prabha Gopal, New Delhi

Adventure Venture

DESTINATION DUMBBELL 12

1st Mar. 85. It was like any other day: a humid March afternoon, with the summer heat picking up. But for Fg Offr Hari Kumar, strapped up inside an Ajeet fighter, awaiting line-up instructions, it was going to be a day he wouldn't forget for a long time to come. Twenty-four-year-old 'Harry', as his close friends call him, had only 340 hrs of total flying experience.

A thorough check of all the systems and instruments had already been carried out. Counting seconds as beads of perspiration rolled down his cheeks making the oxygen mask slippery, he heard the call from the tower. "242 clear line-up; winds 10 to 15 knots. 1 o'clock." He checked all clear, opened throttle and rolled on to the centre of the runway. He was ready for take-off for a practice live bomb sortie over the Air to Ground Range. A last glance at all warning lights and cockpit instruments; everything all right, showing precisely what they should show. A crisp call from the pilot to the tower: "242 take off." Tower cleared him, "Take off, turn left, cross overhead 1 km."

The pilot opened full throttle; felt the power building up as the single Orpheus engine started gulping down fuel to build up a dizzy 10,000 revolutions per minute. He released brakes and felt the healthy acceleration as the little fighter, which shot into fame during the 1965 operations, rushed down the centre line of the runway. Speed coming to 130 kts, the nose wheel was promptly raised and at 150 kts, air borne—a smooth transition from ground to air. It took a few seconds to establish a climb to 1 km crossing overhead the base. It was time to change over to range frequency and obtain clearance to join range. As he changed over, the Range Safety Officer informed him, "242, range is busy; hold over point 'Kilo', orbit left at 1.8 km." Harry acknowledged the message and continued climbing to 1.8 km with full power. The sweat was drying down as the cockpit air-conditioning system started to become effective. Approaching point 'Kilo', the power was brought down 80% and the aircraft levelled out at 1.8 km. It was about 18 km from base and he informed the range that he was holding over 'Kilo'.

Harry started a gentle left orbit and was already visualising the bomb target and where to put his sight according to the prevailing winds and gravity drop, when he felt a sudden deceleration and loss of engine noise. He checked the instruments. The revolutions per minute gauge was winding down like an unwinding coil. He felt as if an unseen hand had closed the throttle. His first reaction was, "Hey no! It's not true." But within a second, his training at the renowned No 9 Squadron Air Force (The 'Wolf Pack' as they are affectionately called) took charge of the situation. He told himself, "Master, believe what you are seeing. You have had engine failure, now what?" His reflex actions, built up on combat-oriented training, took over. He rolled out towards the base and tried to relight the fighter's engine. Moments of anticipation, but the engine kept winding

down. He transmitted to the Range Safety Officer about his problem; and again tried to revive the dying engine. Harry could count the microseconds! It finally registered that the engine wouldn't re-start. He had the most dreaded emergency on board that can happen to a jet fighter. He had to cope with the flying of a disabled aircraft with a dead engine.

Gliding towards the base, he had a height of 1.8 km. With a dead engine, it would take one and a half minutes at the best gliding speed before he touched mother earth. He was authorised to eject; but as he was flying over a

A display of rare courage, presence of mind and exceptional flying skill and Fg Offr Hari Kumar (right) was back on earth after an unforgettable encounter with death at a height of 1.8 km, when the engine of his Ajeet aircraft (below) failed.

thickly populated area, he ruled it out. More over, it would mean the complete destruction of the aircraft giving no chance for the experts to analyse the cause of the malfunction. He had only seconds to decide—should he ensure his safety by ejecting or take a chance by gliding the fighter to the air base? Harry decided to coax the crippled aircraft to limp back to base, even though 15 km was a long distance for the fighter. He knew he wouldn't be able to make it to the runway from which he had taken off only a few minutes before. His only chance was to put the aircraft down on runway 12, which was not in use at the moment. He informed the base and started gliding towards his final destination. He knew he had to muster up every little thing he had been taught and keep his cool, if he was to reach the dumbbell on the beginning of runway 12 which he could see from 10 km away.

Meanwhile, the Base Air Traffic Control

Tower had transformed into a centre of hectic activity. With the cool efficiency of professionals, the crash crew mounted their fire-fighting equipment; the runway controller was on the look out for the aircraft, due any time now; all the other flying aircraft were informed to keep clear of the base and to maintain radio silence. Now they had only to wait. Tense minutes as the chronometer at the Air Traffic Control ticked off the seconds.

Suddenly the flying supervisor spotted the fighter on the final approach, with the landing gear lowered. People looked anxiously at the Ajeet fighter which continued losing height, a minutes appeared to be eternity. The aircraft touched down just at the beginning of the runway. It started decelerating with the tail-chute opening to form a perfect umbrella; it came to a stop just short of the end of the runway, and from the control tower, people saw the pilot jumping out.

Booktalk

THEN AND NOW

The book * can be divided into two parts *The Nehrus And the Gandhis* and *An Indian Dynasty*: the first being the text written by Tariq Ali, the second comprising the introduction by Salman Rushdie. Rushdie sets out to prove that "Indian democracy" has not been left in good shape "by its ruling family" and that "a royal court, a ruling elite of intimates of the family, unelected and unanswerable to anyone but the prime minister" has been created at Delhi. There is a total lack of consistency between such preconceived notions and what Ali has to say. In fact, if one

were to disassociate Rushdie's introduction from the book and cut out *An Indian Dynasty* from the title, it would make quite good reading. But if one were to read the book after reading the introduction, the inconsistency between the two will jar the mind.

Ali, if anything, is sympathetic to both Nehru and the Gandhis. Even Sanjay Gandhi, the bete-noire of so many anti-emergency persons, both in India and outside, is not accused of being a fascist or having autocratic tendencies, but of having an obsession for speed. He says that "Sanjay's true purpose was to clear the ground for an unimpeded display of free enterprise in town and countryside." And for this, people behind him—the Youth Congress, people who felt that caste and class prejudices should not be allowed to stand in the way of constructing a unified group of property-owners. Sanjay

the upper castes, and where he went wrong was that he tried to speed up the process. Ali is not too critical of the emergency period, either, calling it a "constitutional coup d'état, carried out with the support of the large Congress majority in Parliament". If anything, he is critical of the Janata period, depicting it as inefficient. Ali appears obsessed with the underlying communalistic strain in Jan Sangh, and this emerges again and again in his book, specially in the pages on the Janata regime. He, in fact, points out that the Janata was less democratic than Mrs Gandhi during the emergency period. While writing about the election of the Prime Minister in 1977, he says, "Hardly were they in power than they were ignoring Parliament and deferring to the judgment of Jayaprakash." J.P. himself is depicted as a "veteran mystagogue" his movement is called "bogus", and Raj Narain the "giant killer" is dismissed as a "buffoon" Mrs Gandhi, on the other hand, emerges in a much better light, for she took "full responsibility for the defeat" of her party in 1977.

However, one finds little in the book to support Rushdie's contention that India is being ruled by a "dynasty". Ali himself disproves the thesis by repudiating the legend that Nehru pulled strings behind the scene to promote Mrs Gandhi's political advancement. He confirms that Kamraj and his syndicate were the political "bosses" who wanted to keep the "independent" and "puritan" Morarji Desai out of power and therefore got Indira Gandhi elected. They felt that she would be like clay in their hands, to be moulded as they saw fit. About Rajiv Gandhi, Ali says that his "first instincts" after his mother's assassination was in favour of a senior minister taking over, and later he sought "popular legitimacy". This is certainly not how a dynasty works. The overall impression that one gets is that Ali has tried to superimpose an independently-arrived-at deduction on a narrative which is essentially objective and does not support that deduction.

On the whole, the book has little to offer by way of novelty, but this is perhaps because it was completed in only 42 days. What triggered off the author to write it, was Mrs Gandhi's assassination and Rajiv's alleged "succession"—the objective situation would make any well-written book on the Gandhis and the Nehrus popular. The book is basically a run-through of contemporary history starting with the freedom struggle and coming on to the Indian political scene today. It is, in fact, a good resume of newspaper articles in the post-independence period, with a brief historical background. It is, however, interesting at parts, especially when the author's point of view comes through. His sensitive and perceptive interpretation of Nehru and Mrs Gandhi and the way their minds worked are especially worth noting. Further, his analysis of certain events is quite objective and free from partisan bias. If it were not for Rushdie's introduction, which puts the reader on the wrong track and makes him look for things which are not there, the book would be stimulating reading for most of us who have lived through the times Ali writes about.

S.B., New Delhi

*THE NEHRUS AND THE GANDHIS: AN INDIAN DYNASTY by Tariq Ali; published by Picador, London; distributed by Rupa & Co; price : £2.50; pages : 300.

TOO MANY PEOPLE?

Even if the continents are not going to sink one day under the sheer weight of human bodies, the problem of over-population in some countries is going to make people wish they had never been born. Some countries are the key point to notice, though, and not a great many either.

The present cycle of population expansion is already slowing down, and birth rates may drop to replacement level in most of the world in the next 25 years. It could take another 70 years before world population stops growing, because almost half the population in Third World countries is now under 21. A century from now, however, the world's population will probably have stabilised at somewhere between 8 and 11b people.

Over-population is a misleading term, if you take it to signify poverty, hunger and hopelessness. England is not 'over-populated' with over 900 people per square mile (350 per sq km). India is said to be 'over-populated' with less

more than doubled in the 18th; by 1850, at its existing growth rate, it would have reached 10m. But it never got there.

Ireland had exactly the same population density as England at the time, but in Ireland there was no industrial revolution going on; the extra population had to find a living on the land. By 1845 a quarter of the population had no work, and were virtually starving in the winters.

In 1846 the Irish potato crop failed. In the next five years a tenth of the population starved to death, and a million fled to England and America. The emigration never ceased after that, and during the 19th century over 5m people left Ireland. The population fell from the 1845 peak of 8½m to 4½m in 1900. Ireland is the classic modern example of demographic disaster.

This sort of catastrophe now lies in wait for Bangladesh or the Indonesian island of Java. Each has over 90m people, almost all still on the land, at a density of around 1,500 per square mile (600 per sq km). Already the incidence of disease is rising in Java, and the

than 500 people per square mile (200 per sq km). Poverty, in other words, is not caused by too many people; it is the result of too little money.

Most Third World countries have not developed their resources and their people are not trained to exploit them properly. Most of their people, therefore, are poor. But the fact that their populations are growing rapidly is not the cause of their poverty. Apart from the Indian sub-continent, China, and a few islands in the Caribbean and Indian Ocean, Third World countries have very low population densities. Their only problem with population growth is the need to make their economies grow faster, so as to raise living standards. To a greater or lesser extent most of them are succeeding.

Only if they fail consistently do they start running into the classic Malthusian symptoms of overpopulation: famine, disease and chronic violence. It can happen at any population density—the question is not how many people there are, but how much food and other resources are being produced to support them.

The classic case of this in the modern era was Ireland. Like the rest of the British Isles, its population began to grow rapidly around

average food intake is falling; the physical size of the Javanese is actually decreasing. And when Malthus arrives this time, scythe in hand, there will be no escape through emigration.

Fortunately, there are very few places like that in the world. A more typical pattern is that of Mexico or Brazil, where the population is exploding—3% growth a year—but where the economy is expanding even faster new lands are being opened up, and the population growth is going into the cities. (Mexico City, Sao Paulo and Rio will be first, third and sixth in size amongst the world's cities in 2000)

This kind of growth is so fast it's frightening, and as always the experiences of first-generation city dwellers straight off the land are grim. But it actually resembles the experience of the US between 1850 and 1900, when the population more than tripled and New York became the world's biggest city.

The present cycle of world population growth will create a few horribly mutilated casualties in the Third World, just as it did in Europe in the last century. Most countries, however, will come through it without a disaster.

Gwynne Dyer, London

Here's How

TO DRESS FOR AN INTERVIEW

Going for an interview? Here's wishing you good luck and confidence from Blossom Kochar, a highly qualified and well-known beautician of Delhi. Well-groomed hair and right clothes go a long way in making a good impression on the prospective employer.

Women

Hair: Exotic or overdone hairstyles are absolutely wrong. Hair must lie in place without requiring constant attention. While going for an interview, avoid extremes and wear your hair in a simple, well-groomed style.

Wearing the 'wave' for efficiency.

Make Up: The guiding principle is to be natural. The hair should be clean and the face should be clear. While going for an interview, avoid *kaajal* and very little of any other make-up. Your lipstick should not stand out. Any bright red colours which blend with the complexion and do not give you an overdone look. Eye-shadow should not be used as it gives an over-made-up look. But if you must use it, use only a very thin line. Eye liner is also out for the same reason.

Nails: Very long fingernails and false eyelashes should be avoided. Use only colourless nail polish for your fingernails.

Mascara: Mascara should also be used with great discretion. Your eyebrows should look as natural as possible. If you have pale eyebrows, they can be darkened slightly with a pencil.

Perfume: If you want to wear it, wear a delicate and expensive one. But, if others know you are wearing it, then you are wearing too much.

Jewellery: The lesser the jewellery worn the better. It should be functional and should add to your personality. A watch, a simple ring and simple gold earrings are usually enough. Dangling earrings are not for interviews. In fact anything that clangs, bangs or jingles should be avoided.

A riot of curls gives a frivolous look.

Dress: You can wear any dress that you like—sari, Punjabi outfit or a dress. But avoid loud floral prints. Wear solid colours. Stripes, checks, paisleys can also work well. The colours that tested best are: deep blue, navy blue, tan, beige, dark brown, grey and light grey, rust, and medium blue. Colours that tested poorly are: green, purple, orange, baby blue, pink, bright red, lavenders, bright yellow or light rust. Avoid materials that cling, shine or make a noise when you walk. Also avoid halter necks and clinging sweaters and dresses made out of denim or corduroy. In winter, woollens should match your dress. A beige coat, shawl or cardigan blends with your personality and does not distract from it.

Men

A man must learn to use clothing as a business tool. A young man right out of college going for his first or second interview, has limited resources and his wardrobe suffers accordingly. But large wardrobes or expensive wardrobes are not the real issues. The right colours, patterns and styles are very important. If a man has only one good suit, it should be of a dark blue shade. If you can afford a second one, it should be in grey pin stripes. These suits and appropriate shirts and ties, should be able to "get you through" most interviews. Dark blue is the best colour. In summer, a safari suit in light blue shade can also be used. But, a dark blue pant, a light blue shirt and a maroon tie look more effective than a safari suit.

Coordinating clothes: When coordinating clothes, the colours, lines, textures and style must be considered. In choosing colours men make two basic mistakes. They either wear colours that clash or colours that are monochromatic (all in one shade). For example a light grey suit with a pale blue shirt and pale blue tie is an example of colours that fade, while a green shirt with a blue suit and an orange tie is a clash of colours.

The lines of any garment are the directions in which the pattern runs. A pinstripe suit has a vertical pattern. A check suit has a vertical and horizontal pattern. A paisley tie has a non-directional pattern. When putting clothing together it is very important that a pattern that travels in one direction is not put next to a pattern that travels in another direction. The lines are bound to clash.

Texture is often overlooked, but it can be used to match materials with very pleasing results. For example, a nice heavy wool tie with a heavy flannel suit or a linen tie with a linen

suit are good texture combinations. An example of clash of textures is a silk tie worn with a flannel suit.

All items of clothing have a definite style. For example, a pinstriped suit gives a conservative business-like look and it would be a clash of styles to wear a sporting shirt with a pinstriped suit. Similarly, a narrow traditionally patterned tie would look silly if worn with a wide laped suit. So the combination of styles must be appropriate.

The pin stripe look for all reasons.

The simple, effective and acceptable combination of clothing is in solid colours. Remember to keep one of them very dark or in contrast, so that your outfit does not look dull. For example, in a blue suit, a white shirt and a maroon tie, you will project a sharp, fashionable look.

Haircut: Hair should be cut neatly; facial hair should be kept well trimmed and well shaped. Your hair must be well combed and your shoes must be polished.

Jewellery: Stay away from identity bracelets. They should be chosen very discreetly and must be expensive if you must wear them. The only completely acceptable ring is the wedding ring/band. Cult links should be simple and small, never large. If you must wear stones, wear real ones.

Big, heavy and ornate buckles tend to be

One, two, buckle and shoe.

unacceptable. Small, clean, traditional buckles with square lines are best. If you have to carry a briefcase, it should be in a dark rich tone of brown leather. Black and grey briefcases do not look very businesslike. Acceptable colours of shoes are black and brown. The plain lace shoes are the traditional footwear that always look smart.

An exciting package of books worth Rs. 50 each from **Rupa & Co., New Delhi** to the correct entries pulled out of the hat

For How To Enter and solutions to April issue's contests, turn to page 74.

**Kenwords
Coupon**

**Apperception Test
Coupon**

HOW TO ENTER

● Print the answers neatly in capital letters alongwith your name, age and address. Each crossword must be pasted/clipped to a larger piece of paper.

● You may send in any number of entries, but each must be numbered accordingly and accompanied with its respective COUPON.

● Though all your entries will be included in the draw of lots, you will be entitled to only one prize.

Closing date for the two contests: June 25.

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions to this issue's contests will be published in August.

SOLUTIONS SOLI

FROM THE CLUB DEB

Now that university exams are coming to a close, a sizeable number of CCTimes Clubs will be in for a busy session. Debates, group discussions, quizzes, cultural stunts, social service projects, sporting activities, trekking and mountaineering, personality development programmes, career banks... even inter-club activities could be arranged by the enterprising clubs.

Debating sessions could take off with topics like 'Commercialisation of the Idiot Box (TV) in India', 'Advertising in a developing country', 'Reserving seats for women in city-buses', and 'Video boom in India'. Groups could have discussions on issues like 'Should multi-national companies be banned in Third World countries?', 'Should India go nuclear?', 'Role of the police in the common man's life—saviour or destroyer?' and 'Are reservations a necessity or an evil?'

And now for some physical exercise. How about erring trekking trips to the hills? The more adventurous could go higher up into the mountains—but with an experienced mountaineer as guide. Summer is the best time for such outdoor activities which will introduce you to qualities like team-spirit, self-confidence and adaptability.

We hope these suggestions will set the clubs thinking and help them come up with novel ideas. But don't forget to share them with us. Likewise, share your activities and please be more graphic when describing them. A mere listing gives no idea to the other clubs and us about the quality of the programmes. Unlike such clubs, the Wisdom Rendezvous Club from Hyderabad has been quite vocal in its very first letter. Since most of its members are appearing for GRE, GMAT and CAT, they hold plenty of vocabulary sessions. Just-A-Minute and reasoning tests are also part of their schedule as they know these help in performing better at interviews and tests. But their forte is group discussions (GD). They have asked for effective hints for a GD. Our advice to them—CCTimes has published mock GDs now and again alongwith an assessment. The letter should answer most of your queries. Lions Club from Sambhal (another new arrival) has also been very active. Last month they organised polio vaccinations for children of a nearby village.

CCTimes Club from Mahendru Mohalla, Patna, has asked for important points for a debate topic ('Preparation for war is the best guarantee for peace'). Sorry, points from us would defeat the very purpose of encouraging self-reliance in you. Your participants should prepare them from various sources like magazines and newspapers and have their efforts judged at the debate contest. The Thrill Seekers Club from Amritsar (henceforth to be known by its new name, Progressive Youth Association) has asked for a list of all CCTimes Clubs. Your purpose could be served through this very page where we have been publishing

the list. The Amateur Debaters' Club from Varanasi has come up with the unique idea of organising educational tours which could include visits to historical places in their city and even nearby towns. Or, nature tours, which could be conducted with the help of a botany teacher. Each tour could be followed by a report from every participant to see how much he or she has learnt.

CCTimes readers in Salem now have the chance to join a CCTimes Club recently opened in their city. The Club members could be contacted at 39-A, Chairman Thammannan Road, Salem-636 009. We'd like to mention at this stage that since our club mail is overwhelming it's not possible to correspond by post. So, please do not wait for a personal reply from us. Go ahead with your plans and keep writing to us about your activities. Your registration number will be given through these columns when we come to the letter 'S'.

It was nice to know that the Angels Club from Lucknow is already involved in social youth activities like teaching week and financially poor students free of cost and providing them free books. They have their own library and football and cricket team. During this summer, they have planned to hold adult education classes in nearby villages.

This month, too, many readers have shown interest in CCTimes Clubs and would like to know how to go about setting one in their neighbourhood. V.K. Sunil Kumar from Hindupur has asked for an "application form so that he can be enrolled". CCTimes Club, Belur, a new arrival, has made a request for "our prospectus". Sanjay Sethi from Lucknow is disappointed that we haven't sent him the details on how to set up a CCTimes Club. Ashim Nareng from Saharanpur has a similar complaint. Kaushlesh Saxena and friends are eager to set up a club in Faridabad. They are just waiting for our permission to go ahead. Vijaywada CCTimes Club is also waiting to hear from us to start their club. Finally, Sowmya Patel from Jabalpur writes, 'I want to join your club'.

Sowmya, you're most welcome to do so. All you have to do is contact a CCTimes Club in your town (address printed in our May issue) or set up one with your friends. Our last few issues should tell you how to set up a CCTimes Club. As there's so much to say, it's not possible to repeat the details every month.

Other readers, please note that you don't have to wait for our "permission" or a letter to begin your activities. Nor do we issue any such things as "application forms" or "prospectuses". Qu...s for details on how to set up a club will be taken up in these columns. Membership cards will henceforth be issued only to the President and Secretary of each club. Also, the names of members may not be sent to us, though you're welcome to tell us that your club's membership is growing.

Wishing you all an active summer...

If you're over 18, and have stopped growing, but are still not as tall as you'd like to be, INSTA-HEIGHT guarantees to increase your height upto 15 cms.

"INSTA-HEIGHT is a new, safe and scientific method of s-t-r-e-t-c-h-i-n-g- your body to increase your present height. Permanently. Thousands of men and women in the U.S.A. have reported height gains of upto 15 cms. by following this revolutionary new height increasing method. I am not surprised. I have thoroughly analysed INSTA-HEIGHT. Unlike other so-called height improvements methods, I can fully endorse INSTA-HEIGHT—and say it works. Effectively and permanently"

Dr. (Mrs) D. U. GIANANI
Dr. (Mrs) D. U. GIANANI

TALL MEN AND WOMEN DOMINATE OTHERS !

You are judged by your looks ! Often, your whole career depends on the first impression you create. Look around you and see for yourself, most people who are successful have the added asset of a tall and imposing personality.

INCREASE YOUR CHANCES FOR SUCCESS !

The taller a person, the more easily he seems to reach social success, love, sports, jobs and other pleasures. You too, can now enjoy the benefits of being tall.

Whether you are 18 or 30, you can still possess the tremendous assets of a striking figure just 2 weeks after going through and practising this simple step-by-step course, you will be able to gain as much as 5 cms. to 15 cms. in height. Thousands of men and women in America have experienced phenomenal height increases by following the revolutionary new INSTA-HEIGHT method.

SPECIAL 7-DAY MONEY-BACK GUARANTEE !

INSTA-HEIGHT (a division of Business Development Associates)
3/305, Navjivan Society, Lamington Road, Bombay 400 008

Please rush me your Insta-Height programme immediately under your one-week guarantee period. If I am not satisfied I understand I can return it within a week for a full refund (less packing and postage)—no questions asked. Please tick ☐ appropriate box.

- ☐ I am enclosing Rs. 27 (Plus Rs. 3) by cheque/Bank Draft/I.P.O.
- ☐ Money Order for Rs. 30 sent (M. O. No. dated ...)
- ☐ I am not enclosing any money but shall pay postman Rs. 30 on delivery by V.P.P.

Meet a vital member of the Peerless Team

The computer.

The wonder product of modern technology that analyses data, keeps records and statistics; speeds up correspondence and contacts; provides up-to-date information. An invaluable input in providing quicker and increasingly more efficient service to our certificate-holders.

Today, as part of our "better service" drive, Peerless has its own computer service in Calcutta, Bombay, Delhi, Madras, Varanasi and Bangalore, with forward plans to extend this facility to all Peerless offices in a phased manner.

Yet machines for all their efficiency can never replace men, nor work independent of them. The importance of the men and women who make up the matchless Peerless Team can never diminish. There can be no substitute for these dedicated people who are the friends and confidantes of millions of Peerless certificate-holders and visit them regularly as part of the famous Peerless "doorstep" service.

Peerless believes that this quality of door-to-door service coupled with computerisation have contributed greatly to the ever-increasing trust of the people in India's largest non-

banking savings Company. Today, one out of every fifty Indians is a Peerless certificate-holder.

Total investment in Government custody—over Rs 500 crores

 **The Peerless General Finance & Investment Co. Ltd.**
- India's largest non-banking savings Company.

INSTA-MEMORY

once you master
its simple secrets,
the results are
simply amazing...
automatic...
instant...
permanent.

The trouble with most memory systems is that they try to train your memory without removing the mental 'road blocks', without activating its inherent power, without giving it a chance to come into its own. The result usually is disaster... no real gain beyond (perhaps) a bag of memory tricks for after-dinner entertainment.

INSTA-MEMORY is Permanent Memory. Because Insta-Memory does not give you awkward and troublesome memorization gimmicks. Instead, you'll learn the Extrasensory Instant Recall Technique that literally turns your memory into a power-packed mental magnet... makes forgetting virtually impossible.

INSTA-MEMORY is Automatic Success Power. In just a few hours after you master the simple Insta-Memory secrets, you'll be able to instantly memorize 20-digit numbers like 18765439086543214569 and recall them effortlessly a month later. Remembering telephone numbers and names will be no trouble at all.

INSTA-MEMORY is Effortless Memory. Insta-Memory requires no energy-draining efforts... no memorization... no word associations... no key words... no will power... no positive thinking tricks. In fact, no super-human efforts on your part!

Institute of Human Dynamics is a division of Business Development Associates.

INSTA-MEMORY is Result-oriented Memory. Insta-Memory will help you to master...

- Fool-proof Cure for Forgetting
- Secrets of Extrasensory Instant Automatic Recall
- Techniques of Automatic Mind Search and Memory Scanning
- Art of Controlled Intuition and Mind Storming
- Ways of Strengthening Powers of Observation
- Craft of Instant Speed Reading
- Winning 'Exam Secrets'
- Public Speaking without Nervousness
- Dynamic Personality and Confidence Building
- Secrets of Extrasensory Perception

Plus, a whole wide range of tips on how to gain greater success, prestige, popularity and recognition.

INSTA-MEMORY—a U.S. Best Seller at Rs. 120/-... now yours for less than 1/3 the original price! Thanks to our exclusive association with the New York Institute of Personality Development, we are now able to offer you INSTA-MEMORY at 1/3 the original U. S. price (\$15). It will cost you no more than the price of a medium-priced briefcase: only Rs. 54/- (plus Rs. 6/- for postage, packing, handling). And you've our 7-day Full Satisfaction Guarantee—you pay nothing if not absolutely delighted!

Amazing Testimony about Insta-Memory—straight from U.S.A.

"I have had tremendous improvement in my job—my superiors are astounded with my super memory." —Mr. H. D. (New York.)

"After going through your course I am a very different person!" —Miss P.K. (Bombay)

"Insta-Memory has helped me to gain a new type of self-confidence!" —Mr. S.P. (Poona)

INSTITUTE OF HUMAN DYNAMICS

Congress (I) Pollution Control

During the centenary celebrations of the Indian National Congress, PM Rajiv Gandhi said that his party was like the holy river Ganga. Rajiv has already set up a board to purify the waters of the river Ganges. Will he, however, set up a board to control the pollution of Congress (I)?

S.K. Sinha, Patna

Prize-winning Letter: Rs 25

Sports Special

The *Care Issues-6* (May '85) which is devoted to sports, exposes some of the basic reasons for India's dismal performance in international events. Although India has a manpower of 700m, it could not win even a bronze medal. The government should reduce the importance being given to cricket, and provide equal opportunity to other games besides cricket. This might improve matters.

S.K. Mishra, Tarbha (Orissa)

The New Era

The criminals are upright and the cops prosecute. It is the dawn of Al Capone's era.

Suraj Shrivastava, Gwalior

Separatists

It is high time the Khalistan-worshipping separatists realised that there was no *Aboli ahan* (empty place) for them in India.

D.K. Bhatt, Mathura

INS Centenary

In their inaugural address at the centenary celebrations of the Congress Party, political stalwarts eulogised the services rendered by the great leaders Motilal Nehru, Jawaharlal Nehru and Indira Gandhi. I doubt whether it was the centenary celebrations of the Congress Party or of the Nehru family?

Rama Nambisan, Bombay

Living Up To Expectations

Who do you think lived upto George Orwell's great expectations?

The Union Carbide, of course!

M. Suresh, Bangalore

Whose 21st Century?

Much has been talked about taking the country into the 21st century (*India And The 21st Century*, May '85), while nearly half of our population is still living in the 19th century, without even the basic amenities like road, light and drinking water. The much-publicised computer revolution is of no avail to them.

A.K. Singh, Nilakheri

Scramble For Ph.D.

The UGC by stipulating that a college teacher

should have a Ph.D. degree has, alas, not helped to create research consciousness among teachers. In fact, the fall-out of this is the attempt to manage a Ph.D. degree by hook or by crook.

M.M. Sinha, Patna

Meaningful Education

With reference to *Education Needs Awareness* (May '85) some encouraging signs have begun to appear on the horizon of education.

K.C. Lal, Hazaribagh

Political Retirement

With reference to *Disability At The Helm* (May '85), physical and mental ability depends on age. If government servants are subjected to compulsory retirement, why not our politicians?

Subhas Mewar, Bombay

Whither Secularism?

The aftermath of the accidents in north India caused by terrorists makes me wonder whether Indian secularism is just a farce.

U.C. Pandey, Lucknow

Due to widespread terrorism in north India, if personal belongings, watches, radios, etc. are lost they might be found easily since no one would dare to touch them. Is not Gandhi's dream of Ramrajya coming true?

S.S. Khandari, Mussorie

Good Wishes From Rakesh

I wish to thank your readership for voting me as the "Successful Indian of 1984". I see it as an expression of the tremendous interest the youth of our country has in this science of the future.

Through your columns, I would like to convey my best wishes to every reader and hope that each one of them achieves excellence in the discipline of his/her choice.

Sgt. Lt. Rakesh Sharma AC
Asst Director Space Cell

Rich Man's Budget?

It is regrettable but true that the Union Budget for 1985-1986 is hardly better than the previous budgets. There is a noticeable lack of attention to the downtrodden. Abolition of CDS, TV and radio licenses, etc have nothing to do with the poor.

K.V.R. Murthy, Vizag

Rural Banking

Thanks to our government for opening new branches of nationalised banks in rural areas. Previously one had to leave one's village and come to urban areas in search of a job. Now, city-dwellers are coming back to villages for jobs.

Musadev Rao, Ahmednagar

Muslim Personal Laws

With reference to *Indian Constitution And Policy* (Apr '85), the author's remark "One really wonders as to how these (Personal Laws, etc) are related to the essentials of religion" seems a bit preposterous and biased. Everyone knows that the fountain heads of the Muslim Personal Law are the Quran and the Hadith; and they represent the social, cultural, economic and ethical fabric of Muslim society. In this regard, I may be allowed to quote Dr Rafiq Zakaria who recently opined—

"The Quran And Hadith will be the backbone of the Muslim community because the Personal Law is a part of their religion, their culture and their way of life."

Tariq Wajid, Aligarh

Banning Bureaucracy

We, the people of Democratic India, will be free from miseries only when we can abolish bureaucracy; because bureaucracy always precedes democracy in India.

Santosh Kumar, Patna

Talking Shops

The non-aligned nations' meets have become mere talking shops. These countries are hired by the superpowers to speak for them in different forums, which they willingly do with scant regard for the interest of the movement itself.

M.J. Lakshmi, Chh

Prerequisites Of Democracy

Democracy cannot succeed in a country where people have no national character.

Anand Mukherjee, Satna (MP)

Blocking Development?

As is being observed, particularly in the implementation of various agricultural and rural development schemes enunciated for national welfare, the block development machinery seems to be blocking development itself.

Abdul Rahman, Dhoushra Kalan (UP)

Reservation Hils

India is a developing country. Year after year if the government increases the number of reserved seats for backward classes, it will hinder the country's progress.

Dulal Talukdar, Barpeta (Assam)

Only strong will power and firm determination can lead us to our destination in this competitive world. Reservation merely weakens our will power; it is not a panacea for backwardness.

Amarnath Upadhyay, Patna

Is my mother country sleeping in the hall of reservations? If so, when will she wake up to the call of equality?

V. Rangaswamy, Madurai

One cannot say that reservations, on the whole, ought to be abolished. The basic problem is economic. The backward classes have been living under upper class domination for years together. After independence, the economic aspect has not changed much. All the gains of material progress have been grabbed by the upper classes, who have wielded power prior to independence. Progress has failed to touch the bottom rung, mainly constituted by the backward classes. How can one expect these people to uplift themselves socially when economically they are no better off than they were 50 years ago?

N.R. Hotekar, Wai (Maharashtra)

An Oversight

In the June '85 issue, the article, *Economy: Towards Denationalisation*, was written by Rajendra Mathur, editor *Navbharat Times*.

Caution Please!

If you want to drink like a fish, well, drink but drink what the fish drink.

Chakrabarti Nazim, Parbhani

Hello folks...

As soon as they reached Rashtrapati Bhavan the two Presidents sat down to coffee in the Morning Room. After a few pleasantries, Brezhnev remarked through an interpreter: "Mr President, you have been an Ambassador in Russia and you said you liked the country. Why have you not come again in spite of many invitations extended to you?"

Radhakrishnan replied: "I am sorry. I have been too busy. You know after I left Russia my wife expired and, therefore, I have not been able to come."

Brezhnev: "But it is quite some time, and now you have time. I am sure we shall not have to reprimand you for not coping with our invitation." Perhaps the interpreter had translated Brezhnev wrongly, but the word "reprimand" seemed to nettles Radhakrishnan. Contracting his eyebrows and with a hint of tartness in his voice, he replied: "I will come to Russia only when I am sick. You have nice hospitals there." There was perhaps no further talk about a visit to Russia during the rest of Brezhnev's stay in New Delhi.

On Mar 1, 1961, on the eve of Queen Elizabeth II's departure from India, Mr Baig, the Military Secretary, happened to mention that Dr Rajendra Prasad was writing his autobiography and added, turning to the Queen (Elizabeth II): "After your Majesty's visit is over the President is adding another chapter to his autobiography."

"Really?" asked the Queen quickly, looking at the President. "Yes", replied the President, "I have been able to write some chapters already."

"How many have you written?" the Duke asked.

"About 1,200 pages," the President said.

"Oh, where did you get all that time?"

the Queen interjected.

Once again, quietly, the President said: "Your Majesty, I have been writing for a very long time. Don't forget I was in your father's jails for 16 years. There was plenty of time to write in jail."

The silence that followed was deadly. The listeners were struck dumb. Their minds were numbed.

These are real life stories (from Maj C.L. Dutta's book *With Two Presidents*) indicating the type of damages words can do to international relations. If Brezhnev and Radhakrishnan would have been more discreet in selecting the words and expressions used by them, the personal relationship between the two heads of State would have been more cordial and warm. Brezhnev could have said: "Mr President, we miss you very much in Russia—the country and the people you like immensely. When can we expect you? It is a long time since you visited our country."

Then when he was told about the death of the President's wife, he should have expressed his profound sorrow and told Radhakrishnan: "We were sorry to know about that, Mr President. However, time is a great healer. Our people reprimand us presuming that we perhaps are not extending warm invitations to you. Do save us by accepting our invitation." Radhakrishnan would never have refused the invitation.

Again, Dr Rajendra Prasad need not have emphasised that he was in the Queen's father's jail for 16 years. Many a time, harsh truths can be camouflaged in softer expressions and much more can be achieved.

Here's another story where carefully selected words and expressions saved a difficult situation. This happened in a small city in Rajasthan in the early '50s. Students in a government college were on a prolonged strike and local authorities were unable to handle the situation. Ultimately the Director of Education had come to talk to the students. He sent a message through the principal asking the students to come to the Circuit House to meet him. The students felt insulted as they did not receive any letter and refused to go the Circuit House. The Director's secretary undertook the responsibility of bringing the students to the Circuit House.

The same evening a smartly dressed middle-aged man was talking to the striking students.

"What is the matter?" he asked.

"We have certain problems and nobody cares to listen to us," the crowd told him.

"But the director is in town. I am told. Why don't you talk to him?"

"Why should we go? He sends oral messages through the principal and does not write a letter," the infuriated students replied.

"You are fools. You are not accepting the invitation extended through the principal but a letter written by his clerk would be acceptable to you."

Next morning the students were in the Circuit House to meet the Director.

Several examples can be quoted to show the kind of havoc words can play and also the wonders they can achieve. In real life, you have to establish long term relations and get your work done not once but time and again. Your strategy should be to create a warm and friendly environment. Whatever you want to say, can be said with a smile and the words used may induce a person to do your work. It is necessary to prepare a background and not use an expression abruptly. If you think that the person may feel offended and might refuse to oblige you, then you may put forth the idea in such a way that the person does not immediately say no. For example, you can say: "I know it is difficult to do this work. However, I will appreciate if you can help me because if this is not done I may be in great trouble. If it is not possible to do it immediately, do it in the near future."

In brief:

- Choose words carefully and appropriate to the occasion
- Select words which do not offend the person.
- Do not use words which undermine the authority of the person like, "See to it that it is done by tomorrow!" A better way of putting it would be—"I will be happy if you can do it by tomorrow."
- Do not offend the person in any way.
- Do not use strong words.
- Do not come to the subject immediately.
- Do not insist on getting a firm commitment from the person.

Remember, words can be used as bouquets as well as bullets.

Radhakrishnan

TEST YOUR WORD POWER

The per-fect WORD. Is it on the tip of your tongue or is it hidden in the back of your mind? Either way, we agree, it's an eloquent problem.

And so each month we bring you this column, tailor-made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about our word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

Tick the word or phrase you believe is *nearest in meaning* to the key word:

- 1 **arduous**: A: brave B: passionate C: difficult D: hateful
- 2 **brash**: A: worldly-wise B: strong C: harsh D: aggressively self-assertive
- 3 **bully**: A: a tramp B: one who lisps C: a giant D: person who uses his power to frighten those who are weaker
- 4 **commemorate**: A: to honour the memory of B: decorate C: deliver an oration D: expand
- 5 **connote**: A: to suggest in addition to the fundamental meaning B: doubt C: state the obvious D: make up for
- 6 **culminate**: A: to come to a final result B: bring to an end C: lose shape D: collect into a round mass
- 7 **devout**: A: head of a religious meeting B: earnestly religious C: suspicious D: excessively enthusiastic
- 8 **hoist**: A: to raise aloft B: entertain C: turn D: whistle
- 9 **lofty**: A: heavenly B: high-strung C: of great height D: multi-dimensional
- 10 **lure**: A: to tempt B: pull with effort C: unit of money D: mislead
- 11 **maverick**: A: gypsy B: a non-conformist C: an undomesticated animal D: criminal
- 12 **pest**: A: infectious thing B: sticky substance C: troublesome thing D: favourite thing
- 13 **primate**: A: the leading performer B: highest order of mammals C: the most perfect thing D: the most important person
- 14 **psyche**: A: mental illness B: spirit or mind C: supernatural power D: queer act
- 15 **reminiscent**: A: small part that remains B: wistful longing for C: suggestive of D: having regrets for
- 16 **resonate**: A: to produce an echo B: be certain C: oppose D: answer back
- 17 **rigid**: A: old-fashioned B: strict C: peculiar D: strong
- 18 **subtle**: A: poised B: difficult to perceive C: quiet D: feeble
- 19 **traverse**: A: to pass through B: encroach C: cut short D: go back over
- 20 **wares**: A: scientific instruments or tools B: clothes C: vehicles D: goods for sale

(Answers on page 59)

THOUGHTS

Here's some food for thought... provided you pause to ponder over it. These passing thoughts on various social, political and economic issues, expressed by a few observant minds, often portray the bare realities of life. They may even set your thought processes in motion!

Political reality requires that both sides exercise a spirit of compromise and moderation. The opposition should not expect overnight triumphs nor should the government overreact to legitimate challenges.

Newsweek

Every team to be effective has to have one leader even if he is merely the first among equals.

Businessworld

No civilised society can tolerate virtual gangsterism masquerading as

trade unionism which had earlier inhibited action in a number of cases (on the DTC strike).

Indian Express

...no state is ever a neutral agency. It consists of human beings who have their own predilections and interests.

...whatever the popular language of Indian politics, socialism has not been the issue in India...growth has been and remains India's central problem.

Modern technology flourishes only in conditions of great flexibility.

Girilal Jain, *The Times Of India*

Stranglehold on information is completely antithetical to the spirit of participatory democracy, for it leaves people in no position to make informed choice.

Thirty per cent of the fruits and vegetables produced in the country is wasted due to poor post-harvest handling and inadequate facilities for processing.

Whereas until 1970 there were hardly one million hectares under irrigation, about two million hectares were being added per year since 1971.

Manmohan Singh, Deputy Chairman, *Planning Commission*
West Germany's Central Agricultural Marketing Board announces, hopefully, that "on the desk of a manager under pressure, the glass of whisky has been replaced by the glass of milk". If true, this is presumably to ease his ulcer.

The Economist

By-elections are like a mere sentence in a book. A sentence may be badly phrased here and there, but that does not take away from the merit of the book.

Srikant Verma on the results of April by-elections
Rajiv Gandhi does not count in local elections.

Bal Thackeray

QUOTABLE QUOTES

I claim not to have controlled events, but confess plainly that events have controlled me.

Abraham Lincoln

New opinions are always suspected and usually opposed without any other reason but because they are not already common.

John Locke

So the lively force of his mind has broken down all barriers, and he has passed far beyond the fiery walls of the world, and in mind and spirit has traversed the boundless universe.

Lucretius

I heard a thousand blended notes, / While in a grove I sate reclined, / In that sweet mood when pleasant thoughts / Bring sad thoughts to the mind.

Wordsworth

I have nothing to declare except my genius.

Oscar Wilde

I disapprove of what you say, but I will defend to the death your right to say it.

Voltaire

I frequently tramped eight or ten miles through the deepest snow to keep an appointment with a beech tree, or a yellow hinch, or an old acquaintance among the pines.

H.D. Thoreau

I am positive I have a soul; nor can all the books with which materialists have pestered the world ever convince me of the contrary.

Lawrence Sterne

There are so few who can grow old with a good grace.

Sir Richard Steele

IN SEARCH OF FREEDOM

BY SANJUKTA BANERJI

Violence has been part of Namibia's daily experience for a long time. In the 40 years of German imperial conquest, the Namibians were forcibly dispossessed of their land and cattle and 80,000 people perished. During World War I, the land came under Allied occupation but the situation did not improve. In 1920, the country became a mandated territory under the supervision of South Africa and the latter dug in until it has now become very difficult for the Namibians to extricate themselves from the South African clutches. Today, 1,10,000 Namibians work as 'contract-labourers', separated from their wives and children, living in overcrowded 'bachelor' apartments. According to UN figures (1980), while Namibian whites enjoy a per capita personal income of 3,000 rand, the blacks get only 125 rand, the ratio being 24:1.

For the last 40 years, the UN has been waging a 'cold war' with South Africa to free Namibia, which was earlier known as South West Africa. Initially it tried to bring the territory under UN trusteeship, but South Africa refused to part with it. UN pressure increased after 1960, when 16 African nations became independent and joined the UN. In 1966, the UN revoked South Africa's mandate and technically brought Namibia under its administration. This, however, was only on paper, since South Africa still has full control over the administration at the top, though it has been careful in recent times not to reject the idea of Namibia's eventual independence. From the course that it has been taking, it appears that it is more interested in a rule by its own puppets in Namibia, and the passing of a Unilateral Declaration of Independence (UDI), as was declared by Ian Smith in Rhodesia in 1965, confirms this. The one complicating factor in the Namibian tangle is the South West African People's Organisation (SWAPO) which was formed in 1960 to fight for Namibia's independence and which has been fighting a sporadic war with South Africa since 1966, a war which has become more urgent with the independence of countries to the north and east of Namibia. To make matters worse for South Africa, the UN General Assembly called the SWAPO the true representative of the people of Namibia in 1973 and three years later it conferred on the Namibians the right to achieve independence by using any

means. This sparked off a total bush war between the SWAPO guerillas and the South Africans, with the guerillas of the front-line states—Angola, Botswana, Mozambique, Tanzania and Zambia—joining the battle on the side of the Namibians.

South Africa's main concern now is that SWAPO should not take over power in an independent Namibia. It has, in fact, been trying to find puppets for the last seven years in the traditional tribal leadership as well as among the whites. In this period, its aim has also been to win over the people of Namibia through superficial reforms to give the impression that South Africa has good plans in the offing. The Pretoria regime, in pursuit of the aim of some sort of 'internal settlement' for Namibia, had set up *bantustan* (homeland) governments in the country for various ethnic groups, as early as the 1960s. It had planned to give the *bantustans* some

sort of self-government at a later date, but the great contract workers strike of 1971 and the total boycott in August 1973 of the *bantustan* elections in Ovamboland completely destroyed the credibility of this programme.

Next, South Africa went for a formula that would give the Namibians some semblance of power while leaving the ultimate control of the territory in the hands of Pretoria. In 1974, it called a conference of ethnic groups at Turnhalle to discuss constitutional options for Namibia and an interim Constitution was produced which was meant to be the base for an 'independent' Namibia. What it actually did was confirm the existing local authorities and *bantustan* governments and introduce a new third tier of authority at the national

Seeking freedom: SWAPO President Sam Nujoma at the NAM's New Delhi meet for Namibia.

composed of nominees from each of the group which had very little real power.

The international community found the interim scheme totally unacceptable. Meanwhile, the UN Security Council had passed Resolution 385 which urged UN-supervised elections leading to the independence of Namibia. In 1978, the UN General Assembly Resolution 435, which is now regarded as the basis for UN-supervised free elections in the country. In 1947, the Western powers, the US, Britain, France, West Germany and Canada—each of whom has major commercial interests in the region—set themselves up into a 'contact group' with the aim of negotiating with the SWAPO, South Africa and the frontline states. It wanted to persuade Pretoria to accept the UN election plans but South Africa's main objective of setting up a puppet regime in Namibia remained unshaken. They did hold elections, but intimidation was used to such an extent that the UN declared it null and void. However, after the elections, the winners, the Democratic Turnhalle Alliance (DTA), a conglomerate of puppet parties backed by South Africa, was installed as an interim government in Namibia.

In May 1979, the South Africans delegated wide powers of self-government to the Constituent Assembly and renamed it National Assembly. Later, in 1980, more constitutional changes were brought about creating a pyramidal structure of institutions with South Africa at the top of the structure, retaining full control over foreign affairs, planning and defence. Local institutions were established but these had deep ethnic and racial divisions. However, to give the semblance of more reforms, an independent civil service was created and a Government Service Commission was set up. But Pretoria was the puller of strings because the Namibian Administrator General was totally under its control and the Administrator General's Advisory Council, which was Pretoria's version of a Cabinet for Namibians, had strictly limited powers. In this period a South West African defence force and a South West African police force were also created to give the impression of reform, but this experiment had to be abandoned in 1982 when the DTA split. South Africa again took over all formal powers.

Recently South Africa has presented another plan for interim government in which all internal parties would be represented, except SWAPO. South Africa will, however, retain direct control of foreign relations and defence and the Administrator General set up by Pretoria will be able to legislate passed by the interim government. This has created a

furor in the entire non-aligned world which held a meeting in New Delhi recently, where the South African move was roundly condemned. The UN Security Council too has declared the South African move to be null and void and has rejected any unilateral action of South Africa leading towards an internal settlement. What is significant is that even the US, Pretoria's strongest ally, has dubbed the move null and void and has accused Pretoria of holding in 'disregard' Namibia's demand for independence.

Another dimension, however, has been added by US views on the subject, which make its declarations suspect. America wants to link the issue of the independence of Namibia with the withdrawal of Cuban troops from nearby Angola. Last year, the Americans helped to bring about an agreement in Zambia between South Africa and Angola to establish a joint monitoring commission based in southern Angola to stop SWAPO guerrillas from making trouble. The South Africans have agreed that if Washington really could deliver a Cuba-free Angola, they would compromise on UN Resolution 435 in Namibia. For tying decolonisation to an explicit interference in the affairs of a neighbouring state, America was denounced not only by other African leaders, but also by the other members of the contact group. It almost appears that the US is more interested in promoting cold war problems in the region rather than solving the colonisation problem.

With regard to the colonisation problem, one reason that excessive efforts may not have been made by the contact group is that each of the countries involved has excessive commercial interests in the region. Namibia is rich in mineral resources—copper, tin, lead, uranium, zinc, silver, tungsten and diamonds—and is potentially one of the wealthiest countries in Africa. Multi-national conferences extract vast profits and 75 US-based firms are doing brisk business in Namibia in blatant violation of UN-imposed sanctions. In addition, there are 68 firms from UK, 25 from West Germany, 19 from South Africa, 12 from France, 10 from Canada, five each from Japan, the Netherlands, and Switzerland, four from Italy, three each from Austria and Norway and one each from Israel and Portugal, who are doing business with South Africa. In fact, the Western countries are too deeply involved with South Africa and the proceeds of apartheid to take strong action against it.

The situation as it now stands is that SWAPO wants Namibia free under the terms of UN Resolution 435, which calls for elections which the SWAPO reckons it can win. Before granting independence to Namibia, the South Africans have said that

they want some sort of promise by Angola to send home the 25,000 Cuban troops which are protecting the government of President dos Santos against attacks by the South African-backed Unita guerrillas. In Namibia, meanwhile, it wants to keep the SWAPO out of power, and has been promoting a client regime. Its basic fear is that if SWAPO were to take over power it would have an unfriendly neighbour, which could provide a haven for those who rebel against the apartheid regime in Africa, like the guerrillas of the banned African National Congress (ANC) for example.

With the Western countries allowing matters to take their own course, the SWAPO has its main friends in the Non-Aligned Movement (NAM), which has committed itself to end colonialism and racism in the world. At the extraordinary ministerial meeting of NAM held in New Delhi in April, India and Iran accorded diplomatic recognition to SWAPO. The member-states also promised all possible "diplomatic, military and material" assistance to SWAPO and sought to reactivate the Security Council on the Namibian issue. NAM rejected the linkage of Namibian independence to withdrawal of Cuban troops from Angola which it said was converting a decolonisation problem into a East-West issue. With NAM taking so much interest in Namibia, the Western countries may find it difficult to shield South Africa with vetoes in the Security Council, as they have done in the past. If the NAM action can bring positive moves from South Africa, Namibia may finally see real freedom, not just tutelage under South Africa. ■

SUMMER OF '85

The year 1985 may well turn out to be the warmest since 1851 in the entire Northern Hemisphere—thanks to the excessive ultraviolet radiation from the sun. Research has revealed that this unusual emission is being caused because of damage to the ozone layer of the atmosphere which normally filters ultraviolet rays reaching the earth. But nature itself cannot be blamed entirely. Man himself has contributed to this rise in temperature through deforestation and construction of cities. And in India, overpumping of underground water in central India and the Malwa plateau has even resulted in change in the nature of soil. Not only this, the damaged ozone layer coupled with an increase in atmospheric carbon dioxide which traps infra-red radiation has also affected volcanic activity to a large extent. And once again man has a hand in increasing the carbon dioxide content through industrialisation and forest felling. As a result he will have to 'sweat it out' this year!

ECONOMY

SIXTH PLAN: AN ASSESSMENT

By M. BHATIA

The Sixth Five-Year Plan has ended on a highly optimistic note. Indian economy in 1984-85, the closing year of the Plan, was in a reasonably strong position. The growth rate of Gross Domestic Product (GDP) was around 4% in 1984-85, but this was over the high base of 7.4% growth rate in 1983-84. Over the five years of the Plan period, the annual growth rate of GDP is likely to equal the Plan target of 5.2%.

An important contributory factor to the success of the Sixth Plan is the performance of the agricultural sector in the last two years of the Plan. Agricultural production which had practically stagnated over the first three years of the Plan, suddenly jumped up in 1983-84 showing a growth of 13.6% over the preceding year. The increase in 1984-85 in the sector's production is expected to be no more than 1% over the previous year's record production. But, according to the official *Economic Survey 1984-85* "maintenance of the exceptionally strong performance of the previous year, in the face of unfavourable weather conditions, highlights the strengthening of the production base in Indian agriculture".

The fortunes of the industrial sector in the country during the Plan period have closely followed those of agriculture. The growth rate of industrial production which was a meagre 4% in 1980-81 on a low base of minus 1.4% in the previous year, rose to 8.6% in 1981-82 but fell to 3.9% in 1982-83. At least a part of this stagnation in industrial production was due to the stagnation in agricultural growth which created a demand constraint on the growth of industries like tractors, trucks, and a variety of durable and other consumer goods. With the agricultural revival in 1983-84, the industrial growth rate began to pick up. It rose to 5.5% that year and was estimated to be around 7% in 1984-85. The average growth rate of industry in the Sixth Plan period amounts to nearly 6%, which is a small improvement over the average of 5.3% over the preceding five years. However, this falls far short of the target of 8% annual growth rate fixed for the Plan period.

The performance of the infrastructural sector—power and transport—has also been below expectations of the Plan targets. The Plan target for power generation showed an annual average growth rate of 11.3% over the five-year period.

The actual growth rates were 5.9% in 1980-81, 10.1% in 1981-82, 6.6% in 1982-83 and 7.6% in 1983-84, all of them much below the target rate. Only in 1984-85 is the growth rate of electricity generation likely to turn out to be 13.5% which is 2 percentage points above the target rate fixed for the whole Plan period. Power shortage has persisted, particularly in the northern region during the Plan period. As against the target of 191b units of electricity generation by the end of the Plan period, the achievement in 1983-84 was 149.5b units. In the first nine months of 1984-85, that is, April to December, the generation was 116.1b units. On that basis, the generation figure for the entire year may be put at 154b units which is 37b units less than the Sixth Plan target. The Sixth Plan document in its chapter on "Development Perspective 1979-80 to 1994-95" states—"Electricity generation will need to be raised from 191b units in 1984-85 to 395b units in 1994-95 to meet the energy requirements for the projected levels of industrial production and the requirements of other sectors". This also has serious implications on future development of the economy.

In contrast, the performance of the petroleum sector during the Plan period has been upto the mark. Crude oil production in the 70s (1970-71 to 1980-81) had increased by 55% from 6.8m tonnes to 10.51m tonnes. In the next two years output doubled to 21.06m tonnes. A further 24% increase was achieved in 1983-84 and production reached 26.02m tonnes. The target for crude production had been fixed at 29.63m tonnes. As against that the achievement was 29.02m tonnes. It may be added that the target originally fixed in the Sixth Plan for 1984-85 was 21.6m tonnes. The actual achievement is, therefore, 7.4m tonnes more than the original Plan target.

Another essential infrastructure supportive of industrial growth is transport. The performance of this sector during the Sixth Plan period has been satisfactory in as much as no serious bottlenecks in the transport of goods like coal or cement by railways were experienced during the Plan. For the year 1983-84, initially, a target for movement of 241m tonnes of revenue earning goods traffic was set, representing an increase of over 5% over 1982-83. Actual rail freight was limited to 230m tonnes of revenue-earning traffic in 1983-

84. There was some improvement in 1984-85, the revenue-earning traffic during April-December recording an increase of 3.2% over the corresponding period of the previous year. A part of the explanation for the shortfall in the performance of railways is the demand constraint. The Sixth Plan has envisaged a demand on the rail transport to the tune of about 309m tonnes of originating traffic in 1984-85. The figure reached in 1983-84 was 230.1m tonnes and in 1984-85 it may turn out to be 235-240m tonnes, which is nowhere near the target figure of 309m tonnes.

An important achievement of the Indian economy in the last two years of the Sixth Plan is the containment of inflation. Prices had come under pressure in 1983-84 because of the lagged effect of drought in the previous year, and the pressure on prices continued into the early part of 1984-85. The wholesale price index moved up by 7.4% between Mar 31-Aug 25, 1984. However, there was a marked improvement in the latter part of the year owing to spectacular improvement in agricultural production. There was a normal seasonal decline in prices after August 1984. By Feb 9, 1985, the annual rate of inflation in wholesale prices had declined to 4.6%. The annual rate of inflation as measured by the Consumer Price Index in December 1984 was also a low 5.2%.

The balance-of-payments position had also improved considerably in 1983-84. There was further improvement in 1984-85. The government voluntarily terminated the International Monetary Fund (IMF) arrangement effective from May 1, 1984, after having drawn Special Drawing Rights (SDR) 3.9b out of SDR 5b available under the three-year arrangement. Despite the cessation of IMF drawings in that year, foreign exchange reserves (including gold and SDR) in 1984-85 had increased by Rs 547 crores upto January-end 1985. Part of this increase in terms of rupees was because of the strengthening of the US dollar in world currency markets and the consequent increase in the rupee value of dollar holdings. But two other factors have also contributed to that improvement. These are better performance of the export sector and increased inflow of funds from non-resident Indians abroad.

Export performance which was relatively weak in 1983-84 showed a welcome improvement in 1984-85. The rupee value of exports showed a growth of 23% in the first eight months compared to a growth of only 7% in the corresponding period of 1983-84. However, imports increased by about 14% in this period compared with a decline of 4% in the same period of the previous year. The trade deficit in the first eight months of 1984-85 has been estimated at Rs 3,017 crores which is slightly lower than the

deficit of Rs 3,080 crores in the same period of the previous year. Earlier deficit had declined from 4.6% of GDP in 1980-81 to 3% of GDP in 1983-84. It must have declined a little further in 1984-85, however, the exact figure is still to be released. In absolute terms, however, the deficit continues to be around Rs 5,800 crores which is quite high. More vigorous efforts at export promotion and import substitution are required. In the latter, it is possible to economise by reducing imports of edible oils, which can be done by a substantial increase in the domestic production of oil seeds; reduction in import of crude oil, naphtha, fertilizers and other petroleum products, which again requires stepping up production of these in the country itself, for which, fortunately, the outlook is good and situation promising; and, exercising strict discipline in the imports of defence equipment, machinery and even technology. The country should import only that machinery and technology which is not available in the country. On the export side, while there is now a distinct possibility of the country being able to export about 5m tonnes of foodgrains annually, there are several other agricultural products which offer potential for export that needs to be exploited. Export promotion through export subsidies has not yielded results in the last five years. Export subsidies now amount to over Rs 600 crores. What India needs to do in order to encourage exports is to take steps towards improving the competitiveness of the Indian industry. So long as the industry remains under the protective wings of protection and subsidies, it will not be able to develop the level of efficiency required to make its products competitive in the international market. The policy thrust in the fiscal and foreign trade spheres provided by the Union Budget for 1985-86 and the announcement of import-export policy for three years instead of the previous practice of announcing the policy for one year only, is a step in the right direction.

The balance of payments position continues to be strengthened by net inflows on other accounts, though there are a number of uncertainties affecting these flows. Partial data available indicates that although the inflow of remittances from Indian workers abroad continues to be relatively high, the earlier growth in these inflows has declined considerably and prospects are necessarily uncertain. Inflows from non-residents in the form of deposits with Indian banks had increased to Rs 961 crores in 1983-84 but declined in 1984-85 because of higher interest rates abroad. The inflow was nevertheless substantial, with the accretion of Rs 619 crores (including accrued interest) upto December-end, 1984, compared with Rs

750 crores in the same period for the previous year. However, these accretions of foreign exchange have not been found sufficient to meet the foreign payments deficit with the result that the foreign exchange kitty has to be replenished by commercial borrowings which have been on the increase in the past few years. Commercial borrowings have become necessary for supplementing the inflow of foreign assistance as an important means of financing because foreign assistance is becoming increasingly more difficult to get.

While on the whole, the achievements of the Sixth Plan are quite impressive, one must not forget some of the basic weaknesses that still remain and which need to be corrected when making an assessment about the future. The performance of the industrial sector has been much below expectations and an overall growth rate of 6% per annum in industrial production falls far short of the target of 8 to 9%. The working of industrial public sector undertakings continues to be inefficient and instead of being a help in financing further development, they are proving to be a constant drain on the public sector resources. The resource position of the Central and state governments has deteriorated so that planners are finding it difficult to find all the finance needed for financing the proposed public sector outlay of Rs 1,80,000 crores. The external economic environment of the country is also becoming increasingly unfavourable. The uncertainties on the agricultural front due to climatic factors still remain. These are some of the difficulties that the Seventh Plan will also have to face. The difficulties on the resource front stem from certain structural features of Plan financing, which have evolved over a number of years and which will take time to correct. Welcome changes in the fiscal and industrial policies have been recently initiated. This indicates a realisation of the fact that instruments of regulation devised in the early stages of our planned industrial development may not be appropriate in the diversified and sophisticated industrial structure of the present day. Closely allied with financing the Plan is the question of inflation. Heavy doses of deficit financing are bound to result in generation of new inflationary pressures in the economy which instruments like public distribution system will not find easy to contain.

A new thinking on the whole development strategy and Planning is needed to meet these and various other difficulties. Perhaps the emphasis is to shift from industrialisation as the sole aim of Planning to promoting a more rapid growth of agriculture and increase in agricultural productivity. For therein lies the solution to the problems of endemic poverty and unemployment.

PROJECT WILDLIFE

BY N. P. SINGH

India possesses a rich, abundant and colourful wild life. According to experts, there are more than 350 species of mammals, about 1,200 species of birds and more than 20,000 species of insects. Besides, there are a large number of reptiles and crocodiles found all over the country. The *Royal Bengal Tiger*, the *Great Indian Elephant*, the *Asiatic Lion*, the *Indian Bustard*, and the *Siberian Crane* are some of the most well-known specimens of wild life in the country. While all these species face in some degree the danger of extinction, it is the cheetah (the lastest animal in the world) that has become extinct due to indiscriminate killing by poachers.

The enormous destruction of wild life has been hastened by population explosion, large-scale industrialisation and urbanisation. There has been deforestation on a massive scale, leading to soil erosion, floods and ecological imbalance. The increased pressure on land for food and raw materials has led to indiscriminate deforestation and felling of trees.

Institutional Network

It is in the larger context of the conservation of environment that the problem of preserving wild life can be appreciated. From 1952 to 1972, wild life management and conservation in India was governed under the National Forest Policy, administered by the state governments and Union territories. In 1972, a comprehensive legislation called the Central Wild Life Act was enacted which is applicable throughout the country. Under this Act, threatened species of animals have been listed in five schedules, giving them protection from hunting, and trade and commerce in these species has been subjected to regulations. This was followed in 1980 by the Forest Conservation Act, which aimed at preserving forests in the country, as forests constitute the natural habitat of wild life. Under this Act, no forest area can be diverted for non-forestry use without the prior approval of the Central Government. A National Action Plan for Wild Life has also been drawn up recently, which will be placed before the Indian Board of Wild Life (IBWL)—an apex advisory body headed by the PM.

Besides the IBWL, there are a number of non-governmental, voluntary organisations dedicated to the cause of wild life conservation. The voluntary organisations doing invaluable work in the field are: (i) The Bombay Natural History Society; (ii) The Wild Life Preservation Society of India,

and (iii) The World Wildlife Fund, India. The Bombay Natural History Society (BNHS) has done pioneering work for the identification and documentation of India's flora and fauna. It has also established a fine Natural History Museum and Library.

The World Wildlife Fund, India (WWF India) was established in 1969 to help in safeguarding the country's environment from incalculable damage through thoughtless exploitation. Its concern embraces the whole spectrum of nature—plants, animals, forests, landscapes, water, soil and other natural resources.

The aim of the WWF India has been to raise public support, create an awareness of conservation needs among the masses, and raise finance for its conservation, research and educational activities. Among the noteworthy projects of WWF India during the last 10 years, mention could be made of the following:

A. For protection of endangered species: Asiatic Lion; Asiatic Elephant; Black-necked Crane; crocodiles; Great Indian One-horned Rhino; Lion-tailed Macaque, Nilgiri Tahr; Siberian Crane; and Wild Dog.

B. For protection of habitat: Bandipur Ecological Survey; Dalmia Hill Sanctuary; Jawahar National Park; Nanda Devi; Pirotan Island; Silent Valley; Western Ghats.

C. For conservation, education and awareness: Nature clubs of India; photographic exhibitions; slide presentation and film shows; and snake shows.

D. WWF International Projects: Project Tiger; Hangul or Kashmir stag; and Himalayan Musk Deer.

These projects of WWF India have been implemented in active cooperation with other organisations such as the BNHS Indian Institute of Science, Bangalore, Zoological Survey of India, Botanical Survey of India, National Institute of

Oceanography and the Central and state forest departments. For its international projects, WWF India works in association with World Wildlife Fund International which has its office in Gland, Switzerland. It has also been getting support from the International Union for the Conservation of Nature and Natural Resources (IUCN).

The Government of India has decided to set up an Institute of Wild Life at Dehradun in 1984. The aim of the institute would be to study the problems of wild life in all its ramifications (scientific, social and management) and to meet the manpower requirements of conservation programmes and projects. The institute's governing body would be chaired by the Secretary, Department of Environment, Government of India.

Achievements

As a result of the efforts made by the Central and state governments and voluntary organisations, the protected area in the country now comprises 87,735 sq km or nearly 3% of the total geographical area of the country. Forty-four national parks and 207 sanctuaries have been established all over the country, providing considerable protection to endangered species. Two special projects—Project Tiger and Crocodile Project—have been initiated by the Central government in collaboration with FAO and UNDP. The Project Tiger, started in 1973 with nine tiger reserves, has now 15 tiger reserves located in Rajasthan, UP, West Bengal, MP, Karnataka, Bihar, Assam, Orissa, Maharashtra, Kerala, Andhra Pradesh and Arunachal Pradesh. The tiger population, which was 1,827 in 1972, increased to 3,015 in 1979. The achievements in the conservation of wild life in India have been considerable, but there is no room for complacency. The cheetah has already become extinct and there are creatures like the Great Indian Bustard, the Siberian Crane and Lion-tailed Macaque which are on the verge of extinction. We are still far from the goal of 33% forest cover in the country. The need of the hour is to involve the youth of the country in the movement for the conservation of environment and the protection of wild life in the country. The experiment of the nature clubs of India, launched in 1976 under the auspices of WWF India, has tremendous potential. There are nearly 492 clubs with over 10,000 members.

Speaking on the occasion of World Environment Day (Jun 6, 1985) PM Rajiv Gandhi observed, "It was greatly encouraging that a large number of people across the world, particularly the young, have dedicated themselves to restoring the environment. This is an affirmation of faith in life." The conservation of wild life is necessary in order to keep the habitat fit for human beings.

JUNGLE CALL

The World Wildlife Fund's (WWF) worldwide endeavour to preserve nature and natural resources naturally needs worldwide popular participation. One way of participating is to buy the WWF's greeting cards, calendars, posters, note-pads, etc. Another way is to make donations. For further information, WWF India can be contacted at: Post Box No. 6042, c/o Godrej & Boyce Mfg. Co. Pvt. Ltd., Lalbaug, Parel, Bombay-400 012.

PUNJAB

AFTER THE STORM

The reverberations of the bomb explosions have subsided leaving in their wake an eerie silence wherein the bickering of various factions of the Akali Dal can be heard loud and clear. It is evident that the bomb blasts have done more damage than killing innocent people and spreading terror—they have shattered the myth of unity among the top echelons of Sikh leadership.

Obviously Baba Joginder Singh, convenor of the United Akali Dal ad hoc committee, does not command the kind of loyalty Bhindranwale enjoyed. The resignation of the Akali Dal top brass including Harchand Singh Longowal, Gurcharan Tohra and Prakash Singh Badal caused a tremor in the state and district levels. The local presidents of the Dal

ANTI-TERRORIST ACT

In the wake of the recent spurt in terrorist activities including the widespread bomb blast carnage and the unearthing of a plot to assassinate PM Rajiv Gandhi by America's FBI, the Indian Government, in a bid to arm itself with comprehensive legal powers to curb the spreading reign of terror, passed the anti-terrorist Bill. The Terrorist and Disruptive Activities (prevention) Bill, which consists of three parts running into 24 sections, confers on the Central Government adequate powers to prevent and cope with terrorist acts. Under this the Centre also has the power to constitute designated courts for speedy trial of offences committed under this Bill in consultation with concerned state governments. However, the Centre has been provided the authority to set up such a court in the event of the concerned state government failing to do so. The Bill, after unanimous approval by both houses of legislature was passed by the President, thereby becoming an Act.

The Act defines a terrorist as one who, with the intent to overawe the government or to strike terror in the people or any section thereof or to alienate any section or adversely affect the harmony amongst different sections of people, does anything by using bombs, dynamites or other explosive or inflammable substances or firearms or lethal weapons, or poisons or noxious gases or other chemicals or any other substances, biological or otherwise in such a manner as to cause death or damage or destroy property or disrupt supplies or services essential to the life of the community. Under the Act death penalty is awarded for a terrorist act which results in the death of a person. For other cases punishment may be extended upto life imprisonment, from a minimum term of five years and may also include a fine.

The Act also provides for punishment of any person who contravenes any provision or rule made under the Arms Act, the Explosives Act, the Explosive Substances Act or the Inflammable Substances Act, in any notified area. This may include imprisonment for a term which may extend to 10 years. If it is established that the person also had intentions to aid any terrorist then death sentence or imprisonment for a duration of a minimum of three years which may extend to life imprisonment, may be awarded.

Life imprisonment from a minimum of three years may also be awarded to "those who conspire, or attempt to commit, abet, advocate, incite or knowingly facilitate the commission of a terrorist act, or any act preparatory to a terrorist act".

In addition to this the designated authorities specified for the Central Government as officers not below the rank of joint secretary and for the state government as officers not below the rank of district magistrate have been empowered with sweeping powers for the prohibition of any disruptive acts—ranging from communication with people living outside India for information to the demolition of buildings or premises suspected to be used for such purposes to the construction or alteration of buildings or structures necessary for conduct of operations against terrorists.

The Act will undoubtedly go a long way in strengthening the hands of the government against anti-national disruptive forces to a large extent and also help them to nip their terror tactics in the bud.

demanded the withdrawal of Longowal's resignation in particular. And the ad hoc committee of Baba Joginder Singh was unequivocally rejected. Ultimately succumbing to the pressure, Longowal decided to withdraw his resignation.

While the squabbles in the Dal continue to disrupt the ranks of its leadership, the terrorist organisation of the Akalis, both within and outside India, continues to disrupt the nebulous calm in the country. On May 13, America's Federal Bureau of Investigation (FBI) unearthed a terrorist conspiracy which shook the very foundations of the Parliament House in New Delhi—a conspiracy to assassinate PM Rajiv Gandhi during his visit to the US. It also uncovered a plot to kill the Haryana CM, Bhajan Lal, who had gone to the US for eye treatment. Apart from this the FBI uncovered a plan to develop a programme of training Sikhs residing abroad in the use of firearms and explosives. The FBI findings have a dangerous corollary. And that is that anti-national elements abroad will go to any lengths to disrupt life in India and create an atmosphere of panic and uncertainty in order to achieve their goals of a Sikh homeland. What is more horrifying is that these conspiracies were part of a much bigger plan which included sending hit squads to India to blow up strategic sites like government buildings, bridges, hotels, temples, shrines and even a nuclear power plant. The FBI investigation also revealed that the terrorists had been paying frequent visits to west European countries, recently, probably to hire hit-men to assassinate the PM during his visit to France and Algeria and thereby avert the possibility of a backlash against Sikhs in the US. For, the US has made no secret of the fact that it will not tolerate any terrorist activities on its soil.

Keeping in view the implications of these conspiracies and the bomb blasts in north India the government passed the Anti-terrorist Act (see box). Amendments were also made in the existing Arms Act and the Evidence Act. But, undeterred by such preventive measures adopted by the Centre, Joginder Singh justified the carrying of arms into the Akali Takht on the pretext that it was enjoined by Sikhism. And, as an after thought, added that these weapons were used by Sikhs against oppression and injustice and not against innocent people. Surprising in the light of the fact that until now these weapons have been used primarily to butcher the innocent.

And then on Jun 1, as per their agitation itinerary, the Akalis launched the *Ghathughara* (genocide) week to commemorate the first anniversary of Operation Blue Star. Fearing another offensive by the extremists the government took all possible measures to avert the crisis. Security forces were placed on full alert in the more sensitive northern states as well as in the Capital. But, apart from sporadic incidents of bombing in Punjab, no major catastrophe has confronted the nation. And while this undoubtedly comes as a welcome relief there is the lurking fear that perhaps the terrorists are playing a waiting game. The Centre is handicapped because it has no one with whom it can negotiate the terms of settlement to the festering Punjab problem as none of the Akali leaders has unanimous Sikh support. All it can do now is sit back and wait for such a person to make an appearance before it is too late.

INDIA-USSR ROLE REVERSAL

Rajiv Gandhi's visit to USSR heralds the beginning of a new chapter in Indo-Soviet relations. Thereby a marked reversal of roles is now evident with the Kremlin displaying its anxiety to remain in the Rajiv Government's favour and Washington going all out to woo the young Indian PM. The Kremlin is also aware that where once it was the major supplier of defence equipment and technology for India it can now no longer keep pace with its urgent demands for highly sophisticated modern technology. And it is this red herring which Washington is flaunting before New Delhi to entice it into its camps.

That Rajiv Gandhi chose to initiate his major trips abroad with a six-day state visit to the USSR, however, has its own significance. The country still remains a major partner in India's new endeavour to achieve a vibrant and dynamic economy in the shortest possible time. In fact, the conclusion of several major economic agreements was the high point of his visit. It is also evident that Rajiv nurtures the time-tested Indo-Soviet friendship quite in the same way as his predecessors did—a fact which Soviet leader Mikhail Gorbachev was quick to emphasise.

and go, but relations of friendship and cooperation between the USSR and India continue to develop in ascending order."

The overt display of cordiality and friendship and the effusive warmth with which the Soviets greeted Rajiv was overwhelming, to say the least. Right from the moment he alighted from his aircraft and set foot on Russian soil he was given the proverbial red-carpet treatment. Gorbachov and Rajiv had both formal and informal talks—the latter in complete privacy—for several hours during the visit. The talks were wide-ranging covering both bilateral and international issues. Then, in the presence of the Politburo of the Soviet Communist Party—an indication of the high importance the USSR accorded to the event—the leaders of the two countries signed two agreements on economic cooperation. As per the flexible terms of the first agreement the host country will provide India a credit of 1m roubles to bolster bilateral economic cooperation. The repayment of the principal and the payment of interest will be in Indian rupees in accordance with past credits. Also, the repayment will be utilised by the USSR for purchase of Indian goods, in line with the Indo-Soviet trade agreements.

The second agreement ensures greater Soviet cooperation in important sectors of the Indian economy. Thereby trade and scientific cooperation between the two countries has been extended upto 2000 A.D. and India becomes the exclusive non-Eastern bloc country with such long-term understanding with the USSR. The main sectors covered by the agreement include power, petroleum, steel, mining, oil-drilling, coal, machine-building, ferrous and non-ferrous metallurgy. The two countries will also consider cooperation in construction in industrial and other projects in the Third World countries. In addition to this the agreement provides for participation of Indian organisations in civil and industrial projects within USSR in the manner and form mutually agreed upon, in specific cases. Furthermore, India and USSR have given due consideration to the evolving pattern of development of technology, the potentials and capabilities on both sides and will henceforth develop new forms of economic cooperation and trade which are mutually beneficial. For this the complementarities of their economies will also be taken into account.

A rather surprising issue was brought up by Gorbachov during this visit. He gave a fair indication of USSR's interest in initiating a move for collective security arrangements in Asia—no doubt an oblique reference to Afghanistan. By doing so he exhibited his keenness to revive the Asian collective security plan proposed by Brezhnev in the early '70s which was rejected by India then because of its sheer impracticality. It is, therefore, hard to decipher why Gorbachov raised the issue at all.

The visit concluded with both sides signing a joint statement. In this the two countries have expressed serious concern over the continuing tension in some areas of South-West Asia, particularly Afghanistan. Both have also reiterated their conviction that only a peaceful political solution can resolve the crisis. The statement calls upon countries of the region to cease armed conflicts, exercise restraint and cooperate to reduce tension and restore peace. Interestingly, though, the document underlines the similarity in the positions of India and USSR on major contemporary issues. With regard to the threat of an imminent nuclear holocaust the two sides have categorically stated that its prevention is of paramount importance. They stressed the rôle nuclear-weapon states should play to achieve general and complete disarmament. And quite hearteningly, the USSR has declared that it will not take the initiative to use nuclear weapons. The joint statement also deals with wide-ranging issues including military intervention, Iran-Iraq war, Diego Garcia and Nicaragua.

Upon his return to India Rajiv described his visit as fruitful. But whether the happenings beyond the Iron Curtain will cast a shadow on the stage Washington has set for the Reagan-Rajiv talks will be closely scrutinised by political spectators both at Kremlin and Pentagon.

INDIA-FRANCE

A FESTIVE OCCASION

The exposure of the French connection in the espionage network busted by the bright boys of the CBI early this year and the consequent expulsion of a French naval attache and the French Ambassador had resulted in Indo-French relations plummeting to an all-time low. And, therefore, when PM Rajiv Gandhi landed in Paris on the second leg of his whirlwind five-nation tour one expected undercurrents of tension and distrust. But the effusive red-carpeted Parisian welcome for the Indian PM, apart from allaying these fears, went to show the importance the Socialist Government accords to relations with India.

And the unprecedented presence of the French PM, Laurent Fabius at the only airport to receive Rajiv Gandhi, underlined this fact.

Among the developed countries France is perhaps the only one which has, on numerous occasions gone out of its way to render its support to numerous Indian projects, and advocate India's case before the rich nations. France also supported the Third World causes espoused by India. It is, in fact, the only country which did not hesitate to transfer sophisticated technology to India even in some strategic fields, and is, at the moment, helping it in diverse fields ranging from coal mining, environmental study and management telecommunications, ocean development and exploration, electronics, nuclear energy, space and defence.

The talks between French President Francois Mitterrand and Rajiv Gandhi enhanced this bilateral cooperation. However, Rajiv did not hesitate to point out that any French assistance to Pakistan for the development of a nuclear bomb would only strain Indo-French ties. Rajiv also gave his unconditional support to the UNESCO projects. The tangible result of the wide-ranging talks between the leaders was the signing of two agreements, one of which concerns strengthening of scientific cooperation between the countries covering contracts in biotechnology, physical optics, applied mathematics and renewable energy sources and is also related to the establishment of an Indo-French centre for advanced research in Delhi. The second agreement is a joint project to clean the highly polluted Ganges. Both the countries have agreed on a broad framework for a programme to generate energy from the Ganges and also from agricultural waste. France and India are also busy negotiating deals on French helicopters, airbus commercial jets, computers and railroad equipment. And then, much to the relief of anxious political observers, Rajiv unequivocally denied the possibility of signing the Nuclear Non-Proliferation Treaty (NPT) which he felt was distinctly biased in favour of nuclear power states.

But the high point of Rajiv's French visit was undoubtedly the inauguration of the year-long Festival of India in France. Viewing the colourful pageant of Indian folk dancers from various states, and the elaborately adorned camels and elephants from atop the Eiffel Tower, Rajiv and Mitterrand toasted the success of this venture which aims at enhancing France's interest in Indian culture. And as part of this cultural exchange India, too, will host the Festival of France in 1986. The Festival of India commemorates another high in Indo-French relations with the two leaders parting on an optimistic *au revoir*.

ANTI-RESERVATION STIR

AGITATIONS STALL ACTION

Centrifugal forces in Gujarat are spinning the state irremediably into a whirlpool of chaos and confusion. With each passing day the possibility of a solution to the festering reservations issue recedes further into the realm of impossibility, despite concerted efforts by the Centre and the state government.

Gujarat has become a synonym of violence. Even with the army, the CRPF and the Malabar special police force deployed in the state, the ceaseless, horrific bloodletting continues. Practically the entire state is now under army vigil or indefinite curfew, but to no avail. For, the moment curfew is relaxed violence begins. On May 12, an army takeover was staged in the walled city of Ahmedabad following a spate of violence which claimed the lives of at least 12 people and injured scores of others.

Frantic efforts by the state government to bring the anti-reservationists to the negotiating table only resulted in a stalemate once again. According to the leaders of the agitating students and parents the talks failed because "the government is not prepared to accept any of our demands," which include a judicial inquiry into the violence and police atrocities, withdrawal of the proposed 18% increase of reservation for the socially and educationally backward classes and a phasing out of the entire reservations system. In sharp contrast to this CM Madhavsingh Solanki was of the opinion that the agitation should be called off in the light of the fact that the government had postponed the implementation of this proposed 18% increase.

The state government was, however, successful in its attempts as far as the Gujarat panchayat staff was concerned. The panchayat employees called off their week-long strike following a settlement with the government. The government has now agreed to consider the panchayat staff as government employees. They have also been promised adequate representation in the government joint council. But the effect of this minor triumph was nullified manifold when violence flared up in Baroda, Surat, Anand and various small towns of Gujarat. The

agitationists have devised several new arms with which to attack the authorities. Acid bombs, burning rags, lathis filled with explosives and 'molotov cocktails' (petrol bombs) are their current favourites.

In a bid to arm itself against these disruptionists the Gujarat Government, on May 26, promulgated the Anti-social Activities Preventive Ordinance, or the anti-goonda ordinance as it is popularly called, with immediate effect. This Ordinance empowers the government to detain any individual or group for a maximum period of one year if they are caught indulging in nefarious activities which are harmful for the maintenance of law and order. Under the provisions of this Ordinance the government is also empowered to detain a person "on his past record of anti-social activity without the need to produce witnesses". Activities identified under Sections 16, 17 and 22 will also be covered by this Ordinance.

Meanwhile, another round of talks between the government and the agitationists once again ended inconclusively on May 31. And while the call for a Gujarat bandh on May 30 was withdrawn following the release of two detained agitation leaders, a fresh call was given for a bandh on Jun 7. The government remained inflexible in its stance making withdrawal of the agitation a precondition for further talks while the agitationists refused to concede until a solution was found on the reservations issue. They also turned down Solanki's appeal to withdraw their exam boycott programme.

The whole of Gujarat is now intent on striking for one reason or another. The state electricity employees have threatened to go on strike to press for abolition of the caste based roster system. The reservations stir has taken a curious turn in itself. Pro-reservationists are now on the war path, too, clamouring for implementation of the proposed 18% increase in the reservations quota. Trade and business have already come to a grinding halt with various trade associations on a five-day hartal in protest against the state government's inability to maintain law and order. Opposition leaders are all for Solanki's dismissal. And finally the anti-reservationists observed Gujarat bandh on Jun 7 as part of their fresh agitational programme in collaboration with 7,00,000 government employees who want on an indefinite strike to press their demand for abolition of the roster system. Violence has escalated once again following the bandh. To add to the chaos textile mills in the state have also started voicing their discontent regarding the government's new textile policy which makes no mention of taking over of sick and closed units. The state government is making all possible attempts to improve the situation and is resorting both to promises and threats. While acceding to some of the demands of the agitationists, which include a judicial inquiry into police excesses and violence and stalling of the implementation of the new 18% hike in the reservations quota, it has also issued the threat to take stern action against all those who are giving bandh calls. Not that it has made any difference to the agitationists. The anti-reservationists have, in fact, issued a fresh threat to boycott the next academic year commencing in colleges and universities from Jun 15, unless the reservation system is totally abolished.

INDO-SRI LANKA

TAMIL-MUSLIM BLOODBATH

Death has become mere statistics in the tiny island country now and the number of dead bodies just so many points scored over the enemy. The macabre games of the Tamil militants on the one hand and the Sinhalese, Tamil Muslims and the utterly indisciplined psychopathic soldiers of the Sri Lankan army on the other have now reached a stage where neither of the sides can call a halt, even if they wanted to.

May 14 was perhaps the bloodiest day in the recent history of the Sri Lankan ethnic crisis. In a gory carnage the Tamil Tigers ruthlessly gunned down 150 Sinhalese men, women and children in Anuradhapura, the holiest city for Sinhala Buddhists in the country proving that the joint forces of the Tamil militants were far more deadly than before. The gruesome episode was obviously enacted in retaliation against the killing of 75 Tamils a week earlier in Anuradhapura itself. The reprisal from the Sinhalese quarters was swift and the very next day nearly 50 Tamils were massacred in cold blood followed by 28 on May 16 and 40 on May 19. In the wake of the Anuradhapura massacre the government decided to expel 20,000 Tamils from the whole district between the northern town of Vavuniya and Anuradhapura as part of its drive against Tamil guerillas and send them to the Tamil-dominated north.

Meanwhile, on the broader international front, too, the Sri Lankan government gave the South Asian Regional Cooperation (SARC)

organisation a few bad moments. As a mark of protest against an alleged Indian statement on the situation on the island country, it decided to boycott the SARC ministerial meet at Thimpu. Had it gone ahead with its resolution it would have been a clear violation of the ministerial declaration of 1983 which specifically mentions that bilateral and contentious issues shall be excluded from all SARC deliberations. However, frantic efforts by the rest of the six nations of the SARC including a personal telephone call by PM Rajiv Gandhi made Sri Lanka reverse its decision. If all goes well the SARC meet scheduled to be held in Dhaka, in December this year, will take place as per programme.

Finally, the devastating cyclone in Bangladesh brought the two leaders of India and Sri Lanka together to discuss the ethnic problem in the island nation. President Jayewardene came to New Delhi on Jun 1 and Jun 2 and in an event unprecedented in diplomatic history of the two countries, he and Rajiv flew to Dhaka together to express their sympathies to the cyclone ravaged victims. The gesture was fully appreciated by Lt Gen Ershad.

Time was snatched, before, between and after the Dhaka visit for hurried talks between the two leaders on the matter uppermost in their minds—the Tamil problem. During the talks Rajiv Gandhi once again explained the Indian stand on a political settlement. Quite surprisingly, a considerably mellowed Jayewardene displayed his keenness for a negotiated settlement, too, in sharp contrast to his earlier stand on a military solution. Both sides agreed that immediate steps should be taken to defuse the mounting tension in Sri Lanka and create a proper climate for a framework of the unity and integrity of Sri Lanka. Both sides also agreed that it was imperative that all forms of violence should abate and cease. Jayewardene also gave his assurance that every possible effort would be made to restore normalcy in the severely affected northern and eastern provinces of Sri Lanka to facilitate the early return of Sri Lankan Tamils who had fled to India. He also promised to declare amnesty for Tamil militants provided they surrendered to the Sri Lankan Government unconditionally.

The lines on which Jayewardene envisages a political solution to the Tamil issue include elections for the constitution of district councils with representatives from the area, followed by the grant of more powers and rights to these councils. Later the setting up of coordinating councils might also be considered. With regard to withdrawal of troops from the Tamil-dominated regions of Sri Lanka, however, Jayewardene exhibited evasiveness when he said: "Troops won't be there if there is no violence". Considering the fact that it is the troops which have been responsible for violence in the first place the statement does sound incongruous. The two leaders parted with the promise of retaining future contact.

Jayewardene's return to Sri Lanka has been greeted by another bloodbath. On Jun 6, 80 Tamils were butchered by the Sinhalese, assisted by security personnel in a number of Tamil villages near Trincomalee which implies that either there is faulty communication between the authorities and the masses on the island or else the masses are simply not following the instructions of the authorities.

MAHARASHTRA

BEATING RETREAT

Like a fallen angel making a reluctant exit from his heavenly abode Vasantdada Patil resigned as CM of Maharashtra, following differences with the Centre. Ever since assuming office for the fourth successive term, on Mar 12 this year, Patil had repeatedly been complaining that it was becoming increasingly difficult for him to function. But it was only during the Bombay Municipal Corporation elections that things came to a head. Patil, flighted by the Centre's selection of party nominees for the elections without consulting him, adopted an openly critical stance.

The Centre, on its part refused to take matters lying down, and on numerous occasions tried to put Patil in his place. When N.M. Komble, MP, resigned from his post of President of the Maharashtra Pradesh Congress Committee (MPCC) the Central leadership, quick on the uptake appointed Prabha Rao, an MLC and former minister, to fill the breach as part of the process of revamping state units. Another thorn in Patil's side—for Rao is a well-known Patil critic. Apart from this his main grouse against her was that she belonged to a group which had deliberately abstained itself at the time of election of deputy chairman of the Legislative Council. Then the Centre also refused to accept the resignation of the Bombay Regional Congress Committee President, Murti Deora, also a vociferous Patil critic. The induction of such openly hostile people was bound to create friction and it did.

But what ultimately undermined in Patil's resignation was the controversy over congestion in Bombay. The Centre and Patil obviously did not see eye to eye on this explosive issue. While on the one hand Patil was busy endorsing the newly elected Shiv Sena's proposal that entry of people into India's largest metropolis should be restricted and those who had adopted Bombay as their home since or after 1974 be asked to leave, the Centre on the other hand categorically asserted that there could be no restrictions on people coming into Bombay or going out as it was a clear violation of Art 19 of the Constitution under which all citizens of India are given the right to move freely anywhere in the country. But Patil remained adamant in his stand that it was imperative to regulate entry of people into a city which was literally bursting at the seams with overpopulation. Said Patil "We can't create additional facilities and we cannot push the Arabian sea back."

Needless to say Patil's stance embarrassed the Central leadership which was confronted by a protesting Opposition. Furthermore to add to the Centre's embarrassment Patil voiced his reservation about the dual position occupied by PM Rajiv Gandhi—that of party chief and prime minister. He also levelled allegations against the working of the Congress (I) in his state.

In the face of this provocation Patil was summoned to the capital where he was unable to meet the PM. Feeling humiliated Patil returned to Bombay and even as Rajiv went on a nine-hour visit to Maharashtra, among other reasons to assure him of his continued support, Patil tendered his resignation after the shortest term of 82 days.

And after much speculation as to who would step into Patil's shoes Shivajirao Patil-Nilangokar, a former minister, was unanimously elected new CM of the state. Nilangokar, a seasoned politician, who has held various portfolios ranging from irrigation, public health to law, in different ministries was, however, surprisingly not a member of either of the two Houses of legislature before his appointment. In fact, he was even denied a ticket during the last Assembly elections. And he is the second CM, after S.B. Chavan, who hails from the industrially backward Marathwada region. Nilangokar had one more point in his favour. He had the blessings of his predecessor. And, perhaps to reaffirm his loyalty to Patil he has inducted 20 of the 23 ministers of the Patil Ministry into his till now 24-member Council of Ministers, with Patil applauding in the side-wings!

NAGALAND-ASSAM COROLLARY OF CHAOS

Much to the disappointment of all concerned, the month-old much talked about secret talks between the Centre and the Assamese agitation leaders concluded with the Assam problem as unresolved as before. The talks, which began on May 6 after a gap of two years, once again failed to yield conclusive results and the differences on the ticklish issues of the cut-off year for identification of foreigners and disenfranchisement remain as strong as ever. The Centre has also rejected outright the demand of the agitationists to dissolve the Saikia Ministry. It however intends to proceed with its plans for the Lok Sabha elections in which the agitationists will be given the opportunity to establish their political supremacy. And if they succeed in doing so, then the Centre will have no option but to consider the dissolution of the state Assembly. For now the talks have been called off with a tentative proposal to resume them on Jun 28.

And even as the Assamese continue to be saddled with the unresolved foreigners issue, they have been confronted with another crisis—the renewal of the border dispute between Assam and Nagaland. The recent embittered history of border clashes between the two neighbouring states can be traced back to 1971 when the government appointed the one-man Sundaram committee to resolve the almost century-old territorial dispute initiated by the British Government. The committee put forth certain proposals in a bid to satisfy both sides. But the Nagas harboured a grievance that the proposals were biased in favour of the Assamese, with the result that in 1979 clashes between the Assamese and the Nagas, assisted by the Nagaland armed police force, in the villages of Sibsagar district of Assam resulted in the killing of 54 Assamese.

Obviously the 1981 meet of the chief ministers of the two states was a mere formality as it failed to find any acceptable solution to the border issue. Neither did the impassioned plea by the then Union Home Minister to resolve the problem have any effect. The recent eruption of clashes between the two states in the extremely sensitive north-eastern part of India however has much more dangerous portents. For it was not a confrontation between the Assamese and Nagas but between the

police forces of the two states. The clashes were of the nature of the kind going to the extent of capturing certain areas of Assam. The current wave of violence was triggered off by an utterly insignificant incident. Apparently, the Nagaland police force set up a check post in a reserve forest area of Assam in the sensitive border area and enclosed the 200 sq m area with barbed wires. Incensed, the Assam Police demolished the structure and carried away the construction material and barbed wire. The ensuing violence resulted in the death of 30 people. The series of attacks the Nagaland armed police launched on Assam police posts at Meregani, Dighalpani and Sisipani in the Assam-Nagaland boundary had the residents fleeing for safety. And with the Nagaland police showing no signs of calling a halt to its frenzied rampage of arson and looting, the Centre issued a frantic appeal to the CMs of both states to get together and sort out the mess. At the Centre's insistence Assam CM Hiteswar Saikia and his Nagaland counterpart S.C. Jarin had talks in which no lasting solution was found yet again. The two CMs however decided to induct a neutral force consisting of Assam rifles to the affected areas and also decided to hand over the critically important task of maintaining inter-state border peace to the Border Security Force. But even if these steps do help to curb the current spirit of lawless violence, it is imperative that a lasting solution be found to the problem. Considering that Assam has border disputes not only with Nagaland but with Mizoram, Meghalaya and Arunachal Pradesh as well. And the surfacing of the underground in Mizoram and Tripura threatening chaotic developments in the entire north-eastern region.

NEW TEXTILE POLICY CHANGING THE FABRIC

Within a relatively short period of time the Rajiv Gandhi government has become famous for inducting drastic changes into various sectors of the Indian democracy. The announcement of the new textile policy on Jun 6 is part of this design and heralds radical changes in the fast-sinking textile industry in an attempt to rejuvenate it. The main thrust of the policy is to treat all sectors of the textile industry as an integrated whole. It also seeks to remove all curbs on expansion or contraction of capacities by the mill sector and provides the industry 'full fibre flexibility' in the use of manmade fibres and cotton. The policy has been formulated primarily with a view to providing cloth of acceptable quality to the masses at large at reasonable prices.

The new liberalised policy, to be effective for the next five years, brings to an end the three-sector approach which was being followed by the government which has divided the industry into the mill sector, the powerloom sector and the handloom sector. From now on there will be only two sectors, namely the handloom sector and the power-driven sector. The unorganised powerloom sector will henceforth be treated on a par and allowed to compete. A suitable package of measures will also be evolved to facilitate healthy development of this neglected sector. No longer will setting up of powerlooms require prior permit either.

Several sweeping measures have also been proposed for the protection of the handloom sector. It is envisaged that by the end of the Seventh Plan period, the responsibility for the entire production of controlled cloth will be transferred to this sector. And in an attempt to improve the performance of this sector the policy also provides for the modernisation of looms, increase of yarn supply, encouragement of production of mixed and blended fabrics on handlooms, and the reservation of handloom articles for exclusive production. Apart from this, appropriate fiscal measures will also be introduced to remove the existing cost handicap this sector is facing. The government has evidently taken into account the welfare of the 7.2m weavers employed in the handloom sector before formulating its policy.

Due emphasis has also been given to accelerate the pace of modernisation of the textile industry. The government is already envisaging a 5% annual increase in the rise of synthetic fibre over the next five years to meet the booming demand for durable synthetic and blended fabrics at cheaper prices. While indigenous production of textile manufacturing industry will be encouraged, liberal imports of such machinery will also be permitted. A textile modernisation fund will also be created.

The new policy package will have far reaching consequences. It will go a long way in improving the performance of the textile industry providing the requisite momentum for revival, growth and development. With the multifibre approach designed to have beneficial impact on the industry itself, its upstream and downstream industries and most importantly the consumer himself.

(Continued on page 58)

BANGLADESH CYCLONE WAVE OF DEVASTATION

On May 25 a cyclonic storm, with a wind velocity of 130 km per hour, accompanied by tidal waves rising 4.5 km high lashed coastal Bangladesh and left in its trail over 40,000 dead, resulting in what may be the country's worst cyclonic disaster. Although thousands had been evacuated earlier, many perished and an entire island—Sandwip—with 10,000 inhabitants was swept away and less than one-tenth of the population in the islands of Charu Purbaksh and Burichar survived. Most residents of these islands were landless and had come to benefit from the unclaimed land available.

Large-scale rescue operations were conducted with the employment of naval ships and fishermen boats to search for the myriads still believed to be missing. After the fury of the cyclone, floods in Somilla and Sychet districts of Bangladesh brought more misery and large-scale evacuation operations were conducted. Further reports of a new cyclonic storm created more panic but mercifully the weather man was proved wrong.

In view of the pathetic situation in his country, President Ershad cancelled his state visit to the People's Republic of China. Bangladesh observed a day of national mourning and public servants in the country donated a single day's wages to the relief fund set up by President Ershad. Meanwhile relief operations are underway with attempts to rehabilitate 25 lakh victims. International aid has also come in from Japan, the US, the European Economic Community (EEC) and the International Red Cross. India has contributed Rs 21 crores for the relief of the cyclone victims. PM Rajiv Gandhi, in an expression of regional solidarity flew down with President Jayewardene to Dhaka to convey his sympathies to the cyclone victims.

Even as the initial shock of the disaster subsided doubts were cast regarding the efficiency of the Bangladesh government's cyclone warning system. Despite the assistance of the American weather satellite and the Indian Meteorological Department, which had predicted the cyclone one day in advance and passed on the information to Bangladesh officials, the disaster could not be averted. Radio Dhaka only warned the people about the approaching cyclone but gave no indications of the tidal wave and wrongly stated that the cyclone would weaken in the north-west.

LEBANON SYRIA GAINING GROUND

In East Beirut a massive car bomb explosion rocked the Christian quarter of Siniel-Fil district which resulted in 60 casualties, including 15 school children, and left more than 190 wounded. The bomb was packed with about 450 lbs of TNT. The resultant disaster is considered one of the worst since the US embassy suicide attack last September. The situation in West Beirut was equally tense when Shia Muslim Amal Militiamen and Lebanese Army soldiers battled against Palestinians for wresting control over the Palestinian camps of Sabra and Chatille which, sources claim, are virtually now in Shia hands. Attempts are being made by the Shia Muslims to penetrate the third camp at Bourj al Barajneh, the last Palestinian stronghold.

In the recent fightings 369 people have been killed and 1,700 injured. A shaky ceasefire negotiated by Welid Jumblatt, the Druza militia leader also collapsed, badly affecting the work of relief agencies. President Amin Gemayal also narrowly escaped being hit by artillery shells, when his presidential palace came under shelling. In a later move, the Shia Muslim forces called a ceasefire. But the Palestinians displayed no signs of responding and so the shelling continued. The UN Secretary Council, however, passed a resolution in an attempt to put an end to the civil war. The present struggle has further consolidated Syria's position in Lebanon and its consistent support to the Shia Muslim militia is viewed by observers as an attempt to foil Arafat's peace solution with Jordan and Egypt by showing that he lacks the support of his own Arab community. However, the recent support extended by the Syrian backed dissident Fatah group, led by Abu Musa, to Arafat's Palestinian forces, in its conflict with the Shiite military forces, has been viewed as an

attempt by Syria to prevent any faction from attaining dominance in the local power struggle in order to strengthen its own position even further. Meanwhile, the last stage of Israeli withdrawal from Lebanon will be completed this month and in preparation Israel is already consolidating the position of its northern border against the possibility of further attacks.

REAGAN'S EUROPE TOUR BITTERNESS AT BITBURG

The 40th anniversary of VE-Day was celebrated all over the world; but in the Western world, which was most effected by the ravages of Nazism, the celebration was even more enthusiastic. In London a special service was held at Westminster Abbey where Queen Elizabeth II and other British leaders were present. In France, President Mitterrand laid wreath at the tomb of the unknown soldier. But everything did not run smoothly—President Reagan, whose visit to Europe coincided with the VE-Day celebrations, had to face unwelcome demonstrations in a number of places. Some socialist delegates walked out during his speech at the European Parliament. At Madrid, his visit was preceded by a massive demonstration by Spanish leftists and the communist members staged a walk-out during his address to the Portuguese Parliament. At the annual economic summit at Bonn, no agreement of importance was worked out. Reagan was isolated from the other six leaders present on the question of trade policies and also ran into numerous objections over his economic sanctions against Nicaragua.

NIGERIA EXPULSION OF IMMIGRANTS

'Get back to where you belong', became the determined policy of the Nigerian military government of Maj Gen Mohammed Buhari when he ordered 7,00,000 illegal immigrants to leave the country—by land or sea—before May 10. This is the second time in two years that Nigeria has driven out its immigrants. The first expulsion took place in 1983 when there was a mass exodus of 2m immigrants, though many returned back.

The majority of these immigrants are from Ghana, whereas the remaining have migrated from Chad, Niger, Cameroon, Burkina Faso, at a time when Nigeria could absorb excess labour and had relaxed its immigration laws due to the bright prospects opened up by a strong economy based on the oil boom. However, the worldwide oil glut and its effects upon the weakening Nigerian economy spelled the basic reasons for this expulsion as it did in 1983. With rising prices and fewer job opportunities the natural reaction was to blame the immigrants for the country's economic woes.

The actual evacuation led to chaos. Thousands of immigrants lined up for miles together awaiting customs clearance, and were forced to hand over 'scarce items' such as rice, milk and sugar apart from excessive money, to the authorities. With the deadline approaching, the situation became increasingly tense as the Nigerian authorities closed the borders with thousands of immigrants still trapped inside the country.

US-USSR FOR CRISIS CONTROL

The US and the USSR were allies during the struggle against Nazism. But on the 40th anniversary of VE-Day, Mikhail Gorbachev delivered one of the toughest speeches against American imperialism at the Kremlin's Palace of Congresses, saying that "it was at the forward edge of the war menace to mankind". And at Strasbourg, President Reagan's speech in the European Parliament also showed signs of hardening of attitudes towards Moscow. Yet, it was tempered by a few new "practical steps" which the President advocated, including exchange of observers at military manoeuvres and better communication between the US and the Soviet military commanders in order to reduce the risk of a possible nuclear war.

However, there is a sleep-coming to the dark about. Both sides are enthusiastic about improving the US-Soviet hot line and establishing "crisis centres" manned by both the US and the Soviet personnel. Further, although neither side wants to limit its nuclear arsenal, there is broad support for attempts at improved crisis management. The US and its Western allies feel that crisis control is now more important in order to avoid an accidental nuclear holocaust. A visit by the US Commerce Secretary, Malcolm Baldrige to the Soviet Union also helped to clear the air.

PAKISTAN

END OF MILITARY ERA?

There is a general optimism regarding the days of direct military rule soon coming to an end in Pakistan. Even Opposition politicians who had advocated a boycott of the February general elections have opined privately that martial law may end soon. Ghulam Mustafa Jatoi, the leader of the banned Pakistan People's Party (PPP) reportedly said that the Opposition's Movement for the Restoration of Democracy (MRD) was ready to wait till Aug 14, Pakistan's Independence Day, before deciding on whether to confront the elected Parliament and PM Muhammad Khan Junejo.

The reason for this change in the political atmosphere is that President Zia, at least for the moment, appears to be stepping off the stage and Junejo and his cabinet are being given more prominence. Military men are also being replaced by civilians in government appointments. For instance, Zia's close confidante, Lt Gen Mujibur Rehman recently stepped down from his post of Permanent Secretary of the Information Ministry. The members of the National Assembly, the Lower House of the bi-cameral Parliament, are becoming as vocal as the Opposition, about the need to end martial law. Even Junejo has begun to assert his rights as PM and according to sources, he recently refused to sign an ordinance on Islamic banking for legislation by decree.

However, Zia's supporters feel that democracy will come only in easy stages. They speculate that if the process is speeded up, then not only will the 11-party Opposition MRD create disturbances but the military officers will become discontented and become a destabilising factor in domestic politics. The fact that the army still plays an important role in Pakistani politics was demonstrated when Maj Gen Nek Muhammad

also appeared. Director of the... generally held by police officers. Yet at the same time... and government officials confirm that Zia is taking a back seat and is trying to boost Junejo's image. The President recently said, "I am not a constitutional head of state and that is exactly what I want to be." However, according to his amended Constitution, he still retains constitutional powers and can use them at his discretion.

The mood being what it is in the country, the MRD has begun to re-organise itself and has decided to create a permanent organisational structure for the alliance to prepare for its next confrontation with the government. It had hoped that its call for boycott of the February elections would be widely heeded since the high general-election turnout had led to a loss of prestige. The MRD may suffer yet another setback if an Opposition emerges within the elected Parliament.

EAST BLOC

PLEDGING MILITARY SOLIDARITY

The original document was signed in 1955. Now, 30 years later the leaders of the seven-nation group, which comprises the Warsaw Pact, met again at Warsaw to renew the pact. The fresh pledge of fidelity will provide upto 30 more years of military solidarity to the Warsaw Pact.

The group had shown signs of falling apart in recent years with the removal of a firm hand from Moscow. During the last years of Leonid Brezhnev and the short spells of Yuri Andropov and Konstantin Chernenko, the East European satellites had begun to show signs of independence, especially on the economic front. The pact, however, appears to have solidified anew under the new Soviet leader Mikhail Gorbachov. He perhaps realises that Moscow will face little problem as long as it does not hamper East Europe's ability to conduct trade with the West.

Meanwhile, the Soviet Union has begun to expand its Pacific fleet. It recently held manoeuvres a few 100 miles east of Japan involving nearly three-quarters of its ships deployed in Asian waters. Work is also underway at the former US base at Cam Ranh Bay in Vietnam, which is now USSR's only warm-water port in the Pacific, and also at the submarine ports at Petropavlovsk on the Kamchatka peninsula. Moscow's Pacific fleet includes 31 nuclear missile submarines, 87 capital ships and 54 combat vessels.

If you want to study or work in America, this book will show you the way

"I am most impressed (by) the clear explanations and (the) many normally unknown facts about visas (given in your book)," wrote Dr KV Rao, MBBS, of Kurnool, AP, in one of the hundreds of letters received from appreciative readers of this practical handbook.

In 1982, 93,344 non-immigrant visas and more than 20,000 immigrant visas for USA were issued from India. You can get one too if you know how. How to go to America appraises you with the process and helps you evaluate your eligibility.

If you want to study in the U.S., How to go to America tells you about higher education in America, life at American universities, the admission procedures and also provides details and tips on sources of financial aid, including scholarships available, on how to work

out your budget, on living arrangements, part-time work, etc.

If you want to work in the U.S., this book describes the steps for getting labour certification, the kinds of jobs that are certifiable and shows you how to prepare for, apply for, and get a Green Card (immigrant visa), and the completely legal ways of entering the job market without a Green Card.

Complete with a sample set of actual application forms required for different visas, How to go to America has been written by a team of Indian professionals actually working and living in the U.S.

So if you are really serious about going to America to study or to work, get a copy of How to go to America — and get going.

...about this rapid expansion yet ... a significant threat in the Pacific. The ... and many of the ships are of dubious ... categories ... first full-size conventional take-off ... in the early 1980s.

BANDUNG MEET

SUHARTO'S DIPLOMACY GAMES

Thirty years ago, 29 newly independent nations met at Bandung and called for an end to colonial domination, non-intervention in other countries' internal matters and a halt to military alliances with either of the two superpowers. Recently, officials from 82 Asian and African countries and three national liberation movements travelled to Indonesia to attend Bandung II. It was a personal victory for Indonesia's President Suharto, who is trying to reassert Jakarta's position as a leading non-aligned nation.

This time the emphasis was on economic fundamentals. According to Suharto, "political independence does not mean much if we do not immediately fill it with national development." The 250 delegates approved a 19-point declaration which, apart from reiterating the 10 original Bandung principles of non-alignment and self-determination, also denounced South Africa's apartheid policies and attacked the "racist, brutal practices of Israel". Suharto's diplomatic skills were apparent in the manner in which he managed to skirt any mention of the present conflicts in Cambodia and Afghanistan.

The main prize of the conference, however, was that Jakarta and Peking came together for the first time since relations were suspended in 1967 when Indonesia charged China with involvement in an abortive coup attempt made two years earlier. At Bandung, Chinese Foreign Minister Wu Xueqian shook hands with Suharto, symbolically ending the 18-year hostility. Restoration of full diplomatic relations may take time but there may be more immediate economic effects. Indonesia already exports hundreds of millions of dollars worth raw materials and wood products to China via Hong Kong and Singapore, and it is expected that this will increase and the middlemen will be eliminated. The two governments have already agreed to procedures for commencing direct trade and cultural relations.

One major absentee at the conference was India's PM, Rajiv Gandhi, who was the only foreign head of state expressly invited to the conference. He could not attend the conference because of domestic problems, and consequently a lower-level delegation represented India. Of the original Bandung conference, the only two persons still politically active, Vietnam's Pham Van Dong and Cambodia's Prince Sihanouk, also kept away because of their bitter dispute over Vietnam's occupation of Cambodia. The sole surviving delegate of the original conference who did attend was the 86-year-old former Filipino Foreign Minister, Carlos P. Romula.

Indonesia, of late, has been flexing its diplomatic muscles. It has established close relations with Washington and has also been trying to mend its relations with the USSR. Further, Suharto himself is scheduled to represent the Third World at a high-profile meeting of the Food and Agricultural Organisation (FAO), in Rome in November. And to crown its successes, Indonesia has emerged as the leading compromise candidate to host the non-aligned summit in 1986, originally scheduled to be held in Iraq.

BANGLADESH ELECTIONS

ERSHAD'S VOLTE FACE

The Bangladesh upa-zila (sub-district) elections were finally held in two phases on May 16 and 20 and chairmen of 460 upa-zilas, set up by the military government under Lt Gen Ershad, were elected in the rural areas of the country. According to one estimate, 206 of the winners belonged to the government-backed Jamaat Party while the two main opposition parties, the Awami League and the Nationalist Party had a tally of 48 and 47 respectively. These parties had boycotted the elections, and their members had evidently stood for the elections in defiance of party directives whereby the parties had disowned them and expelled them from party candidature.

The two main opposition alliances and the Jamaat-i-Islami opposed the elections because they felt that the poll was redundant and should not be held before parliamentary elections. The elections were scheduled to be held in 1985 but Ershad had backed out at that time under international pressure. At the time he decided to go ahead, and sur-

prisingly many Opposition activists were in the fray for the post of chairman, which carries considerable power. However, clashes among rival candidates caused the death of 11 people and many were injured. In many circumstances, the rivals belonged to the Jamaat Party, since the party allowed members who wanted to contest to join in on a non-party basis.

After the elections, Ershad began informal dialogue with the mainstream Opposition on issues like parliamentary and presidential elections. The Opposition leaders, Hossain Wajed and Khaleel Zia, who had been put under house arrest in March after Ershad had re-imposed martial law and banned political activity, were also released.

PHILIPPINES

ELECTIONS IN SIGHT

The "Crying Lady", so called because she had panicked and turned hysterical at the assassination of Opposition leader Benigno Aquino, Jr, on Aug 21, 1983, finally decided to speak out before the three-judge Sandiganbayan. This special court is trying 25 military officers and one civilian, named in the 457-page majority report of the Agrava panel as conspirators in the murder of Aquino, and Rolando Golman who was allegedly hired by communists to kill the former Senator, and who was himself shot minutes after he was supposed to have assassinated Aquino. The lady is Rebecca Quijano, a business woman, who was on the plane with Aquino and who says that she saw the fatal shooting through a first-class section window. She claims that she saw the man directly behind Aquino pointing a gun at him while he was descending the stairs of the aircraft and simultaneously she heard a shot. This is the first time that a civilian has testified on the murder and her testimony totally contradicts the military account of the murder. The defence, however, had no questions for her and it is surmised that questioning was avoided because defence lawyers do not want Quijano to fill in many of the details she left out of her account. According to Quijano the men accompanying Aquino were a Metrocom soldier and two Aviation Security Command (AVSECOM) personnel. The prosecution is hoping that Quijano's testimony would bring out three more witnesses who were on board the same aeroplane and had told the Agrava Commission that Aquino was still on the stairs when they had heard the first shot. The witnesses are perhaps afraid of repercussions, since among the accused is armed forces Chief of Staff Gen Fabian Ver, who is a cousin of President Ferdinand Marcos.

Meanwhile, the idea of a snap presidential vote has been revived in Manila. Some analysts feel that the CIA is trying to pressurise Marcos into holding elections before his term expired in 1987. CIA Director, William Casey, recently visited Manila and it is speculated that he held talks on the subject with the President. According to sources in Manila the US is worried about Marcos' failing health and the possibility of a chaotic struggle for power in case of his death. Some also feel that Marcos may be in favour of early elections because he wants to see his wife, Imelda, installed as President or Vice-President before his death.

POPE'S HOLLAND VISIT

MOVE TO SPREAD TERROR

The Pope was most unwelcome in Holland during his recent visit, but his charismatic charm appeared to change sentiments to some extent as opinion polls jumped from 40% of those in favour of the Pope to 70% after his visit. Although there are 5.5m Dutch Catholics—nearly 40% of the population—most of them are liberal minded.

For over two decades, many of Holland's church leaders have advocated the ordination of women as priests, and loosening the restrictions on birth control, premarital sex, divorce, homosexuality and the right of lay persons to celebrate mass. It is precisely on these issues that the Pope is uncompromising. His intention is to solidify the Vatican's control over the church and reinforce conservative, traditional values among the 800m Catholics all over the world. His visit to Holland, however, highlighted the divisive tendencies within the Catholic Church and raised the question as to whether some dissident national churches will, one day, break away from the papal fold altogether.

Shortly before his visit, a number of posters appeared in Amsterdam and other cities offering "rewards" for the assassination of the Pope. During his trip, there were ugly mass demonstrations. In Utrecht, some demonstrators dressed as priests and pregnant nuns shouted "Kill the Pope". The crowd had to be controlled by the police with tear gas and a large number of people were injured and arrested.

According to Vatican officials, the Pope had known that he would have a difficult time in Holland but had decided to make the trip out of a sense of duty. The Roman Catholic hierarchy feels that the Dutch Catholic Church strayed too far from the conservative theology promoted by the Vatican. Although he did drop some controversial passages from his prepared texts, the Pope remained firm on the main issues throughout his trip. He said that technologically advanced countries like Holland were more in need of "spiritual inspiration", and because of this, if the Church "makes unpalatable pronouncements" it does so because it feels obliged to do so. Two other countries, Luxembourg and Belgium, which the Pope visited, however, received him enthusiastically.

NEW CALEDONIA

BLUEPRINT FOR INDEPENDENCE

The French Government, under President Mitterand, has taken another stride towards independence for New Caledonia under local Kanak (Melanesian) rule. According to the new plan, announced by PM Laurent Fabius, on April 25, New Caledonia will be divided into four regions, each of which will elect its own council by universal suffrage in August this year. The council members will combine to form a territorial Congress which will decide on independence by the end of 1987. At the same time, Mitterand promised the 54,000 European residents of the islands that he would "reinforce" French military presence in the island. France has already deployed a nuclear-attack submarine, Rubis, which will be installed in the Caledonian port of Noumea. While the Kanak Socialist National Liberation Front (FLNKS) leadership generally welcomed the plan, the anti-independence pro-French Republican Party (RPCR) did not. The only part of the plan that they did like was that the independence package would give France continuing responsibility for the territory's defence and internal security.

Shortly after the announcement of the plan, there was a day-long pitched battle between the pro and anti-independence groups and curfew had to be re-imposed by the French High Commissioner, Edgar Pisani. The rioting was sparked off by a small demonstration by Kanak militants against the French proposal to create a "strategic base" in Noumea. About 6,380 gendarmes, riot police and French troops had

to be called in to quell the protests. The Kanaks are not the only ones who object to French military presence in the region. New Zealand's PM David Lange and Papua New Guinea's acting Foreign Minister, Tony Bais, have already objected to French nuclear presence in the Pacific and the PM of nearby Vanuatu, Walter Lini recently said that this would invite other superpower interests in the region.

VIETNAM

DISPLAY OF PYRRHIC VICTORY

Ten years ago, in March 1975, the South Vietnamese regime of Nguyen Van Thien was losing about a province a day to Hanoi's communist forces. And soon afterwards, a US helicopter whisked the last American officials out of Vietnam and ended the long bloody war, which had brought the American Goliath to its knees. Now, ten years later, Vietnam celebrated its victory with goose-stepping soldiers, left over US-made armoured personnel carriers, Soviet-built T-54 tanks, medal bedecked veterans and workers bearing a huge picture of Ho Chi Minh.

Although the show was jubilant and 400 journalists and technicians were invited from abroad to display Vietnam's victory to the world, the victory itself has proved pyrrhic. About 1,60,000 of its 1.2m strong army is at present busy trying to subdue resistance fighters in Kampuchea, while another 6,50,000 soldiers are kept on an alert along its uneasy border with China. And although Vietnam gets \$2b. in aid from the USSR each year, it is still extremely poor. The disastrous 1976-80 Five-Year Plan almost shattered the country's economy, and it was only after a year long debate, that efforts were made to lead the country towards stability. The Plans were poorly conceived and executed more by compulsion than by persuasion. To add to its problems, there were natural disasters like the floods of 1977-78 and border aggression from China and Cambodia, which brought development of some New Economic Zones (NEZs) to a grinding halt. There was also managerial incompetence which led to economic stagnation.

ANITA NARAYAN, & S.B.

ADMISSION NOTICE

Admission for Oral Coaching Classes for July 1985 at Lodi Road (Morning, Afternoon and Evening), Mandir Marg and St. Xavier's School for all Groups of Intermediate and Final, Old and Revised Syllabus starts from 20th May, 1985. Prospectus available at Lodi Road from 2:00 PM to 7:00 PM on payment of Rs. 10/-. Gazetted Officers, SAS and CA. IIB are exempted from Preliminary Examination.

Contact :

Northern India Regional Council of the Institute of Cost & Works Accountants of India,
3, Institutional Area, Lodi Road,
New Delhi-110003.

NOW! STUDY FREE IN USA/CANADA

The first two books tell how you can get scholarship for higher studies.

Author: Vinod K. Gambhir, C. Eng (UK), MBA (USA), ex. IRSME (Class I), Mng Dir. Scholarship holder throughout

- **HIGHER STUDIES ABROAD**—Procedure for getting admission & scholarship in USA, Canada & other countries. ALSO eligibility, admission tests, visa & lots more. Rs. 34/-
- **SCHOLARSHIPS HANDBOOK**—Details of 80 scholarship schemes of trusts, banks, companies & govt for higher studies in India or abroad including Tata, Rotary, Inlaks, Rhodes, USEFI, Philips & Birla. Rs. 44/-
- **ORIENTATION HANDBOOK U.S.A.**—Indispensable for those going/ planning to go to USA for studies. Tells about travel, baggage rules, campus life, orientation, teaching system, social life, jobs, immigration & success tips. Rs. 34/-
- Addresses of US & Canadian Univs—Rs. 10/- for EACH subject. Specify subject(s) of interest
- Preliminary Appln Forms for admission in US/Canadian Univs—Rs. 15/- for a set of 20 forms
- TOEFL Rs. 50/- ■ GRE General Rs. 85/- ■ GRE Engg Rs. 85/- ■ GMAT Rs. 95/- ■ SAT Rs. 75/-

CAREERS IN ENGINEERING

Capital's top most training Organisation offer:

- I. 5 Year Full Time courses Leading to Engineering Degree in:
 - ELECTRONICS • MECHANICAL • CIVIL
 - AERONAUTICAL • ELECTRICAL
 Recognised by Central and State Govts.
- II. DIPLOMA IN RADIO-AUDIO-TV-VIDEO COMPUTER SERV-
ICING (1 Year)
- III. DIPLOMA IN COMPUTER SCIENCES APPLICATIONS (Pro-
gramming) — 1 Year
- IV. DIPLOMA IN AUTOMOBILE ENGINEERING — 1 Year
- V. DIPLOMA IN AIRCONDITIONING REFRIGERATION —
4 months
- VI. DIPLOMA IN BUILDING TECHNOLOGY
- VII. Post Graduate DIPLOMA IN PRACTICAL ELECTRONICS
(COMPUTER ENGINEERING) — 1 Year.
- VIII. Post Graduate DIPLOMA IN BUSINESS MANAGEMENT
2 Years Part Time. (Recognised by Central Govt.)

Matriculates, equivalent or above with Physics, Chemistry and Mathematics for courses I to VI and graduates for courses VII and VIII may apply on prescribed forms before 30th July 85. There are 25 seats in each course and selection is done on the basis of marks obtained in the qualifying examination in courses I to VII and by test in course VIII. Prospectus with application forms may be obtained by sending Postal Orders for Rs. 12/- separately for each course to:

**NATIONAL INSTITUTE OF
TECHNOLOGY AND MANAGEMENT**
C-40, Connaught Place, New Delhi-1.
Phone: 311597. Grams: NITMA

ADMISSION NOTICE

GOVERNMENT OF INDIA & INDIAN UNION STATES— RECOGNISED COURSES/DIPLOMAS & DEGREES

Applications are invited from employed/unemployed, Boys & Girls for the following Engineering & Management Correspondence Courses and eligible students for IIT/JEE & M.B.B.S Entrance Exams

ENGINEERING COURSES:

A.M.I.E.E., A.M.I.E.T.E., A.M.A.E.E., A.M.I.E.S.E., A.M.I.I. CHEM-ENGL, I.I.T. (J), INDUSTRIAL ENGRG, THE ENGINEERING COUNCIL (U.K.) EXAMINATION THE INSTITUTE OF SURVEYORS.

(Studentship, Grades "A" & "B")

ALL THE ABOVE COURSES ARE RECOGNISED BY THE GOVT. OF INDIA & ALL INDIAN UNION STATES AS EQUIVALENT TO B.E. OR B.TECH. EVEN AFTER PASSING ANY OF THE ABOVE COURSES STUDENTS ARE ELIGIBLE FOR ADMISSION TO B.E. IN TECH. COURSES OF INDIAN UNIVERSITY

GRADUATE DIPLOMA (Chemical, Civil, Electrical, Mechanical, Metallurgical, Mining, Petroleum & Tele-Communication, Surveying, Advanced Engg, Marine Engg, Industrial Engg—(Thermodynamics, Heat and Fuel, Materials and Structures, Material and Electronic, Sugar and Condit., Geotechnics and Mining of the Engineering Council Examination London A.M.I.E.E. in Automobile Engg., A.M.I.M.I.W. in Marine Industry, GOVERNMENT DIPLOMA in Agriculture Engg, Diploma in Refrigeration & Air-Conditioning Engg, Drafting and Systems in Civil & Mechanical Engg.—MANY OTHER ENGINEERING/MANAGEMENT/CORRESPONDENCE COURSES

MANAGEMENT/COMMERCE COURSES:

1. ICWAI Preliminary/Intermediate & Final
2. C.A.M.—Chartered Accountant
3. Company Secretary Examination
4. ICMA London—Part I, II, III, IV
5. Chartered Secretary London—Part I, II, III
6. Govt. Commercial Diploma (GCD)
7. Studentship courses of A.M.B.M. Part A & B in Business Management
8. Diploma A.I.B.M. in Business Management

9. Competitive Examinations: Entrance Examinations (B.E. & B.TECH.) / IIT/JEE & M.B.B.S (all over India)

10. DIPLOMA COURSES IN:
 - B.B.B.M. Business & Industrial Management
 - D.P.B.M. Purchasing & Materials Management
 - B.P.M. Personnel Management
 - B.M.M. Marketing Management
 - B.M.A. Management Accounting
 - B.E.M. Export Marketing Management

11. City & Guilds of London Institute Diploma Courses in Technical Engg., Mathematics & Production Engg, Mechanical and Electrical Engg./Refrigeration Engg. and Radio TV and Electronic Engg.
12. Radio Officer Course—C.O.P.I. (Class I & II)
13. GOVERNMENT RECOGNISED: State Board of Technical Education Diploma Courses in Civil Engg., B.E.E.I. Electrical Engg., A.E.E.I. Mechanical Engg., B.E.E.I. Shipbuilding & Construction Engg., B.E.E.I.

ADMISSION QUALIFICATIONS: None/B.S.C./B.E.C./10+2/P.U.C./Intermediate/Graduate/Diploma in any branch or Graduate in Engineering with any subject

FACILITIES OFFERED: This is the only College in India giving maximum facilities to its students. Examination Centres all over India. Fully furnished library. Highly equipped and experienced staff. Career guidance. MANAGEMENT FOR PRACTICALS ALL OVER INDIA. Supply of books and FREE BOOKS etc. and SCHEM. ON THE SPECIAL FEATURES THIS IS ONE OF THE OLDEST & REPUTED COLLEGE IN INDIA & ABROAD WITH THOUSANDS OF INDIAN & FOREIGN STUDENTS. All subjects are taught from the beginning. So you start from scratch. (LIMITED SEATS).

FOR FULL BROADCAST LATEST PROSPECTUS & ADMISSION FORMS send Rs. 25/- (POSTAGE DUE) by Money Order or Postal Order or Demand Draft to the President

INTERNATIONAL COLLEGE OF CORRESPONDENCE (REGD)

Block No 17 South Post Nagar (Old Post Road) Near Baita Bank of India Post Box No 8904 New Delhi-110008 (India)

NOTE: Our College is RECOGNISED & AFFILIATED to The Institution of Business Management and The Institution of Management Engineers

ONE OF THE BIGGEST AND OLDEST CORRESPONDENCE COLLEGE IN INDIA

HIGHER EDUCATION

SOME VIEWPOINTS

An inter-disciplinary approach to curriculum framework, student evaluation of teacher performance and vocationalisation of education. This fresh approach towards galvanising our inert system of higher education might prove to be result-oriented.

The obstacles to changing the structure of higher education are manifold. In the first place development needs can be adequately met only by making education more practical and less academic. But technical education is expensive in terms of building and equipment, and more importantly, its value has yet to be fully accepted in our country.

Another obstacle lies in the scarcity of qualified teachers in India because of the competition from government and industry, which pay higher salaries and offer better facilities. Whereas in the Philippines, Thailand and Malaya, where teachers enjoy better conditions, education is chosen as a career by a number of students. Hence a deterioration in the quality of teachers.

Universities, colleges and students are often controlled by politicians. The teacher has little control over educational issues; and syllabi and exams are outside the purview of the teacher. Consequently there is a loss of teacher-leadership and, as Edward Shils rightly puts it, Indian higher education is characterised by a "tragic waste of gifted human beings".

The third obstacle to the growth of higher education is student unrest—a phenomenon which has its roots in the general dissatisfactory state of the entire social system, including the system of education—poorly arranged course schedules leave the student with much free time but he has few opportunities for constructive activities. Again, the teachers have little contact with their students and guidance is almost lacking. Factors like scarcity of books, limited library and laboratory facilities also retard student progress. Hence their diversion in political intrigues and non-academic pursuits.

These variegated problems of higher education in India call for radical changes in the entire educational system. But these problems need to be studied in a broader perspective, with emphasis on the interrelated issues.

Some vital areas of university education, viz. teacher performance, university curricula, student/teacher policies at institutes of higher education and the so called new educational policies of the government were selected for analysis. Views of those directly dealing with academics—professors, readers, vice-chancellors and other administrators were taken into account in order to get a clear picture of the state of affairs. However, the opinions were restricted to those working in Jawaharlal Nehru University (JNU) and Delhi University (DU) two of the most prestigious institutions in India.

Teacher motivation

There is no dearth of competent teachers in the country, today. But, what is lacking is their motivation. According to Dr Abad Ahmed, Director, South Campus, DU, teachers were working in a milieu, where students were not motivated and selections were not made on merit; a sizeable number of them were teachers because they could not get any other job and, therefore, their hearts were not on teaching.

In addition, adequate facilities were not given to teachers for leading a decent life.

Dr Ahmed said, "It is difficult for a teacher to survive in Delhi on his single income; either minimise the cost or supplement his income with basic facilities like transportation, schools for children and campus housing."

Another factor which was found to hinder teacher motivation was the attitude of students. According to Dr Neera Chandhoke, Reader, Department of Political Science, DU, a majority of students were docile. The teacher was very often not just a teacher; he was the one to set question papers, the examiner and the job giver—all rolled into one. Thus the students developed a "dependence syndrome" and the teacher faced no challenge. With the result the need to update themselves was not felt by teachers.

Most lecturers even felt that there was no feasible evaluation system of teachers in Indian universities. However, when it was suggested that students were the best judges of teachers and, therefore, a system of evaluation by students could be introduced, the reactions were varied.

Commenting on methods of teacher evaluation, Dr P.L. Malhotra, Director, National Council of Educational Research and Training (NCERT), suggested that faculty members should join the students in evaluating the performance of teachers in classes. Confidential reports could be taken and fed into a computer, and the relative performance judged accordingly.

Pointing out the implications of student evaluation of teacher performance, Dr B.K. Srivastava, School of International Studies, JNU and former VC, Ravi Shankar University, Raipur, opined that students were likely to rate popularity rather than sub-

Politics for past-time? Poorly drawn up course schedules and lack of proper facilities force the students to indulge in political intrigues.

stage. Further, teachers themselves could be tempted to play to the gallery. He added that if it was to be introduced in Indian universities, there should be safeguards. Prof Srivastava also spoke about the inadequacies in universities away from the Centre. In some universities, even basic reading materials like journals and books were not available; and lecturers could not keep abreast of the latest developments in research, he pointed out.

Teacher motivation, according to Dr Ahmad, was partly the responsibility of the institutions concerned. The institution should see to it that merit was duly rewarded. The reward need not necessarily be monetary; it could also be psychological and social. Dr Ahmad also emphasised inner motivation of the teacher, which could be promoted, given the right kind of leadership and environment.

Arup Banerji, Lecturer, Deshbandhu College felt that there could be a system by means of which teachers were made to respond to the felt needs of students regarding curricula, modes of assessment etc. This could be followed by a unanimous poll by students of teacher performance as was being done by most universities in the US. He also felt that models should be evolved to relate research to the felt needs of the country; this would encourage teachers to continuously conduct research work.

In some universities in the West, especially in the US, teachers did not have a permanent tenure. They were appointed on the basis of a contract, which was renewable on the basis of their performance. Talking about the feasibility of such a system in India, Dr Krishna Sharma, Principal, Gargi College, felt that this could provide the kind of challenge—a competitive pressure—which could improve performance.

Curricula

The Science courses in DU were apparently, satisfactory enough, particularly at the graduate level. In fact, drawing a comparison with the Science curricula in American universities, V. Jamuna of Gargi College, said that students in the US were generally expected to specialise in one particular aspect of the discipline of their choice. In India, however, the courses were more generalised at the B.Sc. level, because specialisation was compulsory at the postgraduate level. But there was lack of facilities in Science colleges, although specialised institutions like the Indian Institute of Technology (IIT) or the All India Institute of Medical Sciences (AIIMS) were well equipped to train their students.

In the field of humanities, however, opinions were diverse especially on subjects like English and History. Talking

about the English course in DU, Arora pointed out that the aim of higher education was not to teach the basics of English language. But this was exactly what the teachers were doing at the pass-course level. (English is not compulsory after class-VIII but it is compulsory in the university). While the B.A. (Hons) course in English was alright, the M.A. course was not because the options were few.

In India curriculum often underwent changes; but the methodology was arbitrary and haphazard. Dr Sharma felt that a whole year was required to debate on the modalities of a new course. There was general consensus on the need to adapt the curriculum in the national context. According to Dr B.K. Srivastava, "We do not need to keep pace with the West in all academic subjects. We should acquire excellence in our own fields."

Commenting on the impact of curriculum, Prof. A.N. Kaul felt that although universities did revise courses, off and on, it did not necessarily result in raising the quality of education. What was more important was to motivate students; raising standards would not necessarily motivate them."

Emphasising on the need for an interdisciplinary approach, Dr P.L. Malhotra felt that a drastic change was required in the curriculum of the undergraduate courses. A three-year B.A. course was redundant. It could easily be reduced to two years, he suggested. In addition, the honours students received a lop-sided education,

because they specialised in only one subject and learnt nothing about anything else, because the subsidiary course was a residual course. He favoured the kind of tripos system being adopted in Oxford and Cambridge. Prof Abad Ahmad, on the other hand, was in favour of a structural change and stressed on vocationalisation of education. "Courses should be framed in collaboration with the industry," he reiterated. "Starting a new course or an option, would not prove helpful."

However, vocationalisation was not meant for the postgraduate level. At this level, there should be a kind of applied-discipline. A postgraduate in Botany or Zoology in India was only fit to be a teacher, because these academic streams were removed from life. According to Prof Ahmad it is more important to apply these disciplines to solving real life problems like environmental pollution; crime, lack of productivity, the energy crisis etc.

Student-teacher politics

On the question of student-teacher politics, there was a unanimity of views at all the academic levels. "In any society, which is changing from a feudal to a democratic set-up, it is inevitable that groups will be organised and political influences will come up", Dr Ahmad said, when asked about the existence of student-teacher politics in India. Universities were places where students acquired an awareness of the social processes and institutions and in this context, politicisation of students was a good sign.

VARSITY ENROLMENT ON THE EBB

Even as there is talk of delinking jobs from degrees, the average annual rate of growth in enrolment in Indian universities is on the decline. During the decade 1974-75 to 1983-84 there has been an enrolment decline upto 4.2% from 10.3% during the previous decade—1964-65 to 1973-74. Nevertheless the total enrolment, in absolute terms, rose from 9.50 lakhs in 1964-65 to 33.59 lakhs in 1983-84.

The average enrolment rate in universities worked out rather low at 3.9% in 1980-81, though the enrolment went up from 26.49 lakhs in 1979-80 to 27.52 lakhs in 1980-81. The enrolment rate went up sharply to 7.3% in 1981-82 but declined to 6.1% in the subsequent year. Again in 1983-84, the rate went up to 7.2% when the enrolment in universities touched 33.59 lakhs.

Among the various states/Union territories the enrolment rate in universities during 1983-84 was highest at 26.3% in Meghalaya and Nagaland,

followed by Manipur (22.9%); Bihar (15.4%); HP (12.4%); Kerala (12.1%); Orissa (12%); Karnataka (11.9%) and Andhra Pradesh (11.8%). During 1983-84, as many as nine states had an enrolment rate lower than the average rate of 7.2%.

While there was an increase in the rate of enrolment in the universities in 12 states, the remaining eight states showed a lower rate of enrolment during the same period as compared to the previous year.

The literacy rate in all the states went up uniformly during the last three decades. According to the 1981, census the literacy rate was highest in Kerala at 70.4% followed by Maharashtra at 47.1%, Tamil Nadu at 46.8% and Gujarat at 43.7%. Among the Union territories, the literacy rate was highest in Chandigarh at 64.8%, followed by Delhi (61.5%), Mizoram (59%), Goa, Daman & Diu (56.1%).

All the states except West Bengal have literacy rates below the national average.

MOONIS RAZA DEVOUT EDUCATIONIST

Prof Moonis Raza who took over recently as the new Vice-Chancellor, University of Delhi, is a man of letters. A former professor in the Centre for the Study of Regional Development (JNU), Prof Raza carries with him a rich teaching experience of 34 long years, in reputed educational institutions like Aligarh Muslim University and the Regional College of Engineering, Srinagar.

Prof Raza's views on higher education cover a wide spectrum of this crucial issue.

Excerpts from an interview with him:

How do you view higher education in India?

I feel that much can be done to improve it. At one level there should be, and to some extent there is, an international network of major centres, so that knowledge does not get fossilised. On the other hand, there should be a national network of good departments in the country. There should also be a third network where one can interact with college departments and school departments. While the first network is working very well, the second is working at a lesser level of efficiency and the third is not working at all. An attempt should be made to see that the second becomes more significant and the third becomes operational.

A second problem is that teaching has become a residual activity in our country. The number of workdays when teaching is done is becoming smaller and smaller. This can partly be attributed to a general fall in work ethics in the country as a whole. In the university itself, part of the fall may be attributed to the prevailing service conditions. Colleges sometimes do not even provide any place to sit; so why should the teachers linger on in the colleges after classes? It would be better to provide cubicles to teachers instead of having a general staff room. The lack of work ethics among teachers can also be partly attributed to the lack of concern on the part of the students, who do not take education seriously. All this has combined to create a situation, in parts of India, where the prophecy of Marx has

come true—he spoke of a classless society—and already a situation exists where classes are not held at all.

How can one improve the situation?

One cannot think of any reform which would bring the entire system under its influence. Reforms should be tested in terms of how many people it is able to transform. But, in the final analysis, professional ethics has to be developed by the teachers themselves.

Do you feel that evaluation of teachers by students would help?

It is important, in this context, to involve college teachers in research work. Research is the best way of updating knowledge. Mere teaching does not add to your knowledge. What is happening in most places is that there is no generation of knowledge through research. I would like to build a system where lecturers in colleges and universities would combine in groups to generate research. The inter-disciplinary approach is important. For instance, there is no unit which studies the problem of urbanisation. People can be brought in from various fields—education, health, transport, sociology, geography, economics—to do research on urbanisation.

Do you feel that the university curriculum is adequate?

University curricula, by their very nature, cannot be uniform or similar. There are syllabi which are as good as any in the world. But there are others which are rooted

in the history and the 19th century. The first is increasingly replacing the second kind but the gap is still large. The fact is there are different kinds of students and one has to cater to all.

How do you view student politics?

There can be politics which is good and politics which is bad. Students and teachers should take part in the politics of integration. I have a vague feeling that our students are becoming increasingly non-political. Big things are happening in the country but the students are not worried. They are more interested in holding strikes either to postpone exams or reduce bus rates. These are not political questions. Actually, depoliticisation of the young is not good.

What do you feel about party politics at the university level?

Much depends on the attitude of political parties vis-a-vis academics. Education is a residual element in party platforms; it is an element of politics. Using politics for nefarious purposes should not be encouraged.

policies on education which are being talked about?

I am very impressed by the desire of the PM to have an educational policy. There should be a stronger link between education and the world of work and a far greater emphasis on non-formal education. The level of the system should also be raised. Delinking degrees from jobs is the crucial operational strategy. One would like to wait and see what formal shape the policy takes.

Should there be a link between universities and industries?

There should be a bi-directional symbiosis between the two. The trouble is that Indian capitalists do not invest in education.

Do you feel that the quality of education would improve if the new policies are implemented?

Yes. In India, the theory is that work corrupts knowledge and vice-versa. The Vedas and the plough have long been differentiated. But this theory is wrong. Knowledge comes from work and work from knowledge—there is a bi-directional relationship between work and knowledge.

S.B.

However, Prof Kaul pointed out that "what people are unhappy with is the abuse and vulgarisation of politics by students and teachers who are nowadays bending politics to their personal ends. There is partisanship and factionalism and this is a negative trend which is to be denounced. Political awareness was one thing and it was a positive trend which should be encouraged; but corrupt politics leads to a lack of idealism which means eating up the vitals of the country". Dr Chandhoke asserted.

Banning student elections was definitely not viewed as a feasible solution to this problem and the blame was pinned on to the political parties, who, for their own ends, manipulated students, fed them with funds, and helped in the degeneration

of student politics.

New educational policies

The new set of educational policies introduced by the government were considered mere experiments in changing the old system. The idea of delinking degrees from jobs had assumed the nature of a cliché long ago and had become old hash, according to Dr Krishna Sharma. She said, "the rate of industrial growth will decide the issue faster than educational planning." Dr Abad Ahmad, too, felt that the idea was highly simplistic: "Do you think that people will stop coming to universities if they delink degrees? When they do not get jobs, they will come back to the university, where they get respect. Students have a status and certain privileges in society and carry the hope of a future career."

On the other hand, Dr P.N. Srivastava and Dr P.L. Malhotra were more optimistic about the new educational policies. According to Dr P.N. Srivastava only those who were really committed should go on for higher education. If degrees were delinked the uncommitted ones will automatically start taking competitive exams at an earlier stage. In this context, educational degrees, which have no value now, would regain their lost value.

Voicing the opinion of university professionals of the less elite universities, Dr Srivastava remarked, "The 21st century? For whom? How many will be benefited? The government cannot provide chalks and blackboards to village schools, but it talks of computers to raise the standards of schools."

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your
been taken to frame questions which are of the same standard as those you'll a

Great care has

Rating: Evaluate your performance on the basis of the following score-card:

100 questions in 60 minutes—Excellent
60 questions in 60 minutes—Good
50 questions in 60 minutes—Fair
35 questions in 60 minutes—Poor

Tip: 1. Do not waste time over questions you are not sure about. 2. Give the proper thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

TEST OF REASONING

BY P. R. SAXENA

FOR PO, SCRA, GIC (AAO), CLERKS' GDE...

Reasoning tests constitute an essential section of exams like the SCRA, GIC (Assistant Administrative Officers), Clerk's Grade of the Regional Recruitment Board, bank POs. The following questions have been selected to give you a fair idea of questions you are likely to encounter in this section.

Excellent..... 22-25 Very good 18-21
Good 14-17 Poor Below 14

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests.

1. If ten pie cer means Ram eats apples; ket ditch pie means apples are good; ten pie ket means apples are red and ket sun means fresh apples are red, then which word means red?
(a) Ten (b) Pie
(c) Ket (d) Ditch
(e) Sun

In the above question which statement is superfluous?

- (a) Ten pie cer
(b) Ket ditch pie
(c) Sun pie ket
(d) Ditch pie ket sun
(e) Ten pie cer & ditch pie ket sun.

If CALCUTTA is written as XZOX-FGGZ, then the word BOMBAY will be written as

- (a) YLNXZB (b) YLNYXB
(c) YLNYZA (d) YLNYZB
(e) BZYNLY

Complete the series

- a a - - - a a a a - - - a a a - b - a
(a) a b a b b b (b) b a b a a a
(c) b b b a b b (d) a a a a b b
(e) b b b b b a

5. If > means 'equal to', < means 'not equal to', = means 'greater than' and + means 'smaller than' and

- (i) $A > B$ (ii) $B = C$ (iii) $C + A$ means
(a) $C > A$ (b) $C < A$
(c) $C = A$ (d) $A + B > 2C$
(e) None of the above

6. Ram starts moving towards east. After going 3 km he turns left and walks 4 km further. Then he starts moving in the south-west direction and covers a distance of 5 km. How far is he from the starting point now?
(a) 12 km (b) 9 km
(c) 10 km
(d) He is back at the starting point
(e) None of the above

Directions: In questions 7-9, certain names are given, but their spellings have got jumbled up. Indicate the correct answers from the given options.

7. Name of a monument
(a) AMJLTHAA (b) TMRRIASA
(c) IRSALATA
(d) YTOOK
(e) NYAMAARA
8. Name of an Indian city
(a) YTOOK
(b) NYAMAARA
(c) TMRRIASA
(d) AMJLTHAA
(e) IRSALATA

Name of a book

- (a) IRSALATA
(b) YTOOK
(c) TMRRIASA
(d) AMJLTHAA
(e) NYAMAARA

10. Five girls are sitting in a row, with their backs towards you such that Sheela is on the right of Birma; Ritu is next to Sheela and is on her left, Geeta is on the left of Birma; Beena is on the left of Birma but on the right of Geeta. Who is sitting in the centre?

- (a) Birma (b) Ritu
(c) Sheela (d) Beena
(e) Geeta

11. P is the father-in-law of the wife of the brother of Q. What is P's relation to Q?

- (a) Father-in-law (b) Maternal uncle
(c) Father (d) Son-in-law
(e) Brother-in-law

12. If GANGA is written as DJNDJ, then WATCH would be written as

- (a) ZDTFK (b) DZTFK
(c) ZDTKF (d) DTZKF
(e) KFTDZ

13. If LONDON is written as LKKAIL then PERIOD would be written as

- (a) LAFOMB (b) LAFOBM
(c) LAOFMB (d) LAOFBM
(e) ALOFMB

14. There are five boys named John, Jack, James, Brown and Tony. Given that

- i) Jack is elder to John
ii) James is elder to Jack
iii) Brown is elder to Tony
iv) Jack is elder to Brown
v) Brown is younger to John
Who is the youngest of the five?
(a) John (b) Brown
(c) Tony (d) Jack
(e) James

15. Complete the following series

- s-q-s-qq-s-qq-s
(a) qssqssqs (b) sqssssqs
(c) sqssqssss (d) sqqqssss
(e) rqrarr

is given. On the basis of this statement, two conclusions are drawn. You have to mark:

- If only the first conclusion can be possibly drawn
- If only the second conclusion can be possibly drawn
- If both the conclusions can be possibly drawn
- If either of the two conclusions can be possibly drawn
- If neither of the conclusions can be possibly drawn

16. No tree is a mountain.

Conclusions:

- Some mountains may be trees
- Most of the mountains are trees

17. All bald men have hair.

Conclusions:

- All men with hair are bald
- All men with hair are not necessarily bald

Directions: In questions 18-20, two statements are given. On the basis of the two statements a conclusion is drawn.

You have to mark:

- If the conclusion is definitely true in the light of given facts
- If the conclusion is not definitely true but probably true
- If it is not possible to infer a conclusion on the basis of given

18. I All elephants are white.
II Some white things are made of milk.

Conclusion: All elephants are necessarily made of milk.

19. I All cows are non-vegetarians.
II All buffaloes are non-vegetarians.

Conclusion: All cows are buffaloes.

20. I All boats fly in the air.
II Some aeroplanes fly in the air.

Conclusion: Some boats as well as some aeroplanes fly in the air.

Directions: In questions 21-22 a statement is given and on the basis of this statement two assumptions are made. You have to mark:

- If the first assumption is implicit in the statement
- If the second assumption is implicit
- If both assumptions are implicit
- If either of the assumptions is implicit
- If neither of the assumptions is implicit

21. The Prime Minister of India is responsible to the Parliament
Assumption I: India is a parliamentary democracy. Assumption II: The Prime Minister of India is elected every five years.

Nobel Prize in Physics

Assumption I: Nobel Prizes are given in the memory of Sir Alfred Nobel.

BY THE AARBEEES

FOR ASST'S GDE, SCRA, GIC (AAO)...

This section will help you test your knowledge of the English language and eliminate weaknesses, if any.

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests.

READING COMPREHENSION

1. Read the following passage carefully and answer the questions that follow by choosing the best alternative:

To achieve a continuous improvement in the quality of the environment demands perception, education, economic strength, research, plus policies and administration geared to the right aims. A process of con-

stant appraisal and adjustment is necessary, for as the scope of existing problems is reduced new ones will arise. Fresh discoveries will bring fresh difficulties—and will always do so. As Goethe said, "Every solution of a problem is a new problem."

Of first importance is the capacity to perceive the essentials of society's existen-

ce, to be able to analyse the factors that create and enhance the environment and to relate these to the contemporary situation. If people are to understand, they must be offered ideas which widen their horizons; ideas to excite them to an awareness of a deeper purpose in their living and to a new relationship with their environment. To challenge is to find and capture these ideas and to put them over with élan to hold and inspire people.

Although much remains to be understood, we do have a sufficient basis of knowledge and ideas to make it possible for us to create a new fabric for man and his physical environment. All the time we must remember that man is both part of nature and yet able to influence its processes; that he, like other animals, needs space and repose; and that all his actions have far-reaching effects on other living creatures.

Man has made vast changes on the earth with relatively primitive tools and limited knowledge. What is he going to achieve with the vast power now at his command and the explosion of knowledge under way? Here it is important to note that, while between 1840 and 1940, man created better food, clothing, housing and hygiene for millions, he also contaminated the land, air, rivers, and sea and eliminated much wild life. Now we believe that he need not have done so, that in the next century greater progress can be achieved without accompanying despoilation, and the old dereliction and waste can be cleared away. Such a creative approach requires the perception of the significant and lasting features of the national inheritance. These are, of course, interrelated. As understanding increases, more values will be identified and cherished.

—Robert Arvill, *Man And Environment Crisis And Strategy Of Choice*

1. Improvement of environment can be brought about by
 - (a) the people through their own efforts
 - (b) the combined efforts of a large number of agencies
 - (c) educationists, economists and researchers following purposeful policies
 - (d) adopting suitable administrative measures
2. Goethe's saying, "every solution of a problem is a new problem" implies that
 - (a) there is need to remain ever ready to tackle new problems
 - (b) no problem can ever be solved
 - (c) there are no solutions, only problems
 - (d) men lack wisdom to find permanent solutions
3. The need to offer ideas, capable of widening the people's horizons, is
 - (a) cause for despair

- (b) the only way to create an understanding of the environment
 - (c) a kind of challenge
 - (d) an exciting prospect
4. In the last paragraph the author views the future with
 - (a) despair
 - (b) hope
 - (c) apprehension
 - (d) indifference
 5. Despoilation means
 - (a) making things worse
 - (b) destruction
 - (c) making people immoral
 - (d) plundering

II. Make a precis of the following passage:

Real praise—the sincere compliment—is probably the most useful social tool of all. It's the valued gold coin of our conversation. Yet today it is in danger of losing its brightness. For, it is greatly misused and not properly exchanged.

What is a true compliment? It's one that benefits both giver and receiver. Several years ago, for example, a house painter and his young assistant arrived to paint our house. The older man was wearing shiny new shoes. My father-in-law stood watching them. As the man started skillfully applying paint, my father-in-law, showing his approval, said to the boy, "Son, when you can show up on the job to paint a house wearing new shoes, you will be master of your trade." The painter smiled happily, and our house received its finest paint job.

We all like to have our sense of personal worth built up or pointed out. And when one expert adds to another's sense of dignity and speaks favourably of his skill, he is offering a compliment of the highest and rarest kind. Sitting with a group of editors, I once overheard the perfect example of this type. "He's the only editor I know," a fellow remarked, "who edits copy with a pen." It meant that the editor had such skill that he confidently marked copy in ink, a revision of any kind never being necessary. This compliment was doubly strong because it was certain to reach him secondhand, thereby assuring him of its sincerity.

A compliment differs from flattery in that it is objective and given without thought of gain. Flattery is often merely lip service, or excessive praise given for motives other than expressed.

The greatest efforts of the human race have always resulted from the love of praise. This should be inspired in childhood, but too often parents actually lose the confidence of their children by pointing out only defects and mistakes. The wise parent makes it a point to compliment a child when he deserves it. A woman I know has a 12-year-old son who considers washing dishes for his mother a

great honour. It came about by way of a compliment. One night, he had been unwillingly washing a large dish when it slipped and crashed to the floor. Silence. Then his mother said, "You know, Robert, of all the times you have washed the dishes for me, this is the first time you dropped one. I think you have set some kind of a record." Anxiety left the face of the boy and he smiled. As one psychologist advises, "Praise virtue, and you will find few vices to criticise."

There is art in this giving of compliments. Thus, the good compliment is always to the point. Timing, too, is important. Don't wait too long to tell a person what a good talk he gave, or how well he cut your grass, cooked your dinner, or typed your letter. But don't do it immediately, when he is expecting it, either. Wait. Then when he thinks you may have forgotten, pass the praise.

Confidence, it has been said, is the greatest gift that one human can give to another. But that does not mean we should be wasteful with our compliments. Rather, we should count them carefully, remembering that a good compliment has greater purchasing power than money, that no one is too busy or successful to receive a word of praise.

III. Write an essay in about 300 words on any one of the topics:

- (a) Violence can solve no problems
- (b) Youth power
- (c) The role of the banks in fighting poverty

IV SPOTTING ERRORS

1. She told me that she will get the work done whether the carpenter came or not. No error
2. Take the example of England where most universities not infrequently run common courses for B.A. and M.A. classes. No error
3. On being told about the tragic happening he lost no time in condoling the death of his director. No error
4. He would have most certainly preferred to write the examination in a language he knew best, isn't it?
5. By the time she finishes writing the last letter I will have travelled ten.

6. Doing not the work by or before the prescribed time can often invite ^a censure. **No error** ^b ^c ^d
7. One of the conditions laid down ^a are ^b related to ^c the extra expenditure he keeps talking about. **No error** ^d ^e
8. It was not he alone ^a who was carried ^b away by the false story and who ^c dubbed the lawyer as a liar. **No error** ^d ^e
9. At college I had ^a many choices ^b but I ^c did not hesitate to offer ^d Mathematics and Music. **No error** ^e
10. Giving the examination at ^a such ^b a ^c short notice will at best ^d get me ^e a ^f third. **No error**

SYNONYMS

V Select the word which is closest in meaning to the given word:

- Indecisive**
(a) weak
(b) diluted
(c) unsettled
(d) doubtful
- Quaver**
(a) tremble
(b) talk loudly
(c) imagine
(d) fear
- Exculpate**
(a) pardon
(b) banish
(c) clear
(d) blame
- Outlandish**
(a) enormous
(b) strange
(c) suburban
(d) refined
- Recede**
(a) cancel
(b) recall
(c) reiterate
(d) reform

ANTONYMS

VI Choose the word which is opposite in meaning to the given word:

- Overpower**
(a) lose
(b) surrender

- (c) weaken
(d) free
- Spacious**
(a) implausible
(b) unworthy
(c) narrow
(d) unclear
 - Discreet**
(a) foolish
(b) inattentive
(c) tactless
(d) separate
 - Indignant**
(a) joyful
(b) bright
(c) healthy
(d) calm
 - Contemplative**
(a) unwise
(b) thoughtless
(c) active
(d) practical

SENTENCE COMPLETION

VII Write down the letter of every item that could fill the gap in each question:

- They enjoy looking——their children playing in the park.
(a) to (b) about
(c) at (d) on
- She may not come, but we'll get ready in case she——.
(a) will (b) does

- (c) is (d) may
- You father ought not to——me your secret, but he did.
(a) tell (b) having told
(c) be telling (d) have told
 - I——to go to the college swimming pool every Sunday.
(a) am used (b) used
(c) was used (d) use
 - I wish I——the answer to your question.
(a) knew (b) would know
(c) will (d) know
 - The bulb broke and immediately all the lights went——.
(a) back (b) off
(c) in (d) down
 - As her grandfather——for many years, the visitor felt intrigued.
(a) had died (b) had been dying
(c) had been dead (d) was dying
 - He was——prepared to do it in his heart of hearts.
(a) definitely (b) a little
(c) little (d) a little bit
 - Beyond the bridge was a small cottage——would give them shelter for the night.
(a) in which (b) where
(c) who (d) that
 - She had tried every remedy——standing on her head.
(a) except (b) beyond
(c) yet (d) only

DESTINATION DRIVE

In this age of high technology, anything is possible, what with innovativeness knowing no bounds of human ingenuity. A fully automatic driver-orientation device, developed by the Munich-based Siemens Electrical Corporation, will enable drivers to find their way around in totally unfamiliar surroundings. A code number taken from a map of the city in question, indicating the driver's current location and the direction he wishes to travel in, is logged in, and presto, the device sets to work, with directional arrows lighting up on the dashboard. And as if this is not enough, a digital display indicates how close he is to his destination!

PRACTICAL SESSIONS : Sessions are conducted in Calcutta, New Delhi, Bombay, Madras, Bangalore and Bhubaneswar (Orissa)

PERSONAL CONTACT PROGRAMME : Contact workshops will be held at different places before practical sessions.

TEXT BOOKS: Students are supplied Free of cost standard text books of well known authors on important subjects.

JOURNAL : To keep every student abreast of the recent developments in computer science, IIMS supplies its quarterly journal **MODERN MANAGEMENT AND COMPUTER AGE**

SCHOLARSHIP : A merit scholarship of Rs. 1000/- will be awarded to the highest scorer in the Final Examination.

PLACEMENT : The Institute's Placement Service assists students in securing suitable jobs.

CONCESSION : 20% concession will be allowed on tuition fees to those who belong to SC/ST, or are Defence Personnel or Physically Handicapped.

EXAMINATION CENTRES : Ahmedabad, Alahabad, Amritsar, Bombay, Bangalore, Calcutta, Cochin, Delhi, Gauhati, Hyderabad, Jaipur, Srinagar, Kanpur, Lucknow, Madras, Patna, Ranchi, Bokaro, Bhubaneswar, Bahrain, Dubai (UAE), Jeddah (Saudi Arabia), Kuwait, Kathmandu (Nepal), Tiruvandrum.

DIRECTOR OF STUDIES
PROF. MRITYUNJOY BANERJEE Former Education Minister of West Bengal & Former Head of the Department of Business Administration, Burdwan University

CHAIRMAN (Examinations Committee)

SHRI ARUN K. GHOSH Asst. Director of Research The Institute of Cost and Works Accountants of India.

CHAIRMAN (Research & Publications Committee)

PROF. V. NATARAJAN Project Director, Association of Indian Universities.

Prospectus and Application Forms are available on remittance of Crossed Indian Postal Order/Bank Draft payable at Calcutta for Rs. 20/- in favour of "International Institute of Management Sciences, Calcutta" along with one typed name and address slip of the candidate. Candidates sending Money Order are requested to mention clearly on the M. O. coupon the Mailing Address which should be typed. Cheque is not accepted. Application forms and prospectus may also be collected personally between 11.30 a.m. and 9.00 p.m. on working days (Monday to Friday) on payment of Rs. 20/- in cash.

INTERNATIONAL INSTITUTE OF MANAGEMENT SCIENCES

**STUDY CENTRE : BG-175 Salt Lake, Sector-1,
Calcutta-700 084, India**

FOREIGN CANDIDATES : Candidates from abroad will be required to remit Rs. 50/- for prospectus and applications forms.

LAST DATE : Last date for supply of prescribed application forms and prospectus and receipt thereof duly filled in is

30th July 1985

D. SINHA
DIRECTOR

INTERNATIONAL INSTITUTE OF MANAGEMENT SCIENCES

CALCUTTA

THE FIRST INSTITUTE OF ITS KIND IN INDIA

IIMS

POST-GRADUATE DIPLOMA IN COMPUTER APPLICATIONS 1985-86

Applications in prescribed forms are invited for the ONE-YEAR Post-Graduate Correspondence programme in COMPUTER APPLICATIONS with practical work on the computer.

THE INSTITUTE : IIMS was established in 1978 as an autonomous body. Registered by the Govt. as a non-profit institution, devoted to the art and science of management and the encouragement of good practice and high standards of professional management. The Institute is associated with Calcutta Productivity Council, Business Management Association, U. K., Indian Society for Training & Development, New Delhi, Institute of Marketing Management, New Delhi and accredited as Regional Centre in Calcutta of the Association of Indian Universities, New Delhi for organising training programmes. Along with various other activities, IIMS conducts Post-Graduate programmes in Business Administration (MBA), Personnel Management & Industrial Relations, Marketing Management, Office Management by correspondence & publishes a quarterly journal 'Modern Management' and also books on Management.

OBJECTIVES OF THE PROGRAMME : In the recent past abundant job opportunities have presented themselves in activities related to computers. The situation today in India is one of the very serious manpower shortage in this field. Even as early as 1978, a committee of the Department of Electronics estimated that the total manpower requirements in computer-related activities for the following decade would be approximately 5000 new jobs annually, the gap between demand and supply being in the range of 10:1. The steps taken by the Government and other institutions are much inadequate; only a small fraction of vacancies in the field of computers is being filled at present. This is mainly attributed to the inadequacy of trained manpower.

Even in an advanced country like the United States, there is a significant manpower shortage in this field. It has been estimated that the gap there is as much as 3:1. That is why there is taking place so much brain drain to U.S.A. from India and other developing countries in computer-related areas. Thus computer education is still in its infancy in India. Hence, to cater to this growing demand IIMS has started a post-graduate correspondence course in Computer Applications with practical work (on-hand exercises) on the computer.

THE PROGRAMME : The Course is divided in two semesters. Theoretical lessons in each paper would be followed up by PRACTICAL ON-HAND EXERCISES IN COMPUTER for teaching/debugging of programmes.

COURSE OUTLINE :

1st SEMESTER

- Paper I. Introduction to Programming and BASIC Language
II. Introduction to Computer Organisation
III. Computer-Oriented Numerical and Statistical Methods
IV. FORTRAN and-PASCAL Language

2nd SEMESTER

- Paper V. COBOL/DBMS and Business Data Processing
VI. Data and File Structure
VII. System Analysis and Design
VIII. Project work

Our own Printed study materials on each paper will be supplied with standard text books as recommended by the Dept. of Electronic Govt. of India.

Course Co-ordinator : S. K. Paul (B.Tech.); MBIM(IIT)

ANSWERS Test Of Reasoning

- 1 (e) Here two sentences contain the word red viz.
 - Apples are red Sun pie ket
 - Apples are good Ket ditch pie
 In these two sentences we see that Apples are all common on left hand side and Pie Kit are common on right hand side This means Apples and 'are' are denoted by Pie and Ket So in the sentence, Apples are red Sun pie ket red would be denoted by sun
- 2 (e) We have seen above that we can find the word meaning red without using Ten per cie and Ditch pie ket sun Hence they are superfluous
- 3 (d) CALCUTTA is written as XZOXFGGZ
 On a closer look we can see that in the coded word each alphabet has been replaced by an alphabet of the same position in the reverse order of the alphabetic series e.g. A is replaced by Z (i.e. first alphabet by the last) C is replaced by X (i.e. third alphabet from the beginning is replaced by third alphabet from the end) Following the same rule BOMBAY would be written as YLNYZB
- 4 (e) Series is of the form
 aabbaa aabbaa aabbaa
- 5 (b) As per the given signs
 A > B means A = B (I)
 B = C means B > C (II)
 C + A means C < A (III)
 Alternative (a) is C > A which means C ≠ A actually This is not correct as we see from (III)
 Alternative (b) is C < A which actually means C = A which is correct as we see from (III) C < A
 Alternative (c) is C = A which means C > A which is opposite to (III) and hence is wrong
 Alternative (d) is A + B > 2C which means A + B = 2C
 We know A > C from (I)
 and A = B from (II)
 Adding A on both sides of the first equation
 A + A > C + A
 A + B > A + C
 Hence A + B > 2C is also wrong
 Thus only the alternative (b) is correct

6 (d)

After going 3 km towards east Ram turns left (at an angle of 90°) i.e. he starts moving towards north After travelling for 4 km he turns in the south-west direction and travels 5 km

Thus the route traversed by him forms a right angle triangle ABC because in a right angle triangle

$$(AB)^2 + (BC)^2 = (AC)^2$$

$$(3)^2 + (4)^2 = (5)^2$$

$$= 9 + 16 = 25 = (5)^2$$

$$= 9 + 16$$

Thus AC is the third arm or diagonal of the triangle and so we can conclude that Ram is back at the starting point

- 7 (a) AMJLTHAA TAJMAHAL name of a monument

9 (a) NYAMARA TAJMAHAL name of a city
 Other two words are
 IRSAUTATA AUSTRALIA
 YTOOK TOKYO

- 10 (e) Ritu is to the left of Sheela and is next to her This can be shown as

Ritu Sheela
 Sheela is to the right of Ritu
 If positions are given as

1	2	3	4	5
			Ritu	Sheela

Bimla can be either at position 1, 2, or 3 Geeta and Beena are to the left of Bimla So Bimla can only be at position 3

1	2	3	4	5
		Bimla	Ritu	Sheela

Thus Bimla is at the centre

And in order to determine the position of all the five girls consider the following explanation

Geeta is to Bimla's left She could be either at position 1 or 2

But Beena is to the right of Geeta So Geeta can only be at position 1 and hence Beena is at position 2 So the position of the girls is

1	2	3	4	5
Geeta	Beena	Bimla	Ritu	Sheela

- 11 (c) Q's brother's wife is Q's sister-in-law Her father-in-law must be her husband's father i.e. Q's brother's father and hence Q's father

- 12 (e) GANGA is written as DJNDJ

In the word DJNDJ if we substitute each letter except the middle one (N) with a letter three places to its left in the alphabetic series e.g. D is replaced by A J is replaced by G we get AGNAG which is GANGA written in the reverse order So now WATCH would be coded in two steps i.e.

i) Write WATCH in the reverse order i.e. HCTAW

ii) Substitute each alphabet (except the middle one) with the third letter to its right in the alphabetic series i.e. H should be replaced by K C by F and so on to give KFTDZ

- 13 (c) Word LONDON can be broken into parts as

LO	ND	ON
3	2	1

These parts can be rewritten as

ON	ND	LO
3	2	1

Now if each alphabet is replaced by the third letter to its left in the alphabetic series i.e. O is replaced by L N by K and so on we get LKKAIL

So now if PERIOD is to be coded it should first be divided into three parts viz

PE	RI	OD
1	2	3

which should then be rewritten as

OD	RI	PE
3	2	1

Each letter should now be replaced by the third alphabet to its left in the alphabetic series i.e. O should be replaced by L, D by A and so on to give LAOFMB

- 14 (c) Here we define five positions viz. 1, 2, 3, 4 and 5 in the descending order of age, i.e., person at position 1 is older than the person at position 2. Person at position 2 is older than the person at position 3 and so on
 1 > 2 > 3 > 4 > 5

From statement (i) Jack is elder to John. We don't know

the position of Jack so we assume that he can have any of the positions 1, 2, 3 or 4. He can't be at 5 since he will become the youngest at that position, which is not true since he is elder to at least one person, i.e., John. Similarly James can have any of the positions 2, 3, 4 or 5. But he can't be at position 1, since he would become eldest then, which is not true as he is younger to at least one person, i.e., Jack. So now the possible positions are

1 >	2 >	3 >	4 >	5
Jack	Jack	Jack	Jack	X
X	John	John	John	John

Now we consider a statement which is related to either Jack or John. One such statement is statement (ii) i.e., James is older to Jack.

From the same argument as above James can be at positions 1, 2 or 3 only.

1 >	2 >	3 >	4 >	5
James	James	James	X	X
X	Jack	Jack	Jack	X
X	X	John	John	John

Now we should consider a statement involving John. One such statement is statement (iv) which involves John, i.e., Brown is younger to John

So now the possible positions would be

1 >	2 >	3 >	4 >	5
James	James	X	X	X
X	Jack	Jack	X	X
X	X	John	John	X
X	X	X	Brown	Brown

Now we take a statement relating to Brown, i.e.,

Brown is elder to Tony.

which means Tony can only be at position 5. So the final order is

1 >	2 >	3 >	4 >	5
James	X	X	X	X
X	Jack	X	X	X
X	X	John	X	X
X	X	X	Brown	X
X	X	X	X	Tony

Hence Tony is the youngest.

15. (e) The series is

srq qrs srq qrs srq qrs

16. (e) This problem can be solved using Ven diagrams. Let one circle represent the set of mountains and another circle represent the set of trees.

As is evident from the figure, there is nothing common between the set of trees and the set of mountains. So there is no possibility of some or most mountains being trees.

17. (d) Again representing the statement by figures we see that there are two possibilities.

(a)

All bald men have hair and there are others also who have hair i.e. the set of bald men is a subset of those who have hair.

(b)

The set of bald men and the set of those who have hair is exactly the same.

We see that in case (a) statement II is correct, i.e. all men with hair are not necessarily bald.

In case (b) we see that the statement I is correct. But at a given time either of the two cases is possible, so only either of the two conclusions can be possibly drawn.

18. (e) There are three cases possible in which the two statements can coexist simultaneously.

(a)

This diagram depicts that all elephants are white (things); some white things (which are not elephants) are made of milk.

(b)

Here the diagram depicts that all elephants are white and some white things (including some elephants) are made of milk.

(c)

The third case is that all elephants are white things and some white things (including all elephants) are made of milk.

Thus we see that the given conclusion:

'All elephants are necessarily made of milk.' can be drawn only in one case. Thus such a generalised statement is definitely false.

19. (e) Here again there are three distinct possibilities viz:

In all the three cases though we see that all cows are non-vegetarians and all buffaloes are non-vegetarians we find that only in the case (c) it is so that all cows are all buffaloes. Thus we cannot always draw this conclusion, hence this conclusion is definitely false.

20. (a) If all boats fly in the air, it is evident that some boats fly in air. It is given that some aeroplanes fly in the air. So the statement that some boats as well as some aeroplanes fly in the air is definitely true.
21. (a) The given statement talks about responsibility to Parliament so it is implicit in the statement that India has a Parliament and so is a parliamentary democracy. But the statement talks nothing about the term of the Prime Minister directly or indirectly so the assumption about the term of Prime Minister is not implicit in the statement.
22. (e) There is nothing in the statement on the basis of which any of the two assumptions can be possibly made. The statement talks about the Nobel Prize but no where does it lead us to assume that they are given in the memory of Sir Alfred Nobel. Similarly there is nothing to assume that C.V. Raman was the first person to get the Nobel Prize in Physics. It only states that C.V. Raman was given the Nobel Prize in Physics. Whether he was the first recipient or the last, nobody can tell from the statement.
23. (a) Purpose of a school whether public or private is to impart education. So their existence or abolition should be based most on this factor. Thus an argument which speaks about shortage of schools is basically strong as it relates to the provision of education. The second argument relates to a factor not related directly with education or schools. Public schools might be creating snobs, but still they may be lending a helpful hand in the field of education. So their abolition on this basis is not justified. Since the argument does not relate to the basic issue it is a weak argument.
24. (b) The commercialisation of television is related directly to the line of control. In commercial television, the line of control passes into private hands as they spend large

chunks of money on TV programmes. But the first argument does not relate to this aspect. It only gives a vague reason, which is not substantial. The second argument directly relates to the control aspect and hence is a strong argument.

25. (a) Before going into the decision about the colour of uniforms one should know the various reasons for choosing a colour. One of the important reasons is visibility. So the first argument relating to visibility is strong (though it may be incorrect). But the second argument is weak as it does not relate to any reasons regarding the colour choice.

BSRB (PO) Exam, Aug '84

1. (a) 2. (b)
 3. (d) The annual Best Actor Award is being given since 1970 by the Government of India. It carries a Rajat Kamal and a cash prize of Rs 10,000.
 4. (b) The Jnanpith Award is given by a Calcutta-based private organisation of the same name since 1965, for the best literary work in any one of the Indian languages. Originally, the prize money was Rs 1,00,000, but since 1982 it has been raised to Rs 1,50,000.
 5. (d) 6. (d) 7. (b) 8. (a) 9. (c)

SBI (PO) Exam, Oct '84

1. (a) Merdeka is an international football tournament played every year in Kuala Lumpur (Malaysia)
 2. (a) 3. (a) 4. (a) 5. (a) 6. (a) 7. (b)
 8. (a) 9. (b)
 10. (d) Aid India Club is an organisation of about 13 member-countries. It provides financial help to India every year since 1958, in the form of foreign exchange. The help is extended on the basis of previous years' economic achievement.
 11. (a) Magsaysay Award is an international award given by the Government of Philippines, since 1958, in memory of their late President, Ramon Magsaysay, who died in an air crash, in July 1957. It is given in five different fields—government service, public service, community leadership, journalism literature and international understanding. It carries a cash prize of \$20,000 which is announced in July-August every year and handed over to the winners on Aug 31, every year—the birth anniversary of Ramon Magsaysay.
 12. (a & b) The Pulitzer Prize is given for best work in literature, music, science and journalism. The award is distributed by an American organisation and was established in the memory of Joseph Pulitzer (1847-1911), a US journalist and publisher, in 1917.
 13. (a) 14. (a)
 15. (a & d) Mars has two satellites, Jupiter has 12 satellites and Neptune has two satellites.

31. (a) The National Development Council comprises the PM, CMs/Lt Governors. It approves and reviews various Five-Year Plans.

32. (b) 33. (a) 34. (c) 35. (d)

36. (b) The term North-South Dialogue denotes dialogues between the rich nations and poor nations. All the rich countries of the world barring New Zealand and Australia are situated north of the Equator. Hence they are known as North and the poor countries are called South.

37. (b) 38. (d) 39. (a) 40. (b) 41. (d)

42. (c) The Concorde is a British-French supersonic passenger airliner. It is the fastest passenger airliner in the world.

43. (c) 44. (b)

45. (e) The Finance Commission is appointed by the President of India under Art 280 of the Constitution. The Commission recommends the distribution of income-tax between the states and the Union government.

46. (a)

47. (d) The correct pairs are

(a) Ravi Shankar-Sitar

(b) Hari Prasad Chaurasia-Flute

(c) Bismillah Khan-Shehnai

(d) Vilayat Khan-Sitar

(e) Ustad Amjad Ali Khan-Sarod

English

1. (b) 2. (a) 3. (c) 4. (b) 5. (d)

II A sincere compliment—the same as real praise—though most useful socially, is very wrongly used. When properly exchanged it does good to both the giver and the receiver: For, everyone craves for praise and if one receives it from a professional colleague it is truly precious.

A compliment is not the same as flattery. The latter is motivated praise given for the sake of some selfish gain.

Human achievement has been inspired by the love of praise. Wise parents should therefore praise their children liberally whenever the latter deserve it.

Complimenting is an art. A good compliment should be both to the point and timely, neither too late nor too soon. Similarly, like money compliments too should be 'spent' economically, for they are a precious currency.

Before their nationalisation in 1969, the banks were in the hands of large industrial houses catering by and large to their own and other wealthy sections' needs. The socialist and democratic ideology of the state requires them to contribute to the well-being of the ordinary people and to the overall prosperity of the nation. This purpose has been greatly achieved by the nationalisation of the banks. Today it is not an uncommon sight to see a disabled person driving an autorickshaw on which is written 'hypothecated to the Punjab National Bank' (or to any other nationalised bank). Now it is possible for unemployed hands including jobless doctors and engineers to apply for and get loans from the banks and to start their own business or trade.

These useful activities of the banks are not confined to the urban areas only. Real benefits have come to the weaker sections in the countryside. Banks have opened thousands of new branches in the remotest villages and have made it possible for the poorest of the poor to get loans on very easy terms, sometimes even without any security, for a wide variety of activities including buying livestock, digging new wells, building bio-gas plants and purchasing fertilisers, tractors and other farm equipment. Sometimes whole villages have been adopted by the banks and the overall responsibility of their planned development is being undertaken by them.

It is thus obvious that the nationalised banks have been playing a critical role in our developmental activities, more particularly in the areas of rural financing and unemployment eradication programmes. In a country where more than 45% of the population lives below the poverty line, such beneficial activities acquire an uncommon importance. For these to continue it is vital that people develop the habit of saving money and depositing it in the banks and that those who seek loans and other benefits from the banks make timely repayments, ensuring not only the continuance of the already existing programmes of the banks but also their enhancement. Banks will then become one of the major instruments for the removal of poverty in our country.

THE LORDS' SHOW

The first public television broadcast of the work of a parliamentary institution unique in the world was transmitted in Britain on Jan 23, 1985.

The House of Lords, which can trace its beginnings back to the 11th century in Councils summoned by English Kings, is the "second chamber" in the country's parliamentary system. Its members, unlike those of the House of Commons, are not elected. It depends overwhelmingly on the hereditary principle.

As a set for a television "series", the chamber of the Lords could hardly be bettered. At one end is the gilded throne where the Queen sits at the annual opening of Parliament. In front of the throne is the woolack, which represents the wealth of the nation from the days when the country's economy depended on wool trade. This is where Lord Chancellor presides.

Seating of members

To his right is the Spiritual side of the House, where the Bishops sit. Alongside them the government ministers sit on their front bench

and to the Lord Chancellor's left is the Temporal side where the opposition parties sit. Beyond the three clerks in their wigs and gowns at the table there are the cross-benches which are used by peers who do not ally themselves to any political party.

So venerable are the precincts of this place, and so fond of its traditions are its members, that the Lords sometimes tend to be thought of by the public as a somewhat staid group of parliamentarians out of touch with the 20th century. That is an unfair judgment.

Members of the Upper House work long hours on about 145 days of each year. They comb through highly complex, sometimes deeply tedious legislation that has been sent to them from the Commons. It is their function to check endlessly on the work the Commons has done, and they sometimes propose new legislation and debates of their own. If the Lords believe that the Commons has gone wrong constitutionally they will reverse a decision. More frequently, they see their duty,

because they are a non-elected House, as revising, amending and warning.

Momentous decision

The Lord's decision to allow cameras into their workplace for an experimental six-month period was described by some observers as momentous. Lord Home, a former PM, said the issues involved were "near constitutional". The point at issue was whether the Lords should move ahead of what is known in parliamentary language as "the other place"—the House of Commons....

If the Lords all appeared together they would cram their chamber to overflowing. There are 1,182 members; of these, 26 are Bishops of the Church of England; 793 are hereditary peers; 19 are Law Lords and 344 are life peers. Members never do all turn up together. The average daily attendance, though, is a respectable 320. They receive no salary.

It would be fascinating to learn whether the telecast was as interesting as *Yes Minister*.

Quantitative Aptitude

BY KAVITA KAPOOR & B. L. ARORA

FOR BSRB (PO), NDA, CDSE...

These questions should prove extremely beneficial for those preparing for the SCRA, CDSE, Assistant's Grade and CAT for IIMs. Specially designed to test your aptitude for quantities!

DIRECTIONS : Tick mark the correct alternative from among the several alternatives given below each question. The correct answers and explanations appear at the end of this test.

- The value of $\frac{1}{2} + \frac{1}{3}$ is equal to nearly
(a) 0.12 (b) $\frac{5}{6}$
(c) 0.19 (d) 0.21
- The value of 99^a is equal to
(a) 9801 (b) 9811
(c) 9781 (d) 9981
- The area of the rectangle AEFC in the figure below is
(a) 10 cm^2 (b) 12 cm^2
(c) 16 cm^2 (d) 24 cm^2

- The sum of the radii of two circles is 12 cm and the difference of their areas is $80\pi \text{ cm}^2$. The difference in their circumferences will be nearly
(a) 13.33 cm (b) 8.33 cm
(c) 6.33 cm (d) 4.25 cm
- In the fractions $\frac{1}{2}, \frac{1}{3}, \frac{2}{3}, \frac{1}{4}$ the least is
(a) $\frac{1}{2}$ (b) $\frac{1}{3}$
(c) $\frac{2}{3}$ (d) $\frac{1}{4}$
- The number $10^{27} - 1$ is not divisible by
(a) 11 (b) 9
(c) 3 (d) 27
- $0.035 \times 0.035 \times 0.035$
 $0.035 \times 0.035 + 0.0045$
 $+ 0.0045 \times 0.0045 \times 0.0045$
 $\times 0.0045 - 3.5 \times 4.5 \times 10^{-7}$
is equal to
(a) 0.0080 (b) 0.0395
(c) 0.0010 (d) -0.010
- If the length of a rectangle is increased by 10% and its width is decreased by 10%, its area will
(a) Remain unchanged

- (b) Increase by 20%
(c) Decrease by 1%
(d) Increase by 5%
- In a group of 30 people, 10 take tea but not coffee and 14 take coffee but not tea. How many of them take tea and how many take coffee?
(a) 16, 14 (b) 16, 20
(c) 10, 20 (d) 12, 18
- ABCD is a square and E, F are the midpoints of the half diagonals AO and BO. The area of the triangle OEF is
(a) 2 cm^2 (b) $\sqrt{2} \text{ cm}^2$
(c) 1 cm^2 (d) $\frac{1}{\sqrt{2}} \text{ cm}^2$

- ABCD is a square. If the shaded area is $A \text{ cm}^2$, the side of the square is
(a) $\sqrt{\frac{4A}{1-\pi}}$ (b) $\sqrt{4(4-\pi)A}$
(c) $\sqrt{16(4-\pi)A}$ (d) $\sqrt{\frac{16A}{4-\pi}}$

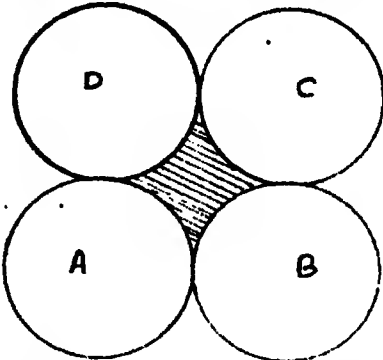

- If $6x + 3 < 2x + 4$, x cannot be
(a) $\frac{1}{4}$ (b) $\frac{1}{2}$
(c) $\frac{3}{4}$ (d) zero
- If $3^x \cdot 27^{x-2} = 1$, $x, y > 0$, and

are both integers, the number of possible values of x is

- (a) 1 (b) 2
(c) 3 (d) infinite
- A 15 kg mixture of cement and sand in the ratio 2:5 is mixed with 10 kg of another mixture of cement and sand in the ratio 2:3. The mixture will contain cement and sand in the ratio
(a) 2:4 (b) 31:73
(c) 58:117 (d) 4:21
- The value of the expression 989^a is equal to
(a) 978121 (b) 987121
(c) 988121 (d) 978201
- Indira Gandhi was assassinated on Oct 31, 1984, which was Wednesday. Her birth-date, Nov 19, 1917 fell on
(a) Monday
(b) Tuesday
(c) Wednesday
(d) Thursday
- Two pipes can fill a tank in 3 and 4 hours respectively while a third can empty it in 5 hours. If all the pipes work simultaneously, an empty tank will be filled in nearly
(a) 2 hours
(b) 2.6 hours
(c) 2.88 hours
(d) 3.2 hours
- If $x + \frac{1}{x} = 5$ and $x^2 + \frac{1}{x^2} = 12$, the value of $x^3 + \frac{1}{x^3}$ will be
(a) 55 (b) 58
(c) 62 (d) 52
- Expressed as a percentage 0.003 is equal to
(a) 0.00003% (b) 0.03%
(c) 0.3% (d) 3%
- If $a \cdot b = (a-b)$, the value of $(-5) \cdot 3$ is
(a) 8 (b) -8
(c) -15 (d) 2
- If the scale chosen to represent the x coordinate is halved,

22. If x is 25% more than y , y is _____ less than x .
- (a) 25% (b) 22.5%
(c) 20% (d) 17.5%
23. If $x^2 + \frac{1}{x^2} = 20$ and $x + \frac{1}{x} = 5$, $x^2 + \frac{1}{x^2}$ will be
- (a) 95 (b) 101
(c) 105 (d) 129
24. A man can do a piece of work in 12 days; his wife and son can do it in 9 days, while he and his wife can do it in 8 days. The man and his son will be able to finish it in
- (a) 10 days
(b) $7\frac{1}{2}$ days
(c) $7\frac{1}{3}$ days
(d) 7 days
25. $12^n - 1$ is divisible by 11 if n is
- (a) Any integer
(b) Any odd integer
(c) Any even integer
(d) It is not divisible for all values of n .
26. The number $4n^2 + 4n$ is always divisible by
- (a) 8
(b) 12
(c) 16
(d) None of the above
(e) All of the above
27. Ten men can do a job in 4 hours while 12 women can do it in 6 hours. Sixteen men and 8 women will finish the job in nearly
- (a) 1.5 hours
(b) 1.75 hours
(c) 1.88 hours

28. The sum of the base and height of a triangle is 15 cm. If the area of the triangle is 25 cm^2 , the base is
- (a) 6 cm (b) 9 cm
(c) 10 cm (d) 11.5 cm
29. Rakesh can do a piece of work in 7 days and Naresh can do it in 5 days. Rakesh works for 3 days and leaves. Naresh will finish the remaining work in
- (a) 2.5 days (b) $3\frac{1}{4}$ days
(c) $3\frac{1}{2}$ days (d) 2.86 days
30. Each of the four circles shown in the figure is of the same radius R . The area of the shaded portion is nearly
- (a) $\frac{1}{4}R^2$ (b) $\frac{1}{2}R^2$
(c) $\frac{1}{4}R^2$ (d) $\frac{1}{2}R^2$
- 
31. If $f(a,b) = a^2 + b^2$, $f(2, f(3,4)) =$
- (a) 29 (b) 129
(c) 81 (d) 629
32. $(1 + \frac{1}{2}) (1 + \frac{1}{3}) (1 + \frac{1}{4}) \dots (1 + \frac{1}{n})$ is equal to nearly
- (a) $\frac{1}{2}$ (b) $\frac{1}{3}$
(c) 2 (d) 38
33. $[(\sqrt{6} + \sqrt{3})(\sqrt{6} - \sqrt{3})]^{3/2}$ is nearly equal to
- (a) $3\sqrt{3}$ (b) $2\sqrt{3}$
(c) $3\sqrt{18}$ (d) $3\sqrt{12}$

34. The value of the expression $x^2 - 12x + 32$ is negative for
- (a) $x < 4$ (b) $4 < x < 8$
(c) $x > 8$ (d) $0 < x < 4$
35. A number when divided by 81 leaves 27 as remainder. When it is divided by 27, the remainder will be
- (a) zero
(b) 9
(c) 18
(d) Can be any number < 27
36. The value of the expression 0.00168×0.00048 is equal to
- (a) 0.00048 (b) 0.0048
(c) 0.0000048 (d) 0.000048
37. The value of the expression $7 + 5 - (3 \div 2 \times \frac{1}{2})$ of $\frac{1}{2} + \frac{1}{2} \times \frac{1}{2}$ is equal to
- (a) $12\frac{1}{2}$ (b) $24\frac{1}{2}$
(c) $12\frac{1}{4}$ (d) $12\frac{1}{8}$
38. The cost of a pant is 70% of the cost of a coat and 130% of the cost of a shirt. If all the three cost Rs 623.60 the cost of the shirt will be nearly
- (a) Rs 135 (b) Rs 147.50
(c) Rs 150 (d) Rs 162.50
39. The maximum value of the expression $-x^2 + 6x + 12$ is
- (a) 12 (b) 21
(c) 17 (d) 8
40. The number $142596x4$ will be divisible by 22 if x is
- (a) 1 (b) 2
(c) 4 (d) 7
41. The maximum number of balls of 20 cm radius which can be accommodated in a cubical box of side 1 m is
- (a) 125 (b) 32
(c) 31 (d) 29
42. Which of the following fractions is the greatest?
- (a) $\frac{1}{2}$ (b) $\frac{1}{3}$
(c) $\frac{1}{4}$ (d) $\frac{1}{5}$

ANSWERS

1. (d) Each fraction is nearly equal to 0.1 and thus the sum should be close to 0.2.
2. (a) $99^2 - 1 = (99 + 1)(99 - 1) = 9800.99^2 = 9801$.
3. (c) The two sides of the rectangle are the diagonal of the square and its half diagonal. Thus, if L is the side of the square, the sides of the rectangle are $\sqrt{2}L$ and $L/\sqrt{2}$ and the area of the rectangle is L^2 . Since $L = 4$, the area is 16 cm^2 .
4. (a) If r_1 and r_2 are the radii of the circles, we have
 $r_1 + r_2 = 12$ and (i)
 $\pi(r_1^2 - r_2^2) = 80$ (ii)
 Dividing (ii) by (i) we get $\pi(r_1 - r_2) = \frac{80}{12} = \frac{20}{3}$ or $2\pi(r_1 - r_2) = \frac{40}{3} = 13.33 \text{ cm}$.
5. (a) The fractions are less than 1 by $3/17, 3/19,$

- $3/20$ and $3/25$ respectively. Since $3/17$ out of these is maximum, the first fraction $14/17$ is the least.
6. (a) The number $10^{27} - 1$ consists of 27 nines (9s) and is thus obviously divisible by 9 and 3. Once divided by 9, it will give twenty seven 1s (1111.....) and this number is divisible by 3. The original number is therefore divisible by 27. The number is obviously not divisible by 11.
7. (b) The expression can be written as $\frac{a^3 + b^3}{a^2 + b^2 - ab}$ with $a = 0.035$ and $b = 0.0045$ the expression is equal to $a + b = 0.0395$.
8. (c) If L and B are the original length and breadth respectively, the original area $= LB$ and the new area $= (1.1L) \cdot 0.9B = .99LB$.

9. (b) Since there are 30 people in all, the number of people who take both tea and coffee is obviously 6. Thus $(10+6)$ take tea and $(14+6)$ take coffee.
10. (c) Since $AC=4\sqrt{2}$, $AO=\frac{1}{2}AC=2\sqrt{2}$ and $E_0=\frac{1}{2}AO=\sqrt{2}$.
Since the diagonals of a square intersect each other at right angles, area of $\triangle OEF$ is $\frac{1}{2}OE(OF)=\frac{1}{2}\sqrt{2}(\sqrt{2})=1\text{ cm}^2$.
11. (a) If L is the side of the square, the area of the shaded portion is $\frac{L^2}{4}-\pi\frac{L^2}{4}=A$ or $\frac{L^2}{4}(1-\pi)=A$
Thus, $L=\sqrt{4A/(1-\pi)}$.
12. (b) $6x+3<2x+4$ means $4x<1$ or $x<\frac{1}{4}$. Since $\frac{1}{4}$ is greater than $\frac{1}{2}$, it is the correct answer.
13. (c) $3^y \cdot 27^{x-1}=3^y \cdot 3^{3(x-1)}=3^{y+3x-3}=1=3^0$
Thus, $y+3x-3=0$ or $3x=3-y$
Therefore, $x=1-\frac{y}{3}$
The number of possible values of x are, therefore, three, viz, 0, 1, 2.
14. (c) Amount of cement in the first mixture = $2 \times 15/7 \text{ kg} = 30/7 \text{ kg}$
Amount of cement in the second mixture = $\frac{1}{2} \times 10 \text{ kg} = 5 \text{ kg}$
Thus the amount of cement in 25 kg of final mixture is $\frac{30}{7} + 5 \text{ kg} = \frac{65}{7} \text{ kg}$
The amount of sand is $117/7 \text{ kg}$. The required ratio is therefore 65:117.
15. (a) $989^2 - 11^2 = (989+11)(989-11) = 978000$
 $\therefore 989^2 = 978121$
16. (a) In a non-leap year one day advances on the same date as we move in to the next year while in a leap year the days advance by two. Since there are 67 years between the two given days and 17 of these are leap years, $67+17=84$ days difference exists between the two dates.
Since $65=9 \times 7+2$, Nov 19, 1917 is 9 weeks and 2 days before Wednesday, viz, Monday.
17. (b) The part of the tank the three pipes fill in one hour is $\frac{1}{3} + \frac{1}{4} - \frac{1}{6} = \frac{5}{12}$. Thus the tank will be filled in $60/23=2.6$ hours.
18. (a) x^3+1
19. (c) $.003 = \frac{3}{1000} = \frac{0.3}{100} = 0.3\%$
20. (b) $(-5) \cdot 3 = -5-3=-8$
21. (d) The height of P above the origin will remain the same whereas horizontal location will move towards left.
22. (c) $x=1.25y$. $\therefore y=\frac{x}{1.25}=\frac{100}{1.25}\%$ of $x=80\%x$.
23. (a) $x^2+1/x^2=(x+1/x)(x^2+1/x^2-1)$
 $=5x(20-1)$
 $=95$.
24. (c) Wife's one day's work = $\frac{1}{3} - \frac{1}{12} = \frac{1}{4}$
 \therefore Son's one day's work = $\frac{1}{3} - \frac{1}{4} = \frac{1}{12}$
The man's and son's one day's work = $\frac{1}{4} + \frac{1}{12} = \frac{1}{3}$
They will thus finish it in $\frac{3}{1} = 3$ days.
25. (a) $12^n - 1 = (12-1)(12^{n-1} + 12^{n-2} + \dots + 12 + 1)$. Thus $11=12-1$ is a factor of $12^n - 1$ for all n .
26. (a) $4n^2+4n=4n(n+1)$ is always divisible by 4,

- since $n(n+1)$ is always
27. (d) 1 man's 1 hour's job = $\frac{1}{16}$ and 1 woman's 1 hour's job = $\frac{1}{24}$.
 \therefore 16 men's and 8 women's 1 hour's job = $\frac{16}{16} + \frac{8}{24} = \frac{144+40}{360} = \frac{184}{360}$
Time required $\frac{360}{184}$ hrs = 1.95 hrs.
28. (c) $b+h=15$..(1)
Area = $\frac{1}{2}bh=25$ or $bh=50$
 $b-h=[(b+h)^2-4bh]^{1/2}$
or $b-h=\sqrt{(225-200)}=5$..(2)
Adding (1) and (2)
 $2b=20$ or $b=10$ cm
29. (d) Work done by Rakesh in 3 days = $\frac{1}{3}$.
The remaining work ($\frac{2}{3}$) will be finished by Rakesh in $5 \times \frac{2}{3}$ days = $\frac{10}{3}$ days = 2.86 days.
30. (b) The required area = Area of the square ABCD of side $2R-4x$ the area of the quadrant of a circle
 $=4R^2-4\left(\frac{\pi R^2}{4}\right)=4R^2-\pi R^2$
 $= (4-\frac{\pi}{4})R^2 = \frac{16-\pi}{4}R^2$.
31. (d) $f(3, 4)=3^2+4^2=25$
 $f(2, 25)=2^2+25^2=629$
32. (d) The given expression is equal to $(1+\frac{1}{2^1})(1+\frac{1}{2^2})(1+\frac{1}{2^3})\dots\dots(1+\frac{1}{2^n})$
 $=\frac{3}{2} \cdot \frac{4}{3} \cdot \frac{5}{4} \dots\dots \frac{n+1}{n} = \frac{n+1}{2} = 38$
33. (a) $(\sqrt{6}+\sqrt{3})(\sqrt{6}-\sqrt{3})=6-3=3$
The given expression is thus $3^{3/2}=3\sqrt{3}$.
34. (b) $x^2-12x+32=x^2-12x+36-4$
 $=(x-6)^2-4$
This is negative if $4 \leq x \leq 8$.
35. (a) If x is the number, obviously $x=81y+27$ where y is the quotient obtained when the number is divided by 81. When the number is divided by 27, the quotient will be $(3y+1)$ and the remainder will be zero.
36. (d) The given expression is equal to $\frac{168 \times 48 \times 10^{-10}}{42 \times 4 \times 10^{-4}} = 48 \times 10^{-6} = .000048$
37. (c) The expression is $7+5-(\frac{2}{3} \times \frac{1}{2})$ of $\frac{2}{3} + \frac{1}{2} \times \frac{1}{3}$
 $=7+5-\frac{1}{3}$ of $\frac{2}{3} + \frac{1}{2} \times \frac{1}{3} = 7+5-\frac{1}{3} + \frac{1}{6}$
 $=12-\frac{1}{6} + \frac{1}{6} = 12$
38. (c) $P=0.7c=1.3s$ and
 $P+c+s=436.5$ where P, c, s , denote the cost of a pant, coat & shirt respectively.
Thus $1.3s + \frac{1.3}{0.7}s + s = 623.60$
 $(.91+1.3+.7)s=436.52$
 $\therefore s=\frac{436.52}{2.91}=150$
39. (b) The given expression is $-(x^2-6x-12)=-[(x-3)^2-21]$ whose maximum value is 21 which happens for $x=3$.
40. (d) Since $22=2 \times 11$, the number should be divisible by 11. Applying the rule of divisibility by 11, x should be 7.
41. (d) The desired number is $\frac{10^6}{11(20^6)}=29$
42. (a) This is >0.7 , whereas all others are less than this.

FOR & AGAINST

Should jobs be delinked from degrees?

The idea of delinking degrees from jobs is not a new one. The Public Services Committee reported, as early as 1956, that "the degree qualification should be abolished for lower and middle levels of public services (clerical jobs and junior officers). It should continue for the top level (senior officers)." The National Committee on the 10+2+3 educational structure, held in 1973 that "a policy of delinking university degrees with the recruitment for the bulk of jobs, both in the public and private sectors, is a sine qua non for the success of the new structure. While university education is necessary for senior-level managerial and executive jobs, for teaching and for other purposes such as training scientists, engineers, doctors, economists, literary persons, etc., it should not be compulsory for all the rest." The idea was repeated by A.R. Kidwai in 1974, then Chairman of UPSC, and also in the Draft National Policy on Education in 1979. In 1982 the National Institute of Educational Planning and Administration (NIEPA) declared that degrees should be delinked from jobs, and today, after PM Rajiv Gandhi's Jan 5 national broadcast, the issue is the subject of much debate.

However, it should be noted that while enrolment at the secondary school stage has increased 283.3% in the last two decades, it has increased only 128.6% in institutions of higher learning in the same period. More importantly, less than 7% of the century's total youth in the age-group 17-23 is enrolled for higher education. Furthermore, according to the estimates of the 32nd round of the National Sample Survey (1977-78), only 2.07% of the total labour force in the country has the educational qualification of "graduation and above", and of about 7m added to the labour force annually only about half a million are "higher educated". Under the circumstances, is higher education the major problem to be tackled at this stage to facilitate employment opportunities? Is not the basic question that of the lack of a socio-economic structure that can match qualifications with employment rather than one of checking "educational inflation"?

CCTimes asked its readers to voice their opinions on the subject, in its January issue. Selected views have been cited in the following columns to show what the readers feel about the subject

For

■ Today's education is not at all job-oriented and the knowledge is seldom useful in practical life. The best way is to have job-oriented courses after SSC so that many student hours will be saved. *M.V. Sonavane, Shahabad*

■ Degrees and marks are not the real measurement of learning and intelligence. Students having no knowledge of their subjects get through with brilliant marks. *Savitari Ananth, Bombay*

■ How will a master of Science be a better administrator or a clerk than a matriculate? There are many brilliant, ambitious persons who are not able to pursue higher education because of financial problems and therefore have to make do with menial jobs. Prescribing higher rather than essential qualifications amounts to violation of the Fundamental Rights guaranteed by the Constitution of India. *P.V. Sreedharan, Panna*

■ Large disparities exist in the standards of courses for various degrees offered by different universities. Moreover, a lot of anomalies are made to obtain a degree by hook or by crook. Degree being an essential requirement for jobs, students rush to the universities, thus reducing the standard of education and the efficient functioning of the universities. *Braj Mohan Agrawal, Roorkes*

■ Practically, university education is proving to be futile as very few competitions have their roots in university education. At present, almost in all fields, candidates are trained after their selection. So why should they waste their time in universities? *Y.P. Singh, Bargeon, Gonda*

Against

■ Delinking degrees from jobs would end in making India devoid of strong leaders. *P. Girish, Hyderabad*

■ A graduate is more mature and thus more suitable for these categories of jobs where public dealing is concerned. *S. Rangaswamy, Madras*

■ Delinking will result in suppressing the poor and the lower middle class, who get their knowledge concerning different fields of education only in colleges. Children from these classes will find all job avenues closed to them if delinking is brought about. *Praveen Kumar Jain, New Delhi*

■ Degrees act as barriers to corruption today. The cases of corruption will increase if degrees are delinked from jobs. *Sanjay Kumar, Muzaffarpur*

■ When jobs are severed from degrees, college education will become useless in the eyes of students. Purposeless universities can be described as dead institutions which can further worsen the quality of education. *Nilay V. Anjaria, Ahmedabad*

■ If delinking is introduced, there will be hardly anybody interested in higher education. On the other hand, the employers will insist on some basic knowledge which was previously being ensured even by the devalued degrees. *Nihar Ranjan Satpaty, Puri*

■ In an abrupt decision to delink degrees from jobs, the state will aggravate the present youth unrest in India. A chaotic environment is bound to occur in the country which might give unemployed persons (and opposition parties also) an issue to

Suggestions offered by readers for improvement in higher education:

■ The posts of teachers should be offered to the intellectuals of the country. *Anang Pal Tomar, Dehra Dun*

■ It is important to link the syllabus with jobs at the degree level. *Dinesh K. Dev, Meerut*

■ The age limit for each job should be reduced to such an extent that a degree holder would not be able to apply for jobs which do not require a degree. *Nilamber Joshi, Almore*

■ A graduate degree is worthless unless higher education is pursued. So postgraduate courses should be integrated with graduate courses, e.g., B.Sc/M.Sc. *V. Lakshmi, New Delhi*

■ There should be more technical and professional institutions to impart specific skills. *Subhash Karmarker, Calcutta*

■ There should be a screening body to determine the merit and aptitude of students who wish to enter universities. There should be equality in all university courses so far as time and graduation courses are concerned. *Somesh Chaturvarty, Baraset, 24 Parganas*

GENERAL KNOWLEDGE

YOU ASK, WE ANSWER

BY SUPRIYA

● **Where is the largest atomic power plant situated and what is its generating capacity?**

Jagjit Singh Parmar, Amritsar

The largest power station in the world is situated in Leningrad (USSR). This 3 000 Mw power station was commissioned in October 1982.

● **When and by whom were the Gateway of India and India Gate (New Delhi) built?**

Ujjal Shah, Angtang (Assam)

The Gateway of India (Bombay) was constructed in 1911 and India Gate (New Delhi) was constructed in mid 1920s. India Gate is also called the All India War Memorial. Both these gates were constructed by the then British Government.

● **Rawte in chronological order: Namdev, Shankaracharya, Ramanuja, Kabir, Fend and Nanak.**

● **Which islands constitute the West Indies?**

● **Which are the rain bearing clouds: Nimbus, Cumulus, Cirrus or Stratus?**

Gursavak Singh

The chronological order is: Shankaracharya (788-828 A.D.), Ramanuja (1017-1137 A.D.), Namdev (1270-1350 A.D.), Kabir (1398-1519 A.D.) and Nanak (1469-1539 A.D.).

The archipelago in North Atlantic between North and South America comprising Cuba, Hispaniola, Puerto Rico, Jamaica, Barbados, Trinidad and Tobago, Antigua, St Kitts-Nevis, Anguilla, St Lucia, Windward and Leeward Islands and Guyana together form the West Indies.

Of all the four types of clouds mentioned, Nimbus bring heavy rain, Cumulus clouds do not bring rain while Cirrus are thin clouds which never bring rain. Stratus clouds are grey in colour and bring light rain.

● **What is the difference between plebiscite and referendum?**

● **What is phonogram? Please elucidate.**

K C Goyal, Abohar

Plebiscite means to seek public opinion on any important public question which is later given the form of a law. In referendum, on the other hand, first a law is made and later on public opinion is taken on it.

Under this system a telegram can be booked through telephone. The charges for the telegram are paid later on receipt of the bill.

● **How many countries of the world have women presidents and prime ministers today? Please give their names.**

● **Who are the members of NATO? Where are its headquarters situated?**

Mohammed Rafi, Madhubani (Bihar)

Today except for England, no other country has a woman PM. Also no country in the world has a woman President. Margaret Thatcher is the PM of England.

The North Atlantic Treaty Organisation (NATO) with its headquarters at Brussels has 15 member states. Spain is its latest member.

ACHING COMPOSITION

BY RAGHU BHATNAGAR & RAJUL BHARGAVA

Introducing yet another serial on grammar. This time on teaching composition. To help you master the skills of writing. From sentences to paragraphs. With suitable illustrations. To be covered in our forthcoming issues.

All writing involves at least two basic things: (a) putting words in a sequence, that is, one after another, and (b) making conscious choices about each one of these words. Writing, therefore, involves making of both chains and choices. But, as everyone knows, writing is a complex process. Part of its complexity lies in determining the order and the form of the words that constitute the sequence, for not every sequence is grammatical. It is in accordance with the rule-governed nature of verbal constructions. All courses in composition are, therefore based, on an understanding of those conventions which govern the sequential compatibility of words. The kind of decision one has to take is why *a*, *c*, *b* and not *b*, *c*, *a* is the correct choice like the following:

A	curious	spectacle
a	c	b
	Spectacle	curious
	b	c
		a
	or	
Most people	in the world	love peace
a	c	b
Love peace	in the world	most people
b	c	a

It will thus be seen that every composition writer is faced with two kinds of choices, one relating to the principle we called sequential compatibility and the other merely verbal, that is, between one word and another. The latter is too obvious to need elaboration: would one choose *people* or *men* in the sentence 'Most people in the world love peace'?

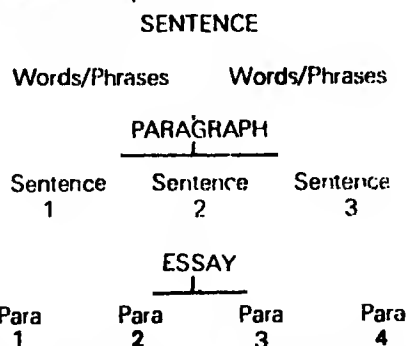

A natural corollary of the principle of sequential compatibility is the distinction between meaningful and meaningless combinations. Thus in the sentence quoted above, the meaningful combinations are: Most people/in the world/love peace.

On the other hand combinations like: people in/ in the/world love—are meaningless.

The reasons why certain combinations are meaningful are rather complex. One thing, however, is clear—there is a direct relation between information structures in the brain and their expressions as meaningful combinations. Phrase structure, in other words, is a reflex of information structure. Here, for example, are a few sentences with their natural divisions:

1. Dogs/like/the company/of their masters.
2. The world/is not/always/a happy place/to live in
3. Machines/have made/modern civilisation/possible.
4. War/means/the end/of all civilisation.
5. Colleges/give/more than mere education/to their students.

A lesson on writing composition should begin with the understanding of these interrelations between the parts of sentences. Later, if one wants to write bigger compositions (paragraphs), one would have to understand interrelations between sentences, and in even bigger compositions (essays), those between paragraphs. Thus the secret of good composition is good relations between various units. The following diagram shows these various interrelationships:

Composition—Putting together of meaningful/interrelated units

Any meaningful composition will aim at putting interrelated units together. Let us then begin with the *sentence*, since it is the basic unit of composition. Consider the following arrangement of words:

Food the away put switch off light the end.

As it stands, it makes no sense whatsoever. However, differently arranged they become meaningful:

Put the food away and switch off the

light.

It means that in English we cannot put words in any order we like. The point can be made with the help of a more simple example:

Snake a killed Ram.

This is not a meaningful sentence. Any one having even an elementary knowledge of English can rearrange it to make it meaningful. But another point emerges here. Sometimes word-order can change the entire meaning of the sentence, e.g.,

Ram killed a snake.

A snake killed Ram.

Either way word-order is an important principle of sentence construction.

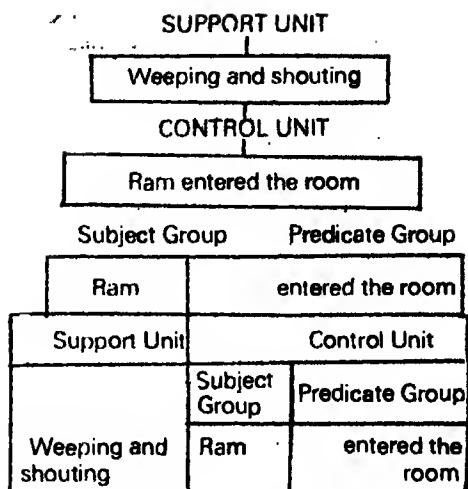

The normal word-order in an English sentence is:

Subject (S)- Verb (V)-Object (O)-Compliment (C)- Adverbial (A) that is, S V O C A in short. This pattern has a natural division according to which S and all that goes into it constitutes one part and V O C A put together constitute another. (Here it is worth remembering that of the VOCA the last three, namely O C A are not always present in all sentences. In other words, they are optional elements of a sentence while V is an obligatory element.) Thus S may be said to represent what may be called the subject group of words and V O C A the predicate group of words. And the normal sequence is the subject group followed by the predicate group.

The subject group and the predicate group taken together constitute a **Control Unit**, so called because it is this unit which controls everything else that occurs within a sentence. It means that besides the subject group and the predicate group other word groups can occur within a sentence, but they cannot take the place of the control unit. All they can do is support the control unit. They can, therefore, be called **Support Units**¹. The thing to remember is that a support unit in itself does not have meaning. It acquires meaning when taken together with or joined to a control unit. Thus the phrase 'weeping and shouting' does not convey much by itself.

However the sentence—'Weeping and shouting, Ram entered the room'—is easily comprehensible, for now 'weeping and shouting' as a support unit has been joined to a control unit, viz. 'Ram entered the room'. We can represent these facts

¹These terms have been taken from R F. Bailey, *A Survival Kit For Writing English*. Longman Cheshire Pvt Ltd, 1977

Here are some more examples of support and control units:

1. When it rains, people use umbrellas.
SU CU
2. If you are hungry, ask for some food.
SU CU
3. He goes swimming, when tired.
CU SU
4. She likes reading, though she has very little time.
CU SU
5. Finish your work, while I type the letter.
CU SU

Although we have taken very short and simple sentences in which the control units are shorter still, we can have bigger examples of the control unit.

The man facing the window to your left is about to jump out of it

Not one part of the sentence can be taken out without doing damage to the sense of the sentence. This is an important point, for it shows that the control unit is one whole, completely irreducible.

Now let us have a look at the support units. A support unit can have three positions: in the beginning of the sentence before the control unit, at the end of the sentence after the control unit, and between one part and another part of the control unit, as in the examples below:

1. At two in the afternoon each day,/he felt extremely restless. (beginning)
2. When tired/he wanted to have a swim. (beginning)
3. She wears red/but very rarely. (end)
4. They got victory/as well as money. (end)
5. His friend/a brilliant teacher,/often behaved abnormally. (middle)
6. The bonus/—third in the year/—proved a great blessing. (middle)

Sometimes all the three positions are taken in the same sentence:

Their wish fulfilled,/the young couple,/now in their 20s/decided to lead a

peaceful life, especially as soon going to have a baby.

The control unit thus can act as an independent word-group. It contains information no part of which is superfluous or of a kind which can be removed without changing/distorting the sense of the sentence. On the other hand, a support unit cannot exist independently. It has the status of a dependent word-group.

Paragraph Writing

A paragraph is a section of prose in which a particular topic is stated and developed. In other words, it is a group of sentences, all of which focus on a single subject. A well-written paragraph possesses the characteristics described below:

1. It almost always contains a topic sentence that presents the subject of the paragraph.
2. The rest of the sentences of the paragraph relate to the topic sentence in one of the following ways—
(a) lead into/up to it.
(b) explain it, by either expanding or limiting its meaning
(c) support it
(d) support or explain one of the supporting sentences
3. The topic sentence mostly occurs at, or near the beginning of the paragraph.
4. In the case of an introductory paragraph as part of a bigger composition the topic sentence ordinarily occurs at, or near, the conclusion.
5. In introductory paragraphs beginning with an 'although clause', the topic sentence often occurs somewhere near the middle.²

The topic sentence most often contains the main idea of the paragraph. Here is an example taken from Edith Hamilton's *The Greek Way*:

A Hindoo temple is a conglomeration of adornment. The lines of the building are completely hidden by the decorations. Sculptured figures and ornaments crowd its surface, stand out from it in thick masses, break it up into a bewildering series of irregular tiers. It is not a unity but a collection, rich, confused. It looks like something not planned but built this way and that as the ornament required. The conviction underlying it can be perceived: each bit of exquisitely wrought detail had a mystical meaning and the temple's exterior was important only as a means for the artist to sacrifice thereon the symbols of the truth. It is decoration, not architecture.

It is evident that what is stated in the topic sentence at the beginning of the paragraph has been supported with a series of descriptive examples in the rest of

²See Beth S. Neman, *Writing Effectively*, Charles E Merrill Co. 1983

The most important thing to remember in writing a paragraph is the fact that each paragraph is 'one whole'. In other words, it has unity, which is the outcome of there being a single topic in each paragraph. A violation of the above principle—'one topic, one paragraph'—results in a bad paragraph. It can be illustrated by taking together two paragraphs one of which observes the principle of unity and the other which violates it.³

- A. When a historian of the future deals with Britain in the 20th century he may well decide that the nation's biggest problem in that period was the preservation of freedoms won centuries earlier. Between 1800 and 1900 the laws of Britain slowly caught up with the growing conviction that the individual had rights against the State, and that it was the proper function of the latter to safeguard those rights. Yet, at the same time, social and economic pressures were developing that were to endanger the liberties of the individual. Those pressures were not fully manifest until the mid-20th century when, though sentiment was still in favour of the idea that the State was made for man, the revolutionary results of technological changes were threatening to reduce the status of the individual.

- B. The immense technical achievements of 19th-century Britain would have been impossible without the work of Henry Bessemer. *His system of producing steel was still in extensive use until a few years ago, though the open-hearth process invented by Sir William Siemens is now of greater importance.* Up to 1856 steel was an expensive product, imported from Sweden and costing about £50 a ton in the money of that day. Consequently, it could be used only for a very limited range of articles. *Wrought iron was used for engines, bridges, ships, machinery and railway tracks.* Bessemer's system, whereby cheap pig-iron was converted into steel in huge retorts within half an hour, instead of the six days required by the older process, brought the cost down to £3 a ton. This means that steel, which is stronger, more resilient and longer lasting than iron, was available for engines, bridges, ships, machinery and railway tracks. Steel can also be machined more accurately than

NEWS CAPSULE

AWARDED

The Lenin Peace Prize for 1983-84 posthumously to Indira Gandhi in recognition of "the outstanding contribution made by her to preserving and strengthening of peace". Sharing the honour are Vietnamese Vice-President Nguyen Huo Tho, West German public figure Joseph Weber, French scientist Jean-Marie Legat, Colombian writer Lyuis Vides and Swedish public figure Eva Palmer.

The Dadasaheb Phalke Award for 1985, carrying a cash prize of Rs 1 lakh, to Satyajit Ray for his services to Indian cinema. Other film awards for the year went to Prakash Jha's *Damul* (best picture), N.V.K. Murthy's *The Music of Satyajit Ray* (best non-fiction film), Adoor Gopalakrishnan (best direction for his *Mukhamukham*), Pratap Pothan's *Meendum Oru Kadhal Kathai* (the Indira Gandhi award for the best first film by a director), *My Dear Kuttichathan* (best children's film), Naseeruddin Shah and Shabana Azmi (best actor and best actress in the film *Peer*), Victor Banerjee (best supporting actor in *Ghare Baire*), Rohini Hattangady (best supporting actress in *Party*), Aravind, Suresh, Mukesh, Sonia (best child artistes in *My Dear...*), Saeed Mirza's *Mohan Joshi Haazir Ho* (best feature film on family welfare), Tapan Sinha's *Aadmi Aur Aurat* (best feature film on national integration), Shankar Nag's *Accident* (best feature film on prohibition). The awards for best regional films went to *Son Moine* (Assamese), *Ghare Baire* (Bengali), *Bandhana* (Kannada), *Mahananda* (Marathi), *Klanta Apanha* (Oriya), *Achamitai* (Tamil), *Sitara* (Telugu) and *Manik Raitong* (Khasi).

The 1985 Nehru fellowships to social scientist Harikrishna Paranjape, geologist Shitindramohan Naha and playwright G. Shankar Pillai. The fellowships announced by the Nehru memorial fund are for a period of two years and carry a monthly stipend of Rs 3,000.

The Nehru Award for engineering and technology for 1983 to former chairman of the Indian Space Commission, Satish Dhawan and the Chairman of the Atomic Energy Commission, Raja Ramanna. The award for social sciences went to former planning commission member, K.N. Raja. The awards carry a Rs 1 lakh cash prize.

APPOINTED

P.C. Alexander, former Principal Secretary to the PM as India's next High Commissioner to Britain. Alexander resigned his post recently, owning full responsibility for the misconduct of his staff involved in the latest espionage scandal. He has considerable experience in diplomacy, having headed the UN trade office in New York.

Mohammad Azeem, 47, the son of a peasant farmer in Chhatro, Kashmir, as the Mayor of Bradford, becoming Britain's first Asian Lord Mayor. Azeem, the chairman of the Labour Party group on the city council and a senior supervisor for mosques in Bradford (Yorkshire), now has his sights on winning a parliamentary election.

Justice P.N. Bhagwati, judge of the Sup-

reme Court, as the Chief Justice of India succeeding Y.V. Chandrachud who retires July 12.

Prakash Narain, Secretary in the Ministry of Shipping and Transport, as the Chairman of the Railway Board, succeeding J.P. Gupta who retired on Jun 30.

K.D. Sharma, Ambassador to Pakistan, as the Ambassador to Spain, replacing Indu Prakash Singh, who retires.

ELECTED

M.L. Fotedar, Political Adviser to the PM, to the Rajya Sabha in a by-election from the UP Assembly constituency, unopposed.

P. Namgyal (Congress (I), from the Ladakh parliamentary constituency, defeating Omar Ali (National Conference-F) by 7,977 votes in a by-election.

S.P. Jagota, former Additional Secretary in the Ministry of External Affairs, as Chairman of the Geneva-based International Law Commission at the body's 37th annual session. Jagota has been a member of the commission since 1976 and his major contribution has been in the field of the law of the sea.

Former Union Law Minister, Shiv Shankar to the Rajya Sabha in a by-election from the Gujarat Assembly constituency, defeating common Opposition candidate Jaymal Thakore (Independent) by 121 votes.

Former Himachal Pradesh PWD Minister, Sukh Ram, to the Lok Sabha in the by-election to the Mandi parliamentary seat, defeating BJP's Madhukar by 1,25,000 votes. With Sukh Ram's election, the Congress (I) has bagged all the four Lok Sabha seats from the hilly state.

The Congress (I)'s D.R. Negi, Devi Singh and Thakur Singh to the Himachal Assembly, taking the party's strength in the 68-member house to 58. Negi wrested the Kinnaur seat from Independent T.S. Negi while the latter two retained their Lahaul-Spiti and Bharmour Assembly seats.

VISITED

US Commerce Secretary, Malcolm Baldrige, on May 16 on an exploratory business trip to report back to President Ronald Reagan on the eve of PM Rajiv Gandhi's visit to Washington. During his stay in New Delhi Baldrige held wide-ranging talks with the ministers for finance and commerce and industry, the foreign secretary and leaders of the corporate sector on ways to strengthen Indo-US commercial ties. He also called on the PM.

Sri Lankan Foreign Affairs Adviser, Eswand Willemasinghe on May 16 for talks with the PM and other officials on various aspects of the island nation's ethnic problem. Willemasinghe stopped over in New Delhi on his way home from Thimphu where he attended the SARC ministerial meeting.

SCIENCE

Valuable mission: Anuradha, India's sophisticated cosmic ray detector, returned home (Earth) on May 6 aboard the space shut-

tle Challenger after astronauts completed final experiments in the orbital research voyage. What they learned from the week in space could provide greater knowledge of stars, cosmic rays and the earth's atmosphere, invaluable experience in space manufacturing process and new insights into the effects of weightlessness on animals and the human body. Part of the mission were two monkeys and two dozen rats. The mission had gotten off to a shaky start when five of the 15 research experiments failed or refused to start. But, working with specialists in Houston, the astronauts managed to repair them. They grew crystals that scientists expect to be of higher quality and greater purity than those grown in the gravity of earth. The improved quality of certain crystals would be of valuable interest to manufacturers of computer chips, medical, environmental sensors and infra-red devices.

Futuristic vaccine? American scientists have used a new technique to isolate genes from the bacteria that cause tuberculosis and leprosy and they say this may help them develop a single vaccine against these major diseases. Vaccines now exist for both TB and leprosy but they have major shortcomings. The scientists hope the new work will lead to the development of a vaccine that will be highly effective and available in large quantities. The idea is to isolate the bacterial genes that produce proteins that the human system recognises as foreign. Then these genes would be spliced into the genetic material of a harmless bacteria which would be used as a vaccine.

To be or not to be: Humans are capable of using their facial expressions to influence their emotions, a phenomenon which can be used to beat the lie detector test, according to Paul Ekman, a professor of psychiatry at the University of California. In other words, "you become what you put on your face." Tests on college students showed that a happy face can produce a happy body; also by coaching students to move their facial muscles in certain ways, it was found that their bodies also acted as if the person was afraid, disgusted, or amused, angry, surprised, sad or contemptuous.

EDUCATION

Underutilised: A survey by the Department of Science and Technology says only 9% of the country's engineering and technology Ph.D. holders are in industry, and the remaining 91% engaged in general services and higher education. The survey found that industry employed more foreign degree holders than those with Indian Ph.Ds in the ratio of 3:1. A disturbing finding pertained to the Ph.D. employees' salaries. The median salary is only Rs 1,500, the lowest salary Rs 900 and the highest Rs 3,000. In the US in 1979, the median monthly salary of a Ph.D. holder was \$2,800 in industry \$2,500 in government service and \$2,200 in educational institutions. "It is distressing to note that there were a number of doctorates getting low salaries, especially in the major scientific departments," the report commented. The primary objective of the survey was to find

whether doctorate holders were properly utilised or not.

DEFENCE

India and Italy will cooperate in defence research and development under an agreement described as a milestone in bilateral ties. The agreement, the first such to be signed by India with any West European country, provides for exchange of information components and sub-systems under development or production in either country. The areas of cooperation could include electronic warfare systems. The agreement, which followed the visit to India by Italian Defence Minister Giovanni Spadolini last year, provides for safeguarding the confidentiality of equipment that may be exchanged between the two countries for research and development.

France snubs US: France has told the US it will not participate in President Reagan's strategic defence initiative programme called star wars. French President Francois Mitterrand told Reagan during the seven nation economic summit at Bonn that the programme was of no interest to France. He repeated a proposal for a Europe-based space technology research programme code named eureka.

West European fighter plane binge: Britain, West Germany, France, Italy and Spain have embarked on a project to manufacture a twin-engine fighter plane for the future—Europe's biggest joint venture in aircraft production. The five NATO members will meet on Jun 17 in London to draw up the guidelines for the project called euro-fighter. The project is estimated to cost £28b.

NEIGHBOURS

Nepal and the Maldives have called for the declaration of the Indian Ocean as a zone of peace and withdrawal of superpower military presence in the region. The call came in a joint statement issued in Kathmandu at the end of a four day state visit to Nepal by Maldivian President Maumoon Abdul Gayoom. Gayoom had "fruitful talks with King Birendra on bilateral, regional and international issues. They expressed satisfaction at the progress made so far by the South Asian Regional Cooperation (SARC) and agreed that cooperation between states in the region would promote collective self-reliance and peace and stability. They expressed concern at the situation in Afghanistan and Kampuchea and appealed for a political settlement of the problems based on the withdrawal of foreign forces and the peoples' right to self-determination.

Zia's wrath: Seventeen Pakistani military officers being tried for plotting to overthrow the Zia government have been tortured in prison, according to Amnesty International. The London-based human rights organisation, Amnesty said the accused were among a larger group of people, most of them military personnel, who were arrested between January and April last year. Five civilians are also among them. Since their arrest, the accused have been given only limited access to their families and tortured by being beaten and given electric shocks. They were deprived of food for several days, denied access to lawyers, and kept con-

tinuously in terror and harassment. Amnesty, in its report released on May 12, demanded that the prisoners be tried in open court with full legal safeguards to ensure a fair trial. Also, there should be no admission of evidence or testimony obtained under torture.

By-elections in the eight months after the collapse of the cabinet: On May 14, appointed Radhakrishna Subba to replace the outgoing Foreign Minister, Padma Bahadur Khatu, dropped two controversial ministers of state and inducted two deputy ministers. Subba, a former ambassador to India, will also look after education. Khatu, bed-ridden for seven months, submitted his resignation on May 13.

Jayewardene's draconian step: Sri Lankan President J R Jayewardene on May 23 announced he will confer executive powers on all members of Parliament and will not hesitate to declare martial law if the need arises. The announcement, which took political observers by surprise, means that parliamentarians will be in charge of security in their own electorates. Jayewardene said the measure was vital because the army and police alone could not tackle the terrorist menace. He asked all MPs to reside in their electorates so they could co-ordinate with the security forces. Incidentally, Sri Lanka will spend \$72m this year above the budgeted \$131m on defence, bringing daily expenditure on it to \$600 000. Finance Minister Ronnie De Mel told a parade in Colombo on May 24 that defence spending had risen 10-fold in nine years, from \$12m in 1978 and the government was prepared to spend 100 times that to defend the country. Defence spending has turned a projected surplus of \$62m into a budget deficit of \$149m.

Pakistan's defence obsession: Pakistan will spend over \$2 066m on its defence during the new financial year beginning Jul 1—11.5% more than in the previous year. Finance Minister Mahbubul Haq, who presented the budget for 1985-86 on May 23, anticipated a resource gap of \$850m in the \$7927.7m budget. He announced several measures to fill the gap, including a 23% increase in electricity, petrol and gas charges and plans for unloading state-run industrial units worth \$125m. Other features of the budget: 12.5% general wage increase, a 5% cess on all imports to finance a vigorous education plan, a 15% reduction in the maximum income-tax rate and the floating of a series of government bonds. This was the first budget in eight years, to be presented before an elected Assembly.

ECONOMY—National

India's foreign exchange reserves recorded a sharp increase of Rs 318 crores in 1984-85 and stood at Rs 6 816.8 crores on Mar 31 this year. The sharpest increase was in the month of March 1985, when the reserves jumped by Rs 571 crore, nearly 2.5 times the increase in the previous month. During the first ten months of 1984-85, exports increased by 18.6% to Rs 9 582.27 crores while imports grew by 8.4% to Rs 13 122.13 crores. The trade deficit, which stood at Rs 3 863.87 crores during Apr-Jun 1985, was thus lower by Rs 430.89 crores from the Rs 4 294.76 crores deficit for the corresponding period of last year. Industrial production during the first ten months of 1984-85 showed an increase of 5.9%. Industries which showed an increase of

more than 10% were: engineering (10.9%), crude petroleum (11.4%), fertilisers (20%). Coal and minerals also went up by 8.7% and 9.7% respectively. The increase in the foodgrains stock was 22.2%. The total stock on Mar 31 stood at 237.88 lakh tonnes.

Reserve money by India's public sector: to Rs 2,500 crores every year, says the annual report of the Department of Labour. The number of Indian workers abroad has been rising steadily since the oil boom in the mid-1970's. In 1979, the number in West Asia stood at 224 000. The report admits that the numbers have started declining in the last two years due to the slowing down of the tempo of development and the Gulf War. The ministry's report covers a number of areas like providing stringent safety measures in chemical plants, social security, wages and bonus and industrial relations. The government proposes to enact a law to regulate the working conditions, safety and health of the workers in the building and construction industry. It also records the Centre's keenness to improve the conditions of unorganised labour such as fishermen, leather workers and the handloom and the powerloom units.

Indo-Arab cooperation: India and the Arab nations on May 4 decided to set up an Indo-Arab trading company, a bank and chamber of commerce. The decision was taken at the first ever Indo-Arab seminar on trade, economic and technical cooperation held in New Delhi and attended by representatives of 17 Arab countries. The seminar felt that updating traditional skills, new and renewable sources of energy, pollution control, preservation of environment and energy conservation were areas where India and the Arab countries could work in cooperation. It also highlighted possibilities of cooperation in increasing food production, food management, dairy farming and exchange of experience and research in important non-food crops.

Rihand gets World Bank assistance: The World Bank has agreed to provide \$250m for the national thermal power corporation's Rihand power transmission project. With this, the bank has committed a total assistance of \$2650.8m for the NTPC—the largest quantum of assistance given to any single organisation. The Rihand project will help meet the power demand in the northern region by providing transmission links between the Rihand and Singrauli power stations in Uttar Pradesh and the cities of Delhi, Panipat, Kanpur and Jaipur, the main load centres in the region.

Finance Bill: Finance Minister V P Singh on May 8 announced a scheme for floatation of bonds by selected public undertakings in high priority areas, particularly telecommunications and power. The value of the bonds will be exempted from wealth tax. Moving the Finance Bill in the Lok Sabha on that date, Singh also announced further concessions in excise and customs. Preparations of pan masala have been exempted from excise duty; the rate of deduction of tax at source in lottery money has been reduced from 30% to 25%. The concessions, which totalled Rs 16.92 crores, are mainly for the small scale sector, including duty exemption for tyres, tubes and flaps for scooters, matches, marble and items under Article 66 of central excise.

and the World Bank, on May 10, signed agreements for assistance totalling \$1.5 billion. The assistance covers five projects—the Maharashtra petrochemicals, two Yamuna river development projects and agricultural extension service.

ECONOMY—International

USA's 32 favoured nations: US President, Ronald Reagan, has designated 32 nations to receive benefits under a law passed by Congress giving preferential American trade treatment to developing nations. They will receive exemption from specific competitive requirements in accordance with a law known as the generalised system of preferences. The countries, determined on the basis of economic development and general living standards, are Bangladesh, Bourkina Fasso, Bhutan, Botswana, Burundi, Benin, Cape Verde, Central African Republic, Chad, Comoros, Djibouti, Equatorial Guinea, Gambia, Guinea-Bissau, Haiti, Lesotho, Malawi, Maldives, Mali, Nepal, Niger, Rwanda, Sao Tome and Principe, Sierra Leone, Somalia, Sudan, Tanzania, Togo, Uganda, Western Samoa and Yemen Arab Republic.

IMF predicts price rise: The IMF forecast that the erosion of the real commodity prices during 1981-82 should have a restraining influence on supplies of commodities during the second half of the 1980's, thus tending to push up prices. In its world economic outlook report, the IMF said, whereas the effects of the large 1984 agricultural harvests will be felt on the prices at least through the first half of 1985, the likely return of production to more usual levels in 1985 may permit an increase in prices in the latter half of 1985 and in 1986. Metal prices are likely to increase in both years as a result of the significant drawdowns in stocks in 1984 and increase in demand. However, the IMF said in 1985 the overall commodity prices are projected to fall by 2% in terms of the US dollar, compared with the 2% increase recorded in 1984.

STATES

Maharashtra celebrated its silver jubilee on May 2 with an impressive inter-services marchpast punctuated by a flypast of helicopters and Jaguar aircraft of the Indian air force. Acting Governor K. Madhava Reddy took the salute and delivered a speech in Marathi. Three major programmes were launched by the state government on the occasion—provision of drinking water facilities to problem villages, afforestation and promotion of the use of non-conventional sources of energy in rural areas.

Commission to review reservation system in Kerala has been constituted by the state government to review the reservation system in educational institutions and the grant of monetary concessions to students. The commission, headed by P. Narayana Pillai of the high court, has been asked to submit its report in two years.

EVENTS—National

Indo-Gulf contract to Italy: The government has awarded the contract for designing and supplying imported equipment for the giant Rs 700 crore Indo-Gulf fertiliser plant to an Italian concern. The contract with Snam

provides for the completion of the project in 36 months. The sub-contract for supervision of the execution of the plant, which has 40% gulf shareholding, has been given to the Projects and Development India Ltd.

The Central prohibition committee has recommended that one per cent of the revenue earned through liquor sales be used exclusively for alcohol and drug abuse control. At its 12th meeting in New Delhi on May 11, it called for extensive use of the media to create awareness against alcoholism and drug abuse among the vulnerable sections. It asked the government to enact a unified law for the prevention of drug trafficking, develop a comprehensive strategy to tackle the problems of alcoholism and drug abuse, expand facilities for treatment of addicts, and explore the possibility of availing funds for creating infrastructure for research and training and consultancy on the twin problems.

India and Pakistan on May 13 agreed to resume their political dialogue at the foreign secretaries' level in New Delhi on Jul 30. The agreement to resume the dialogue was the outcome of talks between foreign secretaries, Romesh Bhandari and Niaz Naik in Thimphu, Bhutan, where they attended the South Asian ministerial meeting. The two foreign secretaries will resume all aspects of bilateral relations and Pakistan is "very keen" that the talks should make some progress with regard to the proposals for a non-aggression pact and a treaty for friendship and peace, an announcement said.

The Jha committee report has suggested that it be the same as the calendar year. "The Jan-Dec period as financial year offers the most advantageous alternative," the committee report, presented to Parliament on May 17, said. The committee said the south-west monsoon will be finished by November and its impact on the economy could be assessed. A changeover would necessitate changes in the taxation laws and other systems, statistical data compilation. The transition will, therefore, have to be carefully planned and implemented. The committee, headed by economist, L.K. Jha, felt that it would be possible to change over to a Jan-Dec financial year by Jan 1, 1987.

Five-day week: All Central Government offices will observe a five-day week beginning Jun 3. It was announced on May 20; the working day will be longer by an hour to make up for the additional holiday on Saturday. A five-day week is expected to help increase the overall efficiency of the government machinery. An official announcement said the government hoped its employees would be able to "respond to the new challenges in a more meaningful way with the introduction of this reform."

Long-awaited intervention: The PM is understood to have intervened to end the 'god-father' system for new IAS and civil services entrants. Under the system, senior civil servants were able to arrange the posting of their kin to states of their choice after the first 20 meritorious candidates have exercised their option. The system was found to have worked to the detriment of the sensitive northeastern states where only 'tailenders' were being posted. According to the Statesman newspaper, the postings will be decided by a computer henceforth.

Hike in IA fares: Indian Airlines on May

HARRY BARNES

PASSAGE FROM INDIA

The last four years with their highs and lows have perhaps been the most tumultuous for Indo-US relations—a period witnessed by US Ambassador to India, Harry Barnes Jr. The late PM Indira Gandhi's visit to the US in 1982 laid the foundations of mutual understanding between two of the world's greatest democracies. Then, in 1984 the festering Punjab problem reached its most horrific proportions with India subtly hinting at a US involvement. Mrs Gandhi's brutal assassination in October 1984 threatened to destroy whatever she had achieved by way of strengthening Indo-US ties. The reins of the country were passed on to Rajiv Gandhi—an enigma to both Indian and foreign political spectators because of his recent entry into politics. And ultimately the Bhopal tragedy in December, which many thought was the closing chapter in Indo-US relations.

Surprisingly though, Indo-US ties, defying all predictions, weathered these upheavals with remarkable equanimity. Thanks to deft handling by Harry Barnes. For not only did Barnes, during his tenure as Ambassador succeed in preserving the essential fabric of the unpredictable love-hate relationship of the two countries but also left his distinctive stamp on them by cashing in on the mutual desires of both the re-elected Reagan and the newly-elected Rajiv to know each other better. It was during Barnes' ambassadorial stint in India that the total trade turnover between the two countries doubled to well over \$4,000m a year. Specially noteworthy are their technology-transfer agreements as well as collaboration in the innovative world of science.

Barnes, however, will not be here to witness the furthering of relations between the countries which he nurtured with such enthusiasm. He now leaves for Chile as US Ambassador to this tiny South American country with a sense of satisfaction at the improved Indo-US ties and slight regret that he could not stay in India a little longer.

23 announced it was hiking its domestic fares by 14.5%. The hike, to be effective from Jun 1, was necessitated by the increase in fuel and operational costs. IA last increased its fares in 1980.

EVENTS—International

Poland expels US diplomats: The Polish government, on May 3, ordered the expulsion of two US diplomats who were accused of taking part in an illegal pro-Solidarity May Day parade. The diplomats were William Harwood, first secretary at the American embassy, and David Hopper, consul at the American consulate in Krakow. The diplomats were allegedly part of a group and carrying posters of hostile contents.

Chile's chilling state of siege: The military government in Chile, on May 6, decreed a 90-day extension of the state of siege to keep political activity banned throughout the country. In addition, the decree maintains a ban on publication of six opposition magazines and on all meetings not authorised by the government. President Augusto Pinochet, an army general who has been in power since 1973, imposed the state of siege last November to combat

an upsurge of guerrilla sabotage and, to end mass demonstrations for a return to democracy.

MISCELLANY

Growing superpower importance: The superpowers are losing their ability to control regional conflicts such as those in the Gulf and Central America, according to the London-based International Institute for Strategic Studies, a privately-funded research body. "No state patronised by a superpower has been able to vanquish its opposition, no combatant has been so deprived of arms that it had to seek a settlement of the conflict... in short, the erosion of the superpower ability to control regional conflicts continued," the institute said in a report. The trend threw greater responsibility on regional bodies such as the Gulf Cooperation Council (GCC), the Association of South-East Asian Nations (ASEAN) and the Contadora group in Central America. The institute noted that this trend reflected a change in the superpowers themselves. "The US, after withdrawing from Lebanon, has once again shown caution with respect to regional involvements. And Soviet leaders, too, do not seem overkeen to undertake wider military commitments,

DIED

Carter Brown, 61, one of the world's most prolific thriller writers, on May 6 in Sydney, Australia, after a long illness. In a 32-year-old career, Brown (real name: Alan Yates) wrote more than 270 books which sold more than 55m copies.

P. Sundarayya, 73, the founder general-secretary of the Communist Party of India (M) and a leader of the Telangana movement in Andhra Pradesh, on May 19, following kidney failure. Sundarayya shot to fame when he pioneered the first armed struggle against the Razakar regime of the Nizami. He was also prominent in the freedom struggle and was elected to the first Lok Sabha.

Prof Biju Krishna, 59, one of the country's foremost economists, on May 20 in Rome following a heart attack. The Chicago University-educated economist had specialised in the study of employment in conditions of poverty in the Third World and was an acknowledged expert on agricultural economics. He was in Rome on a UN assignment.

CAREER NEWS

MEDIA COURSES

The medium is the message; and to work with one of the several communication media is bound to be nothing short of exciting or aspiring youngsters. The Xavier Institute of Communications which conducts courses in Journalism, Advertising, Public Relations and Film is introducing courses in Video Production and Word Processors for writers, in the academic year beginning in July. A Film Appreciation Course in collaboration with the Film and TV Institute, Pune is also to be conducted by the institute.

For details please contact The Institute of Communications, St Xavier's College, Bombay 400 001.

A BIT(E) OF BARC

In this atomic age, who wouldn't jump at the opportunity of doing a course in Nuclear Science and Engineering?

Bhabha Atomic Research Centre (BARC) offers excellent career opportunities for motivated Engineering graduates and Science postgraduates to join their one-year orientation course in Nuclear Science and Engineering. Those who wish to attend the course will be under contractual obligation to serve the centre for a period of three years. An added advantage of this course is that those who complete the course, successfully, will be absorbed as Scientific Officers in any one of the BARC units/projects located in Bombay, Kalpakkam, Indore, Kota, Naroda, Tarapur, Kakrapar, Baroda, Talcher, Tuticorin, Thal-Vishet, Managuru and Hyderabad.

Well, then, if you are interested and less than 26 years as on Sep 1, 1985 (relaxable by five years for SC/ST candidates), you may apply, provided you fulfil the eligibility conditions (see: *TOI*, May 25 1985). But you must apply before Jul 20, 1985. For further details and application

form, send a self-addressed envelope (23X12 cm), with stamps worth Rs 1.30 to the Deputy Establishment Officer (R-IV), Bhabha Atomic Research Centre, Central Complex, Trombay, Bombay-400 085, clearly indicating the subjects for which the forms are required.

BITS OF TEACHING

How do you like the idea of sharing your knowledge with the younger genre? And the idea of preparing teaching material in related disciplines, and participating in team work aimed at innovation and modernisation? Like it? Then you might as well apply for faculty positions at various levels (Professors, Assistant Lecturers and Teaching Assistants) in disciplines like Chemical, Civil, Electrical and Electronic and Mechanical Engineering; Computer Science, Instrumentation, Pharmacy, Management; Biosciences; Chemistry, Economics, Mathematics, Physics; Science and Technology Development, Museum Studies, Engineering Technology and English in the Birla Institute of Technology and Sciences (BITS), Pilani.

All the necessary details are available in the free booklet entitled "Introducing BITS to Prospective Faculty, 1985" obtainable from A.N. Bhargava, Registrar, Birla Institute of Technology and Science, Pilani-333 031. Your request letter should be enclosed in a self-addressed, stamped envelope (30X26 cm) with stamps worth Rs 2.50 and marked 'FR/1/85'.

No hurry! You have one complete year (from May 15, 1985) to ponder over the particulars required, since the institute will be reviewing, more than once, all cases that accumulate during this period.

MAN-MANAGEMENT COURSE

Effective utilisation of human resources is a skill in itself. And the skill comes extremely handy in jobs of every kind

since practically every job—in the government or in the public sector or even in an industry—involves interaction with persons.

The Shri Ram Centre for Industrial Relations and Human Resources offers postgraduate diploma in personnel management, with a view to equipping the participants with essential conceptual knowledge and operational skills required for man-management.

For prospectus and admission form, write to The Administrative Officer, Shri Ram Centre for Industrial Relations and Human Resources, No 5, Sadhu Vaswani Marg, New Delhi-110 005, along with an IPO for Rs 10.

The centre is a little choosy about selecting candidates and the seats are limited to 25. So hurry up! The last date for receiving completed applications is Jul 9, 1985.

The one-year programme, commencing in September 1985, is open to (a) graduates with a minimum of three years' executive working experience in personnel management, industrial relations or related fields or (b) postgraduates in relevant disciplines like Social Work, Psychology, Sociology or Economics. Army personnel and candidates sponsored by organisations will be given preference.

GIC (AAO) EXAM

The Assistant Administrative Officer (AAO-Generalist) Exam conducted by General Insurance Corporation of India (GIC) is to be held on Oct 6, 1985 *instead of Sep 15, 1985* as announced earlier.

Completed applications should reach the advertiser on or before Jul 20, 1985 *instead of Jun 6, 1985*. For details write to GIC, Industrial Assurance Building, 4th Floor, Churchgate, Bombay-400 020.

SPORTS

Got an interview round the corner? Is your preparation complete? Are you familiar with sporting issues? If not, it's time you were. For our research tells us that 'sporting' issues in the news always figure in interviews and written tests. Issues like the football riot in Brussels. The forthcoming Ashes series... Sound answers should tell them you're an all-rounder. And all-rounders always top the list.

FOOTBALL

KICK OFF WITH VIOLENCE

BY NOVY KAPADIA

The Brussels violence, between supporters of Liverpool (England) and Juventus (Italy) prior to the European Champions Cup final on May 29, is the culmination of two decades of intermittent violent episodes at football stadia, all over the world. The death toll at Brussels was 38 and over 400 injured, most of them Italians (including a 10-year-old boy Andrea Casula, the youngest victim and the oldest, 51-year-old Dionisio Febbro, a former soccer player).

In violent episodes during or after football matches in the last two decades, the death toll has often been more than at Brussels but this incident was particularly macabre and sinister for the simple reason that for the first time in football history, a group of fans have indulged in organised violence prior to the start of the match.

It must be stressed that the Liverpool fans who started the riots at the Heysel stadium in Brussels were prepared as they had smuggled flagpoles, firecrackers and knives into the stadium. Also, what is disturbing is the extreme intolerance of the Liverpool fans who began pelting Italian and neutral spectators with fireworks and bottles, resulting in panic, stampede and collapse of a wall and the ensuing casualties.

In previous incidents of football violence, rioting took place after the match, caused mostly by intoxicated spectators unable to bear defeat. For instance, on May 24, 1964, rioting left 300 dead and 500 injured after Argentina beat Peru by a last-minute goal in an Olympic Games qualifying match in Lima. Again on Sep 17, 1968, violence after a second division match in Kayseri, Turkey left 40 dead and 600 injured. On Jan 2, 1970, 66 people were killed in rioting at a local match between Glasgow Rangers and Celtic in Glasgow, Scotland.

Football violence was not confined to Europe and South America only. It spread to Africa and India also. On Aug 14, 1979, violence at a match in Lagos, Nigeria claimed 24 lives. Again on Aug 16, 1980, during a match between traditional rivals East Bengal and Mohun Bagan in Calcutta, there was fighting amongst the fans following a violent tackle on the field. The ensuing stampede left 16 dead and 100 injured. On Nov 18, 1982, 24 people died and 200 were injured in a stampede on an exit ramp in Cali, Colombia after a league match. The stampede began when fans on top of a grandstand began urinating and throwing firecrackers on those below. On Feb 28, 1984, British fans caused nearly \$1m

All in the game: The scene after the rampage at Heysel stadium, Brussels. Inset: Mangled bodies of unfortunate spectators.

damage in and around the Parc de Princes stadium in Paris after a friendly international between France and England, in which the former won 2-0. Again on May 8, 1984, a fan of a British club Tottenham Hotspur was shot dead and 200 of the club's supporters were injured after a rampage through the streets of Brussels before and after a match in the UEFA Cup final against local side Anderlecht.

An analysis of these incidents will reveal that in the past couple of years, football violence

Britain. Rioting mobs, supposedly supporters, indulge in a looting spree ransacking shops and business establishments in the vicinity and destroying public transport, like railways and buses in which they travel. The annual England vs Scotland football match, with a 100 years tradition, has been terminated in England as the vandalism of the soccer fans made London unsafe before and after the match. Why has this phenomenon developed amongst the supposedly phlegmatic British soccer fans?

Sociologists and other experts say that soccer supporters tend to use the game to vent nationalistic fervour, class solidarity and frustrations over unemployment and other problems of modern urban life. Jacques Van Rillaer, a specialist in sports psychology at Belgium's Catholic University of Louvain, feels that noise in sports stadia heightens emotions and spectators get caught up in the emotion of a crowd and act differently than they normally would. Dr George Gaskell, a social psychologist at the London School of Economics, feels that soccer violence in Britain is rampant in areas hardest hit by unemployment and crime. He is of the opinion that football is one of the few remaining institutions where a sort of identity, a source of group pride exists for the deprived people.

It is this identity, coupled with modern economic situations like spiralling inflation and unemployment which have accentuated soccer violence. It must be remembered that the tensions of partisanship tend to be more acute for the working class and unemployed in general. The middle and upper classes always have class loyalties and values and the security to sustain them. For the working class, allegiance to a football team may be their only contact with values outside the narrow concerns of mere survival.

Decline of religion, the splintered family and subsequent deterioration in moral and social values has left a large segment of the youth in Britain bewildered and frustrated. In such a situation, fierce commitment to a football team arouses atavistic feelings as it is the preservation of an image or a cult. This explains partisan commitment but the intolerance of soccer fans is a recent phenomenon, which also has socio-economic and sociological roots.

The chairman of the Liverpool F.C., John Smith, and some opposition MPs in Britain blamed the National Front (a fascist organisation which believes in racial superiority) for the violence at the Heysel stadium. The use of popular sports like football to arouse jingoistic feelings amongst the youth is a practice which started with the Nazis in Germany in the 1930s. It is still being followed in spite of pious homilies by sports administrators that politics and sports should not mix. With increasing publicity being given to sports (most television networks in Europe have live telecasts of the European Cup final), major sports events are being repeatedly used to convey a political message, as is evident from the boycott of the Olympics in 1976, 1980 and 1984 by various nations.

Another reason for violence amongst soccer fans may be traced to that much maligned word 'professionalism'. Basically the word should embody everything good in sports for which you are paid. It is the quest for excellence; but the media has distorted and stretched

THE BLESSED GAME.

The riots, the hooliganism, the violence... the dead and the injured. This is the football scene the world over. But the game didn't always have a bloody history. In fact, about a century ago, football in England was promoted by the Church!

As the Anglican Church was faced with a recruitment crisis leading to fewer intellectuals entering priesthood, the Church decided to propagate "muscular Christianity". As part of this process, the Church promoted healthy pursuits among the working class like football and football clubs. This assumption was based on the Victorian ethic of self-help and an attempt to rid the workers of bad habits like constant drinking.

Above all, the Church encouraged football and sports among the British people because of political anxiety in British society brought on by mounting threats to the country's industrial supremacy from Prussia and the US. In both the latter societies sports had generated widespread combativeness. In Prussia, the gymnastic

movement became a vehicle for militant nationalism while in the US, sport expressed the social Darwinist philosophy of the survival of the fittest. Winning was all important for both American business and American sport. Hence, Britain decided to use football as a social fop as well as an education process for the working class.

Yet another unbelievable characteristic associated with the game in the early days—when the penalty kick was introduced towards the end of the 1880s, many amateurs (Sir Francis Marnin, Lord Kinnaird, Sir Charles Alcock) of clubs like Old Etonians and Oxford University objected to it. They said that the penalty kick was against the ethics of the game, that no defender would deliberately cheat, that he was being harshly penalised for an error of judgment...

Today, be it on the playing field or in the packed stands, it's a different story... a story of drunkenness, unhealthy rivalry, bloody violence, false nationalism...

the word to such an extent that it has come to reflect everything which is sordid and pretentious in the game. For example, Jimmy Hill, noted television football commentator in Britain, defended plays such as stealing a few yards at a throw-in, standing on the ball at free-kicks to prevent them being taken quickly, time wasting, pressurising the referee and body checking elusive opponents and felt they were legitimate. Such plays are at best gamesmanship and at worst straightforward cheating. The media by calling such gimmicks professionalism, has given sport a bad image and confused the legions of fans who now adopt the philosophy that victory must be obtained at all costs, as they see their soccer heroes regularly indulge in acts bordering on cheating. And one can venture to remark that the pursuit of dishonest advantage and the excessive exultation in victory are not the ethics of the working class who support the football teams in Britain. They are the ethics of multinationals, advertising agencies and television companies.

of a society which needs winners to legitimise prevalent enduring inequalities.

The method of gaining advantage through deception has confused football fans, as they would like to associate their soccer heroes with the traditional virtues of manliness, honesty and standing up for their rights. However, the changing values in the football field have left its legions of supporters bemused and frustrated, resulting in intolerance and repeated violence.

To curb football violence, the anachronistic belief that sports and politics do not mix should be shelved. Earnest efforts should be made by all peace loving nations to make sports an ideology to unite mankind and encourage friendship, solidarity and understanding between people. Dishonest advantage in sports must be exposed and not condoned as professionalism. Unless such remedial measures are urgently taken, football stadiums may soon become a platform for war with or without weapons and an outlet for suppressed frustration and violence.

THE ASHES

THE BATTLE ROYAL

Mention 'The Ashes' to any cricket lover and it evokes memories of not just an England versus Australia cricket series but over a hundred years of controversy, excitement and sensation. Basically, The Ashes is a contest between the two oldest cricket playing nations of the world, England and Australia. Yet winning The Ashes can stir emotions with a churning intensity and create a sense of incessant euphoria amongst the victors of the series, either England or Australia.

What are The Ashes? It is not a glittering prize nor a very remunerative financial reward. It is just the charred remains of a century-old length of wood. Yet winning The Ashes brings grown-up men to tears. The origin of The Ashes is also a case of truth is stranger than fiction!

Test matches between England and Australia commenced in 1877. The first-ever Test

Gold dust: The Ashes—charred remains of a burnt stump—the century-old cricketing bone of contention between the Aussies and the English.

at Melbourne in 1877 which Australia won by 46 runs. From 1877 till 1882, eight Test matches were played between England and Australia but not for 'The Ashes'. Then started the ninth-ever Test match between the two arch-rivals at the Oval, Surrey on Aug 28, 1882. This match is generally considered the greatest Test match of all time. Australia totalled just 185 runs in two innings, yet won the match by seven runs, amidst nail-biting tension.

On the opening day of the Test match, Australia were dismissed for just 63 runs. England in reply scored 101 runs in the first innings. Australia got off to a good start in the second innings and were 66 for no loss but crumbled to 122 all out. England needed just 85 runs to win but were bowled out for 78. Australia's fast bowler F.R. Spofforth destroyed England with match-winning figures of 14 for 90. Spofforth, the best fast bowler of his time, with a devastating breakback, was known as the 'Demon'. He used to stay in the countryside in Australia and came on horseback for most of his matches. At the Oval he and his colleague H.F. Boyle bowled 12 consecutive maiden overs, by maintaining a tight line and length. Such was the tension generated at the Oval by this match, that one spectator died from overexcitement and another is said to have chewed clean through his umbrella. This was England's first-ever defeat on English soil and led to national mourning. Hence on the following morning, the *Sporting Times* newspaper printed a mock obituary, which has now become a historic landmark in cricket history, as it led to the initiation of the idea of 'The Ashes'. The announcement was as follows:

In Affectionate Remembrance

of
ENGLISH CRICKET
which died at the Oval
on

29 August, 1882.

Deeply lamented by a large circle
Of sorrowing Friends and Acquaintances
R.I.P.

N.B. The body will be cremated and the Ashes taken to Australia.

Within a matter of weeks, the English team were on the boat heading for Australia, seeking revenge. At a dinner in London before the England squad left, their captain, Ivo Bligh, jokingly declared that he hoped to recover those "Ashes". This joke soon became a symbol of supremacy in cricket.

During the 1982-83 series in Australia, the England team mastered the menace of Spofforth. After Australia had won the First Test, England won the next two Tests and the rubber. To commemorate this victory, some Melbourne women burnt the balls and placed their ashes in the little urn which now rests permanently at Lord's. It was presented to Bligh, since The Ashes were judged to be recovered. Till then it was no more than a lark. The English captain, Ivo Bligh, was a handsome young man and the fashionable women of Melbourne were full of fun (he married one of them). Until Bligh's death the urn containing the Ashes stood on his study mantelpiece. After that it was handed over by his family to Lord's where it will remain probably forever.

If Australia win against they do not take the urn containing 'The Ashes' back with them. The urn always remains at Lord's. The team winning

the series is said to have won The Ashes. In a draw, the side which had won the previous series is considered to have retained The Ashes. For instance, if the current 1985 series ends in a draw, then Australia will have retained The Ashes, as they had won the previous series at home in 1982-83, by 2-1. Incidentally, the 1985 Ashes series is being commercialised as it is being sponsored by the Cornhill Insurance Co. There will be prize money for each Test match and the winner of The Ashes.

The term 'Ashes' was popularised by cricket captains of both countries at the turn of the century till it became part of folklore. Finally England captain, P.F. Warner's book *How We Recovered The Ashes* after the 1903-4 tour, immortalised the term.

There have been several memorable series in the fight for The Ashes. In 1936, under the captaincy of Gubby Allen, England toured Australia and after winning the opening two Test matches, lost the series 2-3. So for the first and only time in cricket history, a side recovered from being two matches down to win a series. Again in the 1956 series, England's off-spinner Jim Laker took all 10 wickets in an innings and

12 wickets in the match at Old Trafford, Manchester—the only bowler in cricket history to have achieved this feat. Laker took 46 wickets in that series which England won 2-1. There have been several thrilling finishes also. In July 1902, at Old Trafford, Australia beat England by three runs, whereas in January 1983, England beat Australia by the identical margin of three runs in the Fourth Test at Adelaide. Australia's largest victory margins have been 5-1 in 1975-76 and 4-0 in 1958-59 at home and 4-0 in 1948 in England when the Aussie team led by the famous Don Bradman, was considered one of the best cricket teams of all time. England's largest victory margins have been 5-1 in 1978 and 4-1 in 1928 and 1932-33. All these triumphs were achieved in Australia. Till the commencement of the 1985 series, Australia have won 91 Test matches, England 83 and 73 matches between the arch-rivals have been drawn.

The West Indies may be the undoubted cricket champions of the world, but the fight for The Ashes between England and Australia, with its century-old tradition, will always remain a significant event in cricket history.

N.K.

AROUND THE TRACK IN 30 DAYS

Athletics

The 24th All-India Open Track and Field Championships concluded at the Chandrasekharan Nair Stadium in Trivandrum on May 5, with a thumping triumph for the Railways. They won both the team championships (men and women), collecting 16 golds, 11 silvers and five bronzes. The women performed better than the men, as compared to their previous performances. Significantly, the only two national records set were by the women athletes, and that too in the heats. P.T. Usha clocked **11.6 sec** for the 100 m sprint and M.D. Valsamma broke the 100 m hurdles record with a time of **13.9 sec**. The top athlete was, of course, P.T. Usha who bagged five golds—three individual titles and two relays.

Results:

Men: 100 m: Adille Sumariwala 10.8 sec; **200 m:** Anand Shetty 21.6 sec; **400 m:** Charanjit Singh Bajwa 48.2 sec; **800 m:** Rajinder Sharma 1:52.6; **1,500 m:** Bagicha Singh 3:49.1; **10,000 m:** Vinod Kumar Pokhriyal 29:56.4; **marathon:** Murlidhar Misra 2:27:02.0; **110 m hurdles:** Vijay Kumar 14.8 sec; **400 m hurdles:** Vasant Singh 53.2 sec; **3,000 m steeplechase:** S. Pachiah 8:53.8; **high jump:** Nelluswami Annavi 2 m; **pole vault:** Sunder Singh Tanwar 4.60 m; **shot put:** Balvinder Singh 17.85 m; **discus:** Ajmer Singh 55.04 m; **hammer:** Raghubir Singh 62.36 m; **javelin:** Nirmal Singh 72.44 m; **decathlon:** Sabir Ali 6,747 pts; **4X100 m relay:** Kerala 42.4 sec; **4X400 m relay:** Railways; **20 km walk:** Baldev Singh 11:40:24; **50 km walk:** Manipal Singh 5:01:59 sec.

Women: 100 m: P.T. Usha 11.8 sec; **200 m:** Shiny Abraham 24.4 sec; **400 m:** P.T. Usha 52.9 sec; **800 m:** Shiny 2:09.0; **1,500 m:** Suman, Rawat 4:36.2; **3,000 m:** Suman 10:02.4; **100 m hurdles:** M.D. Valsamma 14.4; **400 m hurdles:** P.T. Usha 56.8 sec; **high jump:** Elizabeth Mathai 1.62 m; **long**

RECORDS OF THE MONTH

Italy's Maurizio Da Milano set the best world performance in the 25 and 30 km walks on the track, at San Donato near Milan on May 5. Maurizio, an Olympic walk champion at Moscow in 1980, clocked **1:44:54** and **2:06:27** for the two distances respectively.

Both previous records were held by East Germany's Rolf Kowalky—**1:45:53** and **2:06:54**.

East Germany's Lutz Heselich established a new world record in the sprint event (last 200 m of the 1,000 m race are timed) by clocking **10.32 sec** at an international meet in Tbilisi on May 7. He broke his own previous record of 10.44 sec.

jump: O.M. Rosilly; **shot put:** Bhaktarwar Khambatta 11.79 m; **discus:** Vijaymala Dutta 40.62 m; **javelin:** Razia Sheikh 45.14 m; **heptathlon:** Anees Verghese 4,615 pts; **4X100 m relay:** Railways 47.5 sec; **4X400 m relay:** Railways 3:46.2.

Football

The **Federation Cup** Tournament—India's premier club-level tournament—ended in Bangalore on May 19 with victory for East Bengal who defeated Mohun Bagan 1-0 in the final. East Bengal will be the first Indian club to play in the **Asian Cup** for champion clubs.

The **European Champions Cup** final—a knock-out tournament played between the league champion clubs of all European countries—was played at the Heysel stadium on May 29. The best teams in Europe, Liverpool F.C. of England and Juventus from the city of Turin in Italy made it to the final. What was expected to be a festival of football, turned out to be the 'Massacre of Brussels'. Before the match could kick off, trouble started in the stands as the Liverpool fans pelted the Italian

altercation increased, one of the walls collapsed due to the resulting stampede. There was absolute mayhem and in the rioting more than 40 people died, mostly Italians and more than 250 were injured.

The match was started much later. Juventus duly won by a solitary goal, courtesy a penalty kick by Michel Platini, who is the current European footballer of the year and also captain of France.

Hockey

Indian Airlines (IA) beat Pakistan International Airlines 4-1 in the final of the revived **Gold Cup** Tournament in Bombay on Apr 26. This was their third victory in the tournament.

IA was once again in the news when it won the **Beighton Cup** defeating Electrical and Mechanical Engineers (EME) Jalandhar, by a solitary second-half goal in the final in Calcutta on May 4. This was the fourth successive triumph for IA this year, after winning the **Muzaffarnagar Trophy** and Bangalore's **Clark Trophy** (both small tournaments) and, of course, the prestigious **Bombay Gold Cup**.

Incidentally, this is the **oldest hockey tournament in India**. First held in 1985, it is a Calcutta-based tournament. The original trophy, donated by one T.D. Beighton—Legal Remembrancer to the Government of Bengal—was stolen at Asansol, and replaced with a replica by the Asansol Recreation Club in 1920.

Tennis

Martina Navratilova (USA) continued in her winning ways as she won the \$1,50,000 Virginia Slims circuit tournament at Houston on May 5, defeating the young American Elise Burgin 6-4, 6-1. This was the 105th tournament win of her career and sixth this year.

At the \$2,00,000 Invitational Gunze Tournament in Tokyo, five times Wimbledon champion and now in retirement, Sweden's Bjorn Borg dished out some good tennis to beat compatriot Anders Jarryd 6-4, 6-3 in the final on May 12.

SANJEEV GUPTA

A Slip Of The Tongue

Rajendra K. Gaur of Bikaner was quick enough to spot a 'catch' in the **Sportsperson** column of our May issue. 'Long-off' should be read as 'long-on'. And 'long-off' is the off-side fielding position close to the boundary in the area between cover boundary and the straight point close to the boundary from the 'non-striking end's stumps'. It may also be termed deep mid-off.

Addenda to Masters Of The Game

Football

Asian Cup: Saudi Arabia (b China 2-0) 1984
Asian Games: Iraq (b Kuwait 1-0) 1982

Hockey

Some records

● Most Olympic titles have been earned by India—eight (1928 to 1956, i.e., six times in a row, then lost to Pakistan in 1960, beat Pakistan in 1964 and won again in 1980).

BANKING

VARIED INTERESTS

The Reserve Bank of India in a bid to inject a greater degree of efficiency into the Indian economy, decided to discontinue the prevalent system of adhering to a fixed set of interest rates for deposits of varying durations. According to an announcement in the first week of April this year, banks were given the freedom to pay an interest rate of their choice for short-term deposits (maturing over a period between 15 days and one year) subject to a ceiling of 8%. As expected, the new decision triggered off a new spirit of competition, jolting the lethargic banking system out of its slumber. Suddenly frenzied activity became the order of the day for banks, with each bank trying to lure more clients with enticing interest rates.

The Indian Bank's Association (IBA) which represents 95% of the nation's banking system including a few leading nationalised banks, in an attempt to frustrate the RBI move of injecting cut-throat competition, hastily conjured up an agreement aimed at restoring a uniform rate structure. According to this agreement, the rate of interest on deposits for 15 days to 45 days was fixed at 4%, for 46 days to 90 days at 5%, for 91 days to six months at 6%, for six months to nine months at 7%, and for nine months to one year at 8%.

It was then that international banks decided to cash in on the situation and decided to pay exorbitant interest rates to attract short-term deposits. Cause enough for the IBA to rescind its decision as fast as it had been announced. It too decided to follow in RBI's footsteps.

And then, just when it appeared that a true spirit of healthy competition had been inculcated in the country's banking system, the RBI, in a totally unexpected move, decided to withdraw its decisions bringing down the rates of interest to the levels prevailing prior to its April announcement. All this apparently because commercial banks had failed to take the scheme in its true perspective. Said the Governor of RBI, "It was hoped that individual banks would so fix the rates as to safeguard their current and savings accounts and simultaneously bring about better portfolio management. However, the approach of banks has been such as to prevent the emergence of efficient portfolio management."

The two controversial and dramatically opposing decisions taken by the RBI in quick succession are bound to jeopardise the efficiency of the banking system further as it is already running at extremely low profits. While the first decision inculcating competitiveness would have proved beneficial in the long run as it would have helped banks tone up their woefully inefficient customer services, the latter decision will once again cause them to revert to their original soporific existence characterised by a marked indifference to the interests of customers.

EC's RULING ON NRIs

CLOSING THE DOOR

In a bid to minimise interference of non-resident Indians (NRIs) in the internal affairs of the country, the Election Commission (EC) has rejected its demand for voting rights in Lok Sabha and Assembly elections as also its right to have representatives in these bodies. For it believes that granting of such rights would categorise them, as ordinarily resident in their home constituencies in India — obviously a far-fetched idea!

The EC also turned down the plea that the NRIs, while being subjected to all Indian laws, did not have any lawmaker as their representative on grounds that since the Lok Sabha and the state Assembly elections were held directly from territorial constituencies, there was no provision for any functional representation. And under the existing law only those persons whose names are registered in the electoral rolls are entitled to vote in these elections. An essential pre-requisite of such registration is the ordinary residence of the voter in the Assembly constituency.

However, the President, the Vice-President, Governor, Cabinet ministers and their spouses, members of Assemblies and voters with service qualifications are exceptions to this rule under the Representation of Peoples Act. These categories of persons, by a legal fiction, were deemed to be ordinarily resident in the constituencies they would have been ordinarily resident of had it not been their holding such offices to remain away from their places in connection with the duties of the state in public interest. Included among the category of people with service qualifications are persons employed under the Union in posts outside India. These persons, although living abroad, are

tied as voters in their home constituencies and the postal ballot facility is also extended to them. And, as the report categorically states, "But the persons living abroad on their own volition and in their own private interest cannot be equated or treated at par with persons employed under the Government of India in Indian missions abroad." The EC has even gone to the extent of rejecting postal ballot facilities for such categories of persons as R.M.S. employees, road transport workers and airlines staff although they were already registered as voters in the electoral rolls and consequently their demand carried more weight.

Apart from this, the postal ballot facility, if extended would be highly impractical, too. This is because at present a period of 20-25 days is normally allocated between the last date of withdrawal of candidature and the date fixed for counting of votes. And this period is insufficient for sending postal ballots to non-resident Indians in various parts of the world and receiving marked ballot papers before the time fixed, for counting of votes. Moreover, the implementation of such propositions would only generate discontent among people living in India particularly those living in different states and cities who would like to register themselves as voters in their native constituencies. This would also complicate the issue of appointment of diplomatic and consular officers as returning officers and electoral registration officers. The existing law envisages to have only one registration officer per constituency. And while it is possible to appoint diplomatic and consular officers as assistant electoral registration officers it would entail appointing each one of them as assistant registration officers for all the 4,000-odd Assembly constituencies in the country since people of different states and constituencies might be residing abroad.

The Election Commission's decision then should go a long way in curbing infiltration of NRIs having ulterior designs on their country of origin.

PUBLIC SECTOR OUTLAY

CARDS ON THE TABLE

The Planning Commission has approved a total public sector outlay of Rs 1,80,000 crores with the outlays for the Centre, states and Union territories fixed at Rs 95,734 crores, Rs 80,498 crores and Rs 3,768 crores respectively for the Seventh Plan. While this sets at rest certain uncertainties regarding plan size, it also envisages an estimated net resource gap of Rs 12,000 crores to Rs 15,800 crores at the 1984-85 prices. However, the size of the private sector outlay, initially estimated to be around Rs 1,40,000 crores, is yet to be finalised. Quite expectedly, owing to further decline in money value due to inflation the plan size in real terms is less than estimates made in June last year. On the other hand there has been a considerably narrowing down of the resource gap. For the latest study of the resource position of states by the Commission indicates that over the next five years additional resources of Rs 22,000 will be made available which is an increase of Rs 7,000 crores over the earlier estimate.

Most likely, the proposed consignment tax which has already gained the approval of the National Development Council, will make a significant contribution towards the enhancement of the states' resource position. As it is, a general widening of the tax base is expected during the Seventh Plan period.

Since the budget of 1985-86 envisages deficit financing of well over Rs 5,000 crores, for the remaining four years the scope for deficit planning would not be more than Rs 2,000 crores annually. Under such a situation it is imperative that a tight check be kept on inflation which should not be allowed to exceed beyond a single digit.

Meanwhile, the Centre will, during the Seventh Plan period, be giving the states assistance of around Rs 30,000 crores, that is, an average of Rs 6,000 crores annually. The plan allots topmost priority to the irrigation, transport and power sectors, a sum of Rs 16,000 crores has been allocated to irrigation and flood control while for power and railways the allocation has been stepped up by 75% and 85% respectively. However, there will be a substantial decrease in allocation for industry and minerals and the emphasis is likely to shift to modernisation and replacement of worn out machinery. And, hearteningly, the outlay for science and technology has been doubled while that for health and education increased by 100%.

The target of the Seventh Plan is a minimum of 4% annual growth in agriculture, a 7% industrial growth and an overall growth rate of 5.2% annually for the five years of the Plan period. The draft plan will, according to indications, be presented to the Planning Commission by July-end.

JYOTSNA SHARMA

BETTER ENGLISH

(Continued from page 50)

iron and is lighter. The development of the steam turbine and of the internal-combustion engine depends upon Bessemer's work.⁴

It will be seen that whereas paragraph A begins with a clear topic sentence and develops it with well-connected supporting sentences, in paragraph B there are at least two occasions (see the italicised sentences) when the author leaves the straight path and violates the principle of unity.

Unity is not the only quality that a good paragraph has. There are two more, *cohesion* and *coherence*. Cohesion refers to the way one sentence is grammatically related to another. It ensures a smooth transition. There are many devices for bringing about smooth transition. Coherence, on the other hand, ensures 'thought unity' or 'sense unity' in a given piece of text. In other words, it shows how various sentences in the text make sense together. It is not often that cohesion and coherence are properly distinguished. The crucial thing is to know that there can be (discourse) coherence in a text without there being (grammatical)

⁴ibid.

cohesion in it. Take the following example:

Question: Does the world face a famine threat?

Answer: Are you testing how pessimistic I am?

It is obvious that the two sentences (both in the form of questions) though not grammatically related, are perfectly meaningful. In other words they are discursively coherent without being grammatically cohesive.

One of the common ways of creating cohesion in a text is the use of certain fixed words and phrases denoting different kinds of relationships like addition, comparison, illustration, concession, etc. Some of the more important ones among them are

Addition: and, against, also, besides, finally, furthermore, moreover, next one, another, last, in addition

Time: first, second, etc, soon, before, after, finally, then, later, next, former, latter, afterward, at length, immediately, meanwhile, in the meantime, until

Place: here, there, beyond, nearly, opposite to, adjacent to, on the opposite side

Purpose: to this end, for this purpose, with this object

Comparison and contrast: however, but, yet, still, nonetheless, on the con-

trary, nevertheless, instead, on the one hand, in contrast, although, meanwhile.

Examples: for example, for instance, to illustrate, the following example

Concession: although it is true that, granted, naturally, although you could say that, of course

Conclusion, summary and result: in summary, in conclusion, to conclude, to sum up, in brief, in sum, in short, as I have said, as stated before, in other words, to be sure, as a result, consequently, therefore, hence, thus, in fact, indeed

Once the one-topic-one-paragraph principle has been understood, the next thing to do is to learn about the ways in which a given topic can be developed into a paragraph. If we apply the analogy of the composition of a sentence, we can say that in a paragraph the topic sentence is the control unit and all other sentences are support units. However, these support units are literally meant to support, i.e., help develop the theme of the topic sentence. An analytical study of a large sample of paragraphs will reveal a finite number of typical ways in which paragraph development takes place.

(To be continued)

Answers to

TEST YOUR WORD POWER

- arduous:** C: difficult to do or achieve; laborious. In Hindu belief, Ganga came down to earth after King Bhagirath's arduous penance which lasted for several centuries.
- brah:** D: aggressively self-assertive; impudent; cheeky; saucy; hasty; rash. Abdul Rahman Swareddehab, the new leader of Africa's largest nation, is neither an unknown quantity nor a brash young soldier, as some of his African counterparts were when they seized power.
- bully:** D: person who uses his power to frighten those who are weaker. In world trade, Japan plays the bully—stomping into foreign markets and usually dominating them.
- commemorate:** A: to honour the memory of; celebrate. Grand Trunk Road has recently been rechristened Sher Shah Suri Marg to commemorate the ruler who was responsible for laying it out in its present form.
- connote:** A: to suggest in addition to the fundamental meaning; imply. In most Indian languages the word guest connotes a special status; a person who must be honoured, respected, looked after; indeed, one whose wishes must be placed above one's own.
- culminate:** A: to come to a final result or effect; reach the highest point. In 1973, demonstrations in Gujarat spread to other states and culminated in the imposition of emergency rule by Mrs Gandhi in 1975.
- devout:** B: earnestly religious; pious. Every devout Hindu wishes to be cremated on the ghats in Varanasi, the holiest city in India.
- hoist:** A: to raise aloft, especially by some mechanical appliance. Forty years after their victory over Germany, aging veterans of the Soviet Union's struggle in World War II paraded past the Lenin Mausoleum in Red Square, their chests bedecked with medals, the flag that Soviet soldiers had hoisted over the ruins of Berlin in 1945 leading the way.
- lofty:** C: of great height. Situated in the Garhwal Himalayas where the lofty peaks rise up to the sky, Gangotri is the home of the daily Ganga.
- lure:** A: to tempt; attract; recall; entice. The abolition of estate duty might just lure a lot of non-resident Indians back to India.
- maverick:** B: a non-conformist; person who dissents from the ideas of an organised group. To much of the outside world, Romania is remembered as the East Bloc maverick that condemned the Soviet invasions of Czechoslovakia and Afghanistan and defied Moscow's call to boycott the Los Angeles Olympics.
- pest:** C: troublesome or destructive thing, animal, etc. Experts in bio-technology are working to amplify the effects of bacteria and fungi that destroy weeds and pests by natural means.
- primate:** B: highest order of mammals including monkey and man. The great apes, cousins to the homo sapiens, may be wiped out by the end of the century if protection is not given to them and the other primates, says the World Wildlife Fund.
- psyche:** B: spirit or mind; human soul; mentality. Vietnam was America's longest, most debilitating war, and its memory still haunts the national psyche.
- reminiscent:** C: suggestive of; recalling past experiences. The pattern of violence today is disturbingly reminiscent of the beginning of the Opposition's 1973 campaign against Indira Gandhi.
- resonate:** A: to produce an echo. Huck's (Huckleberry Finn) story resonates in America's heart because it is about freedom understood in an American way.
- rigid:** B: strict; harsh; inflexible; unbending. For the past five years, Chinese leader Deng Xiaoping has instituted sweeping economic reforms, moving away from rigid state controls and closer to the free market system.
- salute:** B: difficult to perceive or describe because fine or delicate; complex. Animals know instinctively how to display the patterns of colour on their bodies as signal flags communicating subtle messages to other creatures.
- severance:** A: to pass through, over or across. So great is the volume of goods that traverse the Grand Trunk Road that large sections of the road have to be remodelled every six months.
- wares:** D: goods for sale; merchandise. Comdex, the huge trade show at which personal computer-makers display their wares to dealers, has always been a high-spirited affair overflowing with hype and hoopla worthy of a glamorous growth industry.

Vocabulary Ratings:

20-18 correct	exceptional
17-15 correct	excellent
14-12 correct	good

A CAREER IN TEA

Wanted: a top-flight, well-paying managerial job but away, away from the metropolitan scramble. For an outgoing, sociable young man who loves entertaining, the free country air and his evening round of tennis.

If that query is fed to an appropriately programmed computer, there is likely to be just one solution the screen will flash: tea gar-

den executive.

Prerequisite qualifications, you enquire. Engineering or agricultural degree, public school background. MBAs welcome, but management degree isn't really a must, the computer would add, as an after thought.

Computers of course are faceless, cryptic question boxes, monosyl-

labic if they can help it. So we went to an old tea hand, a tea garden manager for many years who is now posted in the Calcutta head office of his firm, to find out more about tea industry jobs and life in the gardens. Over to him: "It depends on one's temperament of course, but I wonder if I would ever have had so much of life if I wasn't in tea. Job satisfaction, yes, that's it. You are up six in the

Sponsored By HMP Group of Tea Companies

morning, you put in a good day's work (without having to worry about traffic jams on way to office and back), you have your lunch and the afternoon lie-back at home, and you are either entertaining or calling on neighbours in the evening. And in the weekends of course you drive with the family to the club—for sports, the get-to-gethers, the dances, the jam sessions, the library and of course the evening film show. It is a fast-paced life, but in idyllic, sylvan surroundings."

But how well does tea really pay? It depends on the firm, of course; the average starting emoluments range from Rs. 1,500-2,000. But that's just half the story. For, the perks are fabulous. Furnished accommodation—no two-bedroom hole perched in the 12th floor of a highrise, but vast bungalows manned by an army of servants whose wages the company takes care of. The company also sees to your medical expenses, children's education in expensive boarding schools, club subscriptions and what have you. You could also apply for loans for buying your car, and of course the company foots your fuel bill.

Normally, the first post in the gardens is that of assistant manager. Most gardens have two assistant managers, one in charge of the factory and the other to supervise work in the field. The ideal qualification for asst. manager (field) is a degree in agriculture, but you could be selected even if agriculture is Greek to you. What most firms actually look for is good upbringing, quick thinking ability and, most important, leadership quality. The tea garden labour, mostly adivasi emigrants

from south Bihar or Nepalia, looks to the managers for guidance and leadership, and it is the managers' responsibility to look to their well being as well as get work out of them.

"You could be woken up at midnight to settle a quarrel between a labourer and his wife," said one tea-estate manager. "You are expected to be just, fair as well as strict. You are their *mai-baap*. And woe betide you if you don't have the personality." He recalled an anecdote from his early life in the gardens, in the 50s when he was an assistant manager in the Dooars. "While I was on my rounds one day I found that work had stopped round some bushes. The labourers had huddled together and seemed to be tense. On enquiry they told me there was a snake hiding in the bushes. At that moment the manager, a burly Scotsman, turned up. "You know what you have to do?" he asked. I said I didn't. "They expect you to kill the snake," he said. I was scared to death, but mustering all my courage I picked up a stick and went for the snake. I had to kill the snake; there was no way out."

T. Barooah, Director-General, Indian Tea Association, perhaps put it best when he said: "Tea is perhaps the only industry where managers virtually live with the labour." And the result of the experience is a unique capacity to understand labour, which could be of much value if you wish to shift to another line after some years in the tea gardens. Shifting to other lines is no problem at all if you have the normal professional qualifications like MBA or an IIT degree. But even if you aren't so well quali-

fied, as an ex-tea planter you will always be considered good 'officer material', with much the same prospects as an ex-service man. But chances are you would never wish to leave tea. As the saying goes in the industry, "Once in tea, always in tea."

But what's your career graph going to be like if you choose to adhere to that saying. Well, though there are not too many promotions in the industry, the increments are big. Assistant managers become full managers after about 10 years, though some firms have intervening positions like Deputy Manager. If it's as a manager you retire, you could be drawing well over one lac rupees a year. But it is possible you could be promoted to the post of Senior Manager or Superintendent if you happen to be employed in big firms. Officers holding these designations oversee a group of gardens.

You could also be transferred to the head office at Calcutta on a senior executive marketing post. Normally, such transfers are more likely when you are still assistant manager. Full Managers of course are valuable trained material, and following a long tenure in the gardens, firms sometimes do bring them over to Calcutta with promotion to the coveted post of Visiting Agent or Advisor. Visiting Agents oversee even larger groups of estates than Senior Managers or Superintendents, being usually based in Calcutta. And of course there have been instances of tea estate Assistant Managers reaching the very top in his firm. One such success story is of S.K. Mehera who retired recently as President of Tata Tea (formerly Tata-Finlay) Ltd.

Sponsored By HMP Group of Tea Companies

One reason why tea is such a challenging career today is because the industry is poised for tremendous growth. India is the largest tea drinking nation in the world, and consumption is increasing every day. But even after meeting this huge domestic demand, the industry earns 7-8% of the nation's foreign exchange earnings through export. Last year tea netted Rs. 744 crore from sales abroad, the highest by any single commodity. As T. Borooah commented: "A sense of buoyancy now pervades the industry, after two years of prosperity." Much of the recent profits are likely to be ploughed back into the gardens to improve crop quality, extend plantation areas, better drainage and irrigation facilities and also install new and more modern machinery in garden factories. With so much development in the offing, the young recruit should find real challenge in his work.

Traditionally tea has attracted the best talent in the country. Indeed, till about a decade ago, it was a very closed circle from which young garden managers were selected, usually on recommendation. As one tea executive said: "Appointment ads in papers, no, that was never done." Now of course that exclusivity has virtually disappeared and advertisements for openings do appear in appointment pages. So keep a lookout and rush your application as soon as you see one. The competition, we can assure you, is going to be tough.

The gardens, as you obviously know, are mostly located in Assam and north Bengal. There are also gardens in the south on the Nilgiri

slopes, and after Calcutta, Cochin is the biggest auction centre. Auctions are also held in Amritsar, Gauhati and Siliguri besides London, Colombo, Mombasa (Kenya) and Chittagong, but the one at Calcutta is by far the largest. In the auctions, a wide spectrum of buyers from home and abroad come to bid for tea brought from gardens around the country. Since tea estates are spread over vast and often remote areas, it is difficult for gardens, particularly the smaller ones, to expose their teas to a large number of buyers. The auctions help here by allowing the tea to be seen by the maximum number of buyers, thus generating competition and ensuring that it is sold at the best prevailing price. There is perhaps no other industry in the world where the producer is able to dispatch his product and leave the entire process of marketing to an organization hundreds of miles away. The auctioneers are a rare breed of executives: the tea tasters (see following story) Tea tasters form the core of tea professionals in Calcutta and other auctioning centres.

But to return to the gardens, how really is tea grown? The story begins in a plot reserved for selected tea trees from where the seeds are acquired. The trees there are allowed to grow to their full size and blossom. The seeds are collected and planted in a nursery. The seeds germinate soon, and within about a year the young plants are ready to be transplanted in the field—their permanent home. Four years later, when the plant attains a height of about 2 metres, it is pruned. Much care is taken during this period of growth with regular manuring and the applica-

tion of insecticides. Attention is also paid to the drainage in the gardens, as nothing is more disastrous to tea shrubs than stagnant water. The tea leaves are plucked from March through November. The shrubs of course are never allowed to grow beyond 2 metres.

After the leaves are plucked they are taken to the factories for processing; there is a factory in most gardens. The leaves are first 'withered', that is, rid of excessive moisture, sometimes by application of hot air. The leaves are then 'rolled' to impart them the characteristic twist and to break the leaf cells so that its juices are exposed for fermentation to set in. During fermentation, the tannin in tea is partly oxidised and the leaf changes colour and turns into a bright coppery-red. The final operation is 'drying' or 'firing'. The drying machine is the largest machine in the tea estate factory; the essential function of this process is to arrest further oxidation of the leaf and to remove almost all moisture. The tea coming out of the drier is sent through sieves with graduated mesh, so that the final packages are of uniform-sized leaves.

They are then graded and packed in plywood chests with linings of aluminium foil and paper, and ready for their adventurous journey to all corners of the globe. The process outlined above is generally known as the 'orthodox' method; a second important variation is that in which the CTC (Crushing, tearing and curling) machine is used. Here the roller is dispensed with and, by the use of the machine, the manufacturing time is greatly reduced.

Sponsored By HMP Group of Tea Companies

CTC of course is a relatively recent introduction; it has been the orthodox process that planters have followed since the 1830s when the industry in India dug its first tentative roots. Tea of course was known to Europeans since the 17th century and to the Chinese and Japanese for centuries. Ramusio, a noted Venetian traveller, first brought the beverage to the notice of Europe in 1559 after travels to the Far East where it was already widely cultivated then. By 1600 the Dutch had begun shipping tea to the continent, but England, eventually to emerge as the largest consumer of the beverage, remained strangely casual to it in those years. The British royalty however took the lead in taking to tea though it was only in the late 1780s that the beverage, according to Northcote Parkinson, "descended from the palace to the cottage." The foundation and growth of the tea industry in India is one of the great romances of the 19th century. Until about 1830, all the world's tea came from China and tea drinking was essentially identified with that country. Botanically known as

"Camellia", the plant was first identified in India in 1823 as wild growth in parts of Assam by Major Robert Bruce, an agent of the East India Company. It however took a lot of persuasion and assurances of concessions before British capitalists ventured to invest in the Assam gardens.

But the quick success in Assam lured many other to take up this lucrative business and a tea committee was formed in 1834. Seen in retrospect tea is one of the earliest industries developed by British business houses in India. Britishers were largely involved in the industry till as late as the 1970s and no wonder tea circles are still so *pukka*.

So, this is it. Tea is an industry that is thriving, poised for accelerated growth, an industry that has so much history behind it, that has been built up by men of great enterprise and courage and that is India's pride today. Not only is India the world's largest tea producer, it is also here that the best tea is grown—the delectable Dar-

jeeling. If you join tea, you will be part of a great tradition and a part of the dynamic new India. Give it a try. You will never regret it!

TEA TASTERS : THE PROFESSION OUTSIDE THE GARDENS

What if you are interested enough in tea but unwilling to work in far away gardens. The computer sure has an answer to that sort of problem. Become a tea taster, it advises. Interested? Read on to learn more about this remarkable profession.

A look at the dry leaves, in square aluminium containers, a sniff of the aroma, then a sip of the liquor in fine china cups, rolling it in mouth for, say 15 seconds, and spitting it out. "Knobbly, fairly brisk, 23", the hastily noted verdict. Seven hundred such exercises perhaps over the day, plus seeing to the management, sales and market condition for the company as well as auctioneering—it is several jobs rolled into one. But then, tea tasting is a unique profession, with

Sponsored By HMP Group of Tea Companies

less than 500 people all over the world in it. Calcutta, the world's tea capital, has over 150 tea tasters employed in the several broking and export firms. There are tasters employed in the several broking and export firms. There are tasters too in London, one time nucleus of the world tea trade; in Colombo, Kenya and in the Indian centres of Gauhati, Siliguri, Cochin and the Nilgiri town of Coonoor.

Small though their number, the tasters are indispensable to the tea industry. Every senior executive in tea *broking* firms is an accomplished taster, so vital is tasting. Indeed, one oft quoted definition describes tea brokers as those trained in the art of "feeling seeing smelling and valuing" tea. Essentially, of course, tea brokers, like all brokers, are the middlemen. And exceptionally reliable middlemen. Planters in Assam, Cachar and Darjeeling, the Dooars and Terai in north Bengal, after processing and packing the tea in wooden chests, ship the produce to Calcutta (Cochin if it is Nilgiri tea) and then, wash their hands off it. Marketing is the business of brokers.

The brokers take over as soon as the chests arrive in Calcutta. Samples of leaves are taken from selected chests from each garden, before they are sent to the warehouses, and these samples are distributed among the buyers.

Meanwhile the tasters in the broking firms value the samples, and some buyers, who employ tasters too, make their independent valuations. Agents of foreign buyers correspond with importers, enquiring about market conditions in the

respective countries and reporting to them the sample valuations. By the end of the week all consultations are completed and the buyers ready for the coming week's auction.

The Nilhat House Auctions in Calcutta are the largest in the world. Some 3 million kgs of tea come under the hammer here every week, and about 50 per cent is sold to foreign buyers. Auctions have been held in the same premises since 1861 (the first recorded public tea auction was in London in January 1839); the auctioners are mostly executives of a Calcutta based company, acting for the Calcutta Tea Traders Association.

Bidding is started at the price recommended by the broking firm's tasters. The bids come in fast especially if demand is high. The costliest teas are the Darjeelings, with prices reaching about Rs. 400 per kg. The United Kingdom remains even today the largest buyer of tea, though British imports have declined over the years. Russia and the Gulf countries, the US, Australia, Canada and some West European nations are other major buyers of Indian tea. Top quality tea is lapped up by the West Asian oil countries and West Germany, and also Japan. The British penchant for choice tea has much mellowed over the years. Indeed were it not for the Germans and the Arabs, and of course the Russians who ship out most of the not-so-good-but-still-expensive Darjeelings, the legendary mountain plantations would long have been dead.

Acquiring professional "tea connoisseurship" requires years of tast-

ing. "You taste and taste and taste before your palate learns to distinguish those subtle differences," explained one tea taster. For the first few years, the freshers simply sip liquor tasted by senior professionals and check on their valuations. It takes years before the initiate can confidently pronounce on tea quality. If the demand on the palate is so exacting, how are fresh tasters recruited? Tea tasters admit there is no foolproof selection test though what are checked for are the abilities for quick thinking, discrimination and analytical reasoning abilities—abilities demanded in any management career. For tea tasters, after all, are essentially management executives; there are several MBAs today in the profession.

Which raises the question: why do tea tasters have to concern themselves with management and sales? Tasting and valuing should be enough of a job by itself. "It's always been that way", explain tea executives in reply. "The first planters were the first tea tasters." Tea tasters, in other words, have always been traders first, and tasters second. Tasting is an aid to selling and since tea can be valued from only a precise knowledge of the market demand and the prevailing prices, marketing and tasting can't be two separate compartmentalized jobs.

Some tasters don't just value tea, they advise gardens too on bettering quality. Indeed, some of the larger plantations employ in-garden tasters. Processing defects, transshipment faults, every minor detail that can lower tea quality is considered. Tea leaves are very absorbent and it is important that the

Sponsored By HMP Group of Tea Companies

wooden chests for transhipment are built of properly seasoned panels. Otherwise the leaves pick up what tasters describe a 'chesty' taint. If the glue used in the chests is inferior, the leaves will have 'cheesy' taste.

Tasters indeed must have encyclopaedic memories, for the variety of taints and flavours is vast, and valuation must sometimes be made considering such factors as the garden's crop quality history and the shelf life of the packaged tea—exported tea is consumed after weeks of shipment.

A taster collects much of the initial clues of leaf quality from seeing, feeling and sniffing the sample tea, placed in aluminium containers on the tasting room tables. Long rows of the containers with corresponding liquors in cups line the tables, and a taster works his way down the rows, valuing each sample in less than half a minute.

An assistant, keeping pace, notes down the valuations. "Knobbly, fairly brisk, 23." 'Knobbly' is tea jargon for the look of the leaf, 'brisk' signifies a particularly good quality taste, 23 is the valued price in rupees per kg.

The tasting liquor is usually brewed from 2.5 gms of the sample leaves in just boiling water. Infusion time is 6.8 mts, and the liquor is ready for tasting. Sometimes milk is also added.

Tea tasters possess the most sensitive palates, trained for years to register the faintest taints, but they still might err. But, in an age of sophisticated technology, should not a more reliable, more scientific valuing procedure be adopted—chemical analysis, for instance? Industry experts think not. Chemical analysis, they confess, can be a substitute, but only to a certain extent. The final tasting must always have to be left to the human

palate. "You can't taste in test tubes", sums up one broker. "The taster is indispensable."

The tasters' salary packets are no different from other managerial wages. And their life styles are no different either from that of most Calcutta executives—office-club-home, interspersed with a lot of parties. Tea tasters, unlike tea garden managers, have no special clubs—they are usually members of the top Calcutta clubs.

Care to count yourself in this exclusive tribe of professionals? The openings aren't too many, but keep an eye on the appointment page and get in touch, if possible, with major tea broking firms for vacancies are often not advertised. You will most likely be first taken as a management trainee. If you are an MBA, you stand a better chance of selection. Best of Luck!

ESSAYS

INDIA AND HER NEIGHBOURS

International relations involve conflicts between neighbouring countries and cooperation among others. The European Economic Community (EEC) is the best example of cooperation among the West European countries, whereas the ongoing war between Iraq and Iran illustrates the existing conflict between neighbouring countries. The major countries of South Asia are involved both in conflict and cooperation with each other and an effort is required to eliminate the areas of conflict and extend the areas of cooperation.

The South Asian countries had a unique history of having suffered under colonial rule. It was expected that after freedom, these countries would cooperate among themselves to safeguard their freedoms from outside powers. Unfortunately this did not happen. There are numerous reasons responsible for this.

India, after independence, adopted parliamentary democracy and successfully established a secular state. As part of her foreign policy, India followed the path of non-alignment hoping that conflicts with neighbours could be resolved on the basis of negotiations and peaceful co-existence.

Indo-Pak Relations

The basic premise of India's relations with her neighbours was, however, questioned by Pakistan who joined the Western military bloc countries, leading to a cold war and an arms race in the region. Since the '50s, India has been compelled to respond to Pakistan's policy of joining the Western military bloc resulting in serious conflict between the two countries. The conflict has become basic because the two countries have fundamentally different perspectives on their relations with the Western military bloc. The logic of Pakistan joining the bloc culminated in the Indo-Pak war in 1965, followed by the Tashkent Agreement. The agreement, however, was a shortlived one because East Pakistan challenged the hegemony of West Pakistan and India got involved in Pakistan's domestic conflict. Pakistan resorted to armed conflict for the resolution of its domestic regional problem and attacked India. The Indo-Pak war of 1971 ended in Pakistan's dismemberment and signing of the Simla Agreement.

The basic thrust of the Simla Agreement was that bilateral problems between India and Pakistan could be resolved through dialogues, discussions and negotiations. It recognised bilateralism

and expected all issues to be resolved and areas of cooperation strengthened. However, Pakistan's old policy of arms race got re-started.

A non-aligned India, during the last 30 years, has now been compelled to come to terms with the militarily-aligned Pakistan. Consequently a powerful anti-India lobby has developed in Pakistan which is determined to manufacture nuclear bombs. This is likely to bring about a qualitative deterioration in the strategic environment of South Asia. The present efforts towards normalisation of relations between India and Pakistan should continue but normal relations between these two countries cannot emerge unless Pakistan abandons its military and nuclear postures. The only basis for mutual relations of goodwill between India and Pakistan is acceptance of bilateralism which the military rulers of Pakistan refuse to accept. Relations among nations cannot be based on sentiments; they have to be based on recognition of concrete realities and, unfortunately, Pakistan refuses to accept that any large-scale induction of arms by Pakistan with the support of the US will lead to deterioration of relations between India and Pakistan.

Indo-Sri Lanka

India and Sri Lanka are non-aligned countries and they have a common perspective in international and regional affairs. But recent developments in Sri Lanka have sadly strained India's relations with this country. The ethnic conflict in Sri Lanka is escalating and the Sri Lankan Government is inviting outside forces to interfere in its internal affairs. Sri Lanka has allowed *Voice Of America* (VOA) to operate from its soil and the records of VOA in all regions has been full of conflicts.

Indo-Bangla Ties

India and Bangladesh started their journey of friendship after the emergence of Bangladesh in 1971. Two important irritants have developed between India and Bangladesh, i.e., sharing of water and fencing of the border to stop the influx of refugees into Assam from Bangladesh. Negotiations between these two countries are continuing in order to resolve bilateral problems.

During the last 38 years India has consistently supported Nepal and has also extended project aid and trade concessions to Nepal.

Except for Pakistan, India's other neighbours have bilateral ties with India. Because Pakistan has opted for a military solution, relations between India and Pakistan continue to be unfriendly—rather hostile.

To further cement friendship among the South Asian countries, an institutional basis is being created and India, Pakistan,

on Lanka, Bangladesh, Nepal and Maldives are forging links of cooperation under the framework of South Asian Regional Cooperation (SARC). The SARC is a step forward and it is hoped that economic, cultural and technical cooperation among the member countries would help in removing the present irritants.

C.P. BHAMBHRI

MULTINATIONAL CORPORATIONS AND THE THIRD WORLD

The tragedy in Bhopal caused by the leakage of a toxic gas has once again unleashed all the passions inherent in the debate about Multinational Corporations (MNCs) "exploiting" the Third World countries. Methyl isocyanate (MIC), a chemical, used by the Union Carbide pesticide factory as an ingredient in producing highly toxic pesticide, leaked killing thousands of people and affecting an even larger number physically and emotionally. This industrial mishap is one of the major accidents of the year 1984. In Taiwan and Mexico similar gas leakages had claimed about 800 lives, but the Bhopal accident has caused such large-scale misery that a careful analysis of the role of MNCs in the developing countries becomes imperative.

World War II and the oil crisis in 1973 were important breakthroughs for the growth of multinationals. "A multinational corporation owns and manages business in two or more countries. It is an agency of direct, as opposed to portfolio, investment in foreign countries, holding and managing the underlying physical assets rather than securities based upon those assets." Today the MNCs are multiplying rapidly in countries like Brazil, Mexico, Argentina and India—countries rapidly climbing up the ladder of industrialisation. The advantages the MNCs offer to the developing countries are numerous. They provide employment to vast numbers and introduce a wide variety of products in these countries. More important they bring modern technology and help greatly in the industrial activities in such countries. Through their training programmes they help in building up an efficient managerial and supervisory cadre; so essential for promoting the growth of science and technology.

However, the working of these giants has not fulfilled the hopes regarding employment, training, transfer of technology and industrial activity as such. The transfer of "modern" technology remains more of a myth than a reality, with obsolete and unsafe procedures being coolly rubbed off on these unsuspecting nations. Of course the connivance of corrupt politicians and bureaucrats allows these giants much leverage in getting

away with many things. The case of baby foods and drugs will substantiate this point. The advertisements of baby food on television are prohibited in some of the rich countries as it has been conclusively proved that breastfeeding is best for babies. But the same manufacturers adopt aggressive sales promotion campaigns with attractive slogans and ads and try to push through their products. The local authorities of course join hands with these MNCs and promote such campaigns. But what is appalling is the philosophy of these MNCs—what is harmful for babies in the developed countries is good for the young ones in the Third World countries. In the pharmaceutical industry "drugs" banned in the rich nations are freely marketed in the developing countries.

Till the Bhopal disaster everyone feared a nuclear holocaust but now the confidence in civilian technology is also badly shaken. The gas leak in the Union Carbide factory highlights the callous attitude of the MNCs in maintaining safety regulations in the Third World, where such regulations are definitely lax. The use of MIC in producing pesticides and its storage in large quantities in the factory at Bhopal is curious. In a sister plant in the US only a very small quantity of this chemical is stored. This discrimination assumes serious proportions considering the inadequate safety equipment at the pesticide factory of Union Carbide in India. No doubt laxity in the Indian attitude contributed greatly but still Union Carbide cannot get away from being responsible for the disaster in Bhopal.

The Union Carbide cannot be blamed entirely for the sad episode. The government must also own up its mistake in allowing a hazardous chemical factory to be set up amidst vast populace. As compared to this, in the US and other rich countries such dangerous plants are located on the outskirts of the city, away from people. Definitely the government's attitude has spelt misery for a large number of people. But the MNCs must also clearly warn the residents about the adverse consequences of their operation. In the Union Carbide case the parent company could have easily asked the Bhopal plant to be shut down till adequate safety equipment was installed. This could have saved thousands from life long suffering.

The Bhopal leakage has another dimension, i.e., the negligence and the indiscipline in the country. If everyone had been vigilant the accident would not have occurred.

Another important facet of this major industrial accident is the ignorance of the doctors and technical personnel to take care of such emergencies. The MNCs and the governments of the Third World must build up adequate medical facilities par-

ticularly in areas where such plants are located.

The lessons for the Third World are many. Most important is that chemical and other hazardous plants must be made safer. The location should be far away from population. The government machinery should be tightened and implementation of the existing laws, must be ensured; frequent surprise checks by factory inspectors could keep these industries on their toes.

J.V. ARUN KUMAR

PLANNING IN INDIA

It has been over three decades since India set out on the path of planned economic development. Although the growth rates over the years have been uneven, all the six Five-Year Plans, beginning with the First Five-Year Plan in 1951, have aimed at providing new opportunities to the people for improving their living standards. There is no doubt that planning has dominated all spheres of our economic endeavour.

Various objectives have been outlined in the six Five-Year Plans; a few of them figure prominently in all the Plans. These are: to secure a faster growth of national income; equitable distribution of income and wealth; to increase investment in order to expand the capital; and to provide employment to the growing population. Apart from these, price stability, self-reliance, import substitution and export promotion have been some of the other important objectives of our Plans.

A proper assessment of the planning process entails a careful study of the strengths and weaknesses of the Indian economy. On the positive side, the commendable achievement in the field of agriculture and industry, alongwith the increase in capital formation, can be attributed to the success of our planning process. The acquisition of scientific know-how and development of technological skills have helped in reshaping a colonial economy into a modern one. The new agricultural strategy which includes High Yielding Variety (HYV) seeds, fertilizers and improved irrigation facilities, has transformed the agricultural sector. The introduction of numerous and variegated industries, which have come up since 1951, is very impressive. The social gains in the last three decades, have also been considerable. The increase in literacy rates and the improvement in health facilities have contributed immensely towards changing the lives of the people.

Following these impressive achievements of the Five-Year Plans, are a long list of failures. It is unfortunate that despite all efforts, the Gross National Product (GNP) has remained obstinately around

the 3% mark. With a rapidly multiplying population, this has resulted in low per capita income. Another serious limitation of our Plans has been the gross under-utilisation of scarce capital, indicating rising capital-output ratios. The large capacities created in the Plans have not been fully utilised. This has resulted in wastage of precious resources. The increasing rate of unemployment is another concern of our planners. They put the blame on the increasing population in the face of low output. As regards the redistributive objective, success has been partial in the sense that in relative terms, a large number of people are still below the poverty line.

The Sixth Five-Year Plan (1980-85), seems to be the turning point of our planning process. During the 80's, India has been one of the few countries to maintain a fast tempo of development despite a hostile international environment. For the first time since 1951, we have crossed the 5% barrier in growth rate during the Sixth Plan. More importantly, the nature of control exercised by the government, on the private sector has also changed during this period. The adverse consequences of the quota system, the licensing system and the bureaucratic procedures, have been realised and efforts are on to make the system efficient by directly attacking corruption and black money, simultaneously, and liberalising restrictions. This approach has succeeded in making our private sector strong, with a capacity to invest in projects with long-gestation periods. As a result the task of the public sector today is reduced to regulatory functioning rather than direct promotional investment.

The stress on manpower planning since the beginning of the Sixth Plan, is a welcome break from the past. This has brought about improvement in managerial ability of our production units. The tremendous expansion of infrastructural facilities in the 80's has boosted production and helped in smoothening the scarcities in the market. The Seventh Plan has made it clear that the planners intend to break the stronghold of oligopoly in the market. Competition is to be extended to all sectors of the economy to promote technological progress and to reduce costs. It has now been realised that the MRTP Act and the licensing procedures need to be changed. A new thrust is being given to the poverty alleviation programme in the Seventh Plan, e.g., the Integrated Rural Development Programme (IRDP). When the loopholes at the implementation level are plugged, the programme is to help over 50m families. With this new positive approach, there is little doubt that India will prosper in the coming decades.

J.V.A.K.

GROWING POLLUTION IN INDIA

The term pollution technically means the excessive addition of undesirable substances to the ecosystem, affecting it adversely. These substances consist not only of obnoxious gases or smoke as we commonly believe, but also industrial effluents and noise which pollutes sound. It is the excessive use of these substances rather than their physical and chemical properties which is of significance. The pace of ecological pollution has accelerated due to modern human activity which has magnified man's capacity to influence his environment.

The modern transportation systems are largely responsible for environmental pollution. The fantastic increase in the number of vehicles has made road traffic a major source of pollution. A car's exhaust spews out numerous pollutants like sulphur dioxide (SO_2), carbon monoxide (CO), nitrogen dioxide (NO_2), unburnt petroleum products and its derivatives like polycyclic aromatic hydrocarbons (PAH). These cause respiratory diseases, reduction of oxygen carrying capacity of the blood and cancer. The fluorocarbons from jet exhausts have the capacity to destroy the ozone layer in the earth's atmosphere, thus exposing its inhabitants to hazardous ultra violet rays.

Innards of hell: A common sight of pollution at its worst.

The industries add to the pollution of air, water and land. Depending upon the kind of industry, the types of pollutants are as follows.

Chemical industry—various obnoxious gases

Metal industry—metal dust

Textile mills—cotton dust

Paper mills—fly ash

The pollutants have made the environment of industrial (urban) areas more hazardous than that of the poverty ridden rural areas.

Agro-technology has, on the one hand, provided food for the ever-increasing population and on the other, exposed us to slow and gradual death, because the excessive use of fertilisers, insecticides, nitrate and phosphate fertilisers affect the metabolic chain of human life.

The forms of energy have also proved to be potent pollutants. A hot water stream from a factory joining a flowing river adversely affects the ecosystem of that place. Urbanites are subjected to sound pollution—the noise produced by traffic and industries represents a diversity of pitches which our auditory system is not

conditioned to. The same is true for glaring artificial lights which strain the eyes.

The discoverer of radioactivity could never have imagined that his discovery would expose humans to yet another type of pollutant. The atomic reactors, X-rays and other radiations may have serious side-effects if used injudiciously. Human beings have added many more new pollutants than they have tried to remove. The new menace of used empty cans and bottles is becoming a real problem and has been termed 'Third Pollution'.

The environmentalists have often been accused of being anti-developmental. Apparently, they oppose industrialisation and modernisation in the name of environment. This is because of people's misconception and ignorance of both industrialisation and environment. A balance has to be struck between environmental protection and industrialisation. Both aim for the welfare of mankind and are complimentary to each other.

The use of tall chimneys, electrophoretic filters, better exhaust and engines, pretreatment of chemicals and afforestation are a must for the preservation of a pure and clean environment. It is the amalgamated progress of science, technical know-how, industry and environment which can make this earth a better place to live in.

FOR WANT OF PROTEINS

All organisms are made up of cells. Proteins form a major constituent of cells. They are made up of basic blocks—the amino acids. These blocks

The young die old: An emaciated child as a typical case of severe malnutrition.

are connected to each other by specific linkages called peptide bonds.

Our body needs proteins for body-building and repair. It is seen that a child doubles his birth weight in the first six months of his life and triples it during his first year. For this rapid growth he needs proteins. In the first few months the baby gets proteins from his mother's milk and later through various foods rich in proteins.

An adult no longer needs protein for growth. In the adult body, however, different cells and tissues are constantly being subjected to wear and tear. For example the RBCs get destroyed after about 100-120 days and new cells are consequently formed. Proteins are essential for the formation of these new cells.

The following table gives the protein needs for various individuals:

1. Healthy adults need proteins for repair of worn out tissues.
2. Pregnant mothers need proteins for repair of tissues and healthy pre-natal development of the baby.
3. Children need proteins for growth and repair.
4. Adult patients need extra proteins to cope with the effects of their illness.
5. Young patients need extra proteins for growth, repair and recuperation.

Unlike carbohydrates and fats the body does not store proteins. This makes it essential to include proteins in a well-balanced diet.

Protein deficiency diseases in children
Kwashiorkor: Common in Africa and other developing countries. Incidence is mainly seen in children upto the age of two years. Its causes are protein deficiency in the diet and excessive carbohydrate intake. Symptoms: oedema, hair changes, under-weight, moon face, thin muscles.

Nutritional Marasmus: Earlier termed as decomposition, it is characterised by a severe wasting of muscles. Symptoms: under-weight, old man's face, thin muscles, marked atrophy of organs and tissues. The infant is irritable and perpetually hungry.

Intermediate severe protein caloric malnutrition: An in-between form of the first two diseases.

Mild moderate protein caloric malnutrition: Mild type of kwashiorkor, which is much more prevalent than kwashiorkor.

Protein deficiency diseases in adults
Liver necrosis: Breaking up of liver cells.
Less rapid wound healing.
Fall in plasma albumin.

Famine oedema: The disease has symptoms similar to beri beri. Serum albumin is greatly reduced. It is also known as adult kwashiorkor.

Therapy

Life-saving measures: To control the severe water and electrolytic disturbance, a mixture of lemon juice, calcium car-

bonate (CaCO_3) and sugar is given to the patient.

Specific nutrition therapy Skimmed milk, fat, sucrose, banana and honey are preferentially given to the patient.

Prevention of protein malnutrition: Administration of special weaning foods, soyabean foods and cultivation of better eating habits.

Plant Sources	Protein Content
Soyabean	34%
Groundnut	23%
Beans	20%
Animal Sources	Protein content
Dried fish	63%
Fresh fish	18%

Use of soyabean as a rich source of protein is increasing today. The US is its largest producer. Glycine Max (soyabean), a legume, has become a major source of vegetable proteins and oil for human, animal consumption and industrial use.

Soya flour, grits, texturised protein in combination with other foods, soya oil, cooking oil, soya-milk, curd are some examples of soya use. In Japan, Tofu, a cheese-like curd, which is actually a fermented soyabean paste is greatly used. Sprouted immature green seeds are another of its eatable forms.

Though it has been put to numerous uses, there are certain constraints. Being of plant origin its cell wall is difficult to digest. Also, many patients do not relish its bland taste. Many diseases which strike the soya plant reduce its yield and the technology of soyabean use is yet to be fully explored.

BIOTECHNOLOGY

B iotechnology, a recent area of interest to many applied scientists, economists, industrialists and the government has acquired so much publicity, not only because of its sophistication—'mere vogue' but also its multipurpose utility. The developed countries have undertaken successful projects in this area. Among the developing countries, India is playing a lead role. Biotechnological researchers are trying to solve problems faced in various fields including agriculture, medicine and industry.

The quality that makes it so popular is its man's use biological systems for the maximum benefit of mankind without ignoring the important fact of maintaining an optimum ecological balance. Biotechnology is essentially an interdisciplinary field involving not only Biology, but other physical sciences as well.

In the field of medicine, biotechnology has helped in mass production of the following substances:

- Insulin** — This can be used on diabetic patients.
- Interferons** — These can fight against viruses and cancer.
- Monoclonal antibodies** — These help in the better response of the immune system to the human body.
- TPA (Tissue Plasminogen Activator)** — Has the ability to prevent a heart attack.

All these products involve a simple idea. The genes of the required substance (protein) are put into fast growing and replicating cells and through multiplication, massive production of the substance is obtained.

A well-known Nif gene can change the entire agricultural scene. If this gene can be coupled with the gene sequence of another plant, it may well revolutionise agriculture. Nif gene has the ability to trap free nitrogen from the air, and supply it to plants in the form of nitrate ions and can, therefore, form a natural fertiliser. Today we are able to extract a single cell from a sapling, grow it in culture medium and obtain numerous saplings with exactly the same characteristics as the mother plant within a short span of time. This method is being used by some Indian companies for growing coconuts.

Micro-organisms can prove helpful if they are 'made special' by certain biotechnological techniques. These microbes eat up the hard oil to render it soft, thereby making it easy to handle. Foods, especially the fermented products, can also be subjected to biotechnological magics. A variety of fermented foods like cheese, curd, soya products can be flavoured in many ways and made palatable according to each one's choice. Thus, biotechnology is a sophisticated, omnipotent and powerful tool of mankind. ■

HOW TO ENTER

- Print the answers neatly in capital letters alongwith your name, age and address. Each crossword must be printed/clipped to a larger piece of paper and each appropriate entry must be written only on a postcard.

- You may send any number of entries but each must be numbered according to and accompanied by a self-addressed COUPON.

- Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest score you are getting more than our.

Closing date for the contests: July 28
Address your entries to: The Editor, Career & Competition Times, 10, Madan Mohan Road, New Delhi-110 002.

Solutions to this issue's contests will be published in September.

RAJESH PURI: A STAR IN THE MAKING

Rajesh Puri, *yani* ...Lallu, of *Hum Log* fame, is a friendly young man without any airs. Though he started getting small roles in films, some time back (*Jaane Bhi Do Yaaro* was his first film), recognition came to him only when he became popular as Lallu on TV. "It was a very critical decision for me to take. Most of my friends dissuaded me from signing the *Hum Log* contract as they thought it would adversely affect my chances of making it big in films. But, acting in the TV serial was a challenge to me. And I love challenges. I accepted the role and became a star overnight," Puri smiled. And it wasn't the sheepish 'Lallu smile', mind you; it was an intelligent Puri, who spoke with all the seriousness of a professional actor.

A graduate from Delhi University, Venkateshwara College, Puri got interested in theatre at a very young age and often acted in school and college plays. After college he got a job with a firm as sales manager, but did not give up acting. *Yahudi Ki Ladki*, a play directed by Nadira Babbar, in which he did the comic interludes, was appreciated by the big wigs of the Bombay film industry. It was at this juncture that Puri decided to quit his job in Delhi and move to Bombay. "My first break in films came when I was offered a role in *Jaane Bhi Do Yaaro*, but the real recognition came to me

"Dekho... Mehnat Karo... Usha Rani going all out to drive some sense into Lallu."

after I became popular as Lallu in *Hum Log*; and I have signed many new films since then. I enjoy acting both in the TV serial and in movies since both offer me different kinds of challenges. I work equally hard for all my roles and do not take work lightly. It is easy to attain success, but difficult to maintain it", Puri asserted.

Determination, hard work and a will to achieve something are the vital elements of success. "One must also have a definite aim in life to work for," he said. "Good behaviour is also important, especially in the film line."

Puri feels that contacts in the film industry could help a person only to a certain extent, whereas mass acceptance of one's talent is important. "When I started acting in Bombay plays, my performance was appreciated by well-known producers and directors of the film industry. I even came to know some of them quite well; but no one offered me a role. It was only after I was accepted by the masses as Lallu that the film industry also accepted me," he explained. "All aspiring youngsters who wish to join films must have a very practical approach. Acting in school and college plays is not a guarantee to their getting roles in movies. They should not give up other sources of

income to join films since chances are that they may be exploited there. They must work on the professional stage and study the response of both the film industry and the audience. These plays have seasoned actors and directors which makes it easier for newcomers to get recognition if they are good in acting."

Financial security is also essential. "It takes time to get a break in the industry and if one does not have the necessary financial backing, it can be a frustrating experience—for both the person trying for the break and his family. No wonder Puri himself took up a job in Bombay till he was able to consolidate his position in the film industry.

Puri, who really loves acting, has done everything in the theatre—right from getting tea for the established actors to painting sets and even prompting "I have done a lot of *tapasya* in my life to reach the position I enjoy today. Hard work and determination always pay. I have confidence in myself and I know I can play both comic and serious roles. For every role, timing is very important. This is an inborn trait and if a person has good timing in comedies, then no role is difficult for him."

Unlike some TV serial actors, Puri is not planning to ditch *Hum Log*. "I would first like to finish my work for *Hum Log* and then start something new. In any case, I cannot say anything about the future, especially with the film industry's position so shaky at present. But I would like to concentrate on films just now. I give equal attention to all my roles, whether it is for TV, films or even an ad film. And since I have been able to succeed to a certain measure, I am cautious about maintaining it."

Jyotsana Kapoor, New Delhi

SOME CELEBRATION THIS

Jun 2 saw the network's popular 'Janta colony' family languishing amidst the five-star riches of one of the capital's better known hotels. There was wining and dining, with much ado about nothing. Scotch and champagne poured down the gullets of the very 'Janta' who strongly campaigned against alcoholism, ostentation, extravagance and hypocrisy through a TV serial, which was launched in June 1983. The occasion—*Hum Log* had doddered along to a senile 100th episode.

Well, celebrate they must, but not in a manner most unbecoming of those dealing with down-to-earth middle-class issues! Friends and countrymen, in the press and in public, were invited with open arms "for *Sura Pan* (drinks) and *Ratri Bhoj* (dinner)".

Of the masses, for the masses, by the masses, indeed it is this "Hum Bore"!

AAP LOGON KI PASAND

An overcrowded classroom in New Delhi's Harcourt Butler School. The students are silently caught in rapt attention, all eyes focussed on a sprightly teenager. His effortless attempts at monn-acting and mimicry are a refreshing change from the heavy doses of pedagogy the students are generally subjected to.

This very teenager is now known amongst a wider segment of the populace who are covered by the television map of India. And the same youngster is on his 'star path' to a successful career in films. What's more he has amassed 40% of the popularity votes polled in *CCTimes* 'Most popular *Hum Log*' star' contest. And, Rajesh Puri of course, he is. The *Hum Log* nincompoop, 'representative of the present-day youths' struggle for survival, has been the choice of the majority who took part in the contest. "He is a fine example of those who dream with their eyes open," remarks one of our voters. "He presents a correct picture of the Indian youth who lack proper education and guidance," comments another.

Says Puri, "Lallu often sounds as though he is off his rocker. But he is not. His immaturity is the result of his upbringing."

Talking about his belief in the existence of 'Lallus' in India, Pun says, "In traditional Indian families, youngsters are not allowed to think independently; they are forced to study a particular subject; take up a particular job irrespective of their individual aptitudes; marry the girl chosen by elders; and have babies because the Dadima wants one in the family. Naturally when the youngster faces life's realities he feels lost, lacks maturity, is indecisive and acts foolishly." No wonder he goes to the extent of putting the cart before the horse in plunging into married life even before he

has an established source of income of his own.

Young Puri (he is 28) aspires to be a Charlie Chaplin one day. His dream has partly come true in the Cherry Blossom ad where he mimics good old Chaplin. But he knows that to be a true comedian is far from easy and he is willing to leave no stone unturned. Puri has already put his best foot forward in the star-spangled film world and has signed a creditable number of film contracts with well-known producers. Puri also has a handful of 3-D films. And, luckily for him, the roles are all dynamically different so that he has the chance to let his inborn talent surface in all its forms. All the best to Puri from *CCTimes*.

Poll results: Fools think alike. So they say. But there are times when even wise men may think alike. It's a matter of pleasant coincidence that *CCTimes Hum Logon Ki Pasand* star, Lallu, has also been nominated as the most popular *Hum Log* character by a majority of our readers. Now for the count down... Here's the list of the prize-winning nominators who voted for Lallu. Congratulations from *CCTimes*.

Prize winners: 1. Pinku Rai, Muzaffarpur. 2. Goutam Bose, Calcutta. 3. C. Rajay Kumar, Baroda. 4. V.K. Mewar, Bombay. 5. Pravin Gupta, Raipur. 6. Rahul Bahadur, Jaipur. 7. Pradeep Kumar, Karnal. 8. Kamal Nayan, Roorkee. 9. S.K. Jain, Gauhati. 10. Himanshu Jayaswal, Hyderabad.

Top of the polls results of the *CCTimes* opinion poll:

Nominee	% of votes polled
Lallu	40%
Dadaji	20.4%
Naihe	14.7%
Rest	24.9%

Prabha Gopal, New Delhi

Do you think politics should be allowed on the campus?

The answer to this question is in the affirmative. Politics is an essential part of our national life and it should be allowed everywhere in India if democracy is to live. It is true that politics on the campus is now becoming increasingly complicated, having come under the influence of political parties, often leading to unpleasant consequences. But elimination is not the proper solution. After all, students of today will become national leaders of tomorrow. Moreover, students' unions are essential for college goers who, with advancing maturity, are gradually being able to appreciate the stand of politicians in the national scenario...

Do you think students can remain unaffected by the political goings-on on the campus?

The answer depends largely on the institution itself and on what is meant by political goings-on. If it means conflicts among different groups and their unpleasant consequences, then a student can remain aloof from them, but cannot remain totally unaffected. Chances of remaining unaffected by the unions' activities are rare. In a big city or metropolis campus politics is given undue importance and is greatly influenced by political parties. Even neutral students are sometimes threatened. Fights and duels have become common.

Do you think it is possible to eliminate politics from the campus?

Academic politics can be eliminated by banning it. But it will lead to a state where there will be no union to fight for the students' rights. Such an act will certainly be opposed severely. After all, it is the unions which safeguard the interests of the students. In a state of no politics on the campus, students' activities will be dull. It will also put additional responsibilities on the college authorities as the works of the unions will then have to be taken up by them. Even if academic politics is eliminated, politics from the minds of certain students cannot be eliminated. Some of these young politicians have to make it to the national scene one day. Elimination of academic politics will certainly have unpleasant repercussions...

Do you think political developments on the campus are natural?

This depends on what is meant by political developments. If the polls, the canvassing, the election of unions and their activities thereafter are termed as political developments, then it is surely natural. The conflicts among the supporters of different candidates and the tension during the franchise days too are not very unnatural. But the interference of political parties and the introduction of party politics into the campus which has unpleasant consequences cannot be termed natural. It is done deliberately by power-hungry parties. But if political development is interpreted in the true sense of the term, that is, the gradual and evolutionary process of development of the political system, then politics on campus has little to do with it....

Subrat Kumar Sundar Ray, Delhi
First Prize : Rs 150

Do you think our educational system provides a congenial atmosphere for the breeding of politicians?

POLITICS ON THE CAMPUS

Contest Results

CCTimes announced an essay contest on 'Politics On The Campus' in November '84. The response from our readers was overwhelming. A large number of entries both for and against the topic were received. Obviously this is one-issue students, in particular, feel very strongly about. The best three entries have been awarded attractive cash prizes of Rs 150, Rs 100 and Rs 75 respectively. This is not to say that the other entries were not good—they too made interesting reading. Better luck for them next time.

And congratulations to the winners.

Extracts from the prize-winning entries:

Do you think our education system provides a congenial atmosphere for the breeding of politicians?

The answer is in the negative. Of course, many young politicians come from the universities today. But our education system has little to do with that. No course in any discipline is prepared with a view to making good politicians out of students. Political Science,

the subject nearest to politics, is quite different from it. Students learn facts related to the subject, but never go deep into what is called politics for the sake of studies. Some students do so out of their own interest. But most of those who enter even campus politics are motivated by the attraction of the chair. Today, entering politics in student life is considered in-

NEW DELHI-48

ational system which is at best a modified version of a colonial relic imparts very little education in the real sense of the term. Obsolete syllabi, increasing obsession with exams and memory work to the detriment of rational and intellectual thought, and above all failure of communication between the teachers and students are the common maladies that plague this system. Thus, unable to establish any emotional bond with academics, students turn to politics as a means of escaping from harsh realities. Besides, our educational process which is completely isolated from various economic, social and political realities like gainful employment, population control, and national integration, holds little charm for students who are fast lured into the hustle bustle of campus politics.

Do you think politics should be allowed on the campus?

Depoliticising campuses merely because we cannot find a remedy for curbing students' unrest is almost like cutting off one's head to get rid of headaches. It may be argued that the root cause of violence on campuses is the undue influence of various political parties on the affairs of students. Very often one sees opportunistic political leaders involved in power games on the campuses for narrow political interests. Trivial issues are magnified with political overtones while the genuine problems of students like inadequate library facilities, irregular classes, etc are often overlooked. However, banning elections and prohibiting student associations will amount to robbing the students of their democratic rights of voicing their opinions. Instead, students' unions should be shielded from outside political interferences....

Do you think students can remain unaffected by the political goings-on on the campus?

Campus politics usually involves a large number of students who align themselves to one political party or another. Hence it is difficult to comprehend how the students in general can remain unaffected by political developments in their immediate surroundings. Besides, campus politics usually manifests itself in a plethora of political activities like shouting of slogans, gheraos, demonstrations and more often than not in extreme forms of violence....

Do you think it is possible to eliminate politics from the campus?

Certainly. But this can be possible not through coercion but by getting rid of the root causes which give rise to violence and hoodliganism in campus politics. Although the need for a thorough revamping of our educational system can hardly be overemphasised, the immediate task is to stem the rising tide of indiscipline among students by strict administrative measures....

Do you think political developments on the campus are natural?

Yes, campus politics is the natural outcome of the desire of students to voice their opinions on issues which concern themselves and their surroundings. Since they do not have any organised forum from which to voice their concern, the students instinctively choose one political group or another for the purpose. Most often students turn to campus politics not because of any ideological inclination but merely because of a desire for getting together. But one cannot deny that students form a potential group for mobilising political

opinion in our country. And one cannot but remember in this context the famous words of the Kothari Commission report—"The destiny of India is now being shaped in her classroom."

Debashis Chatterjee, Burdwan
Second Prize : Rs 100

Do you think our education system provides a congenial atmosphere for the breeding of politicians?

Yes, it does. In fact, it must, but the calibre of politicians it breeds is largely appalling. The task of education, said Plato, "is to discover aptitudes and progressively train them for social use." Politics is the science of government administration and politicians are specialists in this science. The campus is undoubtedly the best place for breeding these politicians, for, to use the oft-repeated cliché, 'today's students will be tomorrow's administrators'.

Unfortunately, the word 'politicians' today has a very unfavourable connotation. They are merely a set of shrewd opportunists who forget their ideals for money, and are merely in search of more power. And it is a pity that the campus today breeds even worse politicians....

Do you think politics should be allowed on the campus?

Of course! But entry should be restricted only to academic politics...cut-throat professional politics should be kept away from the campus. Ours is a democracy and leaders will be chosen from amidst us tomorrow. If we are ignorant of our administrative set-up, the parties and their ideologies, how can we face the challenge of practically administering 700m people? Professional politics will come later when one makes a career of it....

Do you think that students can remain unaffected by the political goings-on on the campus?

That is impossible; somehow, directly or indirectly, the student is affected by the political goings-on on the campus. When a student is denied admission into a college on political grounds; when he is threatened to cast his vote in favour of some candidate in the elections; when classes are suspended due to strikes or clashes between rival syndicates...the student is the worst hit....

Do you think it is possible to eliminate politics from the campus?

Professional politics has rooted itself in the campus of today, and is hard to eliminate. The campus provides the congenial atmosphere for breeding politics in the worst sense of the term....

Do you think political developments on the campus are natural?

Yes, and this is obvious from the fact that few colleges today are unaffected by political developments within the campus. There are certain conditions prevalent almost in every campus that provide the ground for political developments.

Indiscriminate admission to students, rarely based on their own capabilities or interest in studies but merely on grounds of influence or political connections; the system of conducting elections in a manner most unlikely of students; the 'I-don't-care' attitude of lecturers; total lack of discipline; more of fear than control in the authorities; these are the major reasons for political developments on the campus....

Asha Nateraj, Bangalore
Third Prize : Rs 75

Star And Careers

CANCER

If you were born between Jun 21 and Jul 21, the Sun at the time of your birth occupied the sign cancer.

As such you have a great love of home and a strong desire to cherish and protect others. You are capable and have great tenacity and faithfulness where affections are concerned. You are unimaginative and emotional and a real nagger. You have a sharp intellect and an independent nature with a sufficient amount of self-confidence.

You have a weak constitution. You eat more than you need but that does not help your weight. Your system is so sensitive that loud noise and voices could upset you. Your environment is, therefore, extremely important for you. You want peace and harmony and given such an atmosphere you can concentrate and produce very good results. You cannot be hurried through. The deadlines and pressures add to your problems.

You can absorb ideas and turn them into fruitful ventures. You are faithful and work for others without having your ego deflated. You prefer to work for bigger organisations. You are attracted to jobs that require manual dexterity, adaptability, sympathy, and an ability to meet large numbers of people. Recognition and publicity are important to you although you are not conscious of it. You persistently stick to your goals but take your time reaching them. If you are in a career that allows you to explore your creative sense, your talents can be developed to achieve resounding success. Unless you are in a big company, where responsibilities are changed quite often, you are likely to change your jobs quite often.

You are generally romantic, sentimental and subject to rapidly fluctuating moods, but in love affairs you show a great tenacity and faithfulness before allowing any mood or outside influence to interfere in your existing relations.

You are likely to be benefited in career and in financial matters in your 21st, 28th, 42nd and 48th year. Between Sep 10 and Oct 27 a number of opportunities will arise to raise your status or benefit you in one way or the other. Success is assured but the quantum of success will be restricted to the amount of effort you put in. In 1985 you will have to put in more work to achieve your targets. Travelling may also become very frequent and may occasionally interrupt your normal routine. 1986 will be the most memorable year of your life. Besides financial gains your status will be elevated. Hard work and perseverance in 1985 will pay a very rich dividend in 1986. Further efforts in 1986 will optimise the favourable planetary influences and add colour to your life.

- 7 River Kosi is the sorrow of — (5)
- 8 A term for obstruction of the intestine with severe pain and vomiting goes up. (5)
- 11 An East African soldier (6)

12. Russian revolutionist, founder of the Bolshevik and Communist Party and of the Soviet state, a near deity to communists: millions annually visit his mausoleum in Red Square, Moscow, where since 1953, his embalmed body has been continuously on view. (5)
14. A Muslim theological student attached to a mosque goes up. (5).

OBSERVE & DESERVE

OUT OF TOUCH

Here's another illustrative gimmick from GOPI GAJWANI's 'tricky-tricky' drawing-board. Let's see if you get tricked by this one. And, if you are the type who is overly conscious, then you'll probably see through Gopi's game in a jiffy. If you aren't, well it's just too bad. You'll have to tease your brains a wee bit to tell us in **not more than 20 words** what's wrong.

KENWORDS-42

Across: 1. D. Bushnell 7. Yield 8. Seoul 9. Capua 11. Logic 13. Radium 14. Saturn 16. Varig 18. Idaho 20. Ernie 21. Liner 22. Electrode

SCIENCE TODAY

With that touch of class which sets a great magazine apart from the rest

There are simply no tricks to INSTA-MEMORY

once you master
its simple secrets,
the results are
simply amazing...
automatic...
instant...
permanent.

The trouble with most memory systems is that they try to train your memory without removing the mental 'road blocks', without activating its inherent power, without giving it a chance to come into its own. The result usually is disaster... no real gain beyond (perhaps) a bag of memory tricks for after-dinner entertainment.

INSTA-MEMORY is Permanent Memory. Because Insta-Memory does not give you awkward and troublesome memorization gimmicks. Instead, you'll learn the Extrasensory Instant Recall Technique that literally turns your memory into a power-packed mental magnet... makes forgetting virtually impossible.

INSTA-MEMORY is Automatic Success Power. In just a few hours after you master the simple Insta-Memory secrets, you'll be able to instantly memorize 20-digit numbers like 18765439086543214569 and recall them effortlessly a month later. Remembering telephone numbers and names will be no trouble at all.

INSTA-MEMORY is Effortless Memory. Insta-Memory requires no energy-draining efforts... no memorization... no word associations... no key words... no will power... no positive thinking tricks. In fact, no super-human efforts on your part!

Institute of Human Dynamics is a division of Business Development Associates.

INSTA-MEMORY is Result-oriented Memory. Insta-Memory will help you to master...

- Fool-proof Cure for Forgetting
- Secrets of Extrasensory Instant Automatic Recall
- Techniques of Automatic Mind Search and Memory Scanning
- Art of Controlled Intuition and Mind Storming
- Ways of Strengthening Powers of Observation
- Craft of Instant Speed Reading
- Winning 'Exam Secrets'
- Public Speaking without Nervousness
- Dynamic Personality and Confidence Building
- Secrets of Extrasensory Perception

Plus, a whole wide range of tips on how to gain greater success, prestige, popularity and recognition.

INSTA-MEMORY—a U.S. Best Seller at Rs. 120/-... now yours for less than $\frac{1}{4}$ the original price! Thanks to our exclusive association with the New York Institute of Personality Development, we are now able to offer you INSTA-MEMORY at $\frac{1}{4}$ the original U. S. price (\$15). It will cost you no more than the price of a medium-priced briefcase; only Rs. 54/- (plus Rs. 6/- for postage, packing, handling). And you've our 7-day Full Satisfaction Guarantee... you pay nothing if not absolutely delighted!

Amazing Testimony about Insta-Memory—straight from U.S.A.

"I have had tremendous improvement in my job—my superiors are astounded with my super memory." —Mr. H. D. (New York.)

"After going through your course I am a very different person!" —Miss P.K. (Bombay)

"Insta-Memory has helped me to gain a new type of self-confidence" —Mr. S.P. (Poona)

INSTITUTE OF HUMAN DYNAMICS

"Bullworker turns skinny kids into powerful HE-MAN"

Says: John Xavier, "Mr. France"

BEFORE

AFTER

INSIDE YOU!

there's a
POWERHOUSE
body just waiting
to be set free!

SUCCESS
or it costs
you
nothing!

Guaranteed
results

LET ME SHOW YOU HOW TO
RELEASE IT IN 7 DAYS

Give me 70 seconds a day
and I will give you a
new body!

Are you willing to accept
my offer?

Can you honestly say you
have the kind of body that
men envy and women admire?
Are you going to let it go on
holding you back in life?

Now, thanks to a fantastic SCIENTIFIC
BREAKTHROUGH, you can build the
POWERHOUSE BODY you've always
dreamed of in just 70 seconds a
day! Through a series of magnificent
POWER RELEASESERS you'll
unlock power you never
imagined possible. Rebuild
your whole body. Add as
much as 50% to your
strength.

Prove it to yourself FREE

You commit yourself to
nothing when you agree to try the remarkable
ISOTONIC/ISOMETRIC PROGRAMME and
BULLWORKER-3. If, after 14 days, you cannot
SEE and FEEL the P-O-W-E-R-H-O-U-S-E
being released... if you cannot measure
your increased strength — return everything
and we won't charge you one paisa!

At 16 I was just a
skinny kid. I tried working
out with weights, but
the results disappointed
me. Then I tried
Bullworker. My progress
astounded me. I began
putting on weight and
practically overnight my
body began shaping—
up broader
shoulders, a
deeper chest,
bigger arms
and muscular
legs.
To develop
power-
packed
muscles
fast!
There's
nothing
like
Bullworker.

14 days
Free
home
trial
offer!

STEP 1 Honing away
stomach flab. Build a
rock hard dynamic
stomach
wall!

STEP 2 Rippling
shoulders
build
that
power
packed
chest and
V torso girls
can't resist!

STEP 3 Take a look at
the increase in that
POWER METER
SEE your
success in the mirror
Your
P-O-W-E-R
H-O-U-S-E
body is
being set
free!

7th Year of Unmatched Success!

**56 IMS STUDENTS
SELECTED BY THE**

IIM's alone

Consistently for seven years, IMS Students have produced top results in the country in management entrance tests. This year, so far (at the time of going to the press, on 20th June 1985), 96 of our students are already on the Final Lists of IIM's XLRI, IRMA and Bajaj Institute. In GMAT, GRE 6 are 99+, 37 are 90+ and 2 have all time high GMAT scores of 780 and 760 out of 800 points. Out of the 50 students selected by Bajaj, 16 are ours!

The course is a systematically structured training programme conducted by experienced professionals. It is competently designed to cover each area of the written test as well as group discussion and personal interview. With its excellent, up-to-date course material of over 1000 pages, it is as adequate as if is result-getting.

Admission is open to the **Regular Session of the ORIENTATION COURSE 1985-86 (Oral/By Correspondence) for IIM's/GMAT/GRE**. For Detailed Course Prospectus which answers All your Questions about Management Courses, A List of Prominent Indian Institutes, Complete Admission Procedure of Institutes in India & Abroad, and An Exhaustive Note Analysing each of these Entrance Tests, Contact or write with an MO., D.D. or Crossed Postal Order of Rs.10/- to:

The Course Co-ordinator.

LETTERS

Police Practice

Hallo Folks (June '85) has rightly pointed out that the Indian police has developed a habit of playing around with the lives of innocent people. Perhaps the Indian police has forgotten that in POLICE P stands for polite; O for obedient; L for loyal; I for intelligent; C for courage; E for efficient.

Siddique Hussain, Burhanpur (MP)

In your matter of fact editorial (June '85) you have done justice to the topic. The protectors, the saviours and the defenders have become destroyers, killers and offenders.

Sunil Gautam, Jalandhar

In the far off lands they ask us, "Hey, you must be damn scared of the terrorists at bay." So we give a grim smile and say, "Stop these child-like guesses please! You haven't yet seen our police..."

Rashesh Jethi, Ahmedabad

Mental Ability Special

The *Care Issue-6* (June '85) was particularly interesting and useful as it contained in 21 pages material that would otherwise have been in a costly book form. This issue is worth retaining for future competitive exams as well. I wish to congratulate your editorial staff for taking pains and collecting useful material on *Mental Ability*.

G.M. Nayyar, Chandigarh

I take this opportunity to send you my appreciation for writing such a detailed and interesting write-up on the subject *Mental Ability* (June '85) which is very useful for candidates appearing in all sorts of examinations.

G.T. Chari, Madras

Reservation Stir

The article *The Bomb Ticks Away* (May '85) is superficial and biased. Its single objective was to derogate the ST/SC students. Publishing such an article was reprehensible on the part of *CCTimes*.

Mukul Pradeep Kumar, New Delhi

The Bomb Ticks Away (May '85) lacked objectivity, background and historical facts.

Ramesh Chander, Simla

It is an agonising experience to know that even after 48 years of independence, we are undivided. Almost every official paper requires us to certify which community (SC, ST or General) we belong to. Don't they know that we belong to only one community and that is the Indian community? Undoubtedly, the reservation policy is perpetuating the caste system which is against the dreams of the Mahatma who aspired to live in a classless India.

Sunil Kumar Mehta, Dehra Dun

Violent Waves

Violence is simmering everywhere. Still I hear people sing *Sare Jahan Se Achha Hindustan Hamara*. Is this what the media calls 'rational optimism'?

Archana Sood, Jalandhar City

Military here, military there, military everywhere. Ahmedabad's (some) for them, surely care.

The moment military men are not anywhere—Buildings and shops go up in flare.

Gautam V. Sondarya, Jamnagar

Regional Unity

Are we ready to combat the giant of regionalism for the sake of our beloved motherland? Time calls us.

Amarendra Nath Verma, Bettiah (Bihar)

So far as the religion of nationalism is concerned a majority of us are apostates or atheists. We (the majority) are loyal to our family, caste, region or language. National integrity and love for all are sacrelegious.

Tirumal Mundargi, Gulbarga

Where books failed to make me understand what a 'secular India' means, the Punjab turmoil succeeded. Apparently it means giving concessions to religious minorities at the cost of the nation's unity, integrity, peace, and, of course, numerous innocent lives. Besides, rendering the government power(less) enough to look on helplessly when assassins are crowned martyrs.

Priya Singh, Bhilai

Generation Gap

An 80-year-old 'young' man fights for 'star wars'. A 40-year-old 'man' fights for disarmament and world peace. A generation gap?

S.P. Chaukinath, Dharwad (Karnataka)

Best Letter: Rs 40

Wanted: Jobs

Our education system, everyone agrees, should be job-oriented. But where are the jobs?

S. K. Sanyal, Calcutta

Prize-winning Letter: Rs 25

Tragedy Of Terrorism

More tragic than the tragedy itself are the fatal lip-sets in the security umbrella that make the bloody task of the assassins that much easier.

Santosh Kumar, Patna

Terrorise the terrorists to combat terrorism.

K.P. Raghupati, Nagpur

Of What Use Hum Log?

I was disappointed to read about the TV serial *Hum Log* and its characters in your two consecutive issues (May and June '85). I am afraid Ahmedabad, Punjab poverty, communalism, casteism and ill-tation cannot be solved with serials like *Hum Log* to assist our judgment and perception.

Puneet Dhawan, Jaipur

Forgotten Priorities

While the government is all set to enter the 21st century, some persons are hampering its efforts with their ignorant demands for petty things like food and shelter. Hopefully in the 21st century the government would consent to give them computers and TVs.

Prashant Mishra, Dhanbad

•FREEDOM TO COMPETE

There has been an overwhelming response to Sanjay Kumar Jaiswal's views (*Free For All: Letters*, May '85) that so long as a candidate fulfills the necessary basic qualifications, marks should not restrict him from competing with others in competitive exams. Some opinions:

Setting a minimum standard for eligibility to compete in entrance exams is not unfair. A person's admission to any institution should be on the basis of his performance not only in the entrance exam, but also in his previous exams. After all the intelligence of a student is not like the rising or setting of the sun. To criticise various institutions for their strict stand on issues like minimum qualifying marks is to point towards one's own underdeveloped intelligence and low calibre.

Yogesh Kalra, New Delhi

It is absolutely unjust to debar a candidate from appearing in any competitive or entrance exam only because he has not secured the required percentage of marks. Considering the kind of educational system we have in the country, it is downright unfair to judge a person on the basis of marks.

Rajiv Porcoai, Faizabad

Equal competitions for unequal IQs—this sounds fascinating but is in fact inadvisable. The standard of minimum marks is usually nominal and can be achieved by any person of average IQ; one below this standard cannot be expected to do any better in competitions. When we are not able to provide the swelling numbers of educated unemployed with jobs, where is the sense in including those who fall below the prescribed standard.

Ajay Kanotra, Avadi (Tamil Nadu)

Our exam system at the college level leaves much to be desired. It does not purport to bring out the best in the student and evaluation is erratic as a rule than as an exception. So, testing the candidate's knowledge in the competitive exams would be more prudent than prescribing minimum marks in the qualifying degree.

V. Rengaswamy, Madurai

To allow those with lesser IQ to pursue higher studies is merely a natural wastage which, in the long run, accentuates the burgeoning unemployment problem. Our educational policy must be modified to allow brilliant students to go ahead and arrange for the rest to be trained vocationally for self-employment.

Framod K. Sahoo, Dist Surguja (MP)

Usually, the basic educational requirements for various entrance exams are degrees. The traditional university exams are based on questions which can be answered satisfactorily just by memorising a few stereo-typed answers and do not require in-depth knowledge of the subjects concerned. Under the circumstances, setting a minimum standard is inappropriate.

Vivekbrata Biswas, Gauhati

A Questionable Issue

In *Moonis Raza: Devout Educationist* (Jul '85) the new Delhi University VC in answer to the question 'Do you feel that evaluation of teachers by students would help?' said, "Students always evaluate teachers. Ask a student and he will tell you who is a good teacher. And a good teacher survives on respect which comes not from patting backs but from teaching well."

The answer published for the above query was actually for the question 'Do you feel that college teachers update themselves from time to time?'

The error is regretted.

[Edit]

Hello folks...

Jun 23, 1985, will go down in the history of civil aviation as 'Black Sunday'—the day when a few mindless fanatics blew up the Air India Jumbo 'Emperor Kanishka', flying 5.9 km above the earth, killing all its 329 passengers and crew. Since the evidence (whatever little is available) does not prove anything definite, and the possibility of collecting foolproof evidence is remote, we perforce depend on circumstantial evidence. The movement of two suspected terrorists before the explosion; the suddenness of its disappearance ('one second it was there, and the next it was gone,' said the Chief Air Controller, Heathrow Airport); uninflated life-jackets and life-boats in the Atlantic; no report of bad weather; 747 being the safest aircraft ever designed (in February 1985 a twisted tail turned a Chinese Airline 747 upside down, which nosedived 30,000 ft, righted itself and landed safely in the US); and that it was being commanded by one of the top five pilots in the airlines, points out that bomb explosion is the only plausible cause of the crash. Corroborates Capt Peter Delaney, Air Safety Officer for Aer Lingus, the Irish national airline. "The whole situation screams out that it was a bomb."

"The air crash has shaken the world's conscience," said George Bush. More shaken are the world's 2m people who

travel by air everyday; terrified are those left in homes not knowing whether their kith and kin would return alive.

The crash has forced the world community to take a grim look at terrorism as never before. When terrorists killed four US marines and two civilians in San Salvador, the American President said, "We have our limits; and our limits have been reached. This cannot continue."

The tragic disaster demands serious analysis of the situation. Firstly, why have the developed countries in general, and the US, the UK and Canada in particular, adopted a "who cares" attitude? The US has provided the secessionists a respectable forum, the UK allowed the celebration of Indira Gandhi's assassination and the official sources in Canada financed secessionist organisations, granting citizenship to persons like Talwinder Singh Parmar—a terrorist wanted by the Indian authorities for the murder of two police officers.

The disclosure of a number of commando schools for mercenaries—particularly Frank Camper's in Alabama in the US, where two Sikh terrorists were trained, at a fee of \$10,000, to blow up selected targets in India and Indian targets in the US—and the knighting of Armand Singh, Lal Singh and Gurpratap Singh Birk as "holy warriors" who are going to form "another PLO", is agonising.

More repulsive is the attitude of the Canadians who ignored the requests of the Indian High Commission for more stringent security. They have washed their hands off all responsibility saying that it was the job of Air India to check the baggage and security. Is it a desirable attitude? *The Times Of India* editorial says, "Criminals have acted in Canada and it looks as if their task has been facilitated by the could-not-care-less approach of Canadian authorities." Unless the government in Canada smashes the breeding centres of terrorists, such incidents cannot be checked. Misleading is the suggestion by certain groups in Canada that the plane crashed because of an extra engine in one of the wings of the plane, forgetting that a fifth engine pod is designed in the aircraft to carry a spare engine for repairs. Even if it was not there the pilot was capable of

bringing it back to earth with even one wing. Mischievous is the story that the pilot S.S. Bhinder accepted a packet to be delivered in India which probably became the cause of the accident.

The third biggest tragedy in aviation history, it should initiate a debate on how to ensure maximum air safety to passengers and crew. We must learn from the Al El, the Israeli air service where no hijacking has taken place since 1968. We must formulate and rigorously implement foolproof methods. The airports and the aircraft must be guarded like army installations. The drill for security check must be thorough. Alternate arrangements should be readily available in case one system fails. The methods of checking security and persons managing it should constantly change so that terrorists are not able to identify the system and prepare a plan to foil it. Indians in particular have to take their job more seriously. In fact, we take things lightly and leave many things to God. God does ultimately help but it is up to us to run the system. God will not do that for us.

The developed countries have to be more responsible and not allow their societies to become completely permissive. The free sale of sophisticated arms and open training to extremists should stop henceforth. If these countries do not have laws to curb such activities, they should frame a few.

At a time when a string of extremist activities have shaken the world to the realities of terrorism in the air, the governments will have to think in terms of mutual cooperation. "The battle requires international solidarity," said Erich Becker, the Chairman of Frankfurt Main Airport Inc.

Man did not make the world but has acquired the capacity to destroy it and the terrorists are taking the world towards *kayamat or pralay*—doomsday. Should we permit them to do so?

G. G.

TEST YOUR WORD POWER

The per-fect WORD. Is it on the tip of your tongue or is it hidden in the back of your mind? Either way, we agree, it's an eloquent

And so each month we bring you this column, tailor-made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about our word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

Tick the word or phrase you believe is *nearest in meaning* to the key word:

1. **apprehend**: A: to arrest B: awaken C: inform D: come nearer
2. **opulent**: A: prosperous B: bitter C: showy D: harsh
3. **avid**: A: dry B: stingy C: rapid D: greedy
4. **barricade**: A: to block off B: force one's way in C: order the closure of D: tie up
5. **berserk**: A: (go) uncontrollably wild B: odd C: stupid D: disloyal
6. **brawl**: A: scamper B: noisy quarrel C: a system of writing for the blind D: salt water
7. **buoy**: A: to raise the spirits of B: bend the body C: expand D: swim like a fish
8. **dismember**: A: to divide B: dig up C: forget D: put out of position
9. **erode**: A: to wear away B: carve C: shatter D: hammer out
10. **fad**: A: short-term measure B: fabulous piece of art C: loss of colour D: fanciful fashion
11. **glare**: A: quick look B: subdued light of the dawn C: strong light D: wide-eyed look
12. **levy**: A: to impose B: mix C: float D: move
13. **lump**: A: wet land B: roughly prepared wood C: painful eruption D: hard mass
14. **lurid**: A: angry B: passionate C: violent and shocking D: enticing
15. **mirage**: A: feeling of happiness B: soft, deep mud C: any illusion or hope that cannot be realised D: severe headache
16. **notion**: A: wish B: idea C: warning D: a musical note
17. **ossified**: A: savage B: uncultivated C: rigid D: strong
18. **referendum**: A: a vote of thanks B: a ballot C: the submission of a dispute to a judge D: the submission of a proposed law to a popular vote
19. **spartan**: A: well-dressed B: uncomplicated C: frugal D: careless
20. **supersede**: A: to take the place of B: make an addition to C: overcome D: put an end to something

(Answers on page 60)

THOUGHTS

Here's some food for thought ... provided you pause to ponder over it. These passing thoughts on various social, political and economic issues, expressed by a few observant minds, often portray the bare realities of life. They may even set your thought processes in motion!

... the horrendous level of black money in India drains the exchequer, though it does fertilise the economy in its own way (as by promoting housing), and falls oppressively on the poor and deprived. Fighting black money is a continuous process and there is need for eternal vigilance.

Indian Express

There is nothing wrong with assuming violence provided it hits those who deserve it, and changes their ways.

The Economist

Airport security will never be perfect but the efforts to improve it have had some success: hijackings, which occurred at a rate of 70 a year 15 years ago, were down to 17 last year. The problem is how to maintain the downward trend.

The Economist

... there has been a massive transfer of corporate power into the hands of a new, younger post-independence generation... there was of course a certain inevitability about this... because 82.8% of the country's population is in the below-44 age-group. And it is hardly surprising that this younger populace which is better educated and better informed has more faith in its own generation rather than in the slow and steady older generation which, though rich in experience, has been slow to innovate and perhaps patient to a fault.

Business World

... flying has, perhaps, entered its most dangerous age... not because of the machine but because of man. Even while the advances in technology have made the machine safer, the human being has become that much more sophisticated in his ability to destroy. Suddenly, for every Indian in particular, the sky is tinged with the colour of blood.

M.J. Akbar, The Telegraph

The answer lies in strengthening the political process, especially at the grassroots, so that national resilience is born out of a sense of participation, and rulers and ruled are bound by a common determination to resist blackmail and terrorism.

The Statesman

It (government) should know by now that nearly 18m small enterprises in the country, employing 53m people, generate taxable incomes but pay no tax. It should be easy enough to bring them within the tax net, if the tax collectors mean business.

The Times Of India

The basic postulate of the parliamentary system in the country is that the people's representatives will run the administration autonomously at each tier—Central, state and municipal... This is mere theory... In practice the Chief Minister is a Central nominee. He cannot resign without its consent. He cannot expand the Cabinet or appoint or sack its members save with the High Command's consent.

The Herald Review

QUOTABLE QUOTES

That war is an evil is something that we all know, and it would be pointless to go on cataloguing all the disadvantages involved in it. No one is forced into war by ignorance, nor, if he thinks he will gain from it, is he kept out of it by fear. The fact is that one side thinks that the profits to be won outweigh the risks to be incurred, and the other side is ready to face danger rather than accept an immediate loss.

Thucydides

There are two things to aim at in life: first, to get what you want; and, after that, to enjoy it. Only the wisest of mankind achieve the second.

Logan Pearsall Smith

The Right Honourable gentleman is indebted to his memory for his jests, and to his imagination for his facts.

R.B. Sheridan

Did you ever expect a corporation to have a conscience, when it has no soul to be damned, and no body to be kicked?

Edward, First Baron Thurlow

Death said: The good is one thing, the pleasant another: these two, having different objects, chain a man. It is well with him who clings to the good; he who chooses the pleasant misses his end.

Upanishads

Those who offend us are generally punished for the offence they give; but we so frequently miss the satisfaction of knowing that we are avenged!

Anthony Trollope

'Tis an old maxim in the schools/ That flattery's the food of fools;/ Yet now and then you men of wit./Will condescend to take a bit.

Jonathan Swift

POPULATION

Its Various Dimensions

BY ANITA NARAYAN, & SRIDHAR RAMAN

India's population problem is compounded by a crowd of socio-eco-cultural and religious dimensions. Solving it involves an equally divergent array of issues like education, women's liberation, infant mortality and medicine.

And the population bomb can be defused only if every agency is involved and every individual is aware of his social responsibility. Tracing the various aspects of the problem.

Pandit Jawaharlal Nehru once remarked: "India's population problem is not one but 400m problems." Today that problem has flared up to 743m problems.

The Indian population bomb is well on its way to exploding. Population explosion is not just a bad dream for millions of Indians; it is a scary reality. The Indian population which is presently 743m is growing fast (by 16m annually); in fact it is sizzling along at a pace that thwarts all efforts at breaking through the fetters of poverty and backwardness. And if the present growth rate continues, India's population is expected to double itself in the next 45 years making it 40% larger than China's present population. Boom in population at this rate will, in the years to come, make impossible demands on the limited resources of the State dragging it even further into the morass of abject poverty. If India intends to take its place among the world's foremost economic powers, as prophesied by PM Rajiv Gandhi in a recent interview to the *Newsweek*, then it must make population control a crucial lynchpin of any strategy to battle against its myriad problems.

It is fairly well established that a vast majority (nearly 30%) of population growth in the coming decades will occur in the developing world. Out of a total projected world population of 6.2b in 2000 A.D. the population of the developing world is expected to be 4.5b (from *International Encyclopaedia Of Social Sciences*, Vols. 9, 10, 11 and 12). It is in this regard that the note of warning sounded by the Worldwatch Institute in its *State Of The World Report, 1985*, is pertinent. The institute notes: "These coun-

tries (the sub-Saharan, Latin American and south Asian), if they are to avoid a further decline in living standards, may have to adopt the one-child family norm emulating China." (See Map)

In the Indian context it is, of course, necessary to enforce such a norm with discretion and a sensitive understanding of our social customs, traditions, personal attitudes and health security. The sense of seriousness and urgency of the problem has been growing on the leaders of the Third World with the result that there is now a perceptible change of attitude towards family planning in these countries. As Rafael Salas, Secretary-General of the 1934 Mexico conference on population, remarked: "Ten years ago, you could not find people knowledgeable about population; now virtually every government has developed its own corps of experts and programmes". Nowhere is this change of attitude more remarkably manifested than in China; ten years ago at the Bucharest population parley, China bitterly inveighed against family planning, dubbing it as the capitalist West's tool to subjugate the Third World. Today the Chinese have the kind of family planning campaign operating in their country which is not only aggressive but tends to be draconian in its approach. Such drastic shifts in attitudes have occurred because a vertiginous population growth has now been widely identified as the chief reason for under-development. (See Table B)

Popular Theories

The present population crisis in many of the Third World countries is an echo of warnings sounded earlier by prophetic demographers. Thomas Malthus, an 13th century demographer, in his essay *Princi-*

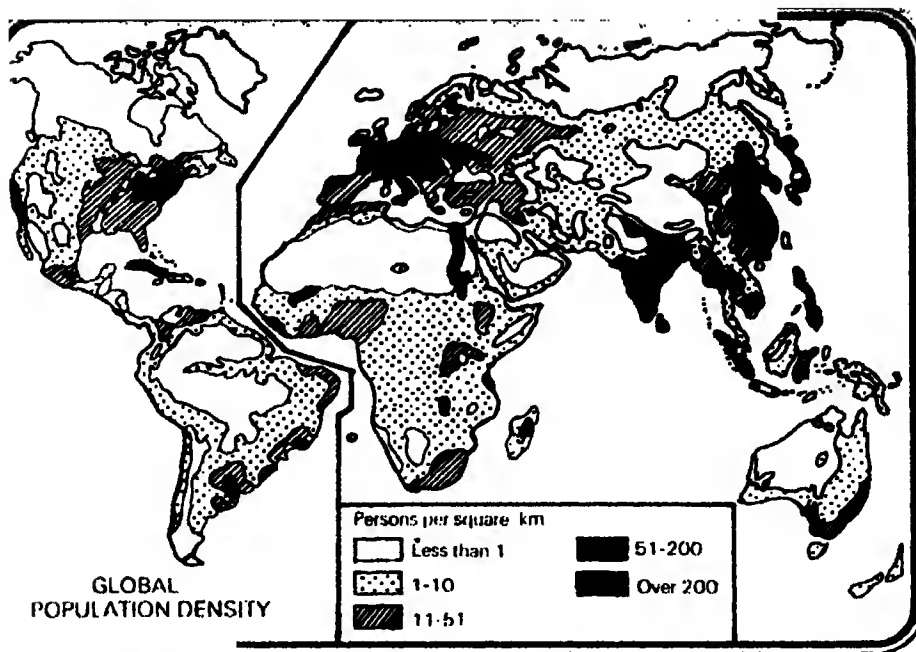

ple Of Population As It Affects The Future Improvement Of The Society,

held the general view that if population grows in geometric progression and outstrips the means of subsistence (which moves in arithmetic progression) then the former factor will absorb all economic gains. This view, although influential, was severely criticised.

Marxists regarded the preoccupation with population growth as simply an imperialist fetish and considered poverty to be the result of oppressive social institutions rather than population growth. Further, during the 19th century, in the wake of the industrial revolution, Europe experienced a massive economic upsurge which greatly outpaced population growth and led to a general increase in living standards; this was accompanied by a uniform slide in birth rates in that continent. However, the recent trend in population growth, especially in the developing countries, has again placed Malthusian views in the forefront.

Stagnation

"A war on poverty would simply have to be a war on population" observed the *World Development Report 1985*. Ensclosed in this seeming overstatement is a kernel of truth. In India, for instance, the national income, since independence, has grown at a healthy rate of 3.5% per annum, but the per capital income, in the same period of time, has crept up by a mere 1.5% per annum, so that even though the people haven't exactly got poorer in the last 30 years, they have not been getting richer either. They have stagnated around the same levels of impoverishment. Most of the hard earned fruits of development have been absorbed

while female literacy was one-seventh and contraceptive use one-third of the level prevalent in Kerala. Thus the close relationship between literacy (especially female literacy) rise in per capita income and reduction of the infant mortality rate are evidently essential prerequisites of controlled population growth. India's record in these areas has not, however, shown, any significant progress. Literacy among women, especially in rural areas, is an extremely neglected aspect and till 1981, three out of four women were illiterate.

Infant Mortality

India along with Iran shares one of the highest rates of infant mortality in the world—120 per thousand live births. Neglect of female children has contributed immensely to this figure. A study of infant and childhood mortality in Andhra Pradesh revealed that it is usually highest among Muslims and Harijans and comparatively lesser among non-Harijans, thereby reaffirming the intricate relationship between population growth and socio-economic development.

Though it is recognised that the benefits of child welfare would go a long way in combating the population problem, in India this area has received little attention. Despite it being a welfare state child labour abounds, with Andhra Pradesh having the highest rate. The obvious motivation leading to child labour is that the low wage structure of the parents, combined with their large family, forces the parents to permit their children to work so as to supplement the family income. This prevents the children from being exposed to any educational facilities. Also, the high rate of infant mortality induces the parents to produce more children. Thus, child labour has a definite influence in determining the fertility rate in India. Legislation for the abolition of child labour along with other incentives such as free education, the mid-day meal scheme, scholarships, etc. might prove helpful in mitigating this problem. It is important to raise the marriage age to at least 19 years, not only to postpone child births but also because the infant mortality rate is the highest for the first and second order of births. Even the Child Marriage Restraint Act which fixes the minimum age of marriage at 18 for women and 21 for men has yet to be seriously implemented.

Hence, the fact that socio-economic development is an essential concomitant of population control is clearly evident and it is this aspect which was clearly highlighted at the United Nations second International Conference on Population held at Mexico City in August 1984. The first International Conference on Population held at Bucharest ten years earlier was polarised into two camps, according to whether priority should be given to family

by the ever-swelling population.

Not only does a rapidly bloating population nullify the gains of development, it also has an adverse effect on income distribution. For example, the number of jobs and wages are largely fixed in the modern sector of the economy. Therefore, the most telling impact of population growth on size of labour is felt in the rural and traditional sectors of the economy. Similarly, since it is the poor who have larger numbers of children and their growth in numbers is relatively faster, income disparities are likely to be exacerbated.

Population Control

Concern about growing population led India's planners to launch a nationwide family planning programme in 1952, making it the first developing country in the world to do so. Symbolised by the inverted red triangle, the programme initially adopted the model of the three-child family, though presently, in view of the seriousness of the situation, it advocates the two-child family norm. The only significant achievement of this programme has been the decline in the fertility rate from 6.5% in the 1950s to 4.3% in 1982. No other country at India's level of socio-economic development has a lower fertility rate. Some success in raising female literacy and lowering infant mortality along with more accessible family planning services have played significant roles in reducing the fertility rate.

However, population in India continues to increase at the spiralling rate of 16% annually which is more than the population growth rate in any other country in the world. This is largely due to relatively high fertility rates and declining death rates in the last three decades which means that

women entering the child-bearing age form a large proportion of the growing population.

Indian population is basically pyramidal in structure. At the base of the pyramid is the 0-9 age-group with gradual decline in the higher age-group. This means that as the women of this age-group enter the childbearing age within the next 20 years there will be a phenomenal spurt in population. The only solution to this critical situation lies in widening the family planning programme so that 60% of the couples, as against 28% now, are brought within its purview. Strict enforcement of the Child Marriage Restraints Act (1929) is also a vital step in this direction. In India, the mean age at marriage has been low as compared to other countries. However, it has been slowly rising between 1991 and 1971 (See Table A).

The fertility rate in India displays wide variations. In 1973, Kerala had the lowest fertility rate of 2.7%. At that time, three-fourths of Kerala's women were literate; infant mortality was 47 per thousand live

Mean age at marriage (Table A)
(age in years)

	Males	Females
Norway	23.0	24.4
East Germany	27.4	24.7
France	26.0	22.6
Japan	25.3	23.0
India (1921)	20.7	13.7
(1951)	19.9	15.6
(1961)	21.6	15.8
(1971)	22.2	17.2

births and 32% of couples were protected by modern contraception. In contrast, the fertility rate in UP was as high as 5.6%; infant mortality was over 150 per thousand

POPULATION GROWTH VS ECONOMIC GROWTH (Table B)

Source: World Bank

POPULATION EDUCATION

Population Growth: The total natural increase in population consisting of births minus deaths and net migration consisting of immigration minus emigration.

Population Growth Rate: Annual rate of natural increase (birth rate minus the death rate in a given year) combined with the plus or minus factor of net immigration or net emigration.

Birth Rate and Death Rate: Annual number of births or deaths per 1,000 people.

Infant Mortality Rate: Annual number of deaths of infants under one year of age per 1,000 live births.

Total Fertility Rate: Average number of live children at each age in accordance with prevailing age specific fertility rates.

Population Momentum: Large increase in the number of women entering the child-bearing age offsets the benefits of a declining fertility rate whereby rapid population growth continues due to the initial momentum.

Optimum Population: Under given conditions in a country the concept of optimum population signifies a population size that is preferable to any other, larger or smaller.

Population Trap: The population surge that follows any increase in per capita income. Such population increase slows down the growth of per-capita income simply because any increase in total income must be shared by a larger number of people.

Demography: Study of population.

Emigration: Movement of people from one country to another for life or residence.

Immigration: To come into a country of which one is not a native and to take up permanent residence.

Over Population: Excessive population. Population in excess of what a region's size and resources can sustain.

Population Projections: Scientific prediction of the population size of a region for the coming years.

Sex Ratio: The male-female ratio in a given population. In India there are 1,000 males to every 935 females, thus the sex ratio in India would be 1,000 males: 935 females.

Floating Population: A mobile population which does not dwell permanently in a region but regularly moves in and out of it.

Depopulation: A phenomenon restricted to certain developed countries like East and West Germany and France in which there is a reduction in the absolute number of people as a result of the birth rate being lower than the death rate.

family programmes or to development, India supported the latter.

The Mexico City Conference, attended by 149 nations, however, unanimously agreed that socio-economic development and population are closely inter-related. The conference also acknowledged that though the world's population growth had slowed from 2.03% to 1.67% since 1961, the population of the developing

countries would continue to increase annually for a number of years. Implementation of effective family planning programmes and development of new contraceptive technology to combat the problem were some of the steps suggested at the conference. (See Table C)

Underemployment

India, being a democratic welfare society, is committed to provide jobs

Population Projections For World's Most Populous Nations (Table C)

(In millions)

Country	1980	2000	2025	2050	2100	Fertility Rate 1984

for as many people as it can. Chronic overstaffing in most government departments and industries is the direct result of this. Overstaffing leads to under-employment and a nearly chaotic division of labour in the organisations. Together they lead to gross inefficiency. On the one hand, overstaffing means uneconomically obese wage bills and on the other, a sluggish and inefficient labour force. Jointly they have kept the public sector perennially in the red. The public sector, therefore, instead of leading the country to development has, over the years, become a crippling drain on our economy. And while we are saddled with an enormous unemployment problem we are also having to grapple with mounting under-employment.

To break the catch we would need to engage the existing idle capacity gainfully and check the seemingly uncontrollable expansion of the capacity. The problem is all the more daunting because of the adverse population-resource balance, which may lead to an Ethiopia-type situation (an economic syndrome where growth in numbers is checked by famine), and because of the great number of young people who will reach the reproductive age within the next few decades—for, in India, according to the 1981 census 40% of the population is below 14 years of age. These are also the very people who will, in the coming years, enter the maddening race for jobs, putting an unbearable pressure on the government. The government, however, is no magician who can create jobs in a jiffy which means that the sea of unemployed will swell with each passing year unless the population is controlled. The legion of unemployed will begin to live parasitically on the nation's dwindling resources pushing economy to the brink.

Therefore, it is necessary to attack population growth on a war footing to ease the pressure on jobs and to make the Indian economy competitive. And for this, two strategies should be simultaneously employed. The first involves stepping up of health care and family planning activities and the second, a dynamic thrust to educate the masses. India hasn't fared too badly on the first score which is reflected in the fall of fertility rate from 6.5% in the 1950s to 4.8% in 1982—though the initial "population momentum" has dulled its positive impact. But on the education front India has fumbled and faltered. Its record in this field continues to be one of the weakest among nations which began their march towards development in the late 40s. Yet a war on poverty without a ruthless attack on ignorance is quite meaningless. And education is the only means of curbing population growth.

In India, due to rampant illiteracy and

CURBING THE BABY BOOM

Rami Chhabra has carved a niche for herself on issues relating to family planning and women's liberation. She is the Programme Director of the Family Planning Foundation in New Delhi and is also a perceptive freelance journalist contributing regularly to national and international journals. In the following interview, Ramispeaks on problems of effective family planning implementation, female literacy and other aspects related to India's population problem. Excerpts from the interview:

Why is it that India, despite being the first country in the world to adopt a population policy aimed at lowering birth rates, has failed to achieve any significant result in controlling its population?

I wish I could tell you that. It must be noted that family planning does not come in isolation, but is intimately related to socio-economic development, which includes improvement in women's status, health and educational facilities combined with effective family planning services. The interesting question is why people who urgently need family planning are rejecting it. The answer is that for these sections of people, who subsist on low-income levels, a family planning programme has no relevance. More children for them means more work-hands and more income. Therefore, to understand the true nature of the problem we must perceive it from their point of view. However, with the requisite socio-economic development, these sections will accept the family planning policy provided there are better health and educational facilities, improvement in women's status, etc.

Family planning services will only be successful when an individual family's needs and society's needs correlate. Although there is general awareness favouring such a policy it now remains basically a question of effective implementation. The only way this can happen is by making certain innovations whereby such a policy is integrated into our general framework of living.

Although it is recognised that literacy, especially female literacy, is an important prerequisite of population control, India's record in this field is very poor. Why is this so?

Firstly, not enough has been done to recognise the real depth of the problem. Formal education is not relevant in the lives of rural women. These women hold the domestic economy on their shoulders and a young girl is needed in the house to take care of siblings, help in getting

water, food and fodder. Our priorities are very different from their needs.

Which sections are most receptive to family planning programmes?

Women from all sections are definitely the most receptive and constitute 90% of our programme—85% of our sterilisations are performed on women. Men, unfortunately, are extremely unresponsive and do not consider it to be their problem with only 10-15% going in for sterilisations. However, it is only when a woman gets exhausted by childbearing that she, as a life-saving measure, resorts to family planning. By then the demographic damage has already been done. In general one can say that the poorest are usually the most unresponsive to the family planning services as they feel they do not have a stake in the system.

What measures are taken to reduce the rate of infant mortality?

Firstly, the infant mortality rate has a definite influence on the fertility rate and vice versa. About 16m women are in the 16-19 age-group and the children born to these women are more likely to be still-born. Foetal infections may be the cause as these women are still not fully mature. It has also been established that an early child makes a mother prone to bearing more number of children. Again, a woman bearing her fourth or fifth child faces the danger of chronic health problems. The babies are usually undernourished and higher mortality rates occur. Therefore, if we can effectively reach these two categories—the teenage mother and the mother bearing her fourth child or more—the infant mortality rate and the fertility rate can be cut down to one-third. Prevention of child marriage is an important step in this direction and though legislation has been enacted, it is only by creating an environment where girls have options and are not mere commodities for exchange in marriage, that the problem can be solved.

What was the significant outcome of the United Nations Second International Conference on Population, held at Mexico City, in 1984?

A very important conclusion which was uncontroverted was that socio-economic development is an important criterion for successful family planning programmes.

What prospects do you foresee for India's population control programme?

Firstly, India's population will rise above 950m in the 21st century. There is nothing that can be done about it, as we have too much population momentum. After that whether the situation will stabilise will depend on prevailing attitudes. A.N.

widespread ignorance & large majority disbelieve that more children are hindrances to their economic interests because for them, it means more work hands. The phenomenon is best explained by the theory of "differential fertility", i.e., the general observation that birth control was first adopted by the better educated and the upper income groups. This theory is clearly active in India where the fertility rate is much lower in the urban areas, especially in the higher strata of the urban society, than in the rural areas. This suggests that people will, among other things, have to acquire a certain level of education and monetary security before they can accept the idea of a small family.

Demographic Transition

In the industrialised countries, the regular sequence of decline in death rates and birth rates led the modernisation theorists to postulate certain general propositions regarding the chain of demographic developments which have been called the "theory of demographic transition" or "theory of vital revolution." This theory traces a particular pattern in population growth. In the primary stage, a country having an agrarian low-income economy is characterised by high birth and death rates; in the successive stage, due to the effect of modernisation, the death rate declines because of higher levels of living and the introduction of public health facilities. However, as the birth rate is still relatively high, society experiences an accelerated population growth. In the final stage, due to the transition from an agrarian to an industrialised economy, with the acquisition of general literacy, urbanisation and improved standards of living, the birth rate also declines and there is controlled population growth.

In the light of the theory of demographic transition it can be seen that till around 1930 India was in the first stage. From 1950 onwards it entered the second stage though already there was a noticeable departure from the model. However, it was much later, when India was poised to enter the third stage, that things began to go awry. Today, despite considerable industrialisation—a symbol of the third stage—and a steep decline in death rates, we remain primarily an agrarian society. This shows that though death rates may decline, without the accompanying progress in the vistas of education and standards of living, there can be no guarantee that the economy will conform to the rest of the theory, with the birth rate showing a similar fall.

"High population growth rates have a negative effect on economic growth rates especially in developing countries," records the *Report Of World Development*

CENSUS INDIA

The practice of conducting census at a regular interval of 10 years began in Sweden in 1750. The US also conducted decennial census from 1790 onwards followed by France and England in 1800.

As for India, its current population problem, however, does not have an ancient origin. Historians have estimated that India's population remained more or less static through the ancient and medieval periods, the reason for this being the same as that which checked the growth of world population in the pre-industrial period; war and disease which led to a high death rate. The first census was taken in India in 1871 when the population count for 1867-1877 was 203.4m, and the figure was later adjusted to 255.2m. The study of the census data in the 20th century shows that although there was a slump in population growth between 1911 and 1921, since 1921 population has increased in every decade, the growth being phenomenal after 1951. From 1921 to 1971, population increased 118.1% and the growth rate for 1971-81, too showed an increase of 25% in the population. One reason for this increase is the rapid decline in the death rate which fell from 48.6 per thousand in 1911-21 to 19.0 per thousand in 1961-71. The expectation of life at birth, which was 18.1 years for males and 18.5 for females during 1911-21, rose to between 46 and 47 for males and between 44 and 45 for females during 1961-71. The birth

rate has not, however, declined correspondingly.

Population Growth In India (In millions)

	Population	Increase or Decrease	Percentage Increase or Decrease
1891	236		
1901	236	—0.0	— 0.0
1911	252	+16	+ 5.7
1921	251	—1	— 0.3
(1891-1921)		+15	+ 0.19
1931	279	+28	+11.0
1941	319	+40	+14.2
1951	361	+42	+13.3
(1921-1951)		+60	+1.22
1961	439	+78	+21.5
1971	548	+109	+24.8
1981	684	+136	+24.8
(1951-1981)		+323	+2.15

Source: Registrar General of India

As per the 1981 Census, India has 934 females to every 1,000 males. In 1901, there were 972 females to every 1,000 males, whereas in 1950 the figure decreased to 950. Urban population has grown from 9% to 23.31% in 1981. Around 39.7% of India's population is below 15 years of age and about 5.5% are over 60 years. The birth rate in 1981 was approximately 36 per thousand. S.B.

1984. In its simplest form this relationship denotes the effect of the rate of population growth on per capita income; more population means a larger denominator for estimating per capita income. But there is also the more significant plane at which the output itself is effected by the rate of population growth. This is essentially because of a reduction in savings, investment and diversion of larger amounts of resources to welfare and to indirectly productive investments such as health and education needed to support a shooting population. The Indian state has to sponsor and heavily subsidise these projects, not only because it is a welfare state, but also because, if some of these investments are withdrawn the speed and structure of economic expansion could be impaired by the resultant lower productivity of an uncared labour force.

The Food Crunch

Human nutrition is sharply divided between the two extremes of haves and have-nots. More than half of the world food output is gorged by the rich who constitute less than 30% of mankind while the

70% poor are left to struggle and scrounge for a helping from the remaining food output. In the combinations, between 1952 and 1971, the volume of food output barely kept up with the pace set by the tearaway population growth; it grew by 2.9% while the population rose by 2.6%. Even this small gain of 0.3% was inequitably distributed. Population control measures should be accompanied by a forceful drive to step up food production by modernisation of agriculture.

After the Green Revolution, India has steadily bolstered its food production and today, it is almost fully self-sufficient. But self-sufficiency is a deceptive phrase when applied to developing countries because food is more inextricably related to the quality of life than to its size. Human beings can survive on much less quantity of food than what is optimum. They can live, at least for limited periods of time, at the Malthusian level of bare subsistence, i.e., on a food supply just sufficient to sustain life. In India, one in every three persons lives under what is by itself a bare-bones-poverty-line of \$100 a year.

large number of Indians are eating much less than they should be. If, for instance, Indians in general were to consume even half as much food as their elite cousins in the US, India would have to import substantial quantities of food grains; even so India's achievements on the food front are not inconsiderable.

Since 1951 India has increased the area of land under cultivation by 20%, doubled the irrigated area and raised fertiliser use . 3 times. The annual harvest of rice, corn and wheat has shot up by 105%, 265% and 340% (*Food And Population* by Roger Revelle). Impressive as this performance is it may not be enough unless India can be satisfied with keeping over half its population constantly at the Malthusian levels. If not, then drastic steps will have to be initiated to keep the population pegged to controllable levels, and to further boost food production. For, the food crunch could be lurking around the corner and may hit the nation sooner than expected if urgent measures are not taken. India's population, even by conservative estimates, is slated to double itself in the next 45 years. India, therefore, has to brace itself to double its food output from the present level of around 600m tonnes to 1,200m tonnes by 2025 even if its aim is limited to maintaining nutrition levels at the present low state. If it aspires to feed every mouth with optimum quantities of food then the figure would be much higher. Though this is a difficult task it is probably not an impossible one if our past performance is any indication. In the 25 years between 1950 and 1975 foodgrain

production went up from 40m tonnes to 500m tonnes. By that count it should not be considered beyond India's reach to achieve the plus 1,200 tonnes target by 2025. All this is, of course, hinged on our ability to curtail population growth. Ecology

The earth is man's home. This is precisely what the word eco (logy) means; the word has its origin in the Greek word *oikos* (household or living place). Today, however, ecology is a house in disorder because man has become too big for his environment. Instead of being merely an organism living in an environment, as he was meant to, he is trying to force the environment to exist in the conditions he chooses to create. The disastrous result of this is becoming increasingly apparent with each passing day. The disproportionate growth of human population and man's indiscriminate destruction of his surroundings is creating a host of new and nameless problems every day.

Human population has expanded with a staggering rapidity since the turn of this century and projections for the future show that there is going to be no let up in this trend; but equally certain is the fact that the earth will not be able to support the multitudinous invasion of humans. If nothing kills man before it, the pestilence of pollution, which the geometrically growing population is sure to unleash, will get him. Thomas Malthus was one of the first to relate the destruction of man's environment to the increase in human population. He postulated that the earth cannot hold people beyond a certain num-

ber; there will be pestilence and famine to reduce the swarm of humanity. Though this theory is considerably old and is now considered outdated, his prophecy of mass-scale destruction as a consequence of overpopulation hasn't been proved wrong. Indeed what we are seeing around us today goes a long way to lend empirical substance to his premonitions. The overpopulated nations are often struck by cyclones, famines and natural calamities and myriads are killed. It may be nature's last resort to restore the equilibrium which is being eroded by an ever-growing population. This agreement stems from a simple logic explained by Milton H. Spencer, Professor of Economics, Wayne State University, "There is no doubt that the growth of population adds to pollution. This can perhaps best be appreciated from an engineering standpoint; just as an engine is not 100% efficient and hence creates waste as it transforms fuel inputs into energy outputs, so a population creates some waste as it transforms resource inputs into commodity outputs."

India is presently moving on a rapid path of industrialisation which is resulting in mass exodus from the villages to the cities. Our major cities are already dangerously polluted and with the additional strain of these daily migrations things can only worsen. If the population increases at the present rate, the unbearable pressure on arable land will relentlessly drive people citywards in search of jobs and we could be on the same path of self-destruction as any other country with similar problems. ■

POLITICS OF POPULATION

BY PROF. C.P. BHAMBHRI

Dean, School of Social Sciences, Jawaharlal Nehru University

All underdeveloped countries of Asia, Africa and Latin America are engaged in the eradication of poverty and many a time their efforts are thwarted because millions of children are born every year and they have to be provided with food, clothing and health services. While in the developed countries population growth has stabilised, in the poor countries the rate of increase in population almost negates the rate of growth in their economy. One important programme of governments in developing countries is to educate people about the small family norm. These governments are compelled to play a crucial role in family planning programmes because their voluntary agencies are weak and the level of education of the people is low.

During the last 38 years, the rate of population growth has made its dent on both the rural and urban areas in India.

A large number of unemployed and unskilled workers migrate from the rural to the urban areas in India, only to end up living in large slums.

Whenever the government is involved in any major social problem, political forces, for and against government policies, take up positions. Thus, even the population policy of the Indian Government has become politicised.

An important political debate in India regarding the population policy is centered around motivation and coercion in family planning programmes. While the government maintains that it is following a policy of motivation and providing incentives to the masses, many opposition parties and groups in India allege that the government is forcing people to go in for sterilisation.

At times, over-enthusiastic bureaucrats and family planning functionaries may be indulging in coercion to achieve their

targets, and this provides a handle to the critics of the government.

National Consensus

The success of family planning programmes depends on national consensus, but in India a division on this issue exists between the government and some of the opposition parties. The family planning policy cannot succeed without a large-scale educational programme; but often rumours are floated against the safety of sterilisation and propagation of birth control measures is rendered meaningless. Two major rumours are often circulated to influence the ignorant people. Firstly, that the family planning programme in India is directed against the poor—especially the scheduled castes and scheduled tribes. Secondly, that some religious communities are against family planning measures while other communities are accepting it, with the result that in future the religious composition of Indian population will change in favour of the minority communities. Thereby, the minority communities are growing in number because

The last voyage: The body of one of the 329 unfortunate crash victims.

KANISHKA FLIGHT 182 TO DEATH

Never before in the history of civil aviation has there been a worse air disaster over water as the one which occurred on the fateful day of Jun 23. The Air India Boeing 747, Kanishka, flying from Montreal to London, en route to Bombay and Delhi, crashed into the Atlantic Ocean, off the coast of Ireland, killing all the 329 passengers including the crew aboard. A catastrophe of this magnitude has a devastating impact in itself. But suspected sabotage has lent the disaster macabre dimensions.

For, minutes after the commander of the aircraft contacted Ireland's Shannon air control, the plane suddenly disappeared off the radar screen, plummeting into the ocean from an estimated height of 31,000 feet like a stone. What is most intriguing is the fact that the pilot did not have any time to radio a distress signal. Obviously, whatever it was that

DEATHS IN THE AIR

The recent Air India Boeing (Kanishka) crash in which 329 people including 77 children lost their lives, ranks third in the list of major air disasters. Prior to this the major five disasters which topped this tragic list were as follows:

- March 1977: 582 killed in a collision of two Boeing 747s (Pan Am and KLM) at the airport on Tenerife in Spain's Canary Islands.
- March 1974: 346 killed in the worst single-plane accident when a Turkish DC-10 crashed 26 miles north-east of Paris.
- Aug 19, 1990: 301 killed in a fiery emergency landing of a Saudi Arabian L-1011 jet at the airport in the Saudi capital of Riyadh.
- May 25, 1979: 273 killed when an American Airlines DC-10 crashed on take-off in Chicago.
- Sep 1, 1983: 269 killed when a KAL 747 was shot down after flying through Soviet airspace near Sakhalin islands by a Soviet fighter jet.

Apart from this, nine days in June '85—from June 14 to 23—proved to be particularly ominous for the aviation world. There were several hijackings and explosions which ultimately ended in a tragedy of unparalleled magnitude—the Air India Boeing crash on Jun 23. This one-day terrorist itinerary reads as follows:

Jun 14: The hijacking of the Trans World Airlines (TWA) aircraft with 145 passengers and a crew of eight aboard on flight from Athens to Rome.

Jun 19: In Frankfurt two children and an adult were killed when an explosion ripped through the passenger departure hall at Frankfurt airport.

Jun 21: A Norwegian domestic flight was hijacked on flight from Trondheim to Oslo. The sole hijacker, however, gave up after releasing 115 passengers for beer.

Jun 23: Baggage from a Canadian airliner exploded at Tokyo's Narita airport killing two baggage handlers and injuring four others.

caused the crash, whether a freak air turbulence, a technical fault or a bomb explosion, it was sudden, instantaneous and lethal. Because the Boeing 747 is system tested to cope with any eventuality including failure of all the four engines, in which case it can glide to land on sea. Also, the Kanishka was a relatively young Boeing with only 23,000 flying hours to its credit. And no matter what the severity of the emergency the pilot only has to trigger a button to signal distress.

That Capt H.S. Narendra piloting Kanishka had no time even for this clearly points out that he was taken totally unawares. The probability of some freak weather condition or technical fault can be eliminated for it is only after thorough checking that an aircraft is given the all-clear for takeoff. Which leaves the possibility of a sabotage only. All indicators point in the direction of this crash being master-minded by terrorists. And three terrorist groups namely the Dashmesh regiment, the All-India Sikh Students Federation and the Kashmir Liberation Army have even claimed responsibility for the crash. But what was heartening was the fact that the majority of the Sikhs also came out with open condemnation of the alleged dastardly act.

Recently terrorism has scaled a new high in India. The recent, perfectly synchronised bomb blasts which rocked Delhi and parts of North India hinted at an organised terrorist network. The blasting of Kanishka is a positive indicator. That the ill-fated Air India flight originated in Canada only strengthens this view, for Canada has made no secret of its extremely liberal policy towards terrorists. Not only Canada but the US, too, has flourishing commercial terrorist training schools imparting knowledge of arms, explosives and terror tactics to their students. It is suspected that two such trained terrorists, Lal Singh and Ammand Singh, wanted by the FBI for their alleged involvement in the plot to assassinate PM Rajiv Gandhi on his US tour, may have a hand in the blowing up of the Boeing. And an international search for these absconding terrorists is on.

Another pointer to the plane crash being a case of sabotage was the baggage blast at Japan's Narita airport, only 44 minutes prior to the Boeing tragedy, in which two people were killed. The Canadian Pacific Air Boeing 747 carrying 400 people, in which the baggage was being carried, landed at Narita airport 15 minutes before schedule because of favourable tail winds. What could have happened had the plane not landed when it did, is too fearsome to contemplate. And what is more shocking is the fact that the suitcase which exploded was among the baggage scheduled to be transferred to another Air India flight which was due to leave Tokyo for Bombay. Apparently the terrorists had been aiming at blowing up two Air India Boeings to intensify the shocking impact and create more panic in the world at large and India in particular.

Meanwhile massive rescue operations have been launched by the British, Irish, Canadian and American authorities. The Atlantic Ocean is being scoured for bodies and remnants of the aircraft. Investigations are trying to decipher the exact cause of the crash on the basis of evidence obtained from the wreckage and the location of the bodies. The accident from the 131 bodies recovered so far that death occurred long before the bodies touched the water. The pressure inside the aircraft was maintained at 760 mm while that outside at the height of 30,000 feet was about one-third—at 225 mm. In the event of the aircraft experiencing a hole being formed the air would have been sucked out of the aircraft at such speed that it would have resulted in an explosion of human also have caused the bursting of the lungs rendering the passengers unconscious. Further, free fall from 31,000 feet which would have lasted approximately 55 seconds, would have, according to doctors, caused the rupturing of blood vessels in the brain and even though the cabin was under pressure may have resulted in the cessation of blood flow to the brain. According to the latest report of medical experts, even if the bodies were recovered, the bodies recovered, death occurred within half a minute of the sudden suction of air from the rear to the front of the body. So great was the suction and so great its force that the passengers were found with their heads against the front seats.

The recovery of the black box, marks the completion of the mission of the rescue teams, will perhaps help the investigators to find the cause. The black box was recovered in two stages. A small, 100-gram, data recorder (CVR) was located and protected. Attached to it, a larger and

BLACK BOX COMES TO LIGHT

Hopes of investigators probing the disastrous Boeing air crash that killed 329 people, are sealed in the black box. For an instrument of such vital importance surprisingly little is known about the black box. The black box—18 inches long and nine inches wide—is a sturdy package of two recording instruments namely the Flight Data Recorder (FDR) and the Cockpit Voice Recorder (CVR). The black box, so called because it is a repository of information that it will divulge only on compulsion, quite in contrast to what its name suggests, is not black but orange in colour. Its casing is made of a special alloy of metals which makes it quite heavy. The black box is designed to survive under the most adverse conditions and is shockproof and water and fire resilient. Apart from this the box is lodged securely in a special protective enclosure in the rear of the aircraft where there is less likelihood of its being destroyed.

The recorders in the black box are invaluable for restructuring the sequence of events occurring in the cockpit of the aircraft. The 4C pound FDR records the functioning of the aircraft, its engines and other instruments with the help of computers. Information regarding the height of the aircraft, its speed, direction, angle of flight, working of various instruments can all be obtained from the FDR. The CVR weighing 21 pounds, records all conversations taking place in the cockpit for a duration of 30 minutes at a time. After this duration the past half hour's conversation is automatically wiped off and in its place that of the next 30 minutes is recorded. This includes the pilot's communication with the ground control tower, and with the pilot of any other aircraft flying in the vicinity.

In case of a plane crash the black box can be traced owing to the signals it starts emitting once it is dislodged from its mounting. These signals being of a specific frequency can be detected with the help of special detecting equipment only. And that, too, upto a distance of 12,000 feet. The power source of the black box remains active for about a month and if the code is known it can be traced with the help of sonar receptors.

Given its functions the role of the black box in the Kanishka crash can be easily appreciated. Since the flight path and the functions of all the vital organs of the aircraft for the entire duration of the flight and during the final moments before it plunged into the water will be revealed, any mechanical defect, which might have caused the accident, could be ascertained. The CVR's recordings of in-cockpit conversations can tell the investigators whether the crew suspected mechanical malfunctioning at any moment of the flight. The cumulative information provided by the FDR and the CVR should be sufficient to accurately and definitely derive the reason for the accident.

recovery of the flight data recorder (FDR). The hunt for the crucial black box had lately been intensified with robots joining the search parties. And ultimately it was *Scorabl*, an unmanned submersible robot, which performed the miraculous feat of retrieving the invaluable piece of evidence from a depth of 6,700 feet. Never before has an object been recovered from such a great depth.

Experts have cautioned against placing too many hopes on the black box either. For there is a likelihood that the recorders may not have been able to record anything in the case of a massive electrical failure. The black box has been brought to India for analysis—precaution against tampering by foreign authorities. It now remains to be seen what exactly will be revealed by the black box to ascertain the causes of the Air India tragedy. For, the dead can't tell!

SPECTACULAR DEBUT

"We hit it off" was US President Reagan's summation of PM Rajiv Gandhi's four-day state visit to the US. An appropriate assessment that, for, seldom has a visiting head of state generated quite so much curiosity and interest in America. And never before has one made so spectacular a debut on the Washington stage as India's young PM. Not only did he take the US by storm—he virtually bowled the Americans over.

Perhaps for the first time in the history of Indo-US relations both sides laid their cards on the table. Rajiv made it very clear that India was not prepared "to be tied to the apron strings of any major power", reaffirming its commitment to non-alignment. And for once the US accorded due respect to this commitment. Neither did the Indian PM exhibit any undue reverence for one of the world's greatest superpowers. The message was clear: India is a self-reliant country which will not be cowed down by Pentagon's dictates.

Rajiv did not hesitate to voice his criticism against US policies. He openly opposed Reagan's pet project—the Strategic Defence Initiative or the Star Wars programme which proposes the induction of weapons into space capable of deflecting a nuclear attack. According to the Indian PM, this programme would lend a totally new dimension to the arms race and would result in militarisation of outer space. On the issue of the US supply of arms to Pakistan, always a sore spot in Indo-US relations, Rajiv was quick to point out that India had no fear of Pak acquisition of additional arms. The implication was evident—India was fully equipped to cope with any eventuality. However, Rajiv's main reason for opposing America's continued military assistance to Pakistan was that it was forcing India to divert precious resources from economic development to stockpiling of arms.

But what perhaps delighted Washington the most was Rajiv's stand on the highly sensitive Afghanistan issue. He went all out against Soviet intervention and reiterated India's unequivocal support of a neutral non-aligned government in Kabul free from all interference. Further, he went on to declare that he favoured "a political settlement in Afghanistan that insures sovereignty, integrity, independence and non-aligned status and enables the refugees to return to their homes in safety and honour"—opposing, in the same breath, both external intervention of the Soviets as well as external pressures exerted collectively by Pakistan and the US. With regard to the nuclear Non-Proliferation Treaty (NPT) the Indian PM maintained his stand. He refused to even consider a treaty, which, according to him, was "blatantly unfair" in its discrimination of non-nuclear countries.

One would have expected the US to view Rajiv's adverse approach on so many issues with a certain amount of irritation. But quite contrary to this the US maintained a cordial attitude and gave India a fair hearing. The Reagan-Rajiv talks were "a smash hit". Said Reagan: "India and the US have just begun to write the history of our relations." Implying that as far as Washington was concerned, the slate of its blow hot-blow cold relations with New Delhi had been wiped clear of all past misunderstandings and it was eager to start anew on a warm note. The wide-ranging talks between the two leaders covered bilateral issues. The joint statement issued at the end of Rajiv's visit hinted at the expansion of bilateral trade and technological collaboration and envisaged the probability of exchange of visits by high-level trade and investment missions in the near future. Also, encouraged by the success of scientific and technological collaborations already agreed upon by the two nations, two new steps were suggested to further enhance their performance. The first was an action programme to develop and produce new, improved vaccines against major commercial diseases. And the second was a long term research and development programme covering activities in fields like agriculture and forestry, health and nutrition, family welfare, biomedical research, industrial research and development. No headway was made on the issue of arms purchase, for the US laid down certain clauses unacceptable to India.

Apart from this, Rajiv also inaugurated the 18-month Festival of India in the US in an attempt to promote American interest in Indian culture. A jointly-financed \$12m venture, the festival will include exhibitions, musical performances, educational and scientific seminars in 90 American cities in 45 of the 50 states of the US. As Reagan remarked: "It is the year of India" in the US.

Rajiv presented a totally different image of India to America. And by his personal charisma, candour, wit and frankness impressed the hard-to-please benches of the Congress and media. His visit was a resounding

ded to any lasting dignity, could dampen its impact. Analysing his trip PM Rajiv Gandhi said: "Although we look at the world from different perspectives we feel we can cooperate to reduce the differences and work together for the ideals we hold in common."

On his way back to India on the last leg of his six-nation tour Rajiv addressed the 71st session of the International Labour Organisation (ILO), during his brief stop over in Geneva. Rajiv returned with a highly optimistic Reagan-prediction reverberating in his ears—"Just as with relations between our two countries I predict good things ahead."

GUJARAT

CHANGE FOR THE BETTER?

The enflamed passions of the agitationists have reduced Gujarat into a burning state. Lawlessness has become so inherent a part of life in the state that even the presence of security troops and armed forces has done nothing to quell the rampant vandalism. No longer are infuriated mobs content with burning houses and vehicles. Their macabre activities now include the burning of innocent people as well.

Ever since the call for the Gujarat bandh on Jun 7, matters have progressively worsened. Violence has escalated especially in the walled city of Ahmedabad and Baroda. This, despite the clamping of curfew in potentially volatile localities. In Dariespur, the epicentre of the recent violent upheavals, a family of eight was burnt alive while nine people were shot dead. All over the state the death toll has reached alarming proportions.

On Jun 20 the Rathayatra procession went through Ahmedabad in blatant defiance of police orders banning the religious procession in the wake of communal disturbances. This resulted in outbreak of violence in the walled city in which at least seven people were killed and many injured. Meanwhile, no headway has been made with the striking employees either. And to add to the already long list of strikers, the 14,000 nurses of the state have also threatened to go on strike to protest against the caste-based roster system.

Keeping the progressively worsening state of affairs in Gujarat in mind, the Centre after much deliberation decided to remove the controversial CM Madhavsingh Solanki. In a much-delayed overture towards restoring normalcy in the state that had long since been clamouring for Solanki's removal. His exit is expected to pacify the anti-reservationists too, to some extent, for they hold him entirely responsible for initiating the anti-reservation agitation by announcing an 18% increase in reservations quota for backward classes prior to the elections this year. This is the second time in Gujarat's history that a CM has been forced to step down. The first was Chiman Patel who resigned in 1974 following the Nav Nirman movement. And now it is Madhavsingh Solanki.

Solanki's resignation elicited a jubilant response from people of riot-torn Gujarat. And was accompanied by festivities and celebrations. The office vacated by Solanki was filled in by a member of the Solanki tanks—Amarsingh Chaudhary. A known supporter of the outgoing CM, Chaudhary was unanimously elected leader of the Gujarat Congress legislative party. In fact, Solanki himself had recommended him for the post. Chaudhary was sworn into office by Governor B.K. Nehru. Continuing in the Solanki tradition, the new CM inducted members of the Solanki ministry in his newly formed cabinet which already consists of seven cabinet ministers and three state ministers. There are, however, four new faces among these. They are Babubhai Sopariwala and Amarsingh Wagela of Cabinet rank and Hasmukh Patel and Sushila Seth as ministers of state.

The Centre has thus taken a major step towards resolving the festering Gujarat problem notwithstanding the repercussions its decision may have in the Congress party in Gujarat as well as other states. It is now upto Amarsingh Chaudhary to live up to the trust the Centre has vested in him.

PUNJAB

ASSESSING THE SITUATION

The All India Sikh Students Federation (AISSF) has become the aggressive youth wing of Baba Joginder Singh's United Akali Dal. Its recent hostile demonstrations against the Longowal-Badel-Tohra trio have contributed to deepening the cleavage between the various factions of the Akali Dal. The open confrontations between the Baba's supporters on the one hand and Longowal supporters on the other, apart from posing a threat to pacific unity has grave connotations for the Centre as well. For, the President's role, imposed in the

is a disturbing willingness to restore popular government rule in Punjab before that.

Therefore, the escalation of the panthic power wars does not augur well for the Centre's plans because the much-delayed Assembly and Lok Sabha elections in the strife-torn state can only be held with the full support and cooperation of the Akalis who have a large following in Punjab.

At present, however, no favourable indications are being received from the Akali leadership. SGPC President, Gurcheran Singh Tohra, is sticking to his guns, unwilling to relent an inch in the government's favour. Neither is he willing to consider the idea of having talks with the Centre. In fact the SGPC has even gone to the extent of serving a notice on the Union Government and the government of Punjab under Sec 80 of the Civil Procedure Code demanding Rs 1,000 crores as compensation for the loss of material in the Golden Temple complex and other gurdwaras in the state, in last year's Operation Bluestar.

To make matters worse, the Punjab Pradesh Congress Committee chief, Santokh Singh Randhawa, in a startling political development, resigned from office. Apparently as a protest against allegations levelled against him of his suspected links with terrorists.

The Centre, seemingly unperturbed by such disturbing developments, has once again made a gesture of goodwill. Already more than 300 Sikh youths arrested recently have been released. All of them have not been involved in offences of sedition, murder, dacoity or arson. For the time being the Centre's eyes are focussed on Punjab to assess the situation before it gives the green signal for elections in an attempt to revive the constitutional process and pave the way for restoration of normalcy.

INDO-SRI LANKA RELATIONS

CALLING A TRUCE

The talks between PM Rajiv Gandhi and the Sri Lankan President Jayewardene may well prove to be the first step towards the ultimate resolution of the island nation's ethnic problem. A Sri Lankan delegation headed by Hector Jayewardene, brother of the President, was in New Delhi in accordance with the proposal for an expert level meeting between the two countries which was agreed upon by the two leaders. The delegation had discussions with Indian constitutional experts which reportedly touched on amendments to the Sri Lankan Constitution to suitably accommodate certain demands of the Sri Lankan Tamils for greater autonomy for their provinces.

The step indicates an attempt by the Jayewardene Government to find maximum acceptability among all political parties in Sri Lanka for the proposed reforms. Obviously ex-PM Bandaranaike's criticism of Jayewardene's tactics is responsible for such a seemingly placatory move.

Then, even as violence continued to rock the island nation as did the atrocities on Tamils, the Sri Lankan government made a startling announcement only a day after 100 Tamil rebels were reportedly killed or injured by the security forces. It announced that it had reached an agreement with the major Tamil separatist groups on the cessation of hostile acts. Said Defence Minister Lalith Athulathmudali, "There appears to be a point that has been reached today when we can confidently look forward to a cessation of hostile acts, as from today, in order to create an atmosphere for resumption of dialogue for a political settlement."

But, apparently, the announcement was made without the consent of Tamil militant groups. For, the Tamil guerillas of the Liberation Tigers of Tamil Eelam promptly asserted that their final decision to observe cessation of hostilities would depend on the implementation of proposed conditions. The Tamils are willing to call a truce only if the government accedes to their demands which include the lifting of prohibition and surveillance zones and other regulations prohibiting movement of people in affected areas; withdrawal of Sri Lankan armed forces from Tamil areas; the release of political detainees; cessation of all acts of illegal arrests; dismantling of state-wide Sinhala settlements and an international inquiry into all acts of atrocities on Tamils by the Sri Lankan army. Further, the Eelam National Liberation Front consisting of the major Tamil separatist groups has also declared its intention of boycotting the proposed peace talks which the Sri Lankan government is planning to hold with the Tamils at Thimpu in an attempt to end the ethnic crisis. The Tamil guerillas have also made it implicitly clear that cessation of hostilities does not entail laying down arms or giving up their armed revolutionary struggle. With this ominous pronouncement the Tamil militants have added a subtle warning. Accord-

ing to them the temporary cesses. The Centre has also asked the states to implement the conversion scheme on the basis of the Jan 28 level as otherwise states which had considerably lowered their overdrafts level would suffer from lack of adequate funds for development.

INDIA-PAKISTAN

HESITANT OVERTURES

The three-day ministerial meeting of the Indo-Pakistan joint commission held in New Delhi in the first week of July ended on a moderately optimistic note. Coming in the wake of Rajiv's anti-Pakistan stance during his recent tour of the US, it is a welcome development indeed. For one would have thought Pakistan would adopt an even more uncompromising attitude towards India. Washington may well be indirectly responsible for Islamabad's friendly overtures.

Pakistan's Foreign Minister Sahabzada Yakub Khan who was heading the delegation had talks with PM Rajiv Gandhi covering a wide range of subjects including bilateral, regional and global issues. The high point of the Pakistan delegation's visit was the signing of an agreement on cooperation in the field of agricultural research and development. The agreement provides for an exchange of scientists and technologists, holding of seminars and workshops of scientific equipment. Programmes of common interest are also envisaged. Apart from this the agreement also includes exchange of scientific literature, information and methodologies and publication of research findings. Also, an additional linkage will be established to facilitate advancement of the objectives of the agreement. A joint follow-up committee will also be set up which will meet once a year, alternately in both the capitals, to see the proper execution of the project.

Besides the agreement, the two countries have also agreed to promote travel and tourism and make travel by businessmen and transit visa holders easier. The meeting finalised a cultural agreement and formulated a cultural exchange programme. Steps have also been taken to make railway travel between the two countries convenient. A coaxial cable linking India and Pakistan to be commissioned in August will provide additional telecommunication facilities. There will also be an exchange of radio and TV programmes.

Major cities in the two countries will henceforth have direct telephone links. At present there is a direct link between Delhi and Islamabad only. With regard to the issue of narcotics smuggling across the Indo-Pak border the two sides identified organisations which would cooperate in checking this menace.

However, India and Pakistan once again failed to reconcile their differences in the crucial trade sector barring an indication that Pakistan would increase its off-take of iron-ore from India. Pakistan declined India's offer of wheat stating that it had already made arrangements for supply of wheat from the US and Australia. It also refused to open trade to private agencies in Pakistan on the pretext that it would hit its domestic industry. It even refused to have a new trade agreement with India. Obviously Pakistan gives extremely low priority to trade with India and in this respect has a decidedly discriminatory approach as far as India is concerned.

The ministerial meeting did not discuss important issues such as the Pakistani offer of a no-war pact or India's suggestion for a more comprehensive treaty of peace and friendship which will feature in the foreign secretaries meet scheduled for the end of this month. And if the just concluded meeting is anything to go by one can look forward to the forthcoming talks with cautious optimism.

STATE OVERDRAFTS

CURB ON STATE-AID

In a bid to inject financial discipline into the country's economic structure, the Centre has decided to abolish the facility of overdrafts available to states. All but 10% of the overdrafts of various states will be converted into medium-term loans payable over four years with an interest of 8% per annum. Jan 28, 1985 has been taken as the cut-off point for determining the conversion of overdrafts into loans.

The total overdrafts on Jan 28 this year had peaked to a staggering Rs 1,808 crores. However, responding to frantic pleas by the Centre the states controlled their overdraft condition bringing down the level to Rs 932 crores by Jun 26. And, according to the Centre, it was persistent requests by the various states to convert overdrafts as on Jan 28 to medium term loans and their assistance in bringing down their overdrafts

which had been also converted to medium term loans, had prompted the conversion scheme on the basis of the Jan 28 level as otherwise states which had considerably lowered their overdrafts level would suffer from lack of adequate funds for development.

The Centre, at the moment, is contemplating the introduction of a consignment tax over and above the sales tax as demanded by the states for raising additional resources. Furthermore, the Centre has impressed upon the states that outlay on priority sector earmarked by the Planning Commission should be strictly adhered to, for a shortfall in expenditure due to diversion of funds in priority sectors would result in a corresponding reduction in Central assistance for state plans.

The Centre has also asked the states to raise additional resources and effect economies in the non-Plan expenditure. And this requires improving the performance of the state electricity boards and road transport corporations which are presently a big drain on the resources of states. In fact, the additional resource mobilisation which some states had managed to achieve has also been eroded by the losses incurred by the state electricity boards and road transport corporations.

Meanwhile, the states on their part have attributed various reasons for their deteriorating financial resources. Among these is their obligation to pay additional DA instalments in line with the Central pattern. Also, the revision of the salary scales of the staff has led to increased non-Plan expenditure. But this excess expenditure should, according to the Centre's reasoning, be met through improved collections and buoyancy in revenues.

The Centre is in the process of formulating its long term fiscal policy. And the reaction of the states to the abolition of overdrafts will undoubtedly play a vital part in ascertaining the nature of the policy.

IRDP

IMPROVING THE STANDARDS

The Programme Evaluation Organisation (PEO) of the Planning Commission conducted an evaluation of the Integrated Rural Development Programme (IRDP) which has shed light on its working. The evaluation has revealed that 49.4% of the beneficiaries covered by the study had crossed the poverty line with an annual income level of Rs 3,500. And this, in spite of the fact that the average amount of financial assistance provided per scheme was considerably lower than the permissible maximum coupled with delay in building up the organisational set up as also shortfall in formulation of annual plans, the existing gaps in infrastructural and supporting facilities and the conspicuous absence of technically sound benefit schemes.

This IRDP study conducted in 1983-84 was confined to 132 villages of 16 states covering 1,170 households. Eighty-eight percent of these households registered increased incomes while 37% registered an increase in family assets, and 77% reported increase in consumption level. The study also revealed that 26% of the sample households were already above the poverty line (that is in terms of the norm of annual income of Rs 3,500 laid down for identification of beneficiaries) and therefore did not qualify for provision of benefits under the IRDP. However, 30% of the beneficiaries were in the Rs 2,500-3,500 annual income group, 29% in the annual income group of Rs 1,500-2,500 while below 15% were well below the poverty line with a meagre annual income of Rs 1,500 and below.

The IRDP study also disclosed that 75% of the selected beneficiaries were provided with benefit schemes pertaining to activities in the private sector. Then, 17% of the sample households were provided with benefit schemes in the tertiary sector while only 8% received secondary sector schemes. Almost 70% of the sample households received financial assistance to the tune of Rs 3,000. And among those, 19% got only up to Rs 1,000 while 14% received Rs 5,000 and above.

With regard to overdues, over 41% of the 1,170 households reported overdues in respect of the loans advanced to them and while 9% had made repayments ranging from 20-40% of the loan amount, 26% had made repayments of 40-60% and 17% had made repayments to the extent of 60-80% of the loan amount.

However, only 28% repaid their loans to the extent of 80-100%. In all probability the overdues resulted from inadequate returns from schemes and unforeseen expenditure. Keeping this in view it has been suggested that physical targets in future, as regards coverage of beneficiaries under IRDP, should be fixed giving due consideration to level of development and economic conditions prevailing in the par-

(Continued on page 59)

USSR

GROMYKO AT THE HELM

Foreign Minister Andrei Gromyko was unanimously elected President of the Soviet Union by 1,500 deputies of the Supreme Soviet after his name was proposed by General Secretary Mikhail Gorbachov. This development signified a departure from the normal Kremlin tradition where the party leader also assumes the post of chief of state. Ever since Leonid Brezhnev initiated the policy of being party leader and also assuming charge of the presidency in 1977, this policy was consistently followed by both his successors—Andropov and Chernenko. The break of practice by Gorbachov of not taking on the presidency has been viewed as a sign that he has consolidated his position sufficiently and feels confident enough of sharing power without diminishing his authority in any way. Gromyko's recent elevation has relieved him of the posts of first deputy PM which he assumed under Andropov and the post of foreign minister which he had continuously held since 1957 when Khrushchev appointed him.

Gromyko's vacancy has been filled by Eduard Shervardnadze, the Communist party chief from the Republic of Georgia, who was hurriedly elected to the Politburo. His relative inexperience in the area of foreign affairs has been taken to mean that Gorbachov will basically be his own foreign minister.

In the present Kremlin triumvirate Nikolai Tikhonov remains PM or Head of Government which is the third branch of the Soviet power structure. The exit of Grigory Romanov from the ruling Politburo is another indication that Gorbachov has played his cards well. Romanov, a one-time power contender and rival of Gorbachov, was removed on "health grounds" and evidently at his own request.

TWA HIJACKING

LEBANESE SHI'ITES STRIKE AGAIN

Beirut became the centrepiece of another high-pitch drama, though this time it had its origins in the air. On Jun 14, the Boeing 727 American airliner, TWA Flight 847, which was flying from Cairo to Rome with a stopover in Athens was hijacked from Athens by two Shi'ite Muslim terrorists identified as members of the Islamic Jihad, and the pilot was forced to fly to Beirut. Though initially Beirut airport authorities refused the plane permission to land, they were forced to relent as the hijackers threatened to blow up the aircraft. After refuelling at Beirut airport, the plane took off for Algiers where permission to land was again denied by airport authorities though a special request from President Reagan to the Algerian President Chadli Benjedid made them change their minds, and after a brief stopover of five hours in which more passengers were released, the plane once again headed for Beirut.

To show that the hijackers meant business, an American believed to be a marine was shot by them and his body was thrown out of the aircraft. Again after refuelling and replenishing food stocks, the plane took off from Beirut to Algiers where 49 passengers were released before the aircraft took off for Beirut once again.

Negotiations between the hijackers and the American authorities were conducted by Nabih Berri, the Shi'ite Muslim leader and present Minister of Justice in the Gemayel Government. The major demand of the hijackers was the release of 735 Lebanese prisoners held in Israeli jails, of which more than 500 are believed to be Shi'ite Muslims. Other demands included the immediate withdrawal of Israel from southern Lebanon and international denouncing of the US and Israel. The situation ultimately developed into a back-to-back standoff between Lebanon's Shi'ite Amal militia, the US and Israel. The stalemate was aggravated because the hijackers had the sympathy of the Shia Muslims in Lebanon. About a week after the hijack drama began, hundreds of Shi'ite Muslims chanting "Death to America" and hailing the hijackers as "heroes of Islam" demonstrated at Beirut airport. Further, the Lebanese who disapproved of the hijacking, like Nabih Berri, approved of the objective of the hijacking—the release of the 735 Lebanese prisoners. Nabih Berri, for instance regarded the hijackers' demand as a quid pro quo offer rather than blackmail. His argument was that the Israelis had transported the Shi'ites from the Ansar prison camp in south Lebanon into jails inside Israel on their withdrawal from the Sidon region earlier

this year and had thus violated international norms. The International Committee of the Red Cross (ICRC) had, in fact, ruled in April that the transfer went against the 1949 Geneva Convention on the conduct of war to which Israel is a signatory. The Shi'ite leader felt that there was no difference between kidnapping in the sky and on the ground and accused Israel of "keeping 700 people without any right".

On the other hand, the US did not want to bend to international terrorism and President Reagan declared at a press conference that making concessions to the hijackers would only invite more terrorism. The US even considered imposing economic sanctions on Lebanon which further enraged the Lebanese.

To present another twist to the tense drama, the passengers of the hijacked TWA plane were removed to secret hideouts. Israel, in the hope of finding a solution, hurriedly released 31 prisoners, though mediator Berri declared that the American hostages would not be set free until the remaining Lebanese prisoners were also released. Berri, as head of the Muslim Amal militia also added that the US should withdraw its warships from the eastern Mediterranean if it wanted the release of the 39 American hostages. Offers to transfer the hostages to Syria or to a Western embassy in Beirut were also made by Berri and the French government indicated its willingness to accept custody of the 39 hostages for two days if Israel agreed to transfer the prisoners within that time.

Negotiations, however, proved to be fruitful. Following Israel's promise to release the remaining 735 Lebanese prisoners and guarantees from the US that it would not retaliate against the incident, the 39 American hostages were released bringing an end to the 17-day suspense-filled drama. The American passengers were flown to Frankfurt from Damascus and then back to the US. Israel freed 300 prisoners and stated that the remaining would soon be released.

The hijacking of the TWA aircraft was the third to occur within three days in the region and the second to be engineered by the Lebanese Shi'ites. The first hijacking involved half a dozen Shi'ites who stormed aboard a Jordanian-owned Boeing 727 at Beirut airport. The terrorists were unhappy about an Arab League statement supporting the cause of Palestinians in the Beirut refugee camps which have been under Lebanese Shi'ites' attack for the past few weeks. They later freed the passengers and blew up the plane. Several of the freed passengers boarded the first flight out of Beirut, which was a Middle East Airlines flight to Cyprus. This, in turn, was hijacked by a Palestinian who threatened to blow up the plane in protest against the earlier Shi'ite hijacking. He, however, surrendered after being granted a request to fly to Amman aboard a Jordanian airliner.

MIDDLE EAST

NEGOTIATING FOR PEACE

With the radical camp in disarray, the more moderate elements in the Middle Eastern stalemate began to look toward a settlement in June. Proposals for the settlement of the Arab-Israeli-Palestinian issue were first made by Jordan's King Hussein who called Washington after talks with the Palestine Liberation Organisation's chief Yasser Arafat. He affirmed that he and the moderate Palestinians were interested in negotiations with Israel for a peaceful settlement on the basis of the pertinent UN Resolutions, including 242 and 338. Since the US and Israel do not want an international conference which may give the Soviet Union a formal role in Middle East talks, and they do not want to deal with the PLO directly, Hussein suggested negotiations under an international 'umbrella', which implies that Israel and the Arabs would meet face to face under the guidance of the permanent members of the UN Security Council.

The US did not dismiss the 'umbrella' plan, but set some pre-conditions including the establishment of full diplomatic relations between Israel and the Soviet Union, and the reduction of the flow of arms to Iran and Lebanon by the latter. The US Secretary of State, George Shultz, wrote to the Israeli PM Shimon Peres, saying that since the US believed that Jordan was committed to talking directly with Israel, he hoped that Israel would back US efforts in that direction. He suggested Peres on an exploratory meeting between a US delegation and Jordanians and Palestinians who are not members of the PLO. He also pointed out that the US would deal directly with the PLO only if it made

a fortnight public statement of its support for the peace process and of its recognition of Israel.

Although Israel was sceptical about Arab intentions, it has a five-point plan of its own envisaging, first, informal talks between the US, Israel, Jordan and non-PLO Palestinians. A Jordanian-Israeli-Palestinian committee would then draw up an agenda for a conference in which the US would take part. Instead of the international conference with Soviet participation which Jordan has called for, the Israelis say that direct negotiations between them and a Jordanian-Palestinian team should be backed by the Security Council's permanent members but 'without pre-committing themselves to support the stand one of the sides takes'. Jordan and Arafat's PLO quickly rejected the Israeli proposals.

However, the pace has been set although the obstacles are many. The US has moved to give some concrete support to Jordan. After four years of delay, the State Department submitted for the President's approval a proposal to supply Jordan with \$250m to \$300m in economic aid. Furthermore, the main stumbling block has so far been the desire for an independent Palestinian entity in the West Bank and Gaza strip. Recently, however, Jordan's Foreign Minister, Taher al-Masri, said in Washington that the Jordanian-Palestinian 'confederation' that Hussein and Arafat have in mind 'means that there will be no independent Palestinian state.'

IRAN-IRAQ

WAR-WEARY

In the latest round of the four-and-a-half year Iran-Iraq war, Iran claimed that Iraq missile attacks on 14 Iranian towns and cities had left 78 Iranians dead and 326 injured. Further air raids launched by Iraq were directed against another 12 Iranian towns leading to a further escalation of the Gulf crisis. Iran, meanwhile launched a major offensive on Iraq's southern Howzeih marshes, occupying an additional 150 sq km of Iraqi territory and killing more than 100 Iraqi soldiers. In another attack, Iran claimed that it had killed or wounded around 250 Iraqi soldiers near the Iraqi city of Qasr-Shirin, 170 kms from Baghdad.

The war which has displayed signs of wearing down both sides, is claiming a heavier toll in the case of Iran. The continuous bombardment of Teheran due to repeated Iraqi air raids has led to tremendous feelings of insecurity in the city with Iranians fleeing to the countryside at night to escape the bomb attacks. Iran's air force has proved no match for Iraq's superior air power. Inflation and economic scarcity have also added to the misery of the people. Several anti-war demonstrations were quickly suppressed by the Iranian authorities and in retaliation two major pro-war rallies were organised in Teheran to demonstrate support for government policies.

Iran's over-all war weariness has even forced Ayatollah Khomeini to calm his rhetoric, as in a recent speech he said, 'We will cut off the hand of the aggressor if we can.'

AFGHANISTAN

SOVIETS DISGRUNTLED

The mujahideen resistance guerrillas are reported holding between 50 and 200 Soviet prisoners inside Afghanistan. However, the death of 12 Soviet prisoners in blasts at a refugee camp near Peshawar proved that they are being held in Pakistan as well and this has led to an all-time low in Soviet-Pak relations. In fact, the Russians allege that the Soviet prisoners were killed by regular Pakistani troops when they took over a mujahideen ammunition dump in an escape bid from the Zangali refugee camp. The Pakistanis claimed that there were no Soviet prisoners being held on Pakistani soil and rejected the Russian allegations. The incident, however, was embarrassing because Pakistan does not officially admit to having any Afghan resistance fighters on its soil and says that it only gives humanitarian aid to Afghan refugees.

Shortly afterwards, Soviet forces in Afghanistan broke the 11-month-old siege of the garrison town of Barikot in the Kunar valley, which runs parallel to the Pakistan border, northwest of Peshawar. Analysts feel that the Soviet action in Kunar is directly linked with the Soviet objective of sealing the Afghan border with Pakistan. It is felt in Western diplomatic circles that the Soviets intend to bring in a brigade with about 3,000 soldiers into the area. They have already established five military posts in the area with 100 men to each ward. Although ostensibly the Soviet intention is to seal off infiltration routes south of Barikot, Pakistani officials feel that the action in Kunar is aimed at them as much as at the mujahideen. During the 11-month siege of the town, Afghan aircraft which took part with the Soviets in the siege, repeatedly attacked Arand, a Pakistan town across the border. Pakistanis suspect that after

FRANCE-GERMANY

A SUMMIT WITH DIFFERENCES

The Mitterrand-Kohl summit which was held in Constance, a village overlooking Lake Constance, can hardly be called a success. The two leaders agreed on very few things. One of the major points of difference was Reagan's Strategic Defence Initiative (SDI) research programme, popularly known as Star Wars. While Kohl had voiced support for Reagan's plan in the Bonn summit with the American President, Mitterrand firmly rejected it on strategic as well as political grounds. Instead, he has been promoting the Eureka project which aims at creating a special agency to pool West European research in the fields of laser and the particle beam and is the European reply to Reagan's SDI. Although Kohl declared at the summit that technological cooperation was a 'vital necessity' he disappointed Mitterrand in not offering fuel support and financial backing for the project.

The two governments also disagreed on trade and agricultural policies. While Kohl agreed with President Reagan that a new round of General Agreement on Tariffs and Trade (GATT) talks should be held soon, Mitterrand felt that this would only result in the creation of a new 'battle field' for renewed US attack on the farm policies and tariff barriers of the European community. West Germany has also refused to accept the European community's cereal price reduction, saying that political realities should prevail. The one bright spot in the summit was that neither leader was ready to antagonise the other and both agreed that the Franco-German relationship was fundamental to the 'success of Europe'.

SOUTH AFRICA

GUERRILLA WARFARE CONTINUES

In a determined operation to flush out alleged guerrillas of the African National Congress (ANC) from Gaborone, the capital of Botswana, South African troops crossed over and attacked 10 suspected ANC strongholds killing 14 people including six South African exiles. South African Foreign Minister Roelof (PIK) Botha justified the attack by claiming that Botswana had been giving asylum to ANC guerrillas who had carried out 36 terrorist raids since last August in South Africa from their bases leading to six casualties. Pretoria stated that despite repeated requests to the Botswana government to hand over the ANC guerrillas, the raids continued and therefore it decided to finish up the job itself. The major haul from the Botswana raid was the capture of an ANC computer which rattled out ANC membership lists and made the policemen's job of rounding up ANC guerrillas a lot easier, as a result of which many ANC guerrillas went underground or fled the country.

This is not the first time that South Africa has engineered attacks against suspected ANC guerrillas in Gaborone. Earlier this year a bomb explosion in a Gaborone house believed to be directed against two ANC members missed its target as they had escaped. The planting of a car bomb leading to the death of a black South African in the Botswana capital is thought to be another instance of Pretoria's involvement.

South African troops also stormed into neighbouring Angola for the second time in the month to search for South-West African People's Organisation (SWAPO) guerrillas and left 61 of the latter dead. The raid, South African officials claimed, was provoked by mortar attack on a South African base. Angolan authorities, however, alleged that the major objective of the attack was to destroy Gulf Oil's Cabinda refinery. Around 5,000 blacks gathered in the black township of Soweto near Johannesburg to protest against the Botswana raid and also to commemorate the ninth anniversary of the 1976 anti-apartheid Soweto riots.

The South African forays into neighbouring African countries have been severely condemned by the UN Security Council during an urgent meeting called by President Quett Masire to review the situation. Member countries of the Non-Aligned Movement, Britain and the US also expressed severe criticism of the action.

NICARAGUA

US AID FOR CONTRAS

President Reagan has done it again. In April, the House of Representatives had voted against Reagan's request for \$14m as aid for the anti-government rebels in Nicaragua. In June, however, 73 Democrats joined 175 Republicans and approved a second request for about twice as much, \$27m, to help the contras. The Senate has already approved its own aid package, and therefore, the

Show of strength Demonstration against troops by Nicaraguan people's militia.

contras are expected to receive funds again from Washington in a short while.

The US has been supporting the anti-Sandinista guerrillas since 1981. The aid had dropped off after revelations some 14 months back, that the CIA had helped the contras to mine Nicaragua's harbours. Earlier this year, 14 Republicans had helped the Democrats to vote down a Bill asking for the renewal of aid. Instead, they wanted to vote for a Bill which called for \$10m in aid for Nicaraguan refugees. However, some liberal Democrats joined the Republicans to cut down this Bill and the contras were left with no aid at all. Sentiments began to change in the Democratic camp when the Nicaraguan President Daniel Ortega Saavedra visited Moscow in search of Soviet aid. Further, it is felt in Democratic circles that the non-interventionist stance of the party since Vietnam had hurt it in the polls. In fact, in the recent elections, a number of younger Democrats ran for office with more liberal foreign policy stands. It needed just a bit of wooing on the part of the administration for Reagan to get what he wanted this time.

However, Reagan has had to make some concessions to the Democratic-controlled House. The US aid to the contras will be limited to items like food and medicine. The House has also specifically forbidden the CIA to administer the funds. The Senate has made no such limitation and has, in fact, authorised a larger sum of \$38m. It is generally felt in both Houses now that the Sandinistas should be persuaded for change, but it is also felt that they should not be overthrown legally.

The Nicaraguan response to the American step is predictably negative. Ortega has decided to lift a five-month-old voluntary moratorium on arms imports. This may mean that Ortega may soon buy Soviet built MiG aircraft. Washington has declared that such a step would provoke military response from the US. The contras, by themselves, cannot overthrow the Sandinistas, who outnumber them by 1,10,000 to an estimated 17,000. In fact, since April the Sandinistas have pushed the guerrillas over the Honduran and Costa Rican borders. And in May they killed Las Vegas in Honduras, which is the base camp of the largest guerrilla faction, the Nicaraguan Democratic Force (FDN). However, because of a certain amount of disaffection with the Sandinista regime, the contras have been steadily recruiting new members, and the renewed US aid means that the insurgency will continue for a long time.

CHINA

CAPITALISING ON CONSUMERS

Is China turning capitalist? Businessmen have been hypnotised by China's senior leader, Deng Xiaoping and feel that there are almost a billion consumers ready in China to be exploited. On the surface, there are many changes and one sees ordinary citizens sporting

watches, jeans and other consumer articles. But according to James Fringle, *Newsweek's* Peking Bureau Chief, the change is merely superficial.

There has, however, been no major change in the recent past. Peking has opened up Tibet entirely for the first time since 1959. Lhasa was opened to tourists in 1980. Now there is a 528-mile-long overland route from Lhasa to Zhangmu, a village on China's border with Nepal. Thus there is now a road open to the backdoor of the Indian subcontinent. Nepal has offered finances to improve the route in the hope that this would improve its tourist industry, but the Chinese have refused to accept it. In recent years, China has been trying to boost tourism in Tibet. At the same time, to endear itself to the Tibetans, it has changed its stance towards Buddhism. Earlier religious mysticism, as practised by the Tibetans, had been persecuted by the Chinese, but today it is actually encouraged. Buddhist shrines, destroyed during the cultural revolution, are being rebuilt and Buddha figurines are being mass produced for sale at the Gandan monastery in Xigatse. The Tibetans have also not forgotten the Dalai Lama who has been in exile in India ever since he was forced to flee in 1959. According to tourist reports, Tibetans are ready to pay 100 yuan for a picture of the Dalai Lama and monks welcome anyone who brings news of him.

EEC-SPAIN-PORTUGAL

UNWELCOME MOVES

Lisbon and Madrid have finally officially signed the Treaty of Accession, which means that Portugal and Spain will join the European Economic Community (EEC) in January '86. They had applied for membership in 1977. However, the measure is not very popular in either Portugal or Spain. In Lisbon, 18 Social Democrats resigned from the coalition government of Mario Soares the day after the signing of the treaty. Soares responded by resigning from the ministership.

The Social Democrats charge that Soares' Socialists have not lived up to the promises made when the coalition was formed in 1983. There are also other opponents to Portugal's joining the EEC. Members of the fishing community are apprehensive because Portugal's current exclusive 12-mile fishing zone will soon be opened to fishing vessels from the rest of Europe, and the fishing industry will be hard hit. Portugal will become the EEC's poorest member and will face an uphill struggle.

In Spain, too, the response was mixed although Spain has Europe's fifth largest economy, and therefore its prospects are brighter under the EEC. Members of the Basque separatist group, the ETA, used the occasion for terrorism and gunned down an Army colonel and bus driver in Madrid, and used a car bomb to kill a bomb-disposal expert. A Navy non-commissioned officer was also shot dead in the Basque city of Bilbao. Besides the Basques Spanish farmers, too, were not very happy about the Treaty of Accession. Most Spanish farms are small, family-run units and the marketing and distribution system is primitive compared to other European countries. The farmers are worried about being over-run by imports, especially from France. Spanish fishermen and winegrowers stand to lose much from the EEC. Spain will have to reduce the catch of its fishing fleet, the world's fourth largest, and will have to cut back on wine production in return for greater access to the European market for fruits and vegetables.

US SPY CASE

ALL IN A FAMILY

It was a family-and-friends-affair that was finally exposed, thanks to the American intelligence services. The four men so far implicated in the espionage case are John A. Walker Jr., ex-serviceman and currently a James Bond-style private eye; his son Michael Walker, Yeoman 3/C aboard the US aircraft carrier *Nimitz*; his brother Arthur J. Walker, also a US Navy veteran and currently employed by Alexandria, Virginia's VCE Corp to work on maintenance of amphibious vessels; and his friend Jerry A. Whitworth also an ex-US Navy man and currently unemployed. The moles had been operating for almost 10 years, and the tip off came only early this year, when John Walker's former wife Barbara, who had known about her ex-husband's side activities for some time but had not known that her son was also involved, decided to spill the beans.

While the others passed vital information to John Walker, he dropped them off at scheduled 'post-boxes' for the Russians to come and collect. The members of the Walker ring had top-secret security clearances and experts fear that they may have let out some closely guarded secrets in coding, anti-detection provisions and cruising patterns. It has been suggested that information from the Walkers may have been responsible for

the improvements that US experts have detected in the Soviet missile submarine force. However, it is doubtful whether the Americans will even be able to figure out what and how much has been lost to them, although damage assessment is going on. This too, is being done under secrecy, for the US does not want the USSR to know more than it already does. Perhaps the maximum damage has been done by Whitworth, who had served in the Pacific as communications watch officer aboard the nuclear-powered carrier, Enterprise, and had been in charge of communications security at the Alameda Naval Air Station near Oakland. He was also familiar with the US Navy's Indian Ocean activities owing to the two duty tours he made to the island of Diego Garcia.

What bothers the Americans is that this new breed of fifth columnists are unlike the older brand as typified by Kim Philby. There is no ideologically motivating factor behind their urge to transfer secrets to the Soviet Union. In fact, John Walker is a Reaganite according to his business associates, and also has some connections with the white racist organisation, the Ku Klux Klan. The motivating factor, apparently, was money. He was a spendthrift and therefore needed more than he earned. The Americans, in general, are alarmed because this attitude does not augur good. The defence establishment thinks that this may be the tip of an iceberg. Already 15 people have been implicated at various levels, in separate espionage cases, in the last 12 months. For the first time, a retired agent of the FBI, Richard Miller, has also been caught spying. It is no wonder that the US Defence Secretary, Casper Weinberger, vented his ire recently when he said that the suspects in the Walker case, if proved guilty, 'should be shot'.

GREECE

PAPANDREOU RE-ELECTED

PM Andreas Papandreu was returned to power in the elections to the 300-member Parliament in Greece. His Panhellenic Socialist Movement (PASOK) won 45.8% of the 6.4m votes cast and gained a clear majority of 161 seats. The losers were the New Democracy Party of Constantine Mitsotakis, which won 40.8% of the votes and 126 seats and the Communist Party (KKE), which got 9.9% votes and 12 seats.

Ever since he first came to power in 1981, Papandreu has been promoting a Third Road to Socialism and during the campaign he stressed his party's social welfare achievements. For the West, however, Papandreu has often been an irksome ally. Although Greece has been a NATO member since 1952, the PM opposed the NATO decision to deploy Pershing II and Cruise missiles in Western Europe. He refused to condemn the shooting down of a Korean airliner by Soviet jet fighters in 1983, saying that the aircraft was a US spy plane. He has also threatened, time and again, to pull Greece out of NATO and the European Community. This March he withdrew his support for the pro-Western Constantine Caramanlis and backed the Leftist Christos Sartzetakis for President. It is expected that the Parliament will soon pass a constitutional amendment limiting the powers of the President. This will result in more power for the PM.

However, the Western allies were somewhat relieved at his victory, because they had feared that if it was otherwise, the Communists would hold the balance of parliamentary power. Some analysts also feel that Papandreu will be too pre-occupied with domestic problems in the coming years to sail forth against Greece's ailing inflation now runs at 18.5%, the highest in Western Europe, and unemployment is around 8%. The foreign debt has risen to \$12.5b from \$7.9b in 1981. The US has leased bases in Greece and this brings in \$500m in US military aid every year besides providing employment to about 1,650 Greeks. As such, Papandreu is not expected to pull the country out of the NATO alliance. Further, Greece gets subsidies from the European Community and its partners hope that by logic, the country will remain in the Community.

ESSAY CONTEST

Even at its ripe old age of 100 years, the Congress month stands strong and mighty. The party has, no doubt, had a chequered history—the stormy pre-independence days and the debacles of factionalism which crept in (trying to strike at the very roots of the party) during the post-independence era.

With a view to setting young minds thinking, C.C. Times announces an essay competition on Indian National Congress—Gains And Losses.

Send in your entries in not more than 500 words, latest by Aug 25, and win prizes worth Rs 150, Rs 100 and Rs 75.

NEPAL

UNDER TERRORIST ATTACK

Bomb blasts rocked the usually peaceful Himalayan kingdom of Nepal: Five blasts shook Kathmandu, two near the west and south gate of the Royal Palace where King Birendra and his family live. Bomb explosions also damaged the National Panchayat building, the Virsingha Durbar (secretariat building) and the Annapurna hotel. More explosions were reported from the town of Bhairawa, and one each from Danghadi and Pokhara. Nine people were killed and around 27 were injured in the blasts. An unknown group called the Samyukta Mukti Bahini claimed responsibility and leaflets thrown on Kathmandu streets warned that the terrorists would attack again. The police quickly arrested 125 suspects and unearthed nearly 100 explosives in and around Kathmandu. Most leaders of the outlawed Nepal Congress Party and the Nepali Communist Party were put in jail.

The bomb blasts were the first major act of political terrorism in Nepal's history and were suspected to have been masterminded by King Birendra's political opponents including the Nepali Congress Party which is peacefully agitating for a return to parliamentary democracy.

JOSEPH MENGELE

END OF A GUESSING GAME?

Are a pile of bones, some clumps of hair, six teeth and a pair of rotting trousers last remains of the 'Angel of Death'? According to Romeu Tuma, the federal police chief in Sao Paulo, they are.

It appears that Joseph Mengele, the Waffen SS doctor responsible for the death of 4,00,000 Jewish concentration camp prisoners at Auschwitz has finally been found—dead. The trial opened on May 31, following a tip off from an unidentified informant. The West German police raided the house of one Hans Sedlmeier, a former employee of the Mengele family firm in Gunzburg, West Germany, and found evidence which led them to an elderly Austrian couple, Wolfram and Liselotte Bossert who live in Sao Paulo in Brazil. They claimed that Mengele, who had been living under the assumed name of Wolfgang Gerhard, an Austrian who was supposedly responsible for looking after Mengele, and had drowned at the beach resort of Beritoga in 1979, and been buried at Embu, 20 miles south of Sao Paulo. Shortly afterwards, a number of people who had so far kept quiet came forward with further identifying evidence. The doctor had escaped from Germany a few years after the end of the war and had adopted a Houdini-esque style of disappearing. He had been sighted a number of times over the last four decades (and some have claimed to have sighted him even after 1979) but had always managed to escape his would-be captors. He was wanted for prosecution by the governments of West Germany, Israel and the US and carries a price of \$3.4m on his head. He was almost caught by Israeli commandos in the 1960s but proved to be more elusive than Adolf Eichmann, another of Hitler's right-hand men, who was seized by the Israelis and hanged in Jerusalem.

After his escape from Germany, Mengele lived in various countries in South America. He was given citizenship by the Government of Paraguay in 1959, but this was, interestingly, cancelled in 1979, the year he allegedly died. Since 1961, he had apparently stayed with a Hungarian couple, Geza and Gitta Stammer, to whom he had been introduced by Gerhard. Initially, the couple had not suspected his identity and had given him work on their farm. Later, when they discovered his true identity, they claimed that they had grown apart, but for fear of their children's lives, which they said were threatened, and also from a sense of guilt, they had allowed him to stay on, first with themselves and later in a house owned by them.

The missing link is Wolfgang Gerhard, who helped Mengele through all these years. He himself died in 1979 and his children claim that he had nothing to do with the Nazis. It is true, however, that his hometown, Graz, lies in the path of the underground railroad used by 'Odessa'—the Organisation of Former SS Members—to spirit many Nazis out of Germany after the war, and many residents say that the network and railroad still exist.

Although there are sceptics, most experts feel that Mengele has finally been traced. The body has been exhumed and technicians have begun to match the remains with the medical records of the Nazi doctor. Forensic and handwriting experts have checked the evidence available and have come to the conclusion that this is not a false find. A lot of evidence has been provided by Mengele's family in West Germany, who has so far been close-lipped but who had apparently kept contacts with Mengele all these years.

SANJUKTA BANERJI & A. N.

EDUCATION

MEDICAL ADMISSIONS: A NEW LINE OF TREATMENT

BY AMRIK SINGH, Former Secretary, Association of Indian Universities

As per the Supreme Court judgment, the Medical Council of India has been directed to conduct an all-India merit exam in order to regulate admissions to medical colleges in the country. The pros and cons of this new selection procedure

Over the years a system had developed whereby, leaving aside one or two exceptions, almost every state conducted a selection test for those seeking admission in medical colleges. Only those domiciled in the particular state were entitled to sit for the test conducted by the respective state.

During the last one year, however, certain significant changes have taken place with regard to the procedure for admission to medical colleges. In June 1984, the Supreme Court gave a decision on the subject which will rank, in the years to come, as one of the more important decisions with respect to higher and professional education.

In a democratic polity like ours, what appears to that even when things go wrong people bear with it until there comes a stage when there is almost an explosion. Something of a similar kind happened in the medical colleges. Admissions were being manipulated. All kinds of unfair restrictions were being imposed. The quantum of reservations was being unduly increased and several other questionable things were happening. In consequence, the Supreme Court chose to intervene decisively as to almost direct the executive to establish an altogether new system of selecting the students for admission to higher

According to the Supreme Court ruling, domicile restrictions are not consistent with the Constitution of India; the Constitution recognises only the citizenship of India. For any state to argue that only those students domiciled in that state are eligible to sit for an entrance test cannot be regarded as valid in the eyes of law. In other words, every Indian is a citizen of India irrespective of the state he belongs to. That being so, according to the Supreme Court, everyone who is duly qualified to sit in the exam can do so without the state which conducts the exam having the right to exclude him from it. Hence, at one stroke, the practice built up in the country in the various states of excluding those

who did not live within their respective territorial jurisdiction, was abolished.

The Supreme Court had earlier given certain judgments after considering some of these issues. In no judgment had the Court approved of what the states were doing, though in one or two cases there was partial approval of some of the related practices. In giving the present judgment, however, the Supreme Court reviewed its earlier stand in detail and set it aside. In the ultimate analysis it based itself on two provisions of the Constitution. One which says that citizenship is that of India and not of any state and the second which ensures for each citizen the right to education, employment and movement throughout the Union of India. Secondly, the Supreme Court did not choose to reopen the question of reservations sanctified by law or even some of the other reservations made from time to time by the various states. Instead what it argued was that reservations, as they existed today, may be permitted but they should not be permitted to exceed 70% of the total number of admissions. This brings us to the third aspect where the Court ruled that a minimum of 30% seats should be thrown open to meritorious students, to start with. In course of time this particular percentage could be increased.

In order to give practical effect to the decision the Supreme Court also directed that the Medical Council of India, a statutory body, should work out a scheme for conducting an all-India merit exam in order to regulate medical education in the country. A few weeks after the pronouncement of the Supreme Court judgment on the subject, a representation was made regarding the inability of giving effect to the judgment, with effect from 1984, because some of the students of the 1984 batch were already admitted in medical colleges. This submission did carry weight and the Supreme Court therefore ruled that the decision be implemented with effect from 1985.

It was for the Medical Council now to take the next step with the approval of the Ministry of Health. However, a few months after the Supreme Court delivered its judgment, there was political turmoil in the country followed by the general elections and the installation of the new government. All these factors combined together to create a situation whereby the Medical Council could not formulate a workable

plan to conduct an all-India merit exam. **Alternatives**

The matter, therefore, went to the Supreme Court once again. The Court was faced with two choices. Either to enforce the decision from 1986 or to enforce the decision with effect from the current year. But if the Medical Council was unable to conduct an all-India exam in 1985, then there should be 30% reservations in the tests conducted by each state. Ultimately the Supreme Court opted for the latter alternative. This year, as in the past, the test will be conducted by each state. But the earlier restriction of domicile will not apply in respect of 30% of the seats.

Despite this welcome liberalisation in favour of meritorious students, the situation this year is going to be somewhat confusing. Most states conduct the test almost simultaneously within a period of two or three weeks. Even if a student wishes to appear for more than one test, probably the utmost he will be able to do is to appear for three or four tests. And that also in states which are not too far from one another. Had the test been all-India in character, as was originally visualised, the situation would not have arisen. Students would have taken just one test at any centre which was nearest to their residence. An all-India merit list would have been prepared on the basis of this test, more or less on the pattern of the Joint Entrance Exam for the IITs, and seats would have been allotted partly on the basis of merit and partly on the basis of preference expressed by the individual student. May be this is what will happen from 1986 onwards.

This Supreme Court decision is likely to usher in a new era in Indian academic life. For instance, what has been made applicable to medicine would almost automatically become applicable to other professional courses. The entrance test for admission to the IITs is over a quarter century old. But there are a large number of other engineering colleges as well. It stands to reason that they, too, will get drawn into the network sooner or later. Indeed this is precisely what ought happen in the admissions for other professional courses, too. It would be naive to imagine, however, that a problem would not arise.

Constraints

One obvious problem that would arise

A TASTE OF CLASS

For The Classroom

BY VIJAY KONWAR

The 21st century is round the corner. And efforts are on to equip India with the wherewithal to successfully combat its herculean challenges. CLASS, the exclusive project to induct 'Computer Literacy And Studies in Schools' is one such effort. Undertaken by the Union Ministry of Education in cooperation with the Department of Electronics and so far introduced in 250 selected government and government-aided schools in urban areas throughout the country, the project at the moment is halfway through its pilot phase. Depending upon the feedback received from this pilot project, plans for installing computers in 2,50,000 schools by 1990 at a cost of Rs 300 crores, would be finalised.

The BBC-model B computers have been purchased from a British firm, Acorn, under a bilateral trade agreement with the UK at a 40% premium over the prevailing market price. They are expected to make children think in totality rather than strait-jacketing learning. Class XI and XII students constitute the target section of the pilot project, though plans are to extend it downwards to the Class VII-X level. A general familiarisation of the students with computers and their use is the immediate objective of the programme. It is expected that through regular interaction with the given systems, a smaller group of students (initially in the age group 16-18) will be able to develop higher abilities to think logically and to take decisions on the basis of processing of information and data.

Students will familiarise themselves with the computers by using commercially available canned software to learn Chemistry, Physics, Mathematics and Biology. Word processing, drawing graphics, accounting, storing and retrieving data, as well as some pure fun and games packages complete the CLASS curriculum. Managing the operations does not appear to be too difficult; familiarity with the keyboard, the computer's parts and LOGO are all that the students need to have. LOGO is not something that will tax the grey cells; considering that children use it by means of a 'turtle' that moves around the screen in response to simple commands such as "move forward, backward or sideways", etc. After all, it is only a simple operational language and does not require knowledge of computer logic.

One of the stated objectives of the CLASS project is "to test the computers as an educational tool for improving the

If there is an urgent need for CLASS, there is an equally, if not more, urgent need to not just provide education to the millions who have little or no access to it, but also to improve the quality of teachers and education

quality of education... (and) initiating computer assisted instruction". CLASS has, however, made it clear that computers are not merely an additional teaching aid; that they are not intended to replace books nor to provide simply some spectacular graphics to a teacher's repertoire. They are expected to provide a new way to teach different skills, to help in developing a way of thinking, a way of understanding and processing information and a skill of analysis and synthesis.

In the first phase, selected schools are going to be concerned with the computer literacy programme, while simultaneous efforts are made in selected institutions to experiment with the idea of computer-assisted learning. All this would lead to the introduction of computer related courses at the plus-two stage.

CLASS derives its justification from the rationale that school computers are essential for preparing a new generation of workers familiar with the 21st century technology and for fostering a "computer culture". Judging by the pace of the fast changing technology, computers are expected to dominate all kinds of activities in homes, offices and industries. So tomorrow's work force must be made capable of coping with the exacting demands of a new technological society. No wonder then, the project is intended to "develop

higher levels of intellectual ability and creativity", according to Prof A K Jalaluddin, Joint Director of the National Council of Educational Research and Training (NCERT).

Computers can be a powerful technology for making a significant change in the methodology of the teaching and learning processes. In the case of a subject like History for instance, it is difficult to communicate to a student all the related events that simultaneously contributed to the rise and decline of an empire. The computer provides a technology by which the interactive nature of forces and influences can be illustrated, allowing a student to examine the different variables in a given situation and to manipulate them. History then becomes a live process, the way it really is and not just a set of dry facts. Computers thus enable the student to develop a new skill of analysis and to understand relationships between forces and events which is rather difficult to communicate through the traditional educational methods and materials.

All said and done, however, the application of computers in schools must be tailored in the context of the prevailing educational requirements, culture and languages if it is to be accepted and ultimately prove beneficial. In this context, software development becomes a very important issue. Care will have to be taken to ensure that innovative pieces of software are developed so that the new technology can be assimilated into the country's largely traditional framework. Furthermore, software development, while requiring an understanding of the process of education, happens to be a multidisciplinary endeavour; time and experience, therefore, have a key role to play. Time because teachers, field engineers and other support personnel will have to be trained. Experience because a high level of ingenuity and wisdom will be called for.

Apart from software development, there are a host of other, more complex issues that seem to question the very relevance and feasibility of the project itself. CLASS exponents face the not-too-easy task of explaining why crores of rupees are being spent on acquiring micro-computers for introduction in a few schools, when 88% of the 6,34,144 schools in the country lack elementary facilities such as buildings, electricity and often even chalk and blackboards.

It is strongly felt in many quarters, and

IDA: A PARTNER IN AID

BY BECO & DAS

An affiliate of the World Bank, IDA has extended its helping hand in restructuring the economy of several less-developed nations. But, in the recent years IDA's generosity has been curbed by problems of resource-mobilisation from donor countries.

International Development Association (IDA) is an aiding centre for several developing countries who look up to it for financial assistance. Started in 1960, IDA is an association of 'donor' countries who have come together under the aegis of the World Bank to help the less developed countries (LDCs) in the task of restructuring their economy. The level of development in LDCs, particularly in South Asia and Africa, is dismally low. Plagued by a variety of socio-economic problems, these countries do not have adequate domestic resources and hence they require external assistance on a continuing basis.

However, the external aid and private capital that these countries received earlier was inadequate. Moreover, these countries were in no position to take loans carrying high interest rates and short maturities which could accentuate their debt servicing problems over the years.

As an affiliate of the World Bank, IDA was to ensure that concessional loans given to LDCs would be utilised for financing projects, similar to those financed by the World Bank itself. It was also visualised that IDA, the 'soft-loan wing' of the World Bank, would act as a coordinating agency among donor countries unhindered by political lobbying.

Replenishments

IDA is funded in the form of subscriptions or contributions from developed countries, special contributions from its non-members and transfers from the net earnings of the World Bank and IDA itself. So far, seven replenishments have been made, IDA-7 being the latest. These replenishments served a two-fold purpose. Firstly, the unabatable demands for concessional finance by the LDCs, particularly after the oil crisis in 1973, was met to some extent; and secondly the real value of IDA finances which was being constantly eroded due to accelerating inflation was maintained (see table).

IDA-7 which concluded on Jan 15, 1984, witnessed a substantial decline of 25% in its replenishments in comparison with IDA-6, a matter of grave concern for the beneficiaries.

Credits

The main criteria for the allocation of IDA credits is the per capita income of the

Replenishment of IDA Resources (1961-1984)

		(Million dollars)	
			Current dollars
% change			
Initial	(1961-64)	757	-
IDA-1	(1965-68)	745	-1.6
IDA-2	(1969-71)	1,271	+70.6
IDA-3	(1972-74)	2,441	+92.0
IDA-4	(1975-77)	4,501	+84.4
IDA-5	(1978-80)	7,732	+71.8
IDA-6	(1981-83)	12,000	+55.2
IDA-7	(1984-)	9,000	-25.0

Source: *IDA In Retrospect* by Oxford University Press and Newspapers

recipient country. Countries which have an annual per capita Gross National Product (GNP) of less than \$681 (in 1979 dollars) are eligible for IDA credits. Other parameters taken into consideration include the country's credit worthiness, its accessibility to commercial borrowing, its economic performance, the density of its population and the existence of viable projects in the borrowing nation.

Interest-free IDA credits are available to governments only and may be obtained on payment of nominal service charges at the rate of 0.75% per annum. The period of repayment is 40 years excluding 10 years of grace period. This is in contrast to World Bank loans on which interest of 12% per annum has to be paid and the loan has to be repaid within 20 years. Thus LDCs have benefited immensely from IDA credits.

Though unmatched by the actual requirements of LDCs, the quantum of IDA aid has recorded a considerable increase: while the recipient countries received \$1,150m (current) during IDA-1, the figure rose to about \$14,658m (current) during IDA-6 (upto 1982 only). The number of beneficiaries till June, 1982 was 78.

LDCs have benefited from IDA credits in that they have been able to strengthen their agriculture and enhance their pace of rural development. Besides, such aid has helped to improve the transport sector, the energy base and the industrial production in these countries. Public utility services like education, health facilities and water

supply have also improved considerably.

IDA and India

IDA assistance to India has resulted in considerable advantage. India's share is 40% of IDA funds. Statistics reveal that while the amount authorised under IDA aid was about \$578m (current) during the Third Plan, it almost tripled itself to about \$1,556m (current) during the Fourth Plan. During the Fifth Plan the figure touched a height of nearly \$5,581m (current). This increasing trend halted during the Sixth Plan, the amount of aid authorised approximating to about \$4,568m. However, India has not been able to utilise this aid fully, both because of infrastructural difficulties at home and the adverse conditions imposed by donor countries, governing such aid.

With the possibility of China getting IDA assistance, India's share in IDA funds is expected to go down further. This has recently been corroborated by Sir William Rye, an Executive Vice-President of International Finance Corporation (IFC) who remarked: "Indian share is certainly going to be lower than it has been in the past."

IDA credits have helped various sectors of our economy such as agricultural and rural development, construction, irrigation, power, telecommunications, ports, industrial imports, fertiliser production, shipping, etc. Some of the prestigious projects financed through IDA credits include the Sone Irrigation Project, Bihar, Punjab Agricultural Credit Project, Gorakhpur Fertiliser Expansion Project, Bombay Water Supply and Sewerage Project, Karnataka Dairy Development Project, Rajasthan Canal Command Area Development Project, Godawari Barrage Project, several telecommunication projects, rural electrification projects, railway projects, etc. IDA has also been providing funds to the Industrial Development Bank of India (IDBI), as also the Agricultural Refinance & Development Corporation (ARDC) for their developmental activities, pertaining to agriculture and rural areas.

Issues

Over the years of its functioning, IDA has constantly been dogged by several problems. Firstly, various donor countries have considerably reduced their shares over the years. For example, the US has reduced its share of IDA funding from 27% in IDA-6 to 25% in IDA-7. Five other countries, viz. West Germany, Kuwait, Sweden, UK and Brazil have also reduced their contributions. Worldwide recession, problems of balance of payment and heavy emphasis on defence expenditure in the budget of some big nations like the US are cited as reasons for this phenomenon. However, a deeper insight into the problem reveals that some donor countries have undergone a realignment of political attitudes towards the system of mul-

ilateral assistance to certain less developed countries. Thus the problem of fixing shares of donor countries bristles with controversy and has posed a serious deterrent to resource mobilisation by IDA.

Another controversy relates to whether all the countries should continue to receive credit on the same soft terms, the implicit idea being reduction of the 'softness' in case of creditors who have already received a lot of assistance from IDA. Thirdly, the idea of reducing the maturity period of the loans is also being mooted, also being debated is the dilution of funds on the basis of per-capita income of the recipient country.

India's economic performance has been laudable in the recent years, imparting it greater credit worthiness for private capital borrowings, though adverse international environment has put tremendous pressures on its balance-of-payments position. Despite these favourable factors, it has been difficult for IDA to allocate credit to India solely on the basis of per-capita income criterion. Hence, India's economic development is being adversely affected.

In the wake of the swift pace of economic, scientific and technological developments in various countries, IDA's terms of credit need to be broadened to include various other parameters such as economic performance of a country, its credit worthiness, availability of viable projects, etc. These criteria should be applied objectively.

The less developed world has also to play a specific role in making the IDA assistance prove more effective. Firstly, these countries should explore the feasibility of entering into bilateral agreements for assistance with other countries or agencies without relying too much on IDA. Secondly, serious and meaningful efforts have to be made by these countries to restructure their economy. The doctrinaire approach to problems has to be shunned in favour of pragmatic policies. The gestation period of various projects should be minimised; this would, in turn, reduce the incidence of cost over-runs and wasteful expenditure in many projects run with IDA assistance.

The problem of meeting the increasing demands of LDCs for assistance from IDA against the depleted replenishments by the donors can be eased to some extent by mutual understanding. It should be realised that the poorer nations serve not only as potential markets for the high-technology products of their developed counterparts, but also as potential suppliers of various primary and intermediary goods to them. It is, therefore, in the fitness of things that developed countries shun the path of narrow nationalism and work for the development of 'have-nots'.

EDUCATION (Continued from page 27)

is that of hostel accommodation. Henceforth, there would be much greater movement of students from one state to another than there used to be earlier. Previously, in large cities and metropolitan towns and even some of the other towns, a substantial number of students in medical colleges were local. They, therefore, did not need hostel accommodation. This situation would now change; much more hostel accommodation would be required. Since it takes time to create residential facilities, the various all-India coordinating bodies which are responsible for the respective professional courses would do well to plan much in advance.

Again, the cost of professional education may go up because a larger number of students may have to move to places away from their home states. Not all meritorious students would have the necessary resources. Quite a few of them would therefore require monetary help—particularly if the fee is raised. They would therefore need loans and scholarships.

The social and academic consequences of the Supreme Court ruling are also likely to be far reaching. In social terms, a much larger number of students would move from one part of the country to another. In a country as vast and varied as India, this will be a welcome move.

In academic terms, 30% reservations for meritorious students will also entail problems of a different kind. Admission into a medical college will certainly become easier in terms of legal disabilities but it will not become easier in terms of academic selection. On the contrary the selection might become more rigorous. **Dynamic move**

The Supreme Court has certainly handed down a decision which in the long run would change the direction of things in the academic as well as in the social sphere, thus making up for the inert attitude of the Executive. For years together the Executive has been underperforming and lacking in dynamism. The Medical Council of India has not been doing all that it could, either due to its own internal problems or because the Ministry of Health was interfering with its working. But the fact remains that the council has not given evidence of competent and purposeful activity.

That the Medical Council of India dragged its feet and did not perform efficiently enough to be able to implement the decision with effect from 1985 only goes to underline the point that vested interests are acting as stumbling blocks. Now it is for the Executive, viz. the Ministry of Health to see that henceforth things happen as they ought to happen.

COMPUTER LITERACY (Continued from page 28)

not without some justification, that computers will only strengthen those already in power. Since they are being introduced in select schools and, that too, only in urban areas, the vast majority, which has so far been denied even the rudiments of education, will continue to be in the doldrums. While the miniscule minority becomes richer and more powerful by virtue of its mastery of tomorrow's grand technology, the authorities would do well to pay heed to this and hammer out a foolproof plan of modernisation that will be beneficial to all.

Will CLASS make students truly 'computer literate'? Many harbour doubts about its ability to do so. It is felt that the kind of skill being imparted through the programme will probably prepare them for the lowest rung of computer users. Since the project is likely to accomplish no more than imparting a generalised awareness, it is a wasted endeavour, the critics feel. This kind of familiarity would come anyway when the new technology becomes commonplace.

Whatever may be the criticisms levelled against CLASS, it would be foolish to reject it outright because that would tantamount to throwing the baby out with the bath-water, to use an age-old adage. The preparation of a computer-aware workforce is a must, in view of the fast approaching highly competitive era of the 21st century. India being a developing country it is all the more necessary for it to recognise the indispensability of the micro-computer in the automated future of the dawning century and take steps well in advance to retain some semblance of credibility in the world market.

At the same time, there is no denying the fact that it would be ridiculous and utterly futile to try and push only a microscopic minority of the Indian populace into the 21st century while the majority languishes in a sluggish, backward and monotonous 19th century existence. If there is an urgent need for CLASS, there is an equally, if not more, urgent need to not just provide education to the millions who have little or no access to it, but also to improve the quality of teachers and education.

Unless simultaneous efforts are made to lift education from the miasma of unproductive memory-based learning and train imaginative, innovative and dedicated teachers, CLASS will accomplish nothing more than introducing mere gadgetry in schools. Needless to say, the much-desired change in education would then become a mirage. Gadgetry will probably give a new look to education, it will not change it. The need of the hour, therefore, is systematic thinking.

CAREER COUNSELLING

BY G. J. UNNITHAN, Director, Students Advisory Bureau, University of Rajasthan

Please let me know the qualifications needed to become a flight engineer and the selection procedure for the same.

Horash Prabhu, Udipi (Karnataka)

A flight or ground engineer is recruited by commercial airlines/air force from candidates who have graduated in electrical or mechanical engineering.

I am orthopaedically handicapped, in the sense that the movement of my right hand is restricted. But I can perform activities like writing and eating normally and efficiently. Am I eligible for the Civil Services?

Dipanker Mukherji, Gondia

According to the regulations relating to the physical examination of candidates for the Civil Services, "To be passed as fit for appointment a candidate must be in good mental and bodily health and free from any physical defect likely to interfere with the efficient performance of the duties of his appointment." There is no further specific regulation for the orthopaedically handicapped; the decision will be left to the Medical Board. Since your handicap is minor and does not interfere with the discharge of your duties, you may assume that you can appear for the exam.

I am studying in B.Com. 1st year and wish to do C.A. together with B.Com. I want to know whether I can appear for C.A. final without having practical experience of auditing under the Articleship of a Chartered Accountant.

Surendra Jain, Guwahati

Articleship is compulsory while preparing for C.A. intermediate and final exams. You may complete your B.Com. privately or by correspondence while undergoing Articleship.

I have been an NCC cadet in college. I want to join the army. Kindly advise me as to what I should do.

Anil Dhar, Srinagar

You will have to appear for the Combined Defence Services Exam in October 1985. This exam is advertised by the UPSC in the newspapers on Apr 27, 1985. There are a limited number of reserved posts for the NCC 'C' certificate holders.

I am a married woman with Honours in Philosophy. I had a paper in Psychology too. Is it necessary under law to have some specific qualification to

practise as a marriage and family counsellor...?

Sushma Gupta, Calcutta

No specific qualifications or registration is required to practise as a marriage and family counsellor. However, training, either in Social Work, Home Science, Psychology, Sociology (with special papers in the field) or Law is helpful. Besides theoretical knowledge, counselling requires sensitivity, maturity, empathy and understanding of marital and family problems. Since you will be self-employed, the success in this work will depend on the reputation you can establish.

I have a diploma in Mechanical Engineering from the Gujarat Board. I would like to have the list of Indian universities/institutes which offer diploma in Russian Language (not through correspondence). What is the duration of the course?

Anandkumar, Ahmedabad

There are 36 universities conducting diploma courses in Russian. In Gujarat you may contact the M.S. University, Baroda.

I am a student of Electronics Engineering, studying in pre-final year. I would like to be a civil pilot. What do I do?

M. Sefdar Baig, Allahabad

Please contact the flying training school in your area (many airports in the country have flying clubs) where you can enrol for Student Pilot Licence after the prescribed medical examination. You can then take training for Private Pilot Licence and subsequently for Commercial Pilot Licence on completion of the prescribed number of flying hours (approximately 80 hours can be flown at a subsidised fee, depending on qualifications and age—minimum is matriculation and below 22 years). All costs have to be borne by the candidates. Employment opportunities are fairly limited.

I have a reading speed of 180 w.p.m. I want your suggestions regarding this handicap.

Madan Saikia, Dibrugarh

A minimum reading speed of 200 words per minute is considered necessary for students at the university level. You are not far below this, but it will impair your performance if you do not improve your reading speed and comprehension. Please avoid reading words separately, read the sentence and understand the meaning of

the sentence rather than the meaning of the individual words. Read silently, do not articulate the words. Read only with your eyes, do not move your head or any other part of the body. Concentration is very important and if you find that your mind wanders away from your studies, you should examine the causes, so that both your study habits and reading speed improve. Efficiency and organisation of one's studies are most important for success.

I am a 1st class Zoology graduate and want to do M.Sc. (Zoology) through correspondence or privately from any university.

Krpudi, Kasibugga

M.Sc. (Zoology) by correspondence is available at Annamalai University only. Please contact the Director, Directorate of Correspondence Courses and Continuing Education, Annamalai University, Annamalai nagar 608 002 in June/July.

I have done B.Sc. (Hons) in Chemistry. I have a diploma in Aircraft Maintenance Engineering with three years experience. Nowadays I am also working on aircraft. But I want to go to a foreign country.

Kumer Rajiv, Patna

You may register with the Dept of Personnel and Administrative Reforms, Ministry of Home Affairs, Central Secretariat, New Delhi, by submitting an application form which is available on pre-payment of Rs 5 I.P.O. from the Controller of Publications, Department of Publications, Civil Lines, Delhi 110 054. Registration for foreign employment is possible for technical/professional personnel with three years experience.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many readers ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

CAREER COUNSELLING
COUPON

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating: Evaluate your performance on the basis of the following score-card:

- 100 questions in 60 minutes—Excellent
- 60 questions in 60 minutes—Good
- 50 questions in 60 minutes—Fair
- 35 questions in 60 minutes—Poor

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

Test Of Reasoning

BY EDGAR THORPE

FOR POs, RRB (CLERICAL GRADE), CAT...

Here is a selection of verbal, non-verbal and reasoning tests to help you in the forthcoming PO, RRB (Clerical Grade), CAT and other management entrance exams. Attempt these tests in order to assess your performance and further eliminate your weak spots, if any.

Time: 40 minutes

Scores: 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer. 3. Then rate yourself as follows:

Excellent...83-88 Very Good...77-82 Good...71-76 Fair...65-70
Poor...Below 65

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the question. Answers are given at the end of these tests.

VERBAL TESTS

I. Directions: In questions 1-6 there are five groups of words in each. All of them have some meaning, but the meaning of them is different in each. Tick the letter

1. (a) breed (b) breed
(c) place (d) place
(e) place (f) place
2. (a) and (b) and
(c) and (d) and
(e) and (f) and
3. (a) dent (b) dent
(c) dent (d) dent
(e) dent (f) dent
4. (a) prone (b) delegate
(c) date (d) late
(e) gate (f) late
5. (a) blade (b) learning
(c) neat (d) clean
(e) bliss (f) clean
6. (a) frank (b) thank
(c) tanks (d) blank
(e) chunk (f) blank

II. Directions: Questions 7-12 each have a set of alphabets following a certain

order/pattern. Find the pattern in order to fill in the blanks to complete the series

7. A B Y Z C D W X ---
(a) CD (b) YZ
(c) LI (d) UV
8. A B C A C Z D E F ---
(a) DEF (b) GHI
(c) UVW (d) RST
9. B A F E D H G ---
(a) L M O (b) L K J
(c) C B A (d) Q R S
10. D E F J K L P Q R ---
(a) X Y Z (b) L M O
(c) V W X (d) P Q R
11. A Z B Y C X D W ---
(a) E F (b) E V
(c) E W (d) E X
12. A B C D B E F G C H I J D K L M
(a) A B F G (b) D K L M
(c) J K L (d) There is no set sequence

III. Directions: Questions (13-21) consist of very common words, but the letters of the same have been scrambled. Also, the letters have been allotted numbers according to the sequence in which these

appear in the alphabet. You are required to find the correct word and state which of the alternatives gives the meaningful word so formed. Note that of the two similar letters, only one has been numbered

13. I F D N S D E G
1 5 4 3 7 6
(a) 4 3 6 5 7 5 4 1
(b) 1 4 3 7 6 5 4 5
(c) 4 5 7 1 6 3 5 4
(d) 7 1 6 5 4 3 5 4

14. I U G I R F
3 2 8 0 5 4
(a) 4 8 0 2 3 5
(b) 5 4 3 0 8 2
(c) 8 0 2 3 5 4
(d) 4 0 8 2 5 3

15. I D E C R P E
3 2 7 5 4
(a) 4 3 2 3 7 3 5
(b) 7 5 3 4 3 2 3
(c) 4 5 3 7 3 2 3
(d) 5 3 7 3 2 3 4 2

16. U A A F T A E B I
1 3 4 2 8 5 7 9
(a) 7 1 3 4 3 8 7 5 4
(b) 7 5 4 1 8 5 5 1 3
(c) 3 1 4 2 2 7 5 4 3
(d) 7 8 5 1 3 1 4 3 4

17. A C P A C L H I
1 3 9 7 5 8 6
(a) 9 5 1 3 8 6 3 1 7
(b) 5 1 9 6 3 8 3 1 7
(c) 5 1 3 6 9 8 3 1 7
(d) 5 3 1 6 9 8 2 7 1

18. E O C D D E
6 5 3 4
(a) 4 6 3 5 4 6
(b) 3 6 5 4 4 6
(c) 3 5 4 6 4 6
(d) 5 3 6 6 4 6

19. E O P N R
6 5 2 3 4
(a) 2 4 5 3 6
(b) 4 2 3 6 5
(c) 5 3 6 4 2
(d) 5 3 4 2 6

20. P E U O R E
4 5 3 2 1

- (a) 5 3 2 1 4 3
(b) 3 4 2 1 5 3
(c) 5 3 1 2 4 3
(d) 1 3 3 2 5
21. ECIPLO
5 3 2 3 4 5
(a) 5 2 3 4 3 5
(b) 3 5 4 2 3
(c) 4 2 3 5 3 5
(d) 3 5 3 5 2
- IV. Which of the following best represents the sequence in which the following words occur in the dictionary?
22. (1) bight (2) bikini (3) bright
(4) bilge (5) billion
(a) 1 2 3 4 5 (b) 2 1 4 5 3
(c) 1 2 4 5 3 (d) 1 4 3 5 2
- V. Arrange the following words in the descending alphabetic order, i.e., if serial numbers are read from right to left, it will form the dictionary sequence:
23. (1) disney (2) disorder (3) disown
(4) dismiss (5) dismount
(a) 4 5 3 2 1 (b) 2 3 5 4 1
(c) 3 2 4 1 5 (d) 3 2 1 4 5
(e) 3 2 1 5 4
- VI. Which of the following words will come exactly in the middle if they are arranged in alphabetic sequence in which they occur in the dictionary?
24. (1) gauche (2) gather (3) gaseous
(4) gastric (5) gaselier
(a) 1 (b) 2
(c) 3 (d) 4
(e) 5
- VII. Which of the following words will come last if they are arranged in alphabetic sequence as they appear in the dictionary?
25. (1) delegate (2) delicious (3) deliquesce
(4) delicatessen (5) delirious
(a) 2 (b) 3
(c) 5 (d) 4
(e) 1
- VIII. Which two letters of the English alphabet come exactly in the middle by counting 12 letters from the beginning and 12 letters from the end?

26. (a) LM (b) MN
(c) NM (d) NO
(e) KL
- IX. If you count 14 letters of the English alphabet from the end, which will be the 15th letter in the sequence?
27. (a) M (b) N
(c) L (d) K
(e) None of the above
- X. If you count the English alphabets backward 1-14 and then forward 1-14, which two letters will be 15th from forward and backward sequence respectively?
28. (a) LM (b) LO
(c) OL (d) PO
(e) NO
- XI. If the alphabetic order is reversed
29. Which will be the 13th letter from right?
(a) O (b) M
(c) N (d) L
(e) None of the above
30. Which will be the 13th letter from left?
(a) K (b) N
(c) M (d) L
(e) O
31. Which will be the 12th letter from right?
(a) O (b) N
(c) L (d) K
(e) None of the above
32. Which 2 letters will come exactly in the middle?
(a) ON (b) NM
(c) MN (d) ML
(e) LM
- XII. Arrange the following words in alphabetic order. Write the last letter of the word which comes first in the sequence. Equator/Equinox/Equivocal/Equity/Equilibrant
33. (a) E (b) Y
(c) R (d) X
(e) T
- XIII. **Directions:** From the set of figures given below, answer the questions 1

- to 5.
6 9 6 9 9 9 6 6 6 9 6 9 6 6 9 9 6 6
9 9 6 6 6
34. How many 9s are followed by 6 as well as preceded by 6?
(a) 5 (b) 4
(c) 3 (d) 7
35. How many 9s are only followed by 6?
(a) 3 (b) 4
(c) 6 (d) 8
36. How many 6s are followed by 9s as well as preceded by 9s?
(a) 3 (b) 2
(c) 4 (d) all
37. What is the total of 6s?
(a) 30 (b) 42
(c) 48 (d) 78
38. If the sum of all 6s is subtracted from the sum of all 9s, what figure will you get?
(a) 9 (b) 12
(c) 18 (d) 27
- XIV. From the following figures, answer the following questions:
7 8 9 7 6 5 3 4 2 8 9 7 2 4 5 9 2 9
7 6 4 0 7
39. How many 7s are preceded by 9 and followed by 6?
(a) 3 (b) 2
(c) 4 (d) all
40. Which figure is missing?
(a) 6 (b) 10
(c) 1 (d) 10
41. Which figure has been repeated maximum?
(a) 7 (b) 9
(c) 6 (d) all except 0
42. Which figures have equal frequency?
(a) 253 (b) 865
(c) 245 (d) None of the above
43. Leaving aside 0, which figure has the lowest frequency?
(a) 2 (b) 8
(c) 3 (d) 4

NON-VERBAL TESTS

Spot the odd one out among the following set of figures.

II. Name the serial number of the figure in the answer figures which will complete the series, i.e. fit in the last column of problem figure.

Problem Figure

Answer Figure

Problem Figure

Answer Figure

Problem Figure

Answer Figure

III. Find the relationship/analogy in the first set (2 figures) of problem figure. Based on the same analogy, find the suitable figure from answer figure to fit in the blank space in the following questions.

Problem Figure

Answer Figure

Problem Figure

Answer Figure

Problem Figure

Answer Figure

Problem Figure

Answer Figure

IV. In each of the following questions, there are three blocks of figures A, B and C. Two figures in Block C have some similarity with the figures/pattern in Block A. In Block B there are some figures that match with Block A or are similar/have same analogy. You have to select two figures from Block C which bear similarity or are based on the same analogy as that of Block A. Block B will help you to determine the correct answer.

12. Block A

AN EYE-OPENER

A high-tech Israeli company called Xanadu Ltd has developed an ingenious gadget which sounds an alarm if a person falls asleep while driving, working at night or doing guard duty. This device weighs only about 16 gm, attaches easily to eyeglass frames and is operated by batteries that will last over 700 hours. When you involuntarily begin to steal some shut-eye, a tiny alarm pleasantly brings you back onto the job.

REASONING TESTS

I. **Directions:** In the following statements, a situation is explained in two premises, followed by a conclusion. Decide whether the

- (a) Conclusion necessarily follows from the statements
 - (b) Conclusion is only a long-drawn one
 - (c) Conclusion definitely does not follow from the statements
 - (d) Conclusion drawn is doubtful
- (Draw your answer only from within the statements)

1. Statements

- 1. Most of the dogs watch at night.
- 2. Ram's dog is a good breed.

Conclusion

Therefore, Ram's dog must be keeping watch at night.

- (a) (b) (c) (d)

2. Statements

- 1. The number of malaria cases is higher during the monsoons.
- 2. The period July to August is the rainy season in north India.

Conclusion

Therefore, malaria cases are less in number during the winter months in north India.

- (a) (b) (c) (d)

3. Statements

- 1. Animals generally cannot see in the dark.
- 2. Dogs are animals who keep a good watch.

Conclusion

But dogs cannot see at night.

- (a) (b) (c) (d)

4. Statements

- 1. To pass a Mental Ability test you need alertness and quickness.
- 2. Ramesh solves questions on Mental Ability very fast.

Conclusion

Therefore, Ramesh has the quality of both alertness and quickness.

- (a) (b) (c) (d)

5. Statements

- 1. All students studying in public schools are intelligent.
- 2. Rakesh studies in a public school.

Conclusion

Therefore, Rakesh is an intelligent student.

- (a) (b) (c) (d)

6. Statements

- 1. Ram is sitting to the right of Seema and Sunita.
- 2. Seema is sitting to the left of Sunita.

Conclusion

Therefore, Seema is not next to Ram but Sunita is in the middle of both.

- (a) (b) (c) (d)

Directions: In each of the following questions, two or three statements are given, followed by a conclusion. Examine the conclusion separately in the context of

the facts given and decide upon its degree of truth or falsity. Mark conclusions as follows:

- (a) Definitely true
- (b) Probably true
- (c) Data is insufficient
- (d) Probably false
- (e) Definitely false

7. Statements

- 1. Some of the government officials are said to be corrupt.
- 2. Ram Chander is a clerk in the post office.

Conclusion

Therefore, Ram Chander is corrupt.

- (a) (b) (c) (d)

8. Statements

- 1. Rusting of iron is a chemical action.
- 2. Rust damages the iron material

Conclusion

We should, therefore, save iron material from rusting.

- (a) (b) (c) (d)

9. Statements

- 1. Ram's father is a doctor.
- 2. Ram is concerned with suffering humanity.

Conclusion

Therefore, doctors are concerned with suffering humanity.

- (a) (b) (c) (d)

10. Statements

- 1. Roshan and Ram work in the same shift.
- 2. Rohit and Burman never work in the same shift.

Conclusion

Therefore, when Rohit works, Burman must work.

- (a) (b) (c) (d)

11. Statements

- 1. Foreign companies pay their employees well.
- 2. Gulati works in an international organisation.

Conclusion

Therefore, Gulati is a well-paid worker

- (a) (b) (c) (d)

12. Statements

- 1. Trees are very high on hills
- 2. This mountain peak is the highest in this country.

Conclusion

Therefore, trees here must be the highest in the country.

- (a) (b) (c) (d)

III. Directions: Each question below is followed by two arguments I & II. Determine which one of them is **strong** or **weak**. Then decide which of the answer choices that follow is correct:

- (a) Only statement I is strong
- (b) Only statement II is strong
- (c) Both the statements are strong
- (d) Either statement I or II is strong
- (e) Neither I nor II is strong

- 13. Should there be a strong Central Government leaving no powers with

the states?

- I. Yes, it will ensure peace and keep discipline in the country.
- II. No, freedom of people will vanish.

- (a) (b) (c) (d)

- 14. Should one prefer a job in a government department or in the private sector?

- I. Government jobs give security.
- II. Private sector pays well.

- (a) (b) (c) (d)

- 15. Should news be censored during communal disturbances?

- I. Yes, because, certain news is dangerous to unity and peace.
- II. No, it is unconstitutional and against the freedom of expression.

- (a) (b) (c) (d)

- 16. What is your opinion about news censorship during a normal political situation in the country?

- I. It is bad as some times certain developments will not be made known to the people and there would be no control on the happenings and activities.
- II. It is good because newsmen will be able to exploit news to create disturbances in the country

- (a) (b) (c) (d)

- 17. Which type of education is suitable for industrialisation?

- I. Scientific education is very essential.
- II. Technical education is necessary.

- (a) (b) (c) (d)

IV. Directions: In the following questions, there is one statement which is followed by two conclusions. Find out which conclusion follows logically from the given statement and then decide which answer choice, marked (a), (b), (c), (d) & (e) is relevant and correct:

- (a) Only I follows
- (b) Only II follows
- (c) Both I and II follow
- (d) Either I or II follows
- (e) Neither I nor II follows

18. Statement

- Days are smaller in winter.
- December and January are the coldest months in the north.

Conclusion

- I Summer is better than winter
- II Hill stations are crowded in summer
- (a) (b) (c) (d)

19. Statement

Surdas is known as the Milton of India

Conclusion

- I Because Surdas was a Hindi poet and Milton an English poet.
- II. Because both of them were blind poets.
- (a) (b) (c) (d)

20. Statement

- X and Y are students of S.S. Collge.
- X studies Arts and Y studies

- I. They are similar in one aspect.
 II. They are dissimilar in another aspect.
 (a) (b) (c) (d)

21. Statement

India has strengthened her nuclear power.

Conclusions

- I. India will explore possibilities to exploit nuclear power as a source of energy.
 II. India will be in a position to be at par with the developed world to make weapons.

(a) (b) (c) (d)

22. Statement

Private sector industries are profit-making in spite of several restrictions imposed on them by DGTD.

Conclusion

- I. Private sector industries work under restrictions from DGTD.
 II. Private sector industries employ skilled technicians.

(a) (b) (c) (d) (e)

23. Statement

X is a respectable member of society

Conclusion

I. Respected members are made members of the jury.

II. X, being a member of the jury, is infallible.

(a) (b) (c) (d) (e)

V. **Directions:** A situation is given in a few sentences in the form of statements followed by a conclusion.

Determine whether the

- (a) Conclusion is valid
 (b) Conclusion is long-drawn
 (c) Conclusion is invalid
 (d) Conclusion is doubtful

24. Statements

1. Singapore is in the east of India.
 2. India is in the north of Sri Lanka.

Conclusion

Therefore, Singapore is exactly in the east of Sri Lanka

(a) (b) (c) (d)

25. Statements

1. If he studies now, he will clear the exam.

2. He does not study.

Conclusion

He will not clear the exam.

(a) (b) (c) (d)

charges levelled against him by B.

2. A is a member of the management team.

Conclusion

A found him guilty.

(a) (b) (c) (d)

27. Statements

1. If he has black money, he can be prosecuted by the income-tax department.
 2. But he has no money.

Conclusion

Therefore, he cannot be prosecuted.

(a) (b) (c) (d)

28. Statements

1. Boys are more intelligent than the girls of the same age group.
 2. Ramu is a boy and is 18 years of age.

Conclusion

Therefore, Ramu is more intelligent than any girl of his age.

(a) (b) (c) (d)

29. Statements

1. Five and four are odd and even.
 2. Five and four are nine.

Conclusion

Therefore, nine is odd and even.

(a) (b) (c) (d)

General Knowledge

FOR NDA, CDSE, ASST'S GDE, ESE EXAMS

A general knowledge of world affairs and everyday observation and experience in scientific matters constitutes an essential section of exams like NDA, CDSE, Central Excise/Income-tax Inspector's Exam, Assistant's Grade Exam and Engineering Services Exam (ESE). The following set of questions should give you a fair idea of the type of questions you may expect in this section.

DIRECTIONS: For each of the following questions tick mark the choice that best answers the question. Answers are given at the end of these tests.

- Who won the French Open men's singles title in 1985?
 (a) John McEnroe (b) Mats Wilander
 (c) Ivan Lendl (d) Jimmy Connors
 (e) None of the above
- Who directed *Damul* which won the National Award for the best feature film in 1985?
 (a) Gautam Ghose (b) Prakash Jha
 (c) Satyajit Ray (d) Mrinal Sen
 (e) Govind Nihalani
- The well-known economist and former member of the Planning Commission who died in Rome in 1985 was?
 (a) Dr M.S. Swaminathan
 (b) K.N. Raj
 (c) Raj Krishna
 (d) Hanumantha Rao
 (e) Mohammad Fazal
- Who was the first Mughal ruler in India?
 (a) Humayun
 (b) Muhammad-bin-Tughlaq
 (c) Muhammad Ghori
 (d) Babar
 (e) Akbar
- Who was the first Governor-General of India?
 (a) Robert Clive
 (b) Lord Cornwallis
 (c) Lord Canning
 (d) Lord Lytton
 (e) Warren Hastings
- Whose court did the Chinese pilgrim Hieun Tsang visit?
 (a) Harsha Vardhana
 (b) Chandragupta I
 (c) Ashoka
 (d) Vikramaditya
- Who composed *Ramcharitmanas*?
 (a) Kalidas (b) Amir Khusrau
 (c) Abul Fazl (d) Tulsidas
 (e) None of the above
- The famous Indian mathematician and astronomer Aryabhata lived during the reign of
 (a) Chandragupta Vikramaditya
 (b) Chandragupta
 (c) Ashoka
 (d) Sher Shah Suri
 (e) None of the above
- What was the significance of the Battle of Kalinga (262 B.C.)?
 (a) Ashoka lost his first battle
 (b) Ashoka defeated Kalinga
 (c) Ashoka gave up battles and became a Buddhist monk
 (d) There was very little bloodshed
- Afghan rule was established in north India after the
 (a) I Battle of Panipat
 (b) Battle of Kanauj
 (c) Battle of Chausa
 (d) II Battle of Panipat
 (e) None of the above
- Who was one of the greatest monarchs of south India known for his kindness to the fallen enemy, acts of mercy and charity and who encouraged the development of art and letters?
 (a) Rajaraja Chola
 (b) Pulakesin II
 (c) Krishna Deva Raya

- (d) Malik Ambar
(e) None of the above
12. Who introduced Permanent Settlement in Bengal?
(a) Lord Wellesley
(b) Lord Canning
(c) Lord Cornwallis
(d) None of the above
13. Mahatma Gandhi joined the National Movement in the year
(a) 1917 (b) 1918
(c) 1921 (d) 1922
(e) None of the above
14. What prompted Gandhi to suspend the Non-Cooperation Movement in 1922?
(a) Killing of a British official
(b) Lack of support from the Muslim League
(c) Killing of 22 policemen without provocation
(d) Difference within the Congress
(e) None of the above
15. Who were the founders of the Swaraj Party?
(a) Chittaranjan Das and Subhash Chandra Bose
(b) Subhash Chandra Bose and Jawaharlal Nehru
(c) Sardar Patel and Jawaharlal Nehru
(d) Motilal Nehru and Chittaranjan Das
16. Subhash Chandra Bose resigned after he was re-elected President of the Indian National Congress in 1939 because of
(a) Personal reasons
(b) Opposition from Gandhi and other leaders
(c) Non-recognition by the British Government
(d) None of the above
- What was the purpose of the Cripps Mission?
(a) To go into the question of constitutional reforms
(b) To negotiate with Congress leaders on the transfer of power
(c) To convince Gandhi to participate in the Second Round Table Conference
(d) To secure cooperation of Indians in the war effort
- The Congress ministries resigned in 1939 because of (the)
(a) Involvement of India in World War II without consulting the Congress Party
(b) Arrest of Gandhi
(c) British Government's subtle moves to promote communal feelings
(d) None of the above
- When was the Planning Commission constituted?
(a) 1961 (b) 1952
(c) 1947 (d) 1951
(e) 1950
20. Who is the present Governor of Punjab?
(a) Jag Mohan
(b) Air Marshal (Rtd) I.H. Latif
(c) B.K. Nehru
(d) Arjun Singh
(e) None of the above
21. Who is the Chairman of the Planning Commission?
(a) Rajiv Gandhi
(b) Dr Manmohan Singh
(c) Narasimha Rao
(d) Prof M.G.K. Menon
(e) Dr C.H. Hanumantha Rao
22. When was oil first discovered in Assam?
(a) 1955 (b) 1895
(c) 1867 (d) 1925
(e) 1875
23. Who wrote the national song *Bande Matram*?
(a) Bipin Chandra Pal
(b) Subramania Bharati
(c) Surendranath Bannerjee
(d) Bankim Chandra Chatterjee
(e) None of the above
24. Who said, "Swaraj is my birthright and I shall have it"?
(a) Mahatma Gandhi
(b) Jawaharlal Nehru
(c) Subhash Chandra Bose
(d) Bal Gangadhar Tilak
(e) None of the above
25. Which is in the correct chronological order?
(a) Mauryas-Guptas-Slave Dynasty-Mughals
(b) Guptas-Mauryas-Slave Dynasty-Mughals
(c) Guptas-Mauryas-Mughals-Slave Dynasty
(d) Mauryas-Guptas-Mughals-Slave Dynasty
26. What was the motto of Swami Dayanand, founder of the Arya Samaj?
(a) Do *bhakti*
(b) Return to the Gita
(c) Read the Ramayana and the Mahabharata
(d) Return to the Vedas
(e) None of the above
27. Who was the foreigner who visited India in the Mauryan times?
(a) Megasthenes (b) Fahein
(c) Hieun Tsang (d) Alberuni
(e) None of the above
28. Which of the following rulers did not convert to Buddhism?
(a) Ashoka (b) Harsha
(c) Kanishka (d) Samudragupta
(e) All the above are converts
29. What was the most important element in the Charter Act 1853?
(a) Trade monopoly in India ended and trade with India was thrown open
(b) Power was transferred from East India Company to the British Crown
(c) The Governor-General's Council was enlarged
(d) Recruitment to the civil services were to be made through competitive exams
30. Which planet in the solar system has the longest winter?
(a) Saturn (b) Jupiter
(c) Uranus (d) Venus
(e) None of the above
31. The first man-made object to leave the solar system was
(a) Challenger (b) Salyut-7
(c) Salyut-6 (d) Soyuz
(e) Pioneer 10
32. Who were the first man and woman to go into space?
(a) Vladimir Komarov and Valentina Tereshkova
(b) Neil Armstrong and Svetlana Savitskaya
(c) Yuri Gagarin and Svetlana Savitskaya
(d) Yuri Gagarin and Valentina Tereshkova
33. Approximately, how many biogas plants are there in India?
(a) 10,000 (b) 30,000
(c) 50,000 (d) 75,000
(e) None of the above
34. The Plasma Physics Programme group at the Physical Research Laboratory, Ahmedabad, is carrying out research on the
(a) Easy disposal of radioactive wastes
(b) Possibility of conducting a fusion reaction in the laboratory
(c) Development of cheap nuclear power
(d) None of the above
35. The Antarctic krill is an important source of
(a) Cheap proteins for humans
(b) Feed to fatten fish
(c) Feed for livestock and poultry
(d) Vitamin E
36. India's manned station in the Antarctic is called
(a) Ganga
(b) Dakshin Ganga
(c) Dakshin Gangotri
(d) Dakshin Yamunotri
37. How many Articles are there in the Constitution of India?
(a) 405 (b) 400
(c) 395 (d) 390
(e) None of the above
38. The word 'socialist' was inserted in the preamble to the Constitution of India by the — Amendment Act.
(a) 28th (b) 32nd
(c) 39th (d) 42nd
(e) 47th
39. A federal constitution is one which provides for
(a) Only one Central Government

- (b) A government at the Centre which is supreme
(c) A government at the state-level
(d) A dual government with distribution of powers between the centre and the states
40. Which of the following is not a Fundamental Right?
(a) Right against Exploitation
(b) Right to Property
(c) Right to Constitutional Remedies
(d) Cultural and Educational Rights
41. In case of disagreement between the two Houses over a Bill
(a) The Lok Sabha is overruled
(b) The Rajya Sabha is overruled
(c) The PM exercises his/her discretion
(d) The President summons a joint session
42. Agriculture and family planning fall under the
(a) Union List and State List respectively
(b) State List and Concurrent List respectively
(c) Concurrent List (both)
(d) State List (both)
43. In the Concurrent List, if a law made by the Parliament comes into conflict with a law made by the state Legislature, the
(a) Latter prevails
(b) Former prevails
(c) President decides after consulting the Governor concerned
(d) None of the above
44. When was National Emergency first declared in India?
(a) Oct 26, 1962 (b) Nov 6, 1961
(c) Jan 10, 1968 (d) Dec 3, 1971
45. On which of the following grounds can an Emergency no longer be declared?
(a) External aggression
(b) Internal disturbance
(c) Armed rebellion
(d) Failure of the constitutional machinery in state
(e) Financial instability
46. The Asia Cup hockey tournament held in Dhaka from Jan 20-28 was won by
(a) India (b) Malaysia
(c) Singapore (d) Pakistan
47. Igneous rocks are those
(a) Formed by the solidification of molten rocks
(b) Formed by the action of wind and water
(c) Which undergo a pronounced change in their physical form due to heat and pressure
(d) Which are capable of producing fire when rubbed together vigorously
48. The Evening Star is.
(a) The first star to appear in the sky
- (b) The planet Saturn
(c) The planet Jupiter
(d) The planet Venus
49. The scheduled castes and tribes constitute—% of the total population in India.
(a) 5 (b) 7
(c) 13 (d) 21
(e) 25
50. The crop which earns the highest foreign exchange for India is
(a) Jute (b) Tea
(c) Cotton (d) Coffee
(e) Tobacco
51. Which city is known as the 'Venice of the East'?
(a) Singapore (b) Hong Kong
(c) Rangoon (d) Cochin
(e) Trivandrum
52. Which country is known as The Playground of Europe?
(a) Finland (b) Switzerland
(c) Britain (d) Spain
(e) Italy
53. Which of these rivers does not flow into the Bay of Bengal?
(a) Tapti (b) Mahanadi
(c) Godavari (d) Krishna
(e) Cauvery
54. Srinagar is located on the banks of river
(a) Beas (b) Sutlej
(c) Ravi (d) Jhelum
(e) Chenab
55. On the banks of which river and in which state is the Bhakra Dam located?
(a) Jhelum in J & K
(b) Chenab in Punjab
(c) Sutlej in Punjab
(d) Sutlej in Himachal Pradesh
(e) Beas in Punjab
56. Which metal is extracted from bauxite?
(a) Copper (b) Zinc
(c) Aluminium (d) Tin
(e) None of the above
57. Which state is the chief producer of cardamom?
(a) Kerala (b) Andhra Pradesh
(c) Tamil Nadu (d) Karnataka
(e) It's not grown any more in India
58. Which state grows the maximum number of poppy (opium plant)?
(a) Bihar (b) West Bengal
(c) Maharashtra (d) UP
(e) Not grown in India
59. Which state is the leading producer of zinc?
(a) Bihar (b) MP
(c) Gujarat (d) Rajasthan
(e) UP
60. Where is Cherrapunji (the place which has the heaviest rainfall) situated?
(a) Assam (b) Meghalaya
(c) Tripura (d) West Bengal
(e) Manipur
61. Who built the Jama Masjid (Delhi)?
- (a) Jahangir (b) Akbar
(c) Humayun (d) Shah Jahan
(e) Aurangzeb
62. Spot the odd one out:
(a) Jamshedpur (b) Bhilai
(c) Rourkela (d) Bokaro
(e) Dhanbad
63. What is Pushkar famous for?
(a) Holy place of Muslims—Dargah
(b) Ancient temples of Brahma
(c) A holy lake
(d) Temple Shiva
64. Who established Shantiniketan?
(a) Rabindranath Tagore
(b) Mahatma Gandhi
(c) Jawaharlal Nehru
(d) Subhash Chandra Bose
(e) None of the above
65. What is Jharia famous for?
(a) Coal mines
(b) Iron ore mines
(c) Mafia gangs
(d) Blindings committed by the police
66. Spot the odd one out:
(a) Rana Pratap Sagar (b) Tarapur
(c) Narora (d) Sriharikota
(e) Kalpakkam
67. Where was Mahatma Gandhi born?
(a) Ahmedabad (b) Dandi
(c) Porbandar (d) Vadodara
(e) None of the above
68. In which of these places outside Britain, has the full Commonwealth Summit or the Commonwealth Heads of Government Meeting (CHOGM) not been held so far?
(a) Ottawa (Canada)
(b) Kingston (Jamaica)
(c) Lusaka (Zambia)
(d) Perth (Australia)
(e) Singapore
69. When did the UN start functioning?
(a) Nov 5, 1945 (b) Oct 31, 1945
(c) Oct 31, 1946 (d) Oct 24, 1945
(e) Oct 24, 1946
70. Which one of these changes was not initiated by India in the Commonwealth?
(a) The King or Queen of Britain could not be the Head of the Commonwealth
(b) Republican countries could join the Commonwealth
(c) Non-white countries could join the Commonwealth
(d) The Commonwealth members increased numerically
71. Salman Rushdie's novel *Shame* is based on
(a) India (b) England
(c) Pakistan (d) USA
(e) USSR
72. Who is the youngest-ever cricket captain in Test history to lead his country?
(a) Gary Sobers (b) Kapil Dev
(c) Ian Botham (d) Ajit Wadekar
(e) Mansur Ali Khan Pataudi

73. Who is the highest wicket-taker in Test annals?
 (a) Bishan Singh Bedi
 (b) Freddie Trueman
 (c) Dennis Lillee (d) Lance Gibbs
 (e) Imran Khan
74. When was the first international Prudential World Cup held and who was the winner?
 (a) 1975—Australia
 (b) 1976—West Indies
 (c) 1975—West Indies
 (d) 1976—India
 (e) 1974—Australia
75. How many Os cars did *Gandhi* win?
 (a) Four (b) Six
 (c) Seven (d) Eight
 (e) Nine
76. Who is the first Indian to have won an Oscar?
 (a) Rohini Hattangadi
 (b) Shabana Azmi
 (c) Naseeruddin Shah
 (d) Bhanu Athaiya
 (e) Satyajit Ray
77. Where are the 1988 Olympics being held?
 (a) Beijing (b) Tokyo
 (c) Seoul (d) Singapore
 (e) Manila
78. What does deficiency of Vitamin A lead to?
 (a) Night blindness (b) Beri-beri
 (c) Scurvy (d) Rickets
 (e) Skin wrinkles
79. Which of these is a rabi crop?
 (a) Rice (b) Sugarcane
 (c) Oilseeds (d) Gram
 (e) Maize
80. Which crop has shown a decline in production/remained stagnant since independence?
 (a) Rice (b) Maize
 (c) Sugarcane (d) Pulses
 (e) Oilseeds
81. Which agency of the UN was set up in 1919 after the Treaty of Versailles?
 (a) WHO (b) ILO
 (c) UNCTAD (d) UNESCO
 (e) UNICEF
82. What are classified as super giants, normal giants, main sequence dwarfs and white dwarfs?
 (a) Stars (b) Countries
 (c) Men (d) Guerillas
 (e) Dinosaurs
83. With which country do you associate the "Great Leap Forward"?
 (a) Russia (b) India
 (c) Japan (d) China
 (e) USA
84. Who wrote *Wealth Of Nations*—a book based on modern economic thinking?
 (a) Karl Marx (b) P.A. Samuelson
 (c) J.M. Keynes (d) Adam Smith
 (e) Ricardo
85. Where does the International Court of

- Justice of the UN meet?
 (a) New York (b) Geneva
 (c) The Hague (d) Amsterdam
 (e) London
86. Mehrman Daruwala is associated with
 (a) Billiards (b) Snooker
 (c) Golf (d) Table tennis
 (e) Squash
87. The bat is distinct from other mammals because
 (a) It can't see
 (b) It lays eggs
 (c) It flies
 (d) It has a very shrill call
 (e) It hangs upside down
88. Gold Coast in Africa is the former name of
 (a) Ghana (b) Nigeria
 (c) Kenya (d) Congo
 (e) Ivory Coast
89. Which one of the following is not one of the great Lakes?
 (a) Lake Superior
 (b) Lake Michigan
 (c) Lake Ontario
 (d) Lake Huron
 (e) Great Salt Lake
90. On which of these Japanese islands is Tokyo located?
 (a) Kyushu (b) Shikoku
 (c) Honshu (d) Hokkaido
 (e) Sado
91. Which country receives the largest number of tourists every year?
 (a) Singapore (b) Switzerland
 (c) France (d) Spain
 (e) Greece
92. Mao Ze Dong wrote *The Red Book*. Who wrote *The Green Book*?
 (a) Winston Churchill
 (b) F.D. Roosevelt
 (c) Leonid Brezhnev
 (d) Col Gaddafi
 (e) Anwar Sadat
93. Which one of the following states was not merged into present-day Yugoslavia?
 (a) Serbia
 (b) Prussia

UNDER MUMMY'S HEAD

A Coptic antique manuscript, said to be the oldest complete manuscript of the Psalms of Prophet David, was recently unearthed during excavations at the Al-Mudil village in Egypt. This Book of Scriptures, dating back to the middle of the 5th century A.D., is perhaps the most important discovery of the 20th century. Being the first Torah text in the Coptic 'Pahansawi' dialect, it will help scholars ascertain characteristics of this dialect. Found in a wooden box under the head of a mummy, the book has been written on fine parchment of gazelle skin in black ink and protected by a wooden cover.

- (c) Slovenia
 (d) Bosnia-Herzegovina
 (e) Montenegro
94. Zealand is the former name of
 (a) Denmark (b) Netherlands
 (c) New Zealand (d) Belgium
 (e) Austria
95. The only wild life sanctuary in India where the Asiatic Lion can be found is in
 (a) Bharatpur
 (b) Corbet National Park
 (c) Gir
 (d) Dudhwa
 (e) Kanhe
96. Imaginary lines on maps joining places with equal atmospheric pressure are called
 (a) Isotherms (b) Isobaths
 (c) Isohyets (d) Isobars
 (e) Isocost
97. Which city is called the modern Babylon?
 (a) London (b) Venice
 (c) Geneva (d) Berne
 (e) Stockholm
98. Which Indian state in ancient times was known as Pragiyotisha?
 (a) Bihar (b) Assam
 (c) West Bengal (d) MP
 (e) None of the above
99. Which country is the birthplace of Mother Teresa?
 (a) Albania (b) Yugoslavia
 (c) Italy (d) Bulgaria
 (e) Greece
100. Which Shakespearean character speaks the maximum number of lines?
 (a) Hamlet (b) Richard III
 (c) Antony (d) King Lear
101. Where was plastic surgery first practised?
 (a) Sicily (b) India
 (c) Japan (d) China
 (e) America
102. Ireland is known as the Emerald Isle because
 (a) It has large deposits of emeralds
 (b) It has a lot of greenery
 (c) Because of its greenhouses
 (d) The water around it is green in colour
 (e) None of the above
103. In which country is Guaraní spoken?
 (a) Uruguay (b) Chile
 (c) Panama (d) Paraguay
 (e) Bolivia
104. Which one of these poets does not belong to the Lake School?
 (a) Wordsworth (b) Coleridge
 (c) Southey (d) Keats
105. St Petersburg was the former name of
 (a) Vladivostok (b) Leningrad
 (c) The Prague (d) Warsaw
 (e) Moscow

ARJUN SRIVASTAVA & V.K.

English

BY THE AARBEEES

FOR SCRA, ASST'S GDE, CDSE, NDA, GIC (AAO)

This section has been designed to help you brush up your knowledge of the English language and facilitate your preparation for the above mentioned exams.

DIRECTIONS: For each of the following questions, tick the choice that best answers the question. Answers are given at the end of these tests.

READING COMPREHENSION

I. Read the following passage and answer the questions that follow:

Sickness, madness, and premature death seem at first sight to be examples of waste of human materials. Here is a good worker who has been crippled in the prime of his life, a devoted mother who has died leaving orphaned children, a sensitive artist who has lost his reason. For the individuals most nearly concerned these are unmitigated tragedies. But from the point of view of the community there is always a redeeming feature if they are studied scientifically. Not only can an examination of such misfortunes save others from their like, but it may even help normal people to a better life.

For we scientists are not supermen. Far from it. We are somewhat more intelligent than the average, and a great deal more critical of our theories. But our minds work in the same way as other men's minds. The greatest living experimental physicist once said to me, "If we could see an inch in front of our noses we should discover the whole of physics in one generation." The man who said that can see, so to speak, a fraction of a millimetre in front of his own nose. Some of his experiments, which to others appeared as shots in the dark, were successful and revealed new principles. But most scientific theories are based on analogy with known facts, and careful experiments must be devised to see if they are correct, which they generally are not. We can only go step by step, and commonly only arrive at a general law by studying its most striking cases first.

The history of medicine is full of examples. It had long been known that some diseases were contagious. But it remained for Pasteur to show that the contagion was something alive. Later on Koch and others showed that a number of diseases such as cholera were car-

ried by water, and a proper organisation of the water supply has abolished them in civilised countries, whilst elsewhere, drinking water must be boiled or sterilised. Only very gradually, as the result of such successes, did the medical profession and the general public come to believe in the theory that most diseases are caused by living germs. In consequence, a search was made for the agents of diseases which are not obviously infectious.

1. The author regards physical and mental disease and death as
 - (a) something inevitable
 - (b) a wasteful phenomenon
 - (c) an absolute tragedy
 - (d) a mixed evil
2. The word *unmitigated* in the first paragraph means
 - (a) mixed
 - (b) severe
 - (c) doubtful
 - (d) unavoidable
3. For we scientists are not supermen. This sentence implies that the author wants to
 - (a) insult scientists
 - (b) criticise fellow scientists
 - (c) uphold the dignity of scientists
 - (d) avoid any exaggerated claims about scientists
4. The author himself is a scientist.
 - (a) There is no evidence in the passage to prove it
 - (b) The first paragraph proves it
 - (c) The second paragraph has the evidence to prove it
 - (d) The last paragraph contains its proof
5. The last paragraph aims
 - (a) to prove that history of medicine can be useful for drawing all kinds of examples
 - (b) to show how only gradual steps beginning with very clear cases can lead to a general law
 - (c) to disprove the belief that some diseases are contagious
 - (d) to point at the importance of boiling or sterilising drinking water

PRECIS WRITING

II. Write a precis of the following passage

The immense and steady growth in the popularity of skiing had dotted the white slopes of every accessible range with ant-like figures. This needs little explanation. Few activities appeal on quite so many levels and to so many different instincts. It is a sport of infinite variety, varying not only from one 'run' to another, but from day to day, sometimes from hour to hour, with changing snow conditions. Thus, it never grows stale, for it knows no repetition. Also, it can never be wholly mastered: there is always room for discovery and improvement since the earth's surface is capricious and unpredictable. Every face, of every mountain presents new and unforeseen problems. As a sport it appeals equally to the novice and the expert, for each finds his challenge and his enjoyment on the slopes that suit him best. With the pleasures of companionship, it offers the freedom of constant and individual choice. You ski with people, yet without them. The track you trace is wholly your own, and at every instant depends on private initiative and judgement. Skiing appeals to the sense of speed, and can, in certain circumstances, appeal to the sense of danger, yet at the same time it affords deep aesthetic satisfaction. The skier inscribing fluid turns on a slope of untouched powder may guess at the more complex emotions of the inspired draughtsman. It might be added that skiing can also be the most elaborate form of exhibitionism devised by human vanity.

SPOTTING ERRORS

- III.1. Why you insist on going to Bombay, particularly at this time of the year?
a b
c d
e No error.
2. All that they are interested to do is give a big party to celebrate their victory. No error
a b
c d
e
3. It is getting increasingly fashionable to profess deep interest in all kinds of classical music. No error
a b c d
e
4. Very few people have the courage to avail the opportunities created by the rather liberal import policy of the
a b c d
e

5. Soviet Russia has made ample provisions to look after young children by building health and pleasure resorts all over the country. No error.
6. She very casually remarked that she will not be a party to the conspiracy being hatched by them. No error.
7. Varanasi, Agra, Jaipur and other places of tourist interest should try to rid themselves of the great menace of beggars before they ask the Central government for more funds. No error.
8. India and China have no reason to be enemies, since they have had the best of relations since times immemorial. No error.
9. Do remember to ask her to return

- ted her secret mission in the country she is being sent to. No error.
10. It was due to my own fault that I got stuck up in the messy business of identifying the thief among a group of twenty suspects. No error.

SYNONYMS

- IV. Select the expression nearest in meaning to the word given at the top
- Expectorate**
 - have a strong wish for something
 - express in clear language
 - eject (by coughing or spitting)
 - exercise the muscles of the body
 - Matrix**
 - place in which thing is developed
 - mathematical puzzle
 - a statistical table
 - a complex diagram with figures
 - Obituary**
 - a health resort
 - a brief notice of death
 - a commercial advertisement
 - a place for burying the dead
 - Pageant**
 - spectacular procession
 - an illustrated page
 - a game of cards

- trade name for a drug
- name of a Greek warrior
- platform for public speaking
- the inner hall of a building

ANTONYMS

- V. Select the word or expression most opposite in meaning to the one given at the top.
- Clumsy**
 - tactful
 - brilliant
 - intelligent
 - cheerful
 - Debar**
 - accept as true
 - include for admission
 - allow to go
 - welcome to a party
 - Explicit**
 - that which is explained

ANSWERS Test Of Reasoning Verbal

- (d) All words have EAD common except in (d) which ends EAT.
- (a) All have ILL common except (a).
- (e) All end in ENT except Land.
- (a) All end in ATE except Prone
- (e) All words have the common letters EAL in some position or the other but they are not found in BLISS.
- (e) All words contain ANK except CHUNK.
- (c) Two letters of the beginning and two of the end (in alphabetic sequence) are taken each time. Therefore, after WX of the end, EF of the beginning sequence should follow.
- (c) Three letters of the beginning and three of the end are taken each time. Therefore, DEF of the beginning should be followed by UVW of the end
- (b) Three letters are taken in reverse order each time.
- (c) Preceding three letters are omitted, i.e., ABC is omitted, DEF is retained. GHI is omitted, JKL is retained; and so on.
- (b) Combinations of the first and the last letters of alphabet, i.e., one of the beginning and one of the last are chosen.
- (b) Letters are arranged in sets of 4, i.e., ABCD. In the next group B is retained followed by the next 3 letters in the natural sequence of the English alphabet. In the next group C is retained, followed by next 3 letters and so on.

- | | | |
|-----------------------|-------------------|-----------------|
| III. 13. (c) DESIGNED | 14. (d) FIGURE | 15. (c) PRECEDE |

Non-Verbal

1. D- The number of dots in the circular portion outside the triangle is increasing. Double vertical line is in first figure A and then appears in alternate figure C. Based on this, D is odd here.
 2. C- Note direction of the arrow, movement of the dot around the main figure and outward opening of open triangular diagram (main figure) is also following a set pattern. Based on these characteristics, figure C is odd here.
 3. E- Here note the direction of the arrow and the movement of dots. In all, dots are moving clockwise and the arrow alternatively pointing inside and outside. Based on these characteristics, figure E is odd here.
 4. E- There is a specific pattern of directions of arrows on the top and bottom of the main figure and also in the movement of the dot above horizontal line in the figure. Based on this pattern, figure E is the odd one.
- II. 5. D- Note movement of the dot in triangle clockwise,

square figure is moving in and out of the triangular figure. The line with dot (pin) is also moving in a regular pattern from one figure to the other. Figure D of answer column fits in the blank column in the problem figure.

6. D- Note the change of direction of line inside the circle in the triangle and the number of dots in the circles and movement of the dot in circles having a vertical line across. Figure D in answer column fits in the blank column following the pattern of preceding figures.
7. A- Note movement of arrow inside/outside the rectangular figure, movement of dot in the triangle inside and the small line moving from one corner to the other. Figure A from answer column follows the same pattern and completes the series based on the analogy of preceding figures of the problem column.
- III 8. E- In figure 1 circle is inside the square and in figure 2 the square is inside the circle with a change in the dot movement and both have a horizontal line. Based on this analogy, figure E fits in the blank column in the problem figure.
9. C- Change in direction, movement of arrows and circle in the rectangular figures is obvious in figures 1 and 2. Based on relationship, figure C relates to figure 3 in the problem column.
10. B- Direction of arrow and dot have relationship in figures 1 and 2 of the problem figure. Based on the same analogy, figure B relates to figure 4 of the problem figure.
11. D- After matching figures 1 and 2 in the problem figure, you will note that figure D correlates with figure 3 in the problem figure and as such fits in the blank column in the problem figure. Note changing direction of circle, rectangular figure and arrows.
- IV. 12. A & C Keeping in view the leaning of main figures and the direction of arrows and position of dots in Block A, figures A and C follow same pattern in Block C.
13. A & D In Block A the horizontal lines passing through all figures are touching one side of the frame. In Block B these lines are not touching the frame. In Block C figures A and D are touching the frame.
14. A & C In Block A arrows crossing the figures are not touching the outside frame. In Block B the arrows are in same direction but touching the frame. In Block C figures A and C do not touch the frame and as such have correlation with figures of Block A.
15. C & D In Block A, straight lines on the semicircular figures are touching one side of the frame. In Block B this is not the case. In Block C, figures C and D follow similar pattern as in Block A.
16. A & D In Block A, semicircular figures are alternatively turning upside down. The arrow follows the same pattern. In Block B, semicircular figures have the same direction in all the columns but the arrows are turning in the alternative columns. In Block C, figures A and D follow the pattern of Block A.

Reasoning

- I 1. (d) Most does not include all. Ram's dog may not be included in "most". Thus, the conclusion is doubtful.
2. (a) Both statements help to make the conclusion correct.

4. (a) 5. (a) 6. (a)
- II. 7. (e) The word "some" excludes Ram.
8. (a) It is true.
9. (e) It is definitely false.
10. (e) It is definitely false.
11. (a) It is true.
12. (b) May or may not be found doubtful but cannot be also false or absolutely true.
- III. 13. (a) 14. (c)
15. (a) The second argument is weak as it does not favour welfare and peace of the country.
16. (b)
17. (c) Both are strong because 1 depends on 2.
- IV. 18. (e) Conclusions are not relevant to the statements.
19. (b)
20. (c) Both I and II follow from the statements
21. (d)
22. (a)
23. (a) Being a member of jury does not mean that he is infallible.
- V. 24. (d) Non-transitive relationship.
25. (c) Fallacy of denying antecedent.
26. (c) Fallacy of division. Collective action cannot be an individual's action.
27. (c) Fallacy of denying the antecedent.
28. (b) Probably true because the possibility of the boy being more intelligent than the girl is there. The conclusion is long-drawn.
29. (c) Fallacy of composition.

General Knowledge

Numerical Ability

H. SAALNA

FOR SCRA, NDA, CDSE, ASST'S GRADE, CLERKS' GRADE EXAMS

This section is specially formulated for those appearing in the SCRA, Assistant's Grade, CDSE, NDA and Clerks' Grade exams.

DIRECTIONS: Tick mark the choice that best answers each question. Answers with explanations appear at the end of this test.

- $.0030 + .007 = ?$
(a) .0037 (b) .0370
(c) .0073 (d) .730
(e) .01
- $39,758 + 4,372 = ?$
(a) 43,130 (b) 44,120
(c) 44,130 (d) 44,030
(e) None of the above.
- $31,471 \times 99 = ?$
(a) 31,47,099
(b) 31,15,629
(c) 31,15,699
(d) 31,78,571
(e) None of the above
- $\frac{3.0}{5} + \frac{3.5}{7} + \frac{6.4}{4} = ?$
(a) $\frac{12.9}{140}$ (b) $\frac{12.9}{16}$
(c) 80 (d) 2.7
(e) .27
- $(56)^2 - (44)^2 = ?$
(a) 12 (b) 144
(c) 1,200 (d) 14,400
(e) 120
- If written in the ascending order, which of the following fractions will come first?
 $\frac{7}{4}, \frac{19}{9}, \frac{31}{11}, \frac{23}{7}, \frac{29}{13}$
(a) $\frac{7}{4}$ (b) $\frac{19}{9}$
(c) $\frac{31}{11}$ (d) $\frac{33}{7}$
(e) $\frac{29}{13}$
- What is 25% of 20% of 120?
(a) 60 (b) 6
(c) 96 (d) 56
(e) None of the above
- $17 + 13 \times 11 - 21 = ?$
(a) 309 (b) 139
(c) -300 (d) 339
(e) None of the above.
- .01% of 100 = ?
(a) 1 (b) .01
(c) 1.01 (d) .0001
(e) 1.001
- $6:7 :: 10 : 35$
(a) 12 (b) 21
(c) 7 (d) 42
(e) None of the above
- If 10 persons can do a piece of work in 8 days, working 16 hours a day; how long will 16 persons take to do the same work, working 8 hours a day?
(a) 12 days (b) 24 days
(c) 80 days (d) 10 days
(e) None of the above
- Ram, Shyam and Suresh enter into a partnership. Ram puts in Rs 200, Shyam puts in Rs 300 and Suresh puts in Rs 400. They earn a profit of Rs 279. If the profit is to be shared in the same proportion as the investment, then how much money would Suresh receive?
(a) Rs 62 (b) Rs 93
(c) Rs 124 (d) Rs 83
(e) None of the above
- In a certain examination 50 marks are required to pass the Mathematics paper. A student secures 50 marks and as a consequence fails by 50 marks. Find the maximum marks obtainable.
(a) 100 (b) 150
(c) 200 (d) 250
(e) 300
- A second-hand car dealer purchases a car for Rs 10,000. He wishes to 'mark' the car in such a way that he may earn a profit of 20% after giving a discount of 20% on the marked price. What should be the marked price of the car?
(a) 10,000 (b) 12,000
(c) 15,000 (d) 16,000
(e) None of the above
- A shopkeeper stocks two

quantities of sugar priced at Rs 5 and Rs 8 per kg. In what proportion should he mix the cheap sugar with the dear sugar to obtain a mixture worth Rs 6 per kg?

- (a) 1:2 (b) 2:1
(c) 3:1 (d) 1:1.5
(e) None of the above
- A person's gross income is Rs 30,000 in a certain year. The going income tax rate is 12% and the first Rs 6,000 are exempted from tax. Find the net income after tax.
(a) Rs 3,600
(b) Rs 2,880
(c) Rs 26,400
(d) Rs 27,120
(e) Rs 21,120
- A man goes from city A to city B which is at a distance of 200 km with a speed of 50 km/hour, and comes back with a speed of 40 km/hour. Find his average speed during the journey.
(a) 45 km/hour
(b) 44.4 km/hour
(c) 44 km/hour
(d) 42 km/hour
(e) 41.5 km/hour.
- Two men are running towards each other on a 140 metre long track at speeds 8 km/sec and 6 km/sec respectively. After how much time will they meet?
(a) 8 sec
(b) 10 sec
(c) 15 sec
(d) 35 sec
(e) 70 sec
- Ramesh earns Rs 3,000 per month. Fifteen per cent of his income is spent on house rent. Of the rest, he deposits 20% in a bank. How much does Ramesh save annually?
(a) Rs 450 (b) Rs 2,550
(c) Rs 510 (d) Rs 6,120
(e) None of the above
- A tap can fill a tank in 5 hours, while an outflow tap can empty it in 8 hours. In how many hours would the tank be filled if both the taps operate simultaneously?

- (a) 13 hours (b) 3 hours

(e) Tank would never be filled

Directions: The bar chart 'A' shows India's foreign trade i.e. exports and imports for the period 1977-1982.

On the basis of this bar chart answer the questions 21-25.

21. During the period 1977-1982, how many times were India's imports less than its exports?
(a) One (b) Two
(c) Three (d) Four
(e) Five
22. The difference between India's exports and imports during the year 1977 was approximately
(a) Rs 500 crore
(b) Rs 1,000 crore
(c) Rs 2,000 crore
(d) Rs 4,000 crore
(e) Can't be determined from the chart
23. What was the percentage rise

(approximate) in Indian exports during 1981 over the exports of 1980?

- (a) 15%
(b) 20%
(c) 24%
(d) 30%
(e) 37%
24. Imports in the year 1981 were approximately what percentage of the imports in 1977?
(a) 250% (b) 150%
(c) 140% (d) 40%
(e) None of the above
25. In which year was the percentage growth of exports over the previous year the highest?
(a) 1982 (b) 1981
(c) 1980 (d) 1979
(e) 1978
- Directions:** In the following questions indicate the number which does not belong to the respective series.

26. $\frac{17}{61}, \frac{16}{128}, \frac{15}{195}, \frac{14}{238}, \frac{13}{399}$
(a) $\frac{17}{51}$ (b) $\frac{16}{128}$
(c) $\frac{15}{195}$ (d) $\frac{14}{238}$
(e) $\frac{13}{299}$
27. 21, 42, 189, 567, 1701.
(a) 21 (b) 42
(c) 189 (d) 567
(e) 1701
28. 35, 68, 101, 134, 170.
(a) 35 (b) 68
(c) 101 (d) 134
(e) 170
29. 305, 232, 162, 86, 13.
(a) 305 (b) 232
(c) 162 (d) 86
(e) 13
30. 915, 405, 135, 45, 15.
(a) 915 (b) 405
(c) 135 (d) 45
(e) 15

ANSWERS

1. (c)
$$\begin{array}{r} + 0.0030 \\ + 0.0070 \\ \hline 0.0100 \end{array} = 0.01$$

2. (c)
$$\begin{array}{r} 39,758 \\ 4,372 \\ \hline 44,130 \end{array}$$

3. (b) $31,471 \times 99 = ?$
99 can be written as $100-1$
so $31,471 \times 99 = 31,471 \times (100-1)$
 $= 31,47,100 - 31,471$
 $= 31,15,629$

4. (d) **Method I:**
$$\begin{array}{r} 3.0 + 3.5 + 6.4 \\ 5 \quad 7 \quad 4 \\ \hline 84.0 + 70.0 + 224.0 \\ 140 \\ \hline 378 \\ 140 \\ \hline = 2.7 \end{array}$$
 (L.C.M. of 5, 7 and 4 is 140)

Method II: Just on inspection we see that all the fractions can be easily reduced to decimal numbers:

$$\frac{3.0}{5} + \frac{3.5}{7} + \frac{6.4}{4} = 0.6 + 0.5 + 1.6 = 2.7$$

5. (c) A simple algebraic formula is $a^2 - b^2 = (a+b) \times (a-b)$
 $56^2 - 44^2 = (56+44) \times (56-44)$
 $= (100) \times (12) = 1200$

6. (a) **Method I:** $\frac{1}{4}, \frac{1}{9}, \frac{1}{11}, \frac{1}{13}, \frac{1}{17}$
To do the comparison between these numbers they should be reduced to a common denominator, (which would be the LCM of all the individual denominators) LCM of 4, 9, 11, 7, 13 would be 36,036
All the fractions can be reduced to this common denominator using the following method. Let us take $\frac{1}{4}$
Divide 36,036 by 4 i.e. $36,036 \div 4 = 9,009$
Multiply 7 with 9,009 i.e. $9,009 \times 7 = 63,063$

So $\frac{7}{4} = \frac{63,063}{36,036}$

Similarly other numbers can be reduced to give

$$\begin{array}{r} 19 \\ 9 \\ \hline = 76,076 \\ 36,036 \end{array}$$

$$\begin{array}{r} 31 \\ 11 \\ \hline = 1,01,556 \\ 36,036 \end{array}$$

$$\begin{array}{r} 23 \\ 7 \\ \hline = 1,18,404 \\ 36,036 \end{array}$$

$$\begin{array}{r} 29 \\ 13 \\ \hline = 80,388 \\ 36,036 \end{array}$$

Clearly, out of all these numbers $\frac{63,063}{36,036}$ is the smallest and so should come first in the ascending order.

Method II: A quicker and simpler method is to reduce the fractions to decimal numbers and then compare them as follows

$$\begin{array}{l} \frac{1}{4} = 1.7 \\ \frac{1}{9} = 2.1 \\ \frac{1}{11} = 2.8 \\ \frac{1}{7} = 3.2 \\ \frac{1}{13} = 2.2 \end{array}$$

On comparison we see that 1.7 i.e. $\frac{1}{4}$ is the smallest number and so should come first if the numbers are written in ascending order.

7. (b) Let us treat the solution in steps

25% of (20% of 120) = ?

25% of $(\frac{20}{100} \times 120)$

$= \frac{25}{100} \times (\frac{20}{100} \times 120)$

or 25% of 20% of 120 can be

written as $\frac{25}{100} \times \frac{20}{100} \times 120 = 6$

8. (b) This question is to be solved using the order BODMAS i.e.

B: Bracket

O: Of

D: Division

M: Multiplication

A: Addition

This means that the operations should be performed in the following order

1st step: Solve the expressions within the inner-most bracket

2nd step : Perform all operations connected with 'of'

3rd step : Perform all divisions

4th step : Perform all multiplications

5th step : Perform all additions

6th step : Perform all subtractions

Now let us solve $17 + 13 \times 11 - 21$

Here the first step to be performed is multiplication, i.e. $13 \times 11 = 143$

9. (b) .01% of 100

$$= \frac{.01}{100} \times 100 = .01$$

10. (b) $6 : 7 :: 10 : 35$

$$6 : x :: 10 : 35$$

$$\frac{6}{x} = \frac{10}{35} \text{ i.e. } 6 \times 35 = 10x$$

$$\frac{6 \times 35}{10} = x \text{ or } \frac{210}{10} = x$$

$$21 = x$$

11. (d) The key to solving this type of question is that all quantities should be converted to common units. Here 10 persons are working in a day so, 1 day = 10 man days. Each person is working 16 hours a day i.e. 1 man day = 16 hours or 1 day = 10 man days = $10 \times 16 = 160$ man hours. Work is finished in 8 days i.e. $8 \times 160 = 1280$ man hours

So the work requires 1280 man hours in all. Now there are 16 persons. So 1 day = 16 man days. Each person works for 8 hours in a day So 1 man day = 8 hours

$$1 \text{ day} = 16 \text{ man days} = 16 \times 8 = 128 \text{ man hours.}$$

We have calculated above that the work requires 1280 man hours in all.

$$128 \text{ man hours} = 1 \text{ day}$$

$$1 \text{ man hours} = \frac{1}{128} \text{ day}$$

$$1280 \text{ man hours} = \frac{1}{128} \times 1280 = 10 \text{ days}$$

12. (c) Ram's investment = Rs 200

Shyam's investment = Rs 300

Suresh's investment = Rs 400

Total 900

$$\text{Suresh's share in investment} = \frac{400}{900} = \frac{4}{9}$$

Suresh's share in profit would also be $\frac{4}{9}$ of the

$$\text{total profit, i.e. } \frac{4}{9} \times 279 = 124$$

13. (c) Marks obtained by the student = 50

Marks by which he failed. = 50

So passing Marks = 100

Passing marks are 50% of the maximum marks.

50% of Maximum marks = 100

1% of Maximum marks = 100

100% of maximum marks = 50

$$\text{i.e. maximum marks} = \frac{100}{50} \times 100 = 200.$$

14. (c) Let us assume that the cost of the car is

Rs 100 Desired profit = 20%

So selling price should be Rs 100 + Rs 20 = Rs 120.

But the dealer wants to offer 20% discount also. If marked price = Rs 100

Discount 20% = Rs 20

Selling price = Rs 100 - Rs 20 = Rs 80.

If selling price is Rs 80, marked price should be Rs 100

If selling price is Re 1 marked price should be $\frac{100}{80}$

If selling price is Rs 120, marked price should be $\frac{100}{80} \times 120 = \text{Rs } 150$

We have assumed that the cost of the car is Rs 100. So if cost of the car is Rs 100, marked price should be Rs 150.

If cost of the car is Re 1, marked price should be $\frac{150}{100}$

If cost of the car is Rs 10,000 marked price should be $\frac{150}{100} \times 10,000 = 15,000$.

15. (b) The easiest way to solve this type of questions is to write all the figures in the following fashion.

Step I

Cheap sugar Dear sugar

Rs 5 Rs 8

Mixture

Rs 6

Step II

Cheap Sugar Dear Sugar

Cheap sugar and dear sugar should be mixed in the ratio 2:1

16. (d) Gross income = Rs 30,000

Income exempted from tax = Rs 6,000

Taxable income = Rs 24,000

Tax rate = 12%

Tax = $\frac{12}{100} \times 24,000 = 2880$

Net income = Gross Income - Tax

$$= 30,000 - 2880 = \text{Rs } 27,120$$

17. (b) Average speed = $\frac{\text{Total distance}}{\text{Total time}}$

Total distance = 200 km for going + 200 km for coming = 400 km.

Time = $\frac{\text{Distance}}{\text{speed}}$

Time for going = $\frac{200}{40} = 5$ hours

Time for coming = $\frac{200}{40} = 5$ hours

Total time = 5 + 5 = 10 hours

Average speed = $\frac{400}{10} = 40 \text{ km/hour}$

18. (b) When the two persons meet on the track they have traversed a total distance

of 140 m. Since they are running towards each other their relative speed would be $8+6=14$ m/sec.

$$\text{Time} = \frac{\text{Distance}}{\text{speed}} \\ = \frac{140}{14} = 10 \text{ sec.}$$

19. (d) Ramesh's earnings = Rs 3,000 per month
House rent spent = $15\% = \frac{15}{100} \times 3000 =$

450

Earnings—House rent = $3000-450 = 2550$

Savings per month = 20% of 2550

$$\text{i.e. } \frac{20}{100} \times 2550 = 510$$

Annual savings = $510 \times 12 = \text{Rs } 6120$.

20. (b) In 5 hours the tap can fill the tank completely. In 1 hour the tap can fill $\frac{1}{5}$ th of the tank. In 8 hours the outflow tap can empty the complete tank. In 1 hour the outflow tap can empty $\frac{1}{8}$ th of the tank. So in 1 hour the tank would be filled $(\frac{1}{5} - \frac{1}{8})$ parts.
$$= \frac{8-5}{40} = \frac{3}{40}$$

$\frac{3}{40}$ th of the tank is filled in 1 hour

Therefore one complete tank would be filled in $\frac{40}{3}$ hours.

21. (a) Only in 1977 the shaded bar is shorter than the unshaded bar which means the imports were less than exports.
22. (a) in 1977 Exports = Rs 5,000 crores (approximately)
Imports = Rs 4,500 crores (approximately)
Difference = Rs 500 crores (approximately)
23. (d) Exports in 1981 = Rs 12,500 crores.
Exports in 1980 = Rs 9,500 crores.
Change = Rs 3,000 crores.
Percentage rise over 1980 = $\frac{3,000}{9,500} \times 100 \approx 31\%$
24. (c) Imports in 1981 = Rs 7,000 crores
Imports in 1977 = Rs 5,000 crores.
Imports in 1981 = $\frac{7,000}{5,000} \times 100 = 140\%$ of the imports in 1977.
25. (c) To answer the question first we have to find the percentage growth for all the years and then choose the year with maximum growth. But a simpler method is to draw an imaginary line joining the mid-points of the tops of the bars as shown below.
The segment where this line has the maximum slope or is steepest is the segment where growth rate has been maximum. As we see the line segment joining 1979,

80 and 81 is the steepest so we consider only these years.

Exports in 1981 = Rs 12,500 crores

Exports in 1980 = Rs 9,500 crores:

Change = Rs 3,000 crores.

Percentage change = $\frac{3,000}{9,500} \times 100 = 31\%$

Exports in 1980 = Rs 9,500 crores.

Exports in 1979 = Rs 7,000 crores.

Change = Rs 2,500 crores.

Percentage change = $\frac{2,500}{7,000} \times 100 = 35\%$

So growth rate in the year 1980 over the previous year was the greatest.

26. (d) $\frac{17}{51}, \frac{16}{128}, \frac{15}{195}, \frac{14}{239}, \frac{13}{299}$
 $= \frac{1}{3}, \frac{1}{8}, \frac{1}{13}, \frac{1}{17}, \frac{1}{23}$

Reciprocals of these numbers are

3, 8, 13, 17, 23

These numbers form an arithmetic series with a common difference 5 i.e. $3+5=8$; $8+5=13$; $13+5=18$; $18+5=23$.

Thus 17 is not a member of this series hence $\frac{14}{238}$ can't be a member of the given series.

27. (b) This is a geometric series with common ratio 3 as shown below.

$$\frac{1,701}{567} = 3; \frac{567}{189} = 3 \text{ but } \frac{189}{42} \neq 3 \text{ and } \frac{42}{21} \neq 3.$$

However if 42 is replaced by 63 then $\frac{189}{63} = 3$ and $\frac{63}{21} = 3$.

Thus 42 is a wrong choice and hence should be replaced by 63.

28. (e) This is an arithmetic series with a common difference 33, $35+33=68$; $68+33=101$; $101+33=134$; $134+33=167$.

Thus 170 is not a member of this series and should be replaced by 167.

29. (c) This is again an arithmetic series with common difference 73.

$$305-73=232; 232-73=159; 159-73=86; 86-73=13.$$

Thus 162 is not a member of this series and should be replaced by 159.

30. (a) This is a geometric series with common ratio 3

$$15 \times 3 = 45; 45 \times 3 = 135; 135 \times 3 = 405; 405 \times 3 = 1215$$

Thus 915 is not a member of this series and should be replaced by 1,215.

STUDENTS! WOULD YOU LIKE TO STUDY FREE IN U.S.A.?

The first two books tell how you can get scholarship for higher studies.

Author: Vinod K. Gambhir, C. Eng (UK), MBA (USA), ex. IRSME (Class I), Mng Dir, Scholarship holder throughout

● **HIGHER STUDIES ABROAD**—Procedure for getting admission & scholarship in USA, Canada & other countries. ALSO eligibility, admission tests, visa & lots more. Rs. 34/-

● **SCHOLARSHIPS HANDBOOK**—Details of 80 scholarship schemes of trusts, banks, companies & govt for higher studies in India or abroad including Tata, Rotary, Inlaks, Rhodes, USEFI, Philips, Birla, Sethna & Sahu Jain. Rs. 44/-

● **ORIENTATION HANDBOOK U.S.A.**—Indispensable for those going/ planning to go to USA for studies. Tells about travel, baggage rules, campus life, orientation, teaching system, social life, jobs, immigration & success tips. Rs. 34/-

● Addresses of US & Canadian Univs—Rs. 10/- for EACH subject. Specify subject(s) of interest

● Preliminary Appln Forms for admission in US/Canadian Univs—Rs. 15/- for a set of 20 forms

■ TOEFL Rs. 50/- ■ GRE General Rs. 85/- ■ GRE Engg Rs. 85/- ■ GMAT Rs. 95/- ■ SAT Rs. 75/-

BETTER ENGLISH TEACHING COMPOSITION-2

BY RAJUL BHATNAGAR & RAJUL BHARGAVA

In this concluding part, important ways of paragraph development. Main types of paragraphs. And the inner structuring of different types of paragraphs.

Time

When he stayed on his grandfather's farm during his holidays, George always had plenty to do. Early in the morning, he used to feed the chickens and other farm animals. After he had finished this, he played with his cousins in the fields until lunch time. They would pick blackberries, chase rabbits, look for badger's nests, and play a hundred-and-one games. After dinner it was usually too hot to work or play, so George used to take a nap or read a book. Later in the afternoon he and his cousins would often go swimming. In the evening, the animals had to be fed again, the cows milked, and the chicken's eggs collected. Then it was time for George to go to bed.

(From *Paragraph Writing*
by Frank Chaplen)

Space

One theory is that cultivation of the grape originated in the area around the Caspian Sea. From there grape-growing spread to neighbouring areas of Asia and Europe. The Phoenicians took the grape to Africa, and the Romans planted it in Gaul, Germany and England. At the same time, grape cultivation spread into the Atlantic where it was carried into the New World by the Spaniards. Everywhere that new land was settled, people took the grape from the Caucasus, and later colonists brought the European grape to America where it had little success until it was crossed with the native American varieties.

(From *From Paragraph To Essay*
by Maurice Imhoff
and Herman Hadron)

Statistics

The Earth is an important planet, moving round an important star—the Sun at a distance of 93,000,000 miles, which is negligible on the astronomical scale. There are some 100,000 stars in our star-system or Galaxy, and the Sun is entirely unremarkable; it is perhaps 30,000 light-years from the centre of the Galaxy, near the inner edge of one of the

spiral arms. (A light-year, the distance travelled by light in one year, is equal to rather less than 6,000,000 miles. The nearest star to us, not counting the Sun, is 4.3 light-years away).

(From *The Listener*, Patrick Moore)

Comparison And Contrast

Thanks to this universality of athletic sports, English training is briefer and less severe. The American makes, and is forced to make, a long and tedious business of getting fit, whereas an Englishman has merely to exercise and sleep a trifle more than usual, and this only for a brief period. Our oarsmen work daily from January to July, about six months, or did so before Mr Lehmann brought English ideas among us: the English varsity crews row together nine or 10 weeks. Our football players slog daily for six or seven weeks; English teams seldom or never "practice" and play at most two matches a week. Our track athletes are in training at frequent intervals throughout the college year and are often at the training table for six weeks; in England six weeks is the maximum period of training, and the men as a rule are given only three days a week on the cinder track. To an American, training is an abnormal condition; to an Englishman it is the consummation of the normal.

(From *An American At Oxford*,
John Corbin)

Cause And Effect

What caused the Texas revolution?

The first cause was simply the difference in civilisation between the Mexicans who owned Texas and the Americans who came there. I don't mean the amount of civilisation; I mean in the *kind* of civilisation. The Mexicans had a Spanish and Catholic civilisation, and they believed in power and authority and tradition. The Americans believed in democracy and self-reliance. You might say that this difference was the thing underlying all the trouble that followed. But perhaps it would not have been enough of a thing to make the revolution if certain other things had not been the way they were.

The second cause was the fact that the Mexicans couldn't get rid of a fear of American adventurers coming in to seize Texas. There had been a lot of adventurers coming in to filibuster far back in the Spanish times, and the Mexicans didn't really trust the Americans that they themselves invited in and who took out citizenship and honestly tried to be good

and loyal Mexicans.

The third cause is related to the second. There were a good many adventurers in Texas, and you might go so far as to say that some of the leaders, like Sam Houston, were adventurers and were seeking to take Texas from Mexico.

(From *Modern Rhetoric*, Brooks and Warren)

Classification

Ideas about progress take three forms: (1) that there is no progress, (2) that progress occurs in cycles, and (3) that progress is permanent and irreversible. For reasons that we shall examine later on, the idea that progress is permanent and irreversible is of fairly recent growth.

The idea that there is no progress belongs to societies which have experienced little change. Eastern cultures, for instance, link a disbelief in progress with a fatalistic acceptance of life as it is. Only in recent years has this idea been challenged. Medieval European society, too, was marked by a disbelief in the possibility of progress. Men placed their hopes for betterment, not in this world, which was too often disappointing, but in the heavenly world to come.

(From *The Rationale Of Rhetoric*,
Alice Chandler)

Analogy

A composition can be compared to a three-act play. The introduction, like the beginning of the first act, presents the subject and its background. The development, like the end of the first act, all of the second, and much of the third, displays the complications or modifications, of the subject. And the conclusion, like the third act, resolves and sums up the action. While an essay has no plot in the technical sense, this straight-line movement from introduction to resolution gives the composition momentum and direction.

The same three-act structure can be seen in the paragraph. The topic sentence is the introduction, or first act, and the succeeding sentences are the all-important second act that develops the action. Although some shorter paragraphs do not have a formal resolution, or third act, most paragraphs, like this one, do conclude by rounding off the subject.

(From *The Rationale Of Rhetoric*,
Alice Chandler)

Having discussed the important ways of paragraph development it will be useful to consider the main types of paragraphs.

She wore a diamond necklace worthy of royalty. Her gait was regal too and the tone in which she spoke had a certain imperious character about it. Her looks, her bearing, her speech—all were majestic.

Narrative

It was a little before five in the morning when strange sounds started coming. Jitendra listened carefully and having assured himself that it was not a hallucination, got up to raise the alarm. The sounds grew fiercer and with that increased the pounding of his heart.

Argumentative

The theme of women's liberation is best left to be thrashed out by women themselves. For even with the best intentions male champions of feminist freedom are more likely than not to be misunderstood by those very persons who are supposed to be the beneficiaries of their crusade.

Reflective

Who can be said to be practising true non-violence? Is it an easy concept to define? The very enormity of its scope may be a deterrent to easy understanding. For, carried to its logical conclusion, would not non-violence be co-extensive with life? But does such a thought bring us any nearer to the proper definition of non-violence?

Evaluative

Even when the most rigorous standards are applied, Indian talent in scientific research is second to none. Given the same facilities and resources as their counterparts in England and America have, Indian scientists will excel in all those fields where at present the West boasts of an exclusive record of supreme achievement.

Finally, we will discuss the inner structuring of different types of paragraphs which results in establishing a variety of paragraph patterns:

Lineal Paragraph

Example: 1. Mere legislation cannot prevent dowry deaths. This may sound contrary to a widely held belief and also to the frequent and passionate demands made on the floor of Parliament by screaming members, who work themselves up in a hysterical state in response to newspaper reports of bride-burning in various parts of the country. 2. No social evil so ingrained in human nature because of man's greed for easy money and gifts has been wiped out by a mere legislative fiat. 3. History bears witness to the fact that it is only the rousing of the social conscience that brings about a real and enduring change of heart. 4. Hence, legislative reform at best achieves partial results and helps those who would like to bring the erring males to book. 5. It is, therefore, vital that a country-wide movement is launched by all the right-thinking Indians

to create a climate of opinion where the taking and giving of dowry will be deemed inherently immoral and therefore law will have to deal merely with a relatively small number of socially and morally perverse people.

Sentence 1 Assertion: Mere legislation cannot wipe out dowry deaths.

Sentences 2-3 Reason: A deeply ingrained instinct can be overcome mainly through social awareness.

Sentence 4 Result: Laws can therefore yield only partial results.

Sentence 5 Conclusion: It is necessary to create a general climate of opinion which regards dowry as abhorrent.

Circular Paragraph

Example: 1. English spelling is the world's most awesome mess. 2. The Chinese system of ideographs is quite logical, once you accept the premise that writing is to be divorced from sound and made to coincide with thought concepts. 3. The other languages of the West have, in varying degrees, coincidence between spoken sounds and written symbols. 4. But the spelling of English reminds one of the crazy quiet of ancient, narrow, winding streets in some of the world's major cities, through which modern automobile traffic must nevertheless in some way circulate.

'Mario Per', quoted by *The Oxford Guide To Writing*, Thomas S. Kane

Sentence 1 Assertion: English spelling is the world's mess.
Sentence 2+3 Contrast: The Chinese system of ideographs is quite logical. The other languages of the West have, in varying degrees, coincidence between spoken sounds and written symbols.
Sentence 4 Analogical Restatement: But the spelling of English reminds one of the crazy quiet of ancient, narrow, winding streets in some of the world's major cities, through which modern automobile traffic must nevertheless in some way circulate.

2. The Chinese system of ideographs is quite logical.
3. Spelling in other Western languages is very consistent.
English spelling is like the maze of medieval streets.

Ramifying Paragraph

Example: 1. It is a typically male and one-sided opinion that throwing open public careers to women results in a lot of wastage. 2. For, it is alleged that women regard their professional jobs as a mere stop gap, or, at best a temporary supplemental source of income. 3. Once the compelling factors disappear, they resume their natural career—that of a housewife, secure in the lap of domestic bliss and connubial comfort. 4. It is conveniently forgotten that love of comfort and idleness is a common human weakness, in that given a suitable opportunity, anyone, man or woman, will take to it. 5. Only, men

enjoy themselves more through a perverse satisfaction of having to earn a living to support their families—which, in their estimation, excludes them and refers only to their wives and their children—and thus being the indisputable lords of the household. 6. It, therefore, needs no special intelligence to know that men have the best of both the worlds. 7. They have their domestic bliss and they have the satisfaction of having their families obliged to them for providing them with material support. 8. They don't have to exercise a choice. 9. However, theoretically the choice has always been there, for there are men like Antony who choose to have women at the cost of everything else, and similarly there are women like Florence Nightingale who choose work to the exclusion of everything else. 10. Choice, then, is an essentially personal matter and is neutral between the sexes.

Sentence 1 Assertion: It is male prejudice that working women are a cause of great wastage.

Sentences 2 + 3 Restatement: Sentence 4. Contrary Evidence

2. For women, their jobs are a mere stop gap.
3. Given a choice they will prefer a purely domestic life.

Love of comfort and idleness is a human trait shared by men and women alike.

Sentence 8 Contrary Appearance

It looks as though men do not have a choice.

Sentence 5 Reinforcement

Men work not out of love but to lord it over their wives.

Sentence 9 Contrast

In fact the choice is very much there.

Sentences 6+7 Inference

Anyone can see the truth that men manage to have the best of both the worlds.

Sentence 10 Conclusion: Choice is essentially a personal matter not related to sex.

Loose Paragraph

It is very much like the Ramifying Paragraph except that it develops out of a subject alone with the help of a string of several predications.

Summing up

Any organised, self-contained piece of writing composed or written for a special purpose can be called a Composition. In the writing of good composition go several skills, particularly grammatical accuracy, adequate vocabulary, appropriate tone or style, and careful structuring of ideas. Although we have discussed only paragraph writing here, it is not difficult to say that longer compositions called essays are merely extensions of the same techniques as discussed above.

(Concluded)

LALIT MAKEN A POLITICIAN'S PROGRESS

Young people are fast making their presence felt. In various fields—from sports to literature, films to politics. With trendsetting career paths. Lalit Maken is one of them. Recently elected MP, at 34, Maken is by no means a novice in the world of politics. Speaking to Y.C. HALAN and JYOTSNA SHARMA, he reveals various facets of his personality. His thoughts and views.

He is young, educated and dynamic and exudes an aura of confidence and enthusiasm. At 34, he already occupies one of the coveted seats in the Lok Sabha which has eluded many a seasoned politician. But Lalit Maken is no babe in the political woods either. At a relatively young age he has to his credit a political graph which depicts phenomenal rise—from student leader to trade union leader to MP—carving a niche for himself in the quicksands of Indian politics.

As befitting a product of the younger generation, Maken's views on various issues have shades of idealism though they are essentially practical. According to him, India of the 21st century will be sans the burning problems which confront the country today. Anti-national forces, he feels, are responsible for the prevalent chaotic conditions.

The politician

A Law graduate of the Delhi University, Maken abandoned the idea of taking up Law as a career and chose politics instead. Explaining this he says, "I belong to a family which has been actively involved

with politics. My father was a freedom fighter. My late elder brother was a member of the Metropolitan Council."

In his college days, young Maken was president of his college and later became a trade union leader before taking to full-time politics. And in the December 1984 Lok Sabha elections he was elected MP from Delhi.

Life of an MP can be very demanding. For Maken, however, being a political leader does not hamper his crusade against oppression of the working class. "Being a part of the ruling party does not mean I can't raise my voice for the working class," he states.

He crams into a single working day several meetings with the people to hear their problems, office work, Parliament sittings, trade union meetings and public functions, if any. And, in order to maintain close contact with the people, he has opened offices in several parts of his constituency which he visits in turn, thrice a week. He also meets people at his residence. In a vastly heterogeneous constituency, comprising both residents of plush colonies as well as jhuggi dwellers, the problems of the people are multifarious, too. However, equal importance is given to them by Maken who makes it a point to render assistance personally too, wherever possible. When a park in South Delhi was selected as the site for a shopping complex, he successfully voiced the concern of the residents to save the park. In another instance, when a jhuggi colony of his constituency was destroyed in a fire, Maken personally supervised the rehabilitation of the affected people. And it is this personal touch which makes Maken so different from his predecessors. However, Maken feels that the elected leaders of the masses should be provided with professional assistance in order to execute their duties efficiently.

On unemployment

Maken strongly feels that the government must give top priority to the unemployment problem which, according to him, is the root cause of all problems. Unemployment is among the major hurdles in the path of progress, says Maken, and it afflicts big townships and metropolitan cities more than villages. And this, he explains, is due to the lure of numerous lucrative jobs that villagers associate with cities. Their influx to cities, in large numbers, is aggravating the unemployment issue. Says Maken, "This race of villagers to the cities must be checked. This can only be achieved by creating

employment potential in the villages, too."

The government should concentrate on providing incentives by setting up small-scale industries in rural areas. Big industrialists must also try and help by setting up their business in these remote areas."

On students and politics

With regard to politics entering university campuses, Maken, a student leader himself during his student years, strongly believes that political parties are increasingly using students as puppets in their vicious games and are responsible for encouraging agitations, through students. He, therefore, thinks that while it is essential for youngsters to be 'politically aware', they should not fall into the clutches of political parties and become party to their devious designs.

On trade unions

A popular trade union leader himself, Maken is totally committed to the workers' welfare. Generally known as the 'Datta Samanta of North India', he does not quite approve of the simile. For, in Maken's opinion, while the notorious Bombay trade union leader tries to make any conflict with the authorities a personal issue, Maken believes in solving problems peacefully and as quickly as possible, without resorting to violence, so as to safeguard the rights and welfare of workers. He, however, unequivocally condemns the multiplicity of trade unions which is, to a large extent, responsible for labour unrest and also for the destructive competition existing today. He suggests granting of recognition to major trade unions as a remedy for eliminating this problem.

With regard to the current trend in Indian economy, wherein the economy is improving at a slow pace while inflation is fast increasing, the cause being generally attributed to the salary component which is rising faster than production (especially in the manufacturing sector), Maken denies that increase in workers' wages is the cause. The crux of the problem is the parallel (black money) economy which should be flushed out to curb the rising inflation. Also, production should be increased and incentives given to workers through productivity agreements in which workers should be given bonus on above-average production. Talking about the role of workers and trade unions he says, "Workers should work sincerely. Trade unions should help maintain discipline and not let personal interests creep into their work."

Being a politician does not mean he neglects his family. In fact, he enjoys spending any free time he has with his young daughter or in catching up with his reading. But despite his responsibilities of home and politics he retains an energetic personality, and no reservations of an ideal India.

NEWS CAPSULE

AWARDED

The **UN Population Award** for 1985, carrying a gold medal and a cash prize, to the London-based International Planned Parenthood Federation, the largest non-governmental body with associations in 120 countries.

The **Mother Award** (1983) for sciences to M.G.K. Menon, member of the Planning Commission. The award, instituted by the MP Government, carries a cash prize of Rs 1 lakh and a citation.

The **US Presidential Medal of Freedom**, America's highest civilian award, to Mother Teresa in recognition of her work among the poorest of the poor in the world.

APPOINTED

Ajmer Singh, Punjab Governor, as Administrator of the Union territory of Chandigarh. The new post will be in addition to his responsibilities as governor.

K.T. Satarawala, former Punjab Governor and retired civil servant, as India's new Ambassador to Mexico, replacing N.P. Jain. Satarawala had also served as the Lt Governor of Goa, Daman and Diu from February 1983 to June 1984.

John Gooder Dean, the US Ambassador to Bangkok, as the American envoy in New Delhi, following the end of the term of Harry G. Barnes. Barnes left his post on Jun 27.

Gen R.S. Sparrow, a former Lok Sabha member, as President of the Punjab Pradesh Congress Committee, replacing Santokh Singh Randhawa, who resigned after allegations that he had links with terrorists.

SCIENCE

Vampirism—a disease? Folk tales of night-roving vampires and werewolves can be explained by the symptoms of a rare genetic disorder which blocks the production of a vital blood component, according to David Dolphin, an American-based British researcher. The genetically-passed disease called *Porphyria* results from lack of the substance called heme, which is produced in the liver and makes blood red and helps carry oxygen in haemoglobin. The lack of heme could also explain the legend of Dracula and other blood-sucking humans, according to Dolphin. Victims of the disease can be disfigured terribly by sunlight, develop excessive body hair and go intermittently mad. There is no cure, but symptoms can be alleviated by treatment like injection of heme, which turns off a malfunctioning mechanism that makes the disease-carrying substance.

Fuel for life: Parts of comets, meteorites and other planets may have struck the earth millions of years ago, causing the formation of natural gas as well as decomposition of plants and animals, says Dr Thomas Gold of the Cornell University in the US. If the theory is correct, Gold predicts substantial new discoveries will

dramatically increase world fuel supplies and even the geographical distribution of natural gas. Gold believes that hydrocarbons which include methane or natural gas, were formed deep inside the earth as a result of such events. When 19th century scientists first postulated that hydrocarbons were produced organically, they did not know that hydrocarbons could possibly be the result of cosmic events.

Second Indian space odyssey in the offing: Two space scientists of the Indian Space Research Organisation (ISRO) have been named for final selection of the Indian cosmonaut who will be on board the US space shuttle next year. They are N.C. Bhat, an engineer at the satellite centre of ISRO, and A. Radhakrishnan of the Vikram Sarabhai space centre, Trivandrum. The two have left for NASA in the US for further training. The final choice between them will be made known in July.

Space action plan: The Space Commission has drawn up an action plan for 1985-95, giving a major thrust to India's rocket-launching technology. The perspective plan includes indigenous launching of advanced remote sensing and other satellites and the Geostationary Launch Vehicle (GSLV) which is to be the successor to the Polar Satellite Launch Vehicle (PSLV). The plan envisages the launching of a series of satellites designated "stretched Rohini satellite series".

CAREER NEWS

Fellowship in Electronics

Young scientists and Electronics engineers with an aptitude for research and development are in for a challenging opportunity. The Department of Defence Research and Development, Defence Research and Development Organisation (DRDO), Ministry of Defence, will conduct a one-year fellowship programme to provide exhaustive training in Electronics at the Institute of Armament Technology, Pune. On successful completion of the training, candidates would be placed in one of the laboratories/establishments as Scientist 'B' in the scale of Rs 700-1300.

If you are 28 and possess a third class master's degree in Physics or Applied Physics with specialisation in Electronics or a bachelor's degree in Engineering/Electronics and Communication Engineering, or equivalent, from a recognised university, you may be one of the 50 candidates (SC-8 and ST-9) likely to be selected for the programme. Selection will be on the basis of a test/interview.

For details and proforma of application, you may look up *The Times Of India*, Jul 13, 1985. Applications should reach the Director, Recruitment and Assessment Centre, Room No 225, B Wing, Sans Bhawan, New Delhi-110 011, preferably by registered post, in a cover superscribed "Application for Fellowship in Electronics," latest by Aug 5, 1985.

EDUCATION

Indo-US cooperation: The Indo-US sub-commission on education and culture ended a two-day session in Washington on Jun 21 by agreeing on a series of new programmes designed to give a fillip to cooperation between the two countries. One of the programmes will be to establish artists-in-residence to enable artists to spend upto eight weeks at schools or universities. Another deals with exchange of visits by distinguished Indian and American journalists. A significant development is the proposed release of a text book on India, 20,000 copies of which are to be distributed in American schools.

Film, worthy of postgraduate study: Jadavpur University in Calcutta will introduce a full three-year postgraduate degree course on film studies next year. An expert committee headed by the vice-chancellor has already been formed to go into the details like syllabus and curriculum.

DEFENCE

New killer weapons for US arsenal: The US military is expected to get a variety of new tactical weapons under a \$4.6b. weapons programme. The weapons include 155-mm nuclear-tipped artillery shells, nuclear-tipped anti-submarine torpedoes, nuclear-tipped ship-to-air anti-aircraft missiles, small nuclear demolition mines and nuclear-tipped aircraft-to-surface missiles. The US Navy is hardening its ships and aircraft against the effect of nuclear weapons, signifying the new navy view that a nuclear war can be contained at sea—a reversal of past policy.

The Mirage has arrived: The French-made Mirage-2000 aircraft, India's answer to Pakistan's F-16s, was inducted into the IAF on Jun 29, with the Defence Minister, P. V. Narasimha Rao, formally receiving the first batch of seven aircraft. The aircraft will be called "Vajra" after the sword of the mythological god Indra. The multi-role, low-level, high-speed penetration aircraft were acquired under a contract signed in 1983. The remaining aircraft will be flown to India by next year. India is the second country after France to possess the aircraft which is capable of destroying any known type of hostile aircraft flying even at three times the speed of sound.

ECONOMY—National

WFP aid for UP project: The UN World Food Programme (WFP) will give commodity aid worth Rs 29 crores for the watershed development project in 22 districts of UP. An agreement to this effect was signed on Jun 7 in New Delhi. The total cost of the scheme is estimated at Rs 156 crores of which Rs 117 crores will be contributed by the UP Government. The main aim of the project is to accelerate ongoing developmental activities in the field of watershed management and afforestation, raise income, food intake and productivity of forest workers.

India's trade deficit in the year 1984-85

stood at Rs 5,187.5 crores—Rs 763.6 crores less than the deficit at the end of the previous year. The fall in the deficit is due to a higher rate of growth of exports, which went up by 20.2% to Rs 11,297.4 crores from Rs 9,396.2 crores in 1983-84. Imports registered a 7.4% increase to Rs 16,489.4 crores from Rs 15,347.3 crores in the previous year. Provisional export figures for March 1985 at Rs 951.4 crores show an increase of 69% over the export performance of March 1984.

Excise and customs to yield more? A national Plan has been drawn up to mobilise an additional Rs 2,700 crores from Central excise and customs by plugging leaks and expediting excise cases pending in courts. The three-tier Plan finalised at a conference of excise and customs collectors in Bombay envisages that Rs 1,000 crores of the Rs 1,300 crores locked up in court cases will be collected this year. Plugging customs leaks will yield Rs 500 crores and checking undervaluation of commodities Rs 1,200 crores. The Plan will be implemented from July and its results reviewed in September.

India gets pat on the back from IMF: An IMF study has praised the new economic initiatives in India as a "major step forward" in the government's efforts to mitigate the disincentive effects of burdensome production and productivity regulations. The new measures, while leaving the regulatory mechanism intact, are expected to remedy deficiencies of the previous policies, it said. The study noted that despite two oil shocks and major domestic dislocations stemming from drought and other upheavals, "India was able to contain the balance of payments effects of the external and internal shocks and even to achieve some small acceleration in real economic growth."

ECONOMY—International

Optimistic inflation scene in Asia: Asian

countries, with the exception of the Philippines, have managed to slow down inflation in the last year, according to an IMF report. India showed an increase of only 4.3% in February compared with 1984's rate of 8.3%. Indonesia recorded a 3.7% growth in March. The IMF report said price increases reached a new low in the US—3.2% in 1983, gained speed in 1984 to 4.3% but have slowed down since. As a whole, in 21 countries, including the US, the first quarter of this year was the fifth in a row to record an inflation slowdown. The annual rate for January-March this year was 4.3% compared with 5.2% in 1984's first quarter. Iceland's rate was the highest at 28.9% and Japan's the lowest at 1.6%. But prices were still galloping in Latin America, topped by Bolivia with a record inflation rate of 3,407.6% in Jan. Argentina's was 850.8%, Brazil's 220%. Most west European countries seemed to have inflation under control—West Germany with a 2.5% annual rate, France 6.5% and Britain 6.1%.

North-South parleys: Ministers from 21 leading industrial and developing countries ended a two-day meeting in Stockholm on Jun 10 by coming closer to an agreement on new multilateral trade negotiations to deal with growing protectionism. Although their agreement was largely on procedural issues, ministers from both sides said there had been substantial progress in reconciling the views of the West, which wants new talks, and the Third World, which is wary of them.

UNCTAD drubs transnationals: The UN Conference on Trade and Development (UNCTAD) has criticised the transnational corporations for concentrating on providing non-financial resources like management technology and marketing to developing countries, which needed more direct investment. In its latest report on the role of foreign direct investment in development finance, submitted to the committee on invisible financing related

to trade, UNCTAD charged transnationals with having effectively shifted the investment risk to international lenders and host nations. The report highlighted the rapid growth of new forms of global investment which include arrangements such as joint ventures, licensing deals, franchising, management contracts and turnkey deals. The implications of such deals is that risks related to capital investment are shifted to the host country. The report said that in the aggregate flow of resources to developing countries, the share of foreign direct investment (FDI) fell from 18% in 1970-72 to 12% in 1981-83 and predicted it would increase by only 25% or less in real terms in the next five years.

STATES

Bihar's tortuous politics: The Election Commission (EC) says elections in Bihar will not reflect the will of the electorate unless effective measures are taken to curb violence, intimidation of voters and other electoral malpractices in the eastern state. "This state is extremely cast-ridden and anti-social elements have been meddling for a long time with the elections by using their muscle power," the commission said, in a chapter on poll violence in its latest report to the Parliament. It condemned the ineffective law and order machinery in Bihar which failed to implement EC-recommended measures to combat electoral malpractices. During the December Lok Sabha elections, 53 constituencies were affected by violence, Bihar topping the list (27 constituencies) followed by UP (10), J & K (30) and Andhra Pradesh (6).

Orissa Sands Complex: The public sector Indian Rareearths Limited, an establishment of the Department of Atomic Energy, is initiating a Rs 110-crore project to mine radioactive sands in Orissa's foreshore territory. The project, to be called the Orissa Sands Complex, will be commissioned during 1985-86. The radioactive sands in Orissa's foreshore have 21% concentration of rare earths. The minerals are used in nuclear reactors, manufacture of paints, electrodes and refractors which fetch a tidy price in the market.

Nagaland's white paper: The Nagaland Government on Jun 28 released a white paper entitled "The Untold Story Of Merapani", giving its version of the events that led to the border clash between Assam and Nagaland police in the first week of June. It had three annexures on the historical background of the Assam-Nagaland border dispute, instances of provocative acts by the Assam Police, and a background on the blockade of the Nagaland checkgate by the Assam Police at Merapani. The paper charged the Assam Government with indulging in "wanton provocative acts" in the border area to "tighten the noose round our neck slowly but surely". It charged Assam with disregarding all pleas to restrain its police from the blockade.

EVENTS—National

The latest move on the Sino-Indian chessboard: China has invited India to open a consulate in Lhasa, the forbidden capital of Tibet, and Shanghai—a proposal seen by observers as calculated to making a dramatic impact on the current negotiations to improve relations. The proposal was officially conveyed

DID YOU KNOW THAT...

■ there are 2,000 species of snakes in the world out of which 200 are in India?

■ six of the world's top selling perfumes are French? These are: Chanel No. 5; L'air du Temps; Opium; Arpege; Shalimar and Coco. The country accounts for 70% of the world's fragrance trade, 800 years old in France.

■ Byelorussia, one of the 15 Soviet republics, located in the western part of the USSR, means 'white Russia', as the people in this region are whiter than the rest of the Russians and the republic is all white and covered with snow from September to April?

■ the largest acquisition in broadcasting history was the \$3.5b takeover of ABC by Capital Cities Communications in March 1985?

■ the Chipko movement was launched in the Himalayas in 1973, when thousands of men, women and children clung to the trees to prevent them from being slaughtered by corrupt contractors in the name of progress?

■ India is the world's largest producer of tea—560m kg—of which 240m kg is exported to 80 countries? India consumes over 10m plywood tea-chests annually for which an estimated 80,000 tonnes of timber is consumed

■ despite the threat of boycotts and sanctions, dating back to the early fifties, South Africa has only become economically stronger? The 1963 arms embargo and the oil boycotts of the 1970s notwithstanding, South Africa has become the world's tenth largest arms exporter and a leader in synthetic fuel production.

■ the cost of production of sugar, according to the Bureau of Industrial Costs and Prices, is Rs 4.18 per kilo at a cane price of Rs 22 per quintal? The international price in London is \$130 a ton or Rs 160 per kilo

■ South Korea, Taiwan, Hong Kong and Singapore are known as four 'Little Tigers' for becoming economic powers despite their small sizes?

■ Utah, a state in the US, is known as 'the world's diaper capital', since the baby boom there is still booming? The birth rate, 29.5 per 1,000 residents, is double the US rate and close to India's.

in Soviet Union. The two countries were closed in 1962 in the wake of the border conflict that year. The proposal by Beijing is being carefully weighed by New Delhi which cannot respond to it in isolation of its overall China policy.

Restructuring of NTPC: The National Thermal Power Corporation (NTPC) is being restructured as part of a 15-year growth plan, to avoid an unwieldy monolithic organisation in the interest of greater efficiency. In the first phase of the reorganisation, the engineering and services, decentralised in August 1982, have been again centralised at the NTPC's corporate office.

India to participate in world youth festival: India is to be represented by a 500-member youth delegation at the 12th world festival of youth and students in Moscow from Jul 27 to Aug 3. About 30% of the delegates will be women. This is the third such festival, the first having been held in Prague in 1967 and the second in Havana in 1978.

An Indian language news agency? A six-member committee comprising prominent journalists and owners of language papers is to examine the possibility of setting up an Indian language news agency. The committee, with Ram Nath Goenka of the *Indian Express* group as convener, will also examine the possibility of entrusting PTI and UNI with the work of providing a news agency service in Hindi and other Indian languages. These decisions were taken at a two-day meeting in New Delhi which ended on Jun 26, with the Union Information Minister V.N. Gadgil, and several newspaper representatives attending.

EVENTS—International

Peru's new President: Alan Garcia, the charismatic 35-year-old leader of a populist party, often at odds with Peru's military, has become the South American nation's new President. Garcia won the presidential election with 45.7% of the votes polled, with Alfonso Barrantes, the Marxist Mayor of Lima, second with 21%. Garcia takes over as President at a time when Peru faces its worst-ever economic crisis and a guerilla insurgency that has taken 5,000 lives.

Routine extension: The governments of the seven countries of the Warsaw Pact have ratified an agreement extending the alliance for another 20 years. The agreement to extend the 30-year-old alliance was reached in Warsaw on Apr 26 by the governments of the Soviet Union, Poland, East Germany, Czechoslovakia, Hungary, Romania and Bulgaria.

Recalcitrant South Africa: Defying world opinion South Africa on Jun 17 installed an interim government in Namibia through a proclamation signed by President Pieter Botha. The latest move by Pretoria delays the UN's prescribed independence plan for Namibia and was immediately condemned by the world body and governments the world over. The new administration in Namibia, which will leave control of foreign affairs and defence in Pretoria's hands, will comprise a council of ministers made up of six local parties and a 62-member legislature.

Italy's youngest President: Christian Democrat Francesco Cossiga, a two-time for-

FREIGHTING HIGH

The world is becoming increasingly inter-dependent. One stunning evidence of this is the relentlessly expanding volume of freight handled by international airports. The US being the world's economic goliath, it is hardly surprising that New York's Kennedy Airport is the busiest in the world. And in Europe, it is Frankfurt that enjoys this distinction. Incidentally, London's Heathrow may not be holding a candle to Kennedy, but it still remains the only airport in Europe to have the largest volume of 'human cargo' passing through it.

mer PM, was, on Jun 24, elected Italy's new President, succeeding socialist Sandro Pertini. Cossiga, 56, is the youngest-ever President of Italy. He will be in office for the next seven years.

UN Charter 40 years old: Jun 26 marked the 40th anniversary of the signing of the UN Charter, which led to the creation of the world body. Secretary-General Javier Perez De Cuellar, at a ceremony to mark the day, called the document a "monumental achievement in the search for a peaceful world." Nine countries used the occasion to come out jointly with a call for bolstering the UN forces and institutions, particularly the Security Council and the peacekeeping forces. They recommended a special meeting of the Security Council aimed at reinforcing the organisation's effectiveness. The nine countries were Sweden, Argentina, Austria, Canada, Jordan, Malaysia, Senegal, Spain and Tanzania.

ILO's annual conference: A three-week-long annual conference of the International Labour Organisation (ILO) ended in Geneva on Jun 27 after adopting a series of conventions, recommendations and resolutions to prevent industrial accidents. A convention on occupational health services makes it obligatory on ratifying members to develop such services and undertake measures to prevent accidents. The theme of the conference was industrial relations and ILO Director-General, Francis Blanchard highlighted the essential role of tripartism for developing harmonious employer-employee relations. The 250 workers, employers and government delegates who spoke during the debate fully endorsed Blanchard's view.

MISCELLANY

A historic find: Turkish, West German and

US archaeologists have discovered what they believe to be the oldest village in the world in southeast Turkey. According to Turkish historian Halet Cambul, who led the excavations, the 9,000-year-old village was discovered after 21 years of work. This was the first time that such an old village had been found with the remnants of stone buildings showing that a varied and complex community lived there. The villagers farmed and raised cattle and knew how to make use of bronze 2,000 years before the date usually accepted as the start of the bronze age. The groups' finding should lead to a revision of the dates laid down by historians for the time tested first-recorded human settlements.

Black human rights scene: More than 1,500 people were executed in 40 countries last year, according to Amnesty International, the London-based human rights organisation. Amnesty said the actual figure was likely to be much higher than its 1,513 because many governments provided incomplete figures. In Iran, 661 people were executed in 1984, but many more executions are believed to have taken place. China reported 292 confirmed executions but these did not include the ones in rural areas. Amnesty said it had learned of 2,068 death sentences in 55 countries last year. The organisation described the death penalty as cruel, inhuman and degrading and called for its abolition all over the world. By 1984, 27 governments had abolished the death sentence for all offences and 19 had retained it only for "extraordinary" offences such as wartime crimes.

Child labour still rampant: An estimated 150m children continue to be used like "animals", in mining, manufacturing and other dangerous occupations throughout the world, according to the World Health Organisation (WHO). One in every four children in India,

Thailand and Turkey and others even more so in Mali and Tanzania are worse, according to B. Batawi, chief of WHO's office of occupational health in Geneva. Child labourers suffered under conditions similar to those in 18th century Europe. The offences occurred largely in Third World and developing countries. "Colombia is the worst but it is also bad in Brazil, Ecuador and all of Africa," Batawi told delegates to the international conference on the health of miners in Pittsburgh, USA. The WHO official said industrialised countries sometimes sold developing nations obsolete and hazardous equipment that would not comply with their own safety standards.

POPULATION

(Continued from page 18)

they are not planing their families, under instructions from their religious priests. The opponents of family planning also spread a fear among the ignorant masses that after sterilisation if children of a family die, the family will be doomed for ever to live without children.

Thus, it is evident that ignorance of the people is exploited by some opposition parties to scuttle the actual implementation of government-sponsored family planning programmes in India.

Economic Planning

The population policy of the Government of India is an integral part of the total process of economic planning which includes development of health services, educational facilities and generation of employment opportunities. Controlling the population growth is not the only aim. People who are born should be socially developed and it is the socially developed groups who automatically practise the small family norm. Population policy of the country has to be comprehensive in its social objectives and for this, political consensus should exist in the country. The worst part of the story is that, in the rural areas and in the slums, rumours against family planning have taken a communal tone and an element of fear has been projected amongst the ignorant masses.

The government functionaries who are in charge of implementation of family planning programmes ought to be sensitive to the prejudices and superstitions of the masses. A prerequisite of a successful family planning programme in a developing country is education of the people and the government alone cannot perform this job. Voluntary effort and political mobilisation is an essential prerequisite.

To sum up, the government has attached great importance to the population policy in India but it needs to be backed by political consensus and mobilisation by political cadres. Social prejudices have to be overcome with the help of political parties, through their voluntary effort. Government functionaries alone cannot achieve the targets.

DIED

Lord George Brown, 70, a former British Foreign Secretary and one of the most colourful and unpredictable politicians of the 60s, after a long illness on Jun 2 in London. Brown was the deputy leader of the Labour Party from 1960 to 1970 and Foreign Secretary from 1965 to 1968.

Karen Ann Quinlan, 31, who lapsed into a coma a decade ago and prompted a historic right-to-die US court decision, on Jun 11, at a nursing home in Morris Township. Quinlan lapsed into coma on Apr 15, 1975 and after

months, her doctors were granted permission to disconnect her from a respirator. The court granted the permission but contrary to doctors' predictions, she remained alive.

Prof Y. Nejedam, 63, former Director-General of the Council for Scientific and Industrial Research and former Vice-Chancellor of the Jawaharlal Nehru University, on Jun 23 in the air crash of an Air India plane in the Atlantic. Nejedam was awarded the Padma Shri in 1971.

Elies Sorkis, 61, former Lebanese President who took over soon after Lebanon's civil war broke out in 1976, on Jun 27 in Paris. A.P.

A RAT RACE FOR PEACE

BY GAUTAM KAUL, Additional Commissioner of Police, Delhi

Man is a social animal. He cannot exist alone. At the same time his existence is disturbed in the presence of too large a crowd. In fact social scientists have analysed that there will be a point in human population concentration when man would act irrationally if he is put in a place which is over-crowded. It follows that when a given community gets over-populated there would be a complete breakdown in the law and order situation which would ultimately result in the disintegration of that community.

This inference was reached on the basis of experiments conducted on the behaviour of rats.

Rat Experiment

In 1964, American scientists in the University of Wisconsin were conducting research on the behaviour of rats using white mice as their model. They had ordered a large consignment of white mice without arranging enough storage space in the university animal farm. Since all the mice looked healthy, they decided to put the newly arrived stock into cages in which there were already a large number of white mice. The transfer of fresh stock led to over-crowding of the mice.

After 24 hours the rat cage was inspected and it was found that a very large number of white mice had died. The cause of death was shock and haemorrhage—result of the white mice having bitten each other. When the dead white mice were removed it was found that the concentration of the living white mice was enough to allow each mouse to move away to a distance equal to the space occupied by its body.

One of the scientists then decided to replenish the cage with a smaller number of white mice. When they were added it was found that all the new entrants to the cage were again killed by the existing mice colony. It dawned on the scientist that there must be a correlation between the number of mice that can be kept in the cage and the area of the cage.

The scientists discovered that the behaviour of rats was directly related to

the concentration of rat population and that increase in the population of rats beyond a certain number led to the rats killing each other till the concentration was brought down to acceptable levels.

The experiment also revealed that there was a related irritability factor in the behaviour of white mice and this factor increased as population in the cage increased resulting in irrational behaviour.

The experiment also showed that breeding in captivity also stopped after a certain point which was much lower than the point at which rats were killing one another. It was inferred that the factor of irritability increased sharply when they were not in a position to undertake the breeding process but the level of intolerance was not achieved till the population increased drastically. As soon as the rat population was brought down breeding started again.

Human Behaviour

This inference was applied to human behaviour. Field observations were undertaken in slum colonies of Hong Kong, Harlem in New York City and some other controlled areas to find out if there were similarities between the behaviour of humans and that of white mice. It was found that in all respects, factors noticed in the behaviour of the former were similar to those noticed among the latter.

It was also revealed that for human beings the minimum required space is 5 sq ft. This is known as 'the area of private defence'. As soon as this minimum area is encroached, human behaviour by a natural process would acquire a threatening posture, rioting and murder would follow.

This model of social behaviour has its lessons to all law enforcement agencies as well as those who have the duty to plan new towns and colonies. To prevent anarchy in human society we need to decongest many of our metropolitan areas and discourage the growth of slums for they are the area which is most threatened by violence and disorder. And the major cause of increasing violence in countries like India is over-population.

Should India Go In For Hi-tech Now?

To many Indians hi-tech is the password to whose chime the doors to an Eldorado will swing open. India's salvation, they are convinced, lies only in hastily boarding the hi-tech bus. To prove the point they cite examples of countries like South Korea, Singapore, Taiwan and Hong Kong—the "four little dragons of Asia"—which have struggled out of the rut of poverty and soared to prosperity on the buoyant wings of hi-tech.

To others such an unseemly hurry in jumping onto the hi-tech bandwagon smacks of a meek attempt to imitate patterns of development set by countries with vastly different socio-economic and cultural backgrounds. Hi-tech, they feel, is neither relevant nor appropriate to India and serves only to scuttle indigenous efforts to develop appropriate technology.

In the nascent months of Rajiv Gandhi's premiership Indians have, in general, become more aware of hi-tech than ever before. Hi-tech has become a topic of engaging debate not only among the mandarins of India's bureaucracy but also among the common people.

More than anything else this signals a break with the past practice of conventional thinking and a growing desire in Indians to think anew. But, has India reached the stage of economic development from where it can safely take off in the direction of higher technology? Or is it too early to do so? Here we present views for and against the subject.

For

■ India, like other developing countries, must use sophisticated technology to improve the quality of its products and reduce costs of production. This will lend its products a sharp competitive edge in the international market and give the much needed fillip to its exports. The increased flow of money from growing exports can then be used to fund welfare programmes and large industrial projects in key sectors of development; for both these crucial development activities, India is presently depending on foreign assistance.

■ Though seemingly expensive, hi-tech is an infinitely more cost effective method of production than labour intensive traditional methods. Wonderful gifts of hi-tech like the robots dramatically improve productivity and quality control. They are sleepless mechanical workaholics, are free of absenteeism and do not pose disadvantages of time loss due to accidents and

strikes. No wonder the world's most productive and profitable businesses are run largely by robots. And as the Long Term Credit Bank of Japan notes: "While wages over the last decade have been rising 13% a year the cost of a typical robot has remained unchanged at about 6.3m yen (Rs 2.5 lakhs)".

■ Nor does hi-tech, as is commonly believed, lead to unemployment. It will, no doubt, herald major changes in the work scene; there will be new ways of working, different kinds of jobs but not fewer jobs. As newer applications for computers are found, a whole new world of job categories will open up. By converting what is essentially an agrarian economy into an industrial one and then a service economy, hi-tech will generate a number of jobs for each one it takes away.

Against

■ It is doubtful whether by stepping up exports we will be able to combat our basic problems of poverty and backwardness. South Korea, which has fully exploited the hi-tech revolution to propel itself to the forefront of the newly industrialised countries, has for instance, failed to fulfil this social objective. Says *Newsweek*: "For all the progress deep pockets of poverty exist throughout the country." Yet its exports have surged from \$119m in 1964 to \$2,000b last year.

■ Hi-tech is very expensive. In purely economic terms it would be impossible for a poor country like India to opt for a full scale acquisition of hi-tech. The international hi-tech market, due to concentration of know-how in industrialised nations, has developed monopolistic features. The pricing mechanism takes into account the enormous investments made on R & D in these countries. By buying prohibitively expensive hi-tech from advanced nations we are actually financing their R & D efforts which are primarily geared towards producing technologies appropriate and relevant to their needs and not to our socio-cultural ethos or economic needs.

■ Despite the most vigorous population control measures, India's population is expected to cross the 1,000m mark by the end of this century. In the foreseeable future, therefore, humans are going to be India's mainstay resource and humans rather than machines will have to be at the centre of any of India's plans to fight its crippling problems.

■ New information technology is no doubt full of promises but we will have to see whether we have the resources and the socio-cultural preparedness in the country for the induction of such futuristic techniques. Besides, the most pressing need in India today is not so much the discovery of new resources but the full utilisation of the potentials we already have. Have we, for instance, been able to fully exploit the already monitored and known natural resources for the benefit of the people? Thus the most compelling need of the hour is to work for the development of a socially just system where the fortunes of the people at large are directly related to those of the state, and a work atmosphere in which we are able to make optimum use of whatever we have achieved.

■ Since independence we have made considerable progress in science and technology; but has this made the lives of Indians any better? (150m people live below the poverty line.) Scientific advancement has meaning only when it is accompanied by cultural development. The people must be culturally alive and capable of seeking and absorbing the fruits of scientific

(Continued on page 58)

Federation. Could the Indian officials have avoided it? Why has our game been allowed to sink to such depths? An analysis of the 'unsporting' issue in the news this month. Also, while all eyes are set on the Cubbon Park court, Bangalore, venue of the forthcoming India-Sweden Davis Cup tie, a replay of the Cup.

INDIAN HOCKEY

CORNERED FOR A PENALTY?

BY NOVY KAPADIA

Six of India's star hockey players have been suspended unilaterally and for an unspecified duration by the International Hockey Federation (FIH) at its meeting in Brussels (Belgium) in April 1985. Also suspended were the manager K. S. Bedi, coach Hardayal Singh and assistant manager Ashok Kumar. The players and officials were accused of an assault on the Japanese umpire Yashimo Yubuta during the closing moments of extra-time in the final of the Asia Cup at Dhaka in January this year.

At that juncture, arch-rivals Pakistan had forged ahead 3-2, following a controversial penalty-corner goal by right-winger Kalimullah. Only two minutes remained of the second half of extra-time when Kalimullah received a rebound off goalkeeper Romeo James' pads and sent a shoulder high shot into the net. The scorer tapped the ball from well above his shoulder and could have been pulled up for dangerous play. Umpire Yubuta's decision after the Pakistanis appealed for it provoked the Indian players who rushed towards him.

Meanwhile, over 1,000 spectators—nearly 4,000 were seated on the fringe of the sideline—rushed onto the field to congratulate the Pakistani players. In view of the prevailing chaos it becomes extremely difficult to discern and identify the so-called culprits of the Indian hockey team who allegedly hit Yubuta. Photographic evidence reveals that six Indian players gheraned the umpire cajoling him to reverse his decision. The players were inside-right Merwyn Fernandez, substitute forward L.

Tikken Singh, half-backs M. Somaiyya, Hardeep Singh and Rajinder Singh and goalkeeper James.

Though the photograph reveals Fernandez in a menacing posture, near the umpire with a raised stick, the soft-spoken Indian Airlines inside-right has repeatedly stated that he raised the stick to demonstrate the way Kalimullah scored the controversial goal, thus highlighting the injustice of the award. The technical delegate at the match Ueda (also of Japan) reached the conclusion that Yubuta was assaulted by the Indian players because of their menacing gesticulations.

There is no doubt that Yubuta was hurt. However, the fact to be determined is the cause of the injuries. Was it caused by the Indian players? There is a school of thought which firmly believes that the mob that surged onto the ground ran amuck, shoving and

colliding against each other, jostling umpire Yubuta who tumbled by the impact of a few unruly spectators and was subsequently trampled upon. Immediately after the crowd was cleared some Indian hockey players surrounded the Japanese umpire urging him to reconsider his decision. Being in a traumatic state, it is possible that Yubuta misidentified his actual assailants. Video-recordings of the match also reveal that Indian players and officials indulged in tantrums to try and disrupt the match.

Thus, there is a strong possibility that the technical delegate Ueda has in his report penalised India not only for the injuries to umpire Yubuta but also for the tantrums and disinclination to continue. Hence, the one-year suspension of the manager, coach and assistant manager and skipper Somaiyya.

The crux of the matter is that for years many FIH officials have strongly felt that Indian hockey teams do not take umpiring decisions against them sportingly, and tend to be overtly demonstrative. Indian hockey officialdom, to camouflage its own inefficiency, takes refuge in the propaganda that the umpiring fraternity persecutes India with wrong decisions in envy of our glorious past record.

Players and coaches of the Indian hockey team have recently been explaining away defeats by blaming perverse umpiring decisions. The actual causes of the decline of Indian hockey, like shortage of quality players, unfamiliarity with the exacting demands of playing on artificial turf and diminishing popularity of the game amongst the youth, are glossed over and the foreign umpires are made a scapegoat. This persecution complex has been unfortunately ingrained into the minds of our national players also. So they have no qualms in protesting against umpiring decisions, little realising that unnecessary pressure antagonises the supervising officials. At Dhaka, the display of protests and tantrums by the Indian players became a bit too much, and hence the extreme punishment. In fact, the Indian team and officials sulked for 30 minutes and only relented after a stern warning from the technical officials and fear of reprisals from a volatile crowd.

The concern of FIH officials to assert the supremacy of the umpires led to the drastic action against the Indian players. What is really galling is the insensitivity and incompetence of the officials of the Indian Hockey Federation (IHF). Marred by fleisparous tendencies for many years, IHF officials did not even inquire into the incident. Thus they had no inkling of what was in store for them. As usual the IHF is indulging in the customary practice of passing the buck. Manager K.S. Bedi was blamed for not highlighting the incident and culprits in his report. The manager, of course, denies this allegation and states that he had presented an accurate picture, but the IHF officials preoccupied with their elections, neglected the issue. So callous has the IHF been that they never

Below: Asia Cup: A bitter finale. Right: True or false? Indian players 'hit' or 'cajoled' Yubuta?

attention for the suspension of the FIH. India's case went unrepresented at Brussels. As always, the players are a victim of the inefficiency of the IHF.

Once the suspensions were intimated, the IHF reactions, to alleviate the issue were pathetic and amateurish. No cogent explanation was presented. Instead, they decided to rush Aslam Sher Khan, former Olympian and now Congress(I) MP from Betul to Brussels to plead India's case. It was later realised that Aslam Sher Khan had no locus standi either in the IHF or worthwhile equations with top administrators in the FIH.

IHF officials further complicated matters by saying that reserve full-back Iqbaljit Singh was involved in the fracas rather than centre-half Hardeep Singh. This was done to protect Hardeep Singh, as the IHF officials felt that it was not possible to find an adequate replacement in the centre-half position. Iqbaljit Singh was being made a scapegoat.

The fissiparous tendencies were revealed when Ashwini Kumar, Vice-President International Olympic Committee (IOC) and former President of the IHF, circulated the story that there was a move to dis-affiliate the IHF from the FIH. Happily, Etienne Glichitch, President of the FIH, denied any thinking on such a move. Unfortunately, hockey administration in India

WAIT UNTIL OCTOBER

The suspended players now have to wait till October before they know what their fate will be. M.A.M. Ramaswamy, Vice-President of FIH and former President of IHF, met Glichitch in an attempt to resolve the issue. The IHF too has changed its stand. Realising that there was no point in 'playing' around with the issue, it tendered an unconditional apology to the FIH and requested it to reconsider its "harsh" decision. Which will be done only when the FIH receives the report of the Japanese chief technical delegate at the Dhaka tournament.

has many enemies within, which further complicates the confusion.

The IHF sent a new-look team to the four nations tournament in Holland in June. India were beaten 1-2 by England, 1-4 by West Germany and thrashed 0-8 by Holland. (West Germany were the ultimate victors). Suddenly the value of the suspended players increased, though it is a sad reflection on the state of Indian hockey that the absence of six players led to such deplorable defeat. There is obviously lack of depth of talent in Indian hockey.

Better late than never, the IHF have decided to present a cogent case to the FIH and convince them that the Indian players had no *male fide* intentions. Even Glichitch agrees that umpiring standards in regional competitions are mediocre. Indian hockey players can still be condoned. Was not a more serious sacrilege by the Pakistani team at the 1972 Munich Olympics condoned after a life ban on the entire squad? It is imperative that the IHF act efficiently in this matter, as it was their procrastination and fallacious policies which led to the suspension and termination of six players in the peak of their career.

THE GAME OF LOVE

The Davis Cup, the symbol of supremacy amongst tennis playing nations of the world, started in 1900. Dwight Davis, an American citizen, a tennis addict and an idealist started the championship when in 1900 he donated a huge silver bowl as a symbol of friendly tennis competition amongst nations. The tournament was named after him and the ideals were to promote tennis and friendship amongst nations.

The Davis Cup has stood the test of time. The rules of the championship have been frequently altered, political systems of participating nations have changed but the idea and the ideal are immutable. The court is always 78 ft by 36 ft and the highest standards of sportsmanship are demanded within those lines.

In these iconoclastic years of planned obsolescence, the Davis Cup endures as few other 84-year-old institutions have done. In the words of Arthur Ashe, 1975 Wimbledon champion and non-playing captain of the American Davis Cup team for many years, "The Davis Cup is not a place or a player, a cup or a contest, a name or a notion. It is an idea and will always be just that."

In the inaugural year of the competition, the US won the Davis Cup beating Great Britain 3-0 in the final. Since then the championship has been an annual feature except during the years of World War I (1915-18) and World War II (1940-45) and in 1901 and 1910 when there were not sufficient entries. The US has won the Davis Cup for the maximum number of times, with 28 victories, followed by Australia with 23 victories. The longest span of victories has been by the US, seven-in-a-row, between 1920 and 1926. The Davis Cup, however, has not been the monopoly of a few nations. Fifteen nations have reached the finals at least once. They are: the US, Australia, Great Britain, India, Belgium, Japan, France, Italy, Mexico, Spain, Rumania, West Germany, South Africa, Sweden and Czechoslovakia.

India's match in the 1985 Davis Cup against Sweden is scheduled to be held in Bangalore from Aug 2-4. World ranked players like Mats Wilander, Anders Jarryd and Stefan Edberg will be seen in action for the first time in India. This is one of the major charms of the Davis Cup. Spectators in developing nations like India which cannot afford to stage lucrative prize-money tournaments get to see world class players only during Davis Cup ties.

India's participation in the Davis Cup has been a regular feature for over half a century. In 1921 India first participated in the Davis Cup and the All India Lawn Tennis Association was affiliated to the then International Lawn Tennis Federation (ILTF, now ITF, i.e., International Tennis Federation) in 1925. The halcyon days of India's participation in the Davis Cup were in the sixties and early seventies. The trio of Ramanathan Krishnan, Jaideep Mukherjee and Premjit Lal was responsible for India's excellent Davis Cup record over several years in the sixties. The pinnacle of glory was achieved when this trio led India to the Challenge Round for the

in a closely contested final in Calcutta, India went on to meet holders Australia in the Challenge Round. The Aussies had Wimbledon singles champion Roy Emerson and runners-up Fred Stolle and doubles champions John Newcombe and Tony Roche in their squad and so expectedly won 4-1. However, India performed creditably with the doubles pair of Krishnan and Mukherjee gaining a memorable triumph over the Wimbledon champs Newcombe and Roche.

During the seventies, India's Davis Cup challenge was spearheaded by Vijay and Anand Amritraj and Shashi Menon. In 1974 India reached the finals of the Davis Cup and had a good chance of winning the prestigious trophy outright as their opponents South Africa were not a very formidable squad. However, India chose not to play against South Africa because of their policy of apartheid (South Africa is now suspended from participation in the Davis Cup).

The Davis Cup rules and format have undergone many changes. From 1900 till 1971, the Challenge Round existed. This meant that the previous year's holders did not participate in the tournament itself but played the ultimate inter-zonal winner in a decisive tie known as the Challenge Round. The winner of the Davis Cup for a calendar year was the victor of the Challenge Round tie. So often the winner of the Davis Cup played just one match.

In 1972 the Challenge Round was abolished and the inter-zonal winners played each other on a knock-out basis with the US and Rumania reaching the final with the former winning 3-2. Another significant change took place in 1974 when the competition was thrown open to professionals for the first time.

In keeping with the spirit of the times, the Davis Cup also obtained corporate sector spon-

PASSAGE TO VICTORY

In his fairy-tale passage to the Centre Court at Wimbledon, Boris Becker, the 'Wonderkid' left a trail of scarred and stupefied opponents. At 17, this adolescent from Leimman, West Germany, became the youngest and the first unseeded player to win a Grand Slam title.

declining as there was no prize money at stake and so the best players like Jimmy Connors often did not play in Davis Cup matches. The new ITF President Philippe Chatrier was determined to rekindle the tradition and aura of the event. He hence sought corporate sector sponsorship. Nippon Electric Corporation of Japan annually puts up \$1m in prize money to be shared amongst the participating nations. Winners in each round get a stipulated amount. A new format was also introduced to resurrect spectator interest. The new format initiated in 1981 changed the cup into a two-tier contest with a 16-nation top group and the rest playing in zones on a regional basis. This format offers

options. Davis Cup matches are held on fixed dates throughout the world which are so arranged that they do not clash with major international tournaments. The leading professionals now do not have to alter or miss their tournament schedule to play in the Davis Cup.

Spectator interest in the Davis Cup is once again aroused. Around 3,44,322 people watched the Davis Cup in 1982 whereas attendance rose to nearly 4,00,000 the following year. So the Davis Cup remains as popular as ever, a symbol of friendship amongst nations participating in sporting contests and impeccable behaviour on court, values rapidly declining in contemporary times.

N.K.

A new Asian national title set in the women's when Zhu Hong Yang of China threw the spear to a distance of 63.88 m at the national championships in Shanghai on Jun 9. This improved the existing record by 1.44m, held by compatriot Tang Guoli since 1981.

At the East German national championships, held in Leipzig, on Jun 5, Silke Hoerner (GDR) swam the 200 m breaststroke in 2:28.33 to just about break the old mark of 2:28.36 set by Lina Kachushite of the Soviet Union.

The great showman of world athletics, Willie Banks of USA, shattered the 10-year-old world record for the triple jump when he hop, step and jumped to cover a distance of 17.97 m in the US Outdoor Track and Field Championships at Indianapolis on Jun 16. The earlier record was 17.89 m set by Joao Oliveira of Brazil in Mexico City in 1975.

Thus, now there are still three world marks which have stood since 1963 Olympic Games in Mexico City—almost 17 years. The long jump record—8.90 m (29 ft-2½ in) is being threatened by Carl Lewis, who is reputed to have crossed the mark during training. The other two—(i) 400 m in 43.06 sec by Lee Evans and (ii) 4x400 m in 2:56.1 by the US quartet of Vince Matthews, Ron Freeman, Larry James and Lee Evans—are both likely to stand till the 1990s.

Tian Bingyi (China) 5-15, 15-7, 15-9.

Women's Singles: Han Aiping (China) b Wu Jian Qiu (China) 6-11, 12-11, 11-2
Doubles: Han Aiping & Li Lingwei (China) b Lin Ying and Wu Dixi (China) 15-9, 14-18, 15-9
Mixed Doubles: Joo Bong Park & Sang Hee Yoo (South Korea) b Stefan Karlsson & Maria Bengtsson (Sweden) 15-9, 12-15, 15-12

SANJEEV GUPTA

AROUND THE TRACK IN 30 DAYS

Athletics

In the 100 m sprint, Olympic champion Lewis was defeated over the distance for the first time in two years, when he came fourth in the semi-finals—in 10.34 sec—slow by his standards.

Cricket

England gained a five-wicket win over Australia in the First of their six-match 'Ashes' series, on the fifth and final day—Jun 13—at Leeds.

Tennis

The first of the four annual Grand Slam events, the French Open, ended at the Stade Roland Garros in Paris on Jun 9.

Results: Men's Singles: Mats Wilander (Sweden) b Ivan Lendl (Czech) 3-6, 6-4, 6-2, 6-2.

Women's Singles: Chris Evert-Lloyd (USA) b Martina Navratilova (USA) 6-3, 6-7, 7-5.

Doubles: Martina and Pamela Shriver (USA) b Claudia Kohde-Kisch (FRG) and Helena Sukova (Czech) 4-6, 6-2, 6-2.

Mixed Doubles: Peter Gunthardt (Swiss) and Martina (USA) b Francisco Gonzalez (Paraguay) and Paula Smith (USA) 2-6, 6-3, 6-2.

WHAT'S NEW

will be introduced in the Olympics at the next Games in Seoul (South Korea) in 1988.

Organisers of the 13th Commonwealth Games announced that 'MAC', a Scottish term, has been adopted as the official mascot of the Games, to be held at Edinburgh in June 1986.

Heads that rolled on the way: None other than John McEnroe and Jimmy Connors, beaten in straight sets by Wilander and Lendl respectively in the semi-finals.

The World Championships ended at Calgary (Canada) on Jun 16 with total domination by the Asian countries—China and South Korea.

Results: Men's Singles: Han Jian (China) b Morten Frost-Hansen (Denmark) 14-18, 15-10, 15-8
Doubles: Inc. Bong Park & Moon Seok Kim (South Korea) b Li Yongfu &

(Continued from page 55)

For

■ Today's fantastic spectrum of information technology has placed in our hands tools that can scan and monitor every inch of the earth's surface—what lies beneath it or floats above it. It is imperative for India to make effective use of the new techniques not only to seek out new reserves of natural resources but to check the immense waste of its natural as well as human resources.

■ Hi-tech can help in the free flow of information so that the gains of scientific development percolate down to the common man. One satellite, for instance, can speak to more people than all the schools and colleges in the country put together.

■ If hi-tech industries have spawned a pollution problem, the solution to it also clearly lies in hi-tech. As the world becomes increasingly conscious of the need to protect and preserve its ecosystem, hi-tech is moving in to create new methods for curbing industrial pollution and reducing chances of industrial accidents to a minimum.

■ It is a fact that hi-tech does trigger off a consumer boom. But it is wrong to conclude that this will give rise to consumerism and erode human relations, traditions, and the culture of a country. The most technologically advanced country in the world, Japan, still retains its glorious culture and traditions.

Against

achievements. In the absence of pipelines from labs to farms all the progress we make seems to gather around the elite strata of the society, and our village folk remain untouched by the technological advancement which can make their lives much easier and healthier. Before we go in for import of some more hi-tech we must create conditions where its benefits can filter down to the grassroot levels quickly.

■ If hi-tech has helped man, it has also ushered in a host of problems, of which, the hazards it is creating for the ecology is the most serious. The Far Mile nuclear accident (US) and the Bhopal gas tragedy should be eyeopeners to what might happen if indiscriminate growth of hi-tech industries is encouraged.

■ Hi-tech leads to a mushroom growth of consumer durable articles promoting consumerism and eroding human ties and relations. It is also worth noting that apart from Japan no country which has modernised has succeeded in protecting its culture. This does not mean we should not modernise; by all means, we should. But modernisation should be woven into the fabric of our culture so that the process of modernisation appears to be growing from it (culture) rather than in spite of it. The two disparate concepts of modernisation and westernisation should be clearly distinguished in the minds of the masses.

S.R.

continued from page 22

cular angle chosen.

The FEO also made the observation that in more than half the selected states five-year perspective plans had not been prepared. Neither had most of the District Rural Development Agencies (DRDA's) planning teams been organised. No effort had been made to develop capability for planning and formulation of viable schemes. To rectify these lapses, therefore, strengthening and unifying the administrative structure at various levels is imperative. Also the involvement of village assemblies when selecting beneficiaries will ensure that only the more deserving households are selected for IRDP assistance.

JD INDIA CONSORTIUM A HELPING HAND

Responding to a strong plea by India for continued concessional aid, the Aid India Consortium agreed to provide development assistance to the tune of \$4b. This development aid will help India to achieve viability in balance of payments, a higher growth rate of exports and to maintain debt service ratio within reasonable limits.

The consortium meeting held at Paris was attended by representatives of donor governments of Australia, Belgium, Canada, Denmark, France, West Germany, Italy, Japan, The Netherlands, Norway, Sweden, the UK and the US. Apart from this representatives of multilateral financial and aid agencies including the Asian Development Bank, International Monetary Fund and the United Nations Development programmes were also present. While reviewing India's achievements on the economic front favourably, the consortium also endorsed its needs for continued concessional assistance to sustain economic development aimed at modernisation and alleviation of poverty.

Its \$4b assistance for 1985-86 which, in terms of SDRs (special drawing rights) is about 3.9b SDRs, registers an increase of 5.5% over the 3.7b SDRs in 1984-85. And this increase offsets the rate of inflation in donor countries. The World Bank, on its part, has managed to keep the aid at last year's level by increasing assistance from the International Bank of Reconstruction and Development (IBRD) at market rates thus making up for the reduced aid from the International Development Association (IDA) which is its soft loan affiliate. The bank's assistance will, therefore, be about \$2.5b while that of IDA will decline sharply from more than \$900m last year to \$650m in the current financial year. The IDA assistance has, in fact, registered a decline from 40% of the total IDA funds in 1980 to 23% this year. Rather regrettable considering that financial aid although constituting only 7% of the total investment, is still of crucial importance to India as it helps avert debt-servicing problems. And the reduced size of IDA VII from \$12b to \$9b coupled with the inclusion of China among IDA beneficiaries portends a further decline in this soft aid.

India's Seventh Five Year Plan envisages an average annual Gross Domestic Product (GDP) of 5%, an accelerated industrial development and export growth rate and lays stress on higher productivity, greater employment opportunities and primary reliance on domestic savings for financing of investment. Still it will need commercial loans, for the bulk of investment in the country is absorbed by infrastructure and, therefore, net transfer of resources is required for longer periods. And for that it has already established its credit worthiness in the international market, thanks to prudent debt management.

ASSAM

N DEEP WATERS

With floods and inter-state border conflicts with Nagaland disrupting life in Assam, the army and security forces have their hands full trying to combat these natural and man-made threats.

For, despite the talks between the CMs of Nagaland and Assam, a lasting solution to the frequent inter-border disputes between the two states has not been found. In fact, no sooner had the talks concluded than the trigger-happy Nagaland Armed Police resumed its attacks on border villages in Assam with impunity. Complete villages were razed to the ground and fleeing villagers shot as a result of which thousands of Assamese villagers had to be sheltered in relief camps. The cessation of border traffic further disrupted conditions. It was then that the Centre decided to intervene and hammered out an agreement between the warring states which would ensure immediate restoration of normal flow of traffic on the Assam-Nagaland border as also the resettlement of the

Apart from this, the Assam police force was deployed on these routes to ensure uninterrupted flow of essential commodities to Nagaland through Assam. The Centre has also decided to make informal inquiries into the recent violence to identify the police personnel indulging in lawlessness and take strong action against the guilty. Meanwhile the resumption of talks between the agitating Assamese leaders and the Centre have also been put off till some normalcy is restored in the state.

Meanwhile, the onset of monsoons brought their share of miseries for north-eastern India as a whole and Assam in particular. The Brahmaputra and its tributaries rose above the red mark in several places owing to incessant heavy downpours. Flooding of the Barak and Kushiara rendered 50,000 people in Assam homeless. All rail, road and air links were totally disrupted. Army had to be called in for massive rescue operations. Tripura, too, was in the same deep waters with the Manu and Deo rivers rising dangerously above all previous flood level records. It drove about 60,000 people into make-shift camps.

And, with an end to the monsoons nowhere in sight at the moment and with little hope of an early solution to the numerous problems in the north-east, the forecast is rather gloomy.

DRUG POLICY

PANACEA FOR PILLS

In yet another move to liberalise the critically important drug industry, the government, in early June, announced the delicensing of 82 essential and mass consumption bulk drugs as well as their formulations and threw their manufacture open to all sectors of the pharmaceutical industry. As a first step in this direction the Centre had earlier delicensed 12 drugs in March, this year.

With this announcement all pharmaceutical firms, whether large or small, private or public, wholly Indian or part-foreign owned will be able to freely make and sell bulk drugs and their formulations, that is, the final packaged form in which chemicals are traded and consumed. These delicensed drugs will no longer require a license under the provisions of the Industries (Development and Regulation) Act, subject to the provision that the industrial undertaking does not fall within the purview of the Monopolies and Restrictive Trade Practices (MRTP) Act or the Foreign Exchange Regulations Act (FERA). Apart from this the article of manufacture should not be reserved for the small-scale sector either. Another condition is that the concerned industrial undertaking should not be located or even proposed to be located within standard urban limits of a city with a population of more than 10 lakhs as determined in the Census of India 1981, or within the municipal limits of a city with a population of more than 5 lakhs. However, the delicensed units will be required to register themselves with the Secretariat of Industrial Approach (SIA), Department of Industrial Development.

This registration of delicensed industrial undertakings will be subject to clearance by the concerned Central and state authorities with regard to foreign collaborations, capital goods, pollution control, hazardous processes, and, most importantly, the environment angle.

The 82 delicensed drugs belong to 29 therapeutic groups ranging from vitamins to antibiotics, anti-TE and anti-leptotics to hormones, psychotherapeutic drugs to muscle relaxants and cardio-vascular drugs to pain killers.

This latest drug policy comes as a complete anti-thesis of the earlier drug policy and in net effect will deprive the Indian sector, both public and private, of protection granted to it under the 1978 drug policy which was essentially responsible for its growth in the past few years. Also the entry of foreign firms as formulators which this policy ensures will not only deprive Indian drug companies of profits but may well prove to be a setback for the processes of indigenisation and technology upgradation.

J.S.

HIGH BILLING

In the just ended Budget Session the Lok Sabha has given a creditable performance. For, the passing of over 20 Bills of crucial national importance apart from the various Bills relating to the Budget is no mean feat! Important among these Bills were the Bhopal Gas Leak Disaster (Processing of Claims) Bill, the controversial Andhra Pradesh Legislative Council (Abolition) Bill, the Arms (Amendment) Bill, and lately the Terrorist and Disruptive Activities (Prevention) Bill. The House was also able to discuss the detailed Budgetary demands of 15 ministries.

LATEST IN SCIENCE

plans forward engineers which can be used to design tailor-made systems and hence are broader in scope and have wider applications.

Mysterious Black Holes

BLACK HOLES are so dense that no light or radio waves can escape from them. How, then, can astronomers unravel their mystery? The answer lies in gravity waves. According to Einstein's general theory of relativity, the collapse of a star or any other event that generates a lot of mass movement quickly, should result in a change in gravitation.

However, nobody has seen a gravity wave so far. Since the sixties Dr Joseph Weber and his colleagues at the University of Maryland in America have been trying to 'catch' a gravity wave by watching massive bars of aluminium for minute contractions and expansions.

Researchers at Stanford University, the Cern Laboratory in Geneva, Louisiana State University and the University of Maryland are preparing a new international gravity wave hunt. They are planning to use supercooled aluminium bars which would cut out much of the noise from random atomic motion within the bars.

However, since the detectors can cap-

ture events only within our galaxy and since stars collapse within our galaxy only once in 30 years, we may still have a long way to go before some light is shed on the black holes.

Computer Consultants

IN SPITE of the giant steps taken by science, computers are still a long way from imitating the logic and reasoning—much less the complex creativity and subtlety—of human thought. But that does not mean that they are not trying.

The latest in computer software are the expert systems which are programmes that store human expertise on a disc making the computer a consultant. They have two key components, namely, a specific knowledge base of information and a logic system which applies the appropriate part of the stored data to solve a problem.

All that the layman has to do is to have an electronic question-and-answer session and thus receive help from the computer. Besides these easy-to-use pre-programmed systems, there are 'shells' or

New Look For You

TO SEE what you would look like in different hairstyles you do not have to go to the barber and actually have a hair-cut anymore. The computer can show "you" in different hairstyles and you can then decide which one you look best in.

This image-processing system has been made possible by combining the life-like freeze frame pictures of video cameras with a computer's graphics capabilities. By reproducing existing images onto computer monitors, video cameras can provide an electronic first draft 'sketch'. Computer graphics programmes can then be used to manipulate the frozen images without altering the original pictures.

These image-processing systems will prove to be of tremendous use for plastic surgeons, orthodontists, hair-replacement and styling centres, cosmetic artists, etc. It is also expected that in future this will find applications in electronic mail, business graphics slide shows and at-home video shopping.

Answers to

TEST YOUR WORD POWER

- apprehend:** A: to arrest; take into custody. Computer technology is helping law-enforcement officers seek, identify and apprehend criminals with far greater speed than in the past.
- austere:** D: harsh; without comfort or luxury; simple and plain; severe. Though Hanoi has more vitality than in its austere wartime days, life for the more than two million inhabitants is stark.
- avid:** D: greedy; urgently eager; enthusiastic. Judging from the merchandise available in the Chongqing (China) department stores and the thousands of bazaars and shops, city residents have become avid consumers.
- barricade:** A: to block off with an improvised fortification. Tensions between the Akalis and the Centre came to a head in June '84 after armed Sikh radicals barricaded themselves in the Golden Temple in Amritsar, Sikhdom's holiest shrine.
- berserk:** A: be, go uncontrollably wild; violently destructive; frenzied; crazed. The TSP (Tamil Nadu Special Police) went berserk on All Fools Day, beating up sleeping civilians, looting and damaging public property worth thousands of rupees.
- brawl:** B: noisy quarrel or fight; row. Beer brawls have become a regular event at American hockey and football games.
- buoy:** A: to raise the courage or spirits of; keep up hopes. While the recent change in the Sudanese Government has buoyed the national mood, the country's awesome problems remain.
- dismember:** A: to divide up (a country, etc); partition; tear or cut the limbs of. Ten years ago Pol Pot's Khmer Rouge guerillas swept into Phnom Penh and began their sadistic work of dismembering Cambodia.
- erode:** A: to wear away; eat into. The mammoth storm surges caused by cyclones can erode 30 to 50 ft of beach within an hour.
- fad:** D: fanciful fashion, interest, preference unlikely to last. One way or another, students in the Soviet Union often adopt, belatedly at least, Western fads.
- glare:** C: strong, fierce, unpleasant light. Mesh screens are the simplest and cheapest way to cut glare from VDTs (video display terminals) which causes eye-irritation, fatigue and focussing problems to the VDT users.
- levy:** A: to impose; collect by authority or force. Britain's National Union of Journalists has a stern code of conduct and wide-ranging powers to levy fines against those who violate its rules.
- lump:** D: hard or compact mass usually without a regular shape. Recently biochemists at NASA's Ames Research Center in California presented evidence that life on earth may have gotten its start in lumps of clay.
- lurid:** C: violent and shocking; sensational, causing horror or revulsion; gruesome. Scotland had a lurid history of soccer turmoil until it banned the sale of alcohol at stadiums; hooliganism dropped sharply.
- mirage:** C: any illusion or hope that cannot be realised. The continuing anarchy in Beirut shows that *pax Syria*—the once vaunted ability of Mr Assad's Syria, and nobody else, to impose peace on Lebanon—may still be a mirage.
- notion:** B: idea; opinion; view; conception. The notion that factories should be allowed to funnel some of their profits back into expansion was first tried in Chongqing, the largest city in the world.
- ossified:** C: rigid; unprogressive. Young, smart and tough, Mikhail Gorbachov appears determined to impose new discipline and efficiency on the ossified Soviet system.
- referendum:** D: the submission of a proposed law to a popular vote. Recently, the Bangladesh President Lt Gen Hussain Muhammad Ershad captured 94% of the vote in a controversial public referendum on his rule.
- spartan:** C: frugal; marked by simplicity or avoidance of luxury and comfort. With their loose, undisciplined style, the Saigonese have never made the adjustment to the strict political controls and spartan economy that are tightening the screws on so much of the country.
- supersede:** A: to take the place of; supplant. Joginder Singh's (the father of Sant Jarnail Singh Bhindranwale) selection of a number of extremists as members of the ad hoc committee to run Sikh affairs indicated that it was an attempt to supersede the more moderate leadership of the movement.

PERSONALITY DEVELOPMENT

Preparing For An Interview

BY PRABHA GOPAL

Selection at an interview is hinged on the image you portray before the board. So know yourself, your aspirations and interests thoroughly... and victory would be yours.

Ahl The interview letter! The words sound sweet music for the desperate job-seeker and even motivate him to toil hard. An interview call also means half the battle won, and carries the hope of total victory. Nevertheless, there is always a slip between the cup and the lip. So here's to help you reduce your slips.

The interview call is sent out only to a handpicked few selected from the myriad of applicants for the job. If you happen to be at the receiving end, you have to compete with a handful of those who have almost the same qualifications, ability and potential as you. And you have also to emerge as the best among these equals.

The purpose of an interview is to assess the candidate's personal traits and behaviour, which, in the long run, play a vital role in efficient job management. It is also a forum where the employer tries to assess the credibility of the resume presented to him earlier, by the latter. It is not a 'strict cross-examination' but an information dialogue intended to judge the candidate's alertness.

The moment the interview letter is in your hands you have to remember that the ball is in your court. Success would entirely depend on your capacity to spin the ball to the best of your ability and skill. Now, this capacity needs to be developed by way of practice as does every other art. There is, in fact, a preparing strategy that can even see you through your maiden interview.

Strategy

The initial stages of preparation involve the defensive strategy of "knowing the enemy". Make an effort to learn all about the organisation you intend to work for and the nature of the work you would be expected to do. If you are shrewd enough you may try to analyse possible ways and means of improving the work methods. Such an analysis should equip you to

answer one standard question posed by most employers: "In what ways do you think you can make a contribution to our organisation and how do you think you can help us perform better?"

The image you portray in the interview is bound to be the turning point in your success. So know yourself and your plus and minus points. Here's where an honest self-assessment comes in handy. This would help you realise what you are ideally suited for and also answer questions like: "How would you describe yourself as a person?" "What are your aims in life?"

In the case of candidates with prior job-experience, questions like "What was the nature of work in your previous job?" "Why do you want to change your job?" figure most.

As part of your strategy for preparing for an effective interview, you may try to

coordinate with another student in mock interview sessions where one of you may assume the role of the interviewer, and the other the role of the interviewee.

Lastly, how you present yourself in the interview is as important as what you have to present. Dress appropriately and cultivate a sense of confidence in the presence of the interviewer; nothing conveys lack of self-confidence more than a limp handshake, a clumsy *Namaste* said in a shaky voice, fidgety hands or wandering eyes. Try to be relaxed and composed.

A word of caution on how and how not to answer the questions put to you by the board. Be candid, confident and fearless. At the same time do not be impulsive, arrogant or curt in case the board members try to corner you on a particular point. Be honest, for, honesty goes a long way.

(To be continued)

KEEP THE BALL ROLLING

One basic courtesy is often overlooked by job-seekers, after the interview. This is the letter in appreciation of the fact that they were given an opportunity to be interviewed. Such a prompt action would help in keeping their name fresh in the interviewers' mind; and, of course, the communication ball can also be kept rolling.

Two other kinds of letters are also important: the letter of acceptance and the letter of rejection. These letters should be promptly despatched as soon as the interviewee has accepted or rejected a job. See the sample letters below:

In Appreciation

Your Address,

Employer's Address
(If possible, use employer's name)

Dear

I appreciated the opportunity to talk with you on *(date)*. The information you shared with me about (name of the company) was excellent, and I am excited about the possibility of applying my education and experience to the position offered by you.

If I can provide you with any additional information, please let me know. I look forward to hearing from you soon.

Yours sincerely

Letter of Acceptance

Your Address,

Employer's Address

(If possible, use employer's name)

Dear

I am very pleased to accept your offer *(state offer)* as outlined in your letter of *(date)*.

(Mention enclosures—application, resume, or any other related information)

I look forward to meeting the challenges of the job and I shall make every attempt to fulfil your expectations.

Yours sincerely,
Signature
Your name typed

Letter Of Rejection

Your Address,

Employer's Address
(If possible, use employer's name.)

Dear

After considerable thought, I have decided not to accept your offer of employment as outlined in your letter of *(date)*. This has been a very difficult decision for me. Nevertheless, I thank you for your consideration. Your confidence in me is greatly appreciated.

Yours sincerely,
(Signature)

UTILITY OF MAPS-3

BY N.K. HANS

Questions on map interpretation are a part of competitive exams, viz. Civil Services Prelims, Bank PO exams, etc. This is the third in the series on map reading, emphasising on India's physical features.

Understanding our country India is understanding its geography, polity, economy, history and other social and cultural aspects. It is rather interesting to study these aspects through maps. Geography and maps are very closely related. Map-1 shows some of the physical features of India, a country of great geographical extent. India, as you see, is well marked off from the rest of Asia by mountains and seas which give it a distinct geographical entity. Bounded by the Himalayas in the north, it stretches southwards and at the Tropic of Cancer, tapers off into the Indian Ocean between the Bay of Bengal on the east and the Arabian Sea on the west.

At the macro-level the Indian sub-continent may be divided into three broadly defined physiographic units: (a) The Himalayan and the associated moun-

tain chains (b) The Indo-Ganga-Brahmaputra plain; and (c) The peninsular plateau.

The boundary line between the arc of the Himalayan ranges and the plains of India is clearly marked out. This, however, is not so in the case of the boundary line between the plains and the peninsular plateau. The Himalayan mountain chain, all along its longitudinal axis, is arranged in a series of three parallel ranges sometimes referred to as (i) Great Himalayas (ii) Lesser Himalayas and (iii) Sub-Himalayas; at other places they are called the inner, the middle and the outer Himalayas. Contours are the iso-lines joining the places of same height. As you see in Map-1 the contours have been drawn at heights of 1,200 ft, 3,000 ft, 4,500 ft, 6,000 ft, 9,000 ft, 12,000 ft and 18,000 ft. The altitude as well as physiographic complexity increase from the outer to the innermost Himalayan ranges. The Great Himalayas which have an average altitude of 6,000 m have, within them, almost all the prominent Himalayan peaks like Mt Everest (8,848 m), Kanchenjunga (8,598 m) and Nanda Devi (7,817 m) (shown in the map as 1, 2 and 3 respectively). In the northwest the Himalayan ranges coalesce with the diversely arranged mountain chains of the Kara Koram, the Hindukush, Kunlun, Pamir, etc. Also note the positions of Sulaiman

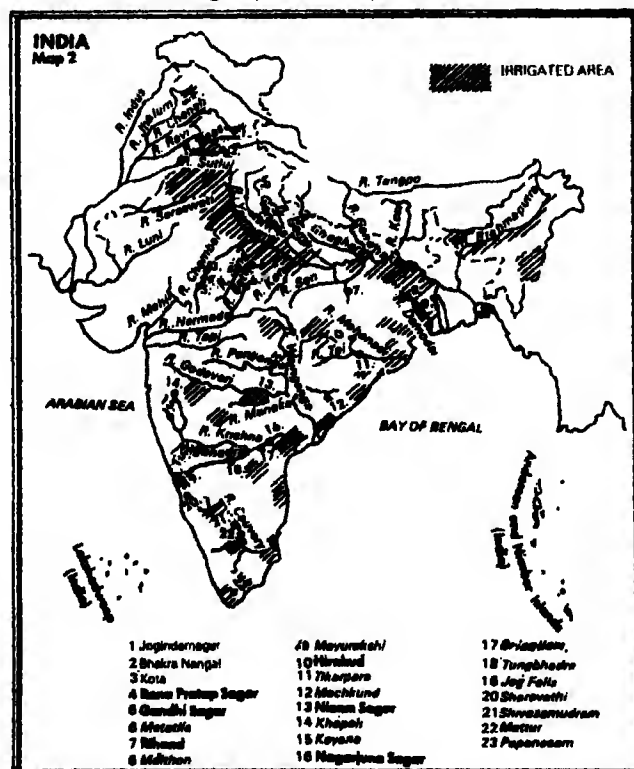

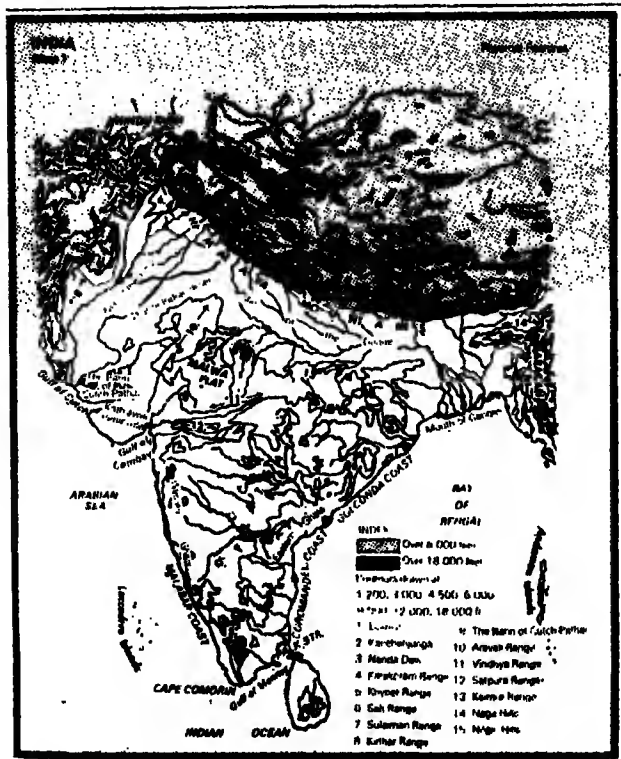

ranges, Salt ranges, Kirthar ranges and the Naga hills.

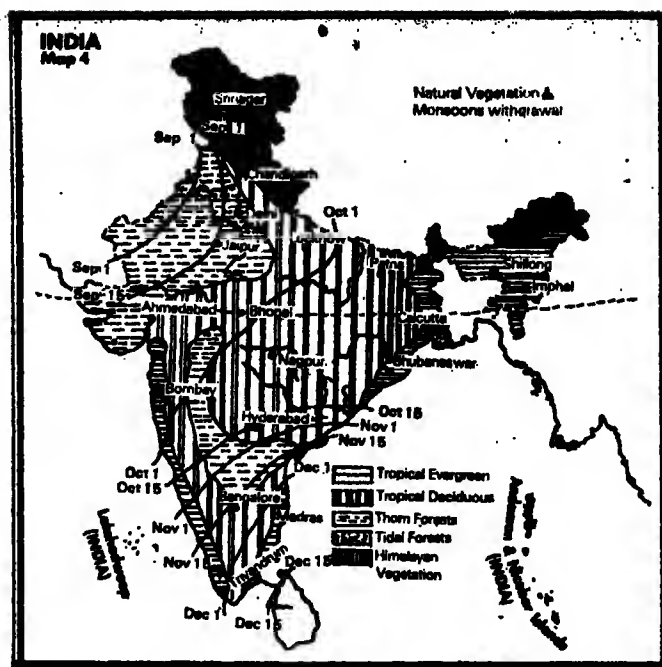

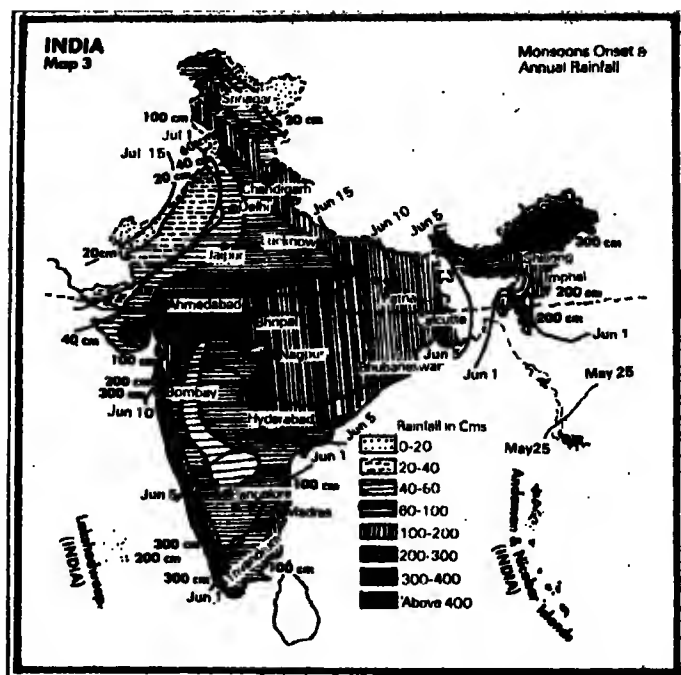

The Plains

The great plain of India, formed by the Indus, the Ganga and the Brahmaputra rivers has been an area of immense significance. Generally the plain is recognised as consisting of four divisions, each characterised by important differences in surface relief. They are (i) Bhabar (ii) Terai (iii) Bhangar and (iv) Khadar.

Rising from the alluvial plains of UP and Bihar, south of the Yamuna-Ganga line, the great Indian plateau extends towards the south to encompass the entire peninsula. The outlying projections of the peninsular plateau represented by the Aravallis, Rajmahal and Shillong Hills mark the northern limits of the Himalayas. The plateau first slopes to the north and the east and thereafter the Vindhya-Kaimur range to the west. The topography of the Deccan and the Karnataka Plateaus is dominated by the Western Ghats. Near Goa, the Ghats dip to 900 m but rise once again in the Nilgiri Hills. The Eastern Ghats are less impressive and form a discontinuous crest on the eastern periphery of the plateau. They are represented by an irregular line of hills, such as the Nallamalais, Velikondas, Palikondas and the Pachmalais.

The Indian islands in the Bay of Bengal consist of the Andamans (about 200 islands) and the Nicobar (19 islands), group extending for 350 km. The Arabian Sea islands consist of the Lakshadweep group formed by the coral deposits off the

Kerala coast.

River System

Map-2 depicts the Indian river system and its potential uses in terms of irrigation, thermal and hydel power projects, etc. Broadly speaking the river systems of the country can be classified on the basis of their origin, viz, (i) The Himalayan rivers and (ii) the peninsular rivers. The Himalayan rivers belong to three principle river systems—Indus, Ganga and the Brahmaputra, originating on the southern slopes of the Tibetan highlands. Initially they flow parallel to the main axis of the mountains in longitudinal troughs and then take a sudden bend towards the south piercing the towering mountain crest to reach the plain. The Himalayan rivers are typical examples of antecedent drainage.

The Indus river rises in Tibet near the Mansarowar lake and receives Himalayan tributaries such as Gartang, Zaskar, Dros, Shyole, Shigar, Nubra, Gilgit and the Aunza in J & K. Near Attock it receives the

Kabul and its tributaries. Some of the important tributaries below Attock are Kurram, Tochi and the Zholo-Gomal. The collective flow of its well-known Punjab tributaries—Sutlej, Beas, Ravi, Chenab and Jhelum (their ancient names being Sutudri, Vipas, Parushri, Asikni and Vibsta respectively and the Greek names being Zaradrus, Hyphasis, Hydraotes, Akesines and Hydasper, respectively), goes to make the Panjnad which falls into the mainstream a little above Mithrakot.

With a total length of 2880 km the Indus is one of the larger rivers of the world. India can utilise only 20% of its total waters as per the Indus Water Treaty with Pakistan. River Jhelum rises in Verinag; Chenab, Ravi and Beas in the Himachal mountains and the Sutlej in Tibet.

The Ganga rises in the Himalayas and flowing south-westwards branches out from the hills near Haridwar. Tributaries on the right include Jamuna, Son, Punpun

and Tonis, and on the left Ramganga, Gomati, Ghaghara, Gandak, Kosi and the Mahanadi. In Bangladesh it flows as River Padma.

Major rivers of the peninsula such as Mahanadi, Godavari, Krishna, Cauvery flow eastwards into the Bay of Bengal. Rivers which flow westwards are generally small. Narmada and Tapi are the important west flowing streams which occupy structural depressions. The Godavari rising in Nasik district of Maharashtra and joining the Bay of Bengal in Andhra Pradesh is the longest of the peninsular rivers. It is often referred to as Vridha Ganga or Dakshin Ganga.

To utilise the water resources of the river system several dams, river valley projects and hydel power projects have been constructed. (see Map-2). Yet India remains a rain fed country and monsoons play a very important role in agriculture and natural economy

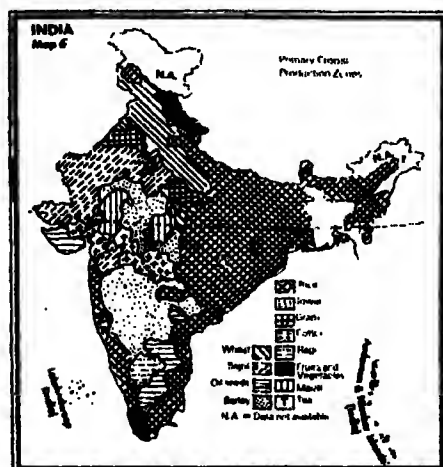

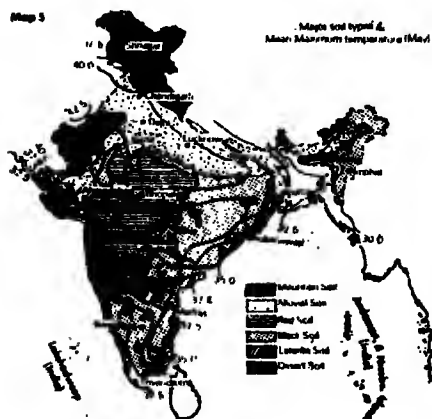

Rainfall

Map-3 shows the distribution of annual average rainfall in different parts of the country. There are areas where there is virtually no rainfall and others where it rains almost throughout the year.

The same map shows dates of the onset of monsoons. The Indian sub-continent receives the bulk of its rainfall during the southwest monsoon period. In about a month's time, the rain-bearing winds which are strong, blowing at an average speed of 30 km per hour, cover almost the entire country. Note the date and directive shown in Map-3.

The south-west monsoon begins to retreat from north India by the second week of September. Unlike the sudden burst,

(Continued on page 67)

ESSAYS

What do written tests, group discussions and interviews have in common? Water pollution, freedom of the press, social forestry, 'freak' TV transmissions...

You could be asked to write, talk or discuss steps being taken to curb the first (topic), or the significance of the second in a democratic polity, or the importance of the third in present times, or what's responsible for the fourth... For substantial answers that should 'open' every door for you, here's some solid ground work.

CODE FOR THE PRESS?

For democracy to thrive, a free press is a must. It is not for nothing that the press is regarded as the watchdog of democracy. And since democracy is a way of life, the role of the press is as multi-faceted and multi-dimensional as life itself. In the course of playing this role, it often comes into conflict with the government. The Indian experience has been that from time to time, blatant as well as not-so-blatant attempts are made to curb the freedom of the press which, taken as an extension of 'freedom of speech and expression', is a Fundamental Right, guaranteed by the Constitution.

The constitutional restrictions on this right notwithstanding, a more elaborate code has been sought to be spelt out, the deliberations of the recently held state information ministers' conference in New Delhi being the latest attempt. It was suggested at the conference that the press does not follow any professional code or standards. However, it is a matter of common knowledge that this accusation can be justifiably levelled against only a section of the press. There is no conceivable reason why the more responsible section of the media should bind itself because of the lapses of a few.

Further, if any such code is to be effective, it cannot contain vague formulations so as to become practically irrelevant. It must comprise detailed do's and don'ts covering the entire gamut of life. The formulation of such an exhaustive code is next to impossible, and if it is made and implemented it would tantamount to enforcing rigidity in a line of work that needs flexibility. After all, everyday situations are so fluid and complex that the press, in order to possess a semblance of credibility, must be free from any straitjacketing. Exactitude is therefore unreasonable. **only broad principles should act as a**

There are already quite a handful of legal and constitutional guidelines, which constitute the framework within which the press is required to function. When a section transgresses, it can be hauled up before the Press Council. Moreover, the Council itself has built up the equivalent of case law through adjudicating on a variety of matters. There is, therefore, no dearth of codes for the press.

Under the circumstances, any enlightened citizen cannot help but feel that suppression of facts is what is aimed at by the protagonists of such a detailed code of conduct. It is a fact that Indian public opinion has matured. Prompt dissemination of accurate and complete information, soberly portrayed, can easily mobilise the vast majority of law-abiding and right-thinking people against evil-doing. Therefore, undue official interference must be avoided. After all, if the press is to become responsible, the government must first take the initiative to be responsive. V.K.

SOCIAL FORESTRY

After the popular appeal of the Chipko movement and its southern counterpart, the Appiko movement, the social forestry programme has again given India's rural population something to think about.

Though initially introduced by the National Commission on Agriculture (NCA) in 1976, the aims of the social forestry programme were clearly articulated in the Sixth Plan (1980-85) which allocated Rs

FOR THE FORESTS

India's forests certainly deserve a better deal. Recent researches conducted by the National Remote Sensing Agency, Hyderabad reveal that the total geographical area under forest cover is just 14.10% which is far below the minimal figure of 33% necessary for maintaining the right ecological balance as established by the National Commission on Agriculture.

Despite the enactment of the Forests (Conservation) Act, 1980 by the Government of India, for the prohibition of the conversion of reserved forests into any other type of forest land or its use for any non-forest purposes without prior permission of the Central Government, the heaviest depletion has occurred in these reserved areas. The worst affected states are Haryana, Rajasthan, West Bengal, Jammu and Kashmir, Maharashtra and Gujarat. In this critical situation, the successful implementation of the social forestry programme is undoubtedly imperative.

3518m or 51% of the total amount reserved for forestry for its financing. The major objective of this policy, as stated in the Sixth Plan, is to make India's rural population self-sufficient in terms of food, fodder fuel and other domestic needs, as well as to meet the requirements of village industries.

In rural India since firewood is one of the primary sources of energy, it became evident that the rapid denudation of forests, especially over the last few decades, due to the effects of industry, commerce and population pressure, would ultimately lead to the collapse of the firewood economy and thereby place great pressures on energy from mineral resources. Therefore, to avert this crisis the social forestry programme with special emphasis on increasing the quantity of fuel wood, bamboo and timber to fulfill the growing fuel requirements of the countryside, was enunciated.

The first four years of the Sixth Plan saw the planting of trees on 1,20,000 hectares of land. With the help of foreign assistance social forestry projects have been launched in nine states including Gujarat, Punjab, Karnataka, West Bengal, Kerala, Meghalaya. Recently, Bihar started its own social forestry programme too. The World Bank, Sweden, USA and Canada have provided assistance in the implementation of these projects. The Government has also taken special interest in the area and this is reflected in the PM's decision to create a separate ministry for forests at the Centre.

A major factor in support of the social forestry programme is that a great deal of rural land is available which is unfit for cultivation and hence can be utilised for the growing of trees, thereby serving a dual purpose of providing fuel wood for the villagers and timber for small village industries. Besides, if such land is not utilised it usually becomes useless for any kind of cultivation due to ecological deterioration. Also, apart from protecting the soil and environment, such a policy has the merit of providing rural employment.

This programme has involved the planting of trees in government-owned and panchayat lands and other public areas in the villages. Provisions are also made for the planting of trees along roadsides. In the case of individual cultivators, efforts are being made to raise private sources of wood and orchards on their lands.

Small and marginal farmers owning less than two hectares of land in unirrigated areas comprise the backbone of this programme. Within this category, any farmer who raises a plantation in a maximum area of half a hectare is given cash incentives for the first three years in addition to free seedlings. Efforts are also made to involve

the scheduled tribes and castes, landless labourers and rural women-folk. The leadership for this programme has come mostly from primary school teachers and other local leaders owning little land

Within the short time period of its operations, certain doubts have been cast regarding the results of the social forestry programme. The type of trees usually planted such as the eucalyptus, are those which fulfill industrial and commercial requirements, and therefore the social and environmental purposes which constituted the principal aims of the programme have been neglected. Further, the major beneficiaries are not entirely the weaker sections, but the relatively better-off medium and larger farmers. However, it is hoped that these passing obstacles will be eliminated in the pursuit of the overall objectives of the programme.

A.N

WATER POLLUTION IN INDIA

The recent setting up of the Central Ganga Authority to cleanse the polluted Ganga has suddenly increased public awareness of the problem of water pollution in India. While the Ganga is the largest river system in the country and carries 25% of India's water wealth, the pollution scene in other major rivers is no less alarming. According to a survey by the National Environmental Engineering Research Institute, Nagpur, more than 70% of the available water (estimated at over 1,000b cubic metres per year) in India is polluted. Unlike the industrialised countries of the West, the major source of pollution in Indian rivers is human and municipal wastes. Industrial effluents account for only 20% of the total pollutants. Most of these wastes are discharged untreated into the water courses. Out of India's 3,119 towns and cities, only 217 have partial or full sewerage and sewage treatment facilities. These cover less than a third of the country's urban population. And, even though India is predominantly a rural country, one out of five Indians lives in urban areas. Urban population makes up almost a fifth of India's total population. The most revealing fact is that more than half of the country's total urban population lives in only 142 cities which have a population of more than 1,00,000 each. One-fourth of the total urban population lives in nine metropolitan cities only, each of which has a population of 1m or more. Untreated wastes from such highly concentrated human populations, when discharged into rivers cause havoc with the ecosystem. People drinking contaminated water fall prey to a host of illnesses which cost the country dearly. It is estimated that nearly two-thirds of all illnesses in India are related to water pollution. Water borne

WATER SUPPLY AND SEWERAGE FACILITIES IN MAJOR INDIAN CITIES

City	Population (1971)	Source of water	Qty. of water supply (MLD)	If sewerage exists	Fraction served by sewer	If sewage treatment plant exists

MLD = Million Litres per Day

Source: Central Board for the Prevention and Control of Water Pollution.

diseases such as jaundice, cholera, diarrhoea and dysentery take a heavy toll every year. About 73m workdays are lost each year due to water-related diseases.

Untreated sewage affects the quality of water in two ways—by reducing the level of dissolved oxygen and by increasing the concentration of harmful bacteria. When dissolved oxygen is reduced, fish and other aquatic fauna die. A high bacterial load makes the water unfit for human consumption.

Wastes discharged into a river comprise mainly dissolved solids and suspended matter. The latter include harmful bacteria such as those found in human faeces, which scientists call 'coliforms'. Normally, river water also harbours other useful organisms known as aerobes and protozoa, which purify the polluted water by killing harmful bacteria and degrading organic wastes into harmless products. These organisms normally obtain oxygen necessary for survival from the dissolved

oxygen in the water. The amount of oxygen required to sustain these waste-degrading organisms (expressed in mg per litre) is known as the biological oxygen demand, or BOD, of water. Clean, unpolluted water has a BOD of about three mg per litre. With increasing pollution load, BOD also goes up. But if it exceeds the level of dissolved oxygen in water, as happens if the pollution is very high, the waste-degrading organisms die and the river loses its self-purificatory mechanism.

One of the simplest ways to prevent this from happening is to control pollution at the source itself that is, to treat the sewage before it is discharged into the river. This is what has been proposed as the first phase of the Ganga Action Plan. Being India's largest river system, the Ganga has a catchment area of more than 9,00,000 sq km. The river's main course is more than 2,500 km long and covers 26% of India's land mass. There are 100 towns along the banks of the river including 27 with pop-

ulation more than 1,00,000. At the Central Pollution Control Board has shown that 34% of the total pollution of the Ganga is caused by sewage and industrial effluents from these cities.

The main plank of the Ganga Action Plan is the setting up of 54 sewage treatment plants in the 27 heavily populated cities along the river. The plan is to divert the sewage from these cities through a line parallel to the river bank so that the sewage can be treated scientifically at appropriate locations. At the treatment plants the sewage will first be allowed to settle in large tanks where solids will get separated from liquid. The separated solids will then be fed into a digester to produce methane gas and manure. The liquid from the settling tanks would then be passed through a biological aerator which would produce more solids and almost clean water. This clarified water will be used for aquaculture for growing algae and fish. The water flowing out of the aquaculture ponds can be used for irrigation or can be discharged into the river.

The most attractive feature of the whole scheme is its waste recycling capability. Each resource recycling unit will not only be cleaning the river but would also produce useful resource such as methane gas, manure and fish. According to an estimate of the Central Pollution Control Board, the treatment plants when commissioned, will yield a net profit of Rs 11 crore annually from the sale of manure, piped biogas, fish and irrigation water. If successful, it will blaze a new trail in water pollution control in India.

BIMAN BASU,

'FREAK' TV TRANSMISSIONS

One of the main disadvantages of television compared to radio is the inability of a TV set to receive programmes from a distant station. The normal range of even the most powerful TV transmitter is limited to a couple of hundred kilometres at the most, but radio programmes can be received thousands of kilometres away. The reason for this is the difference in the frequency of electromagnetic waves used in the two media. Frequencies used in common radio broadcasts (except FM) range from 550 kilohertz (kHz) to about 26,000 kHz, while television programmes are transmitted at frequencies between 30 megahertz (MHz) and 900 MHz (1 MHz=1,000 kHz).

The comparatively low frequency radio waves can be transmitted over long distances because they can pass through ground (as ground waves) or are reflected easily by the earth's ionosphere. But the very high frequency television signals can travel only in a straight line as far as the 'line-of-sight' from the transmitter because they are neither conducted through ground nor are they reflected by the ionosphere.

But sometimes TV signals are received from stations thousands of kilometres away. For instance, when the Madras station of Doordarshan started functioning in August 1975 with a low power transmitter, viewers in Madras often received, in the evenings, TV programmes from Calcutta, more than 1,400 km away. Viewers in Pune often received programmes from Karachi. On some occasions, signals from Chinese TV stations have

been received in Delhi. And now there are reports of Bombay TV programmes being received in Karachi.

Such 'freak' receptions occur only during certain periods of the day and in certain seasons. Several explanations have been put forward by scientists to explain these unusual phenomena. One of them is by tropospheric propagation through a phenomenon known as 'ducting' in the lowest level of the earth's atmosphere called troposphere which extends to a height of about 20 km at the equator. In this region, especially immediately before the monsoon season, there is a sudden rise in moisture content and changes in temperature and pressure which make it possible for very high frequency TV signals to travel long distances through the troposphere. Such conditions may also arise over sea surfaces as in the path between Bombay and Karachi.

The second explanation proposed is the occurrence of events known as 'sporadic-E' in the E-layer of the ionosphere which normally does not reflect TV signals. During a sporadic-E event, there occurs a sudden rise in the concentration of electrons in the E-layer which makes it reflect high frequency TV signals.

The third possibility is the modification of the ionosphere by high power radio waves beamed from radio transmitters. Such a possibility has been experimentally proved. In such an event, high power beams from radio transmitters have been found to increase the reflectivity of portions of the ionosphere for high frequency waves, which could enable TV signals to be received several hundred kilometres away.

B.B.

UTILITY OF MAPS

(Continued from page 64)

the retreat is gradual (see Map-4).

Vegetation

Map-4 presents an outline of the geographical distribution of vegetation in India. Compare this with Map-3 and note the correlation between the two. On the basis of rainfall, India, outside the high Himalayan region is divided into three major vegetation regions: The tropical deciduous forests and the thorn forests and scrubs.

Soil

Map-5 shows the soil distribution in India. Note the major soil belts in India. In Map-3, Map-5 and Map-6, are compared, we find that there is a definite correlation between the major physical division, different soil belts, the average annual rainfall and crop distribution.

Map-5 depicts the mean, minimum temperature in the month of May. Note

the areas which have the highest maximum temperatures. The steepest gradient of heat is in the north-west, shown by the line of increasing temperature and decreasing pressure. In north-west the temperature may go up as high as 48°C. Map-4 shows the primary crops grown in different parts of India. India has been divided into 12 cropping zones on the basis of the relative proportions of the cropped area under various crops in different parts of the country. It reflects the first ranking position of the particular crops in India favoured by the suitable combination of physical and cultural factors required for each of them. It is observed that rice is widely cultivated in almost all states of India except Rajasthan. It is mainly distributed in the great plains of north India, coastal plains, terraced valleys of low Himalayas and in irrigation pockets elsewhere.

If you refer to the previous maps, you will observe that all high productive areas coincide with areas of heavy and well dis-

tributed rainfall of over 100 cm or of extensive irrigation, temperatures remaining generally above 25°C during the season. Wheat, the second important food-grain is grown in north-west India, where the annual rainfall is 50-75 cm. One half of the wheat production comes from Punjab and UP alone. Also, UP is the sugar bowl of India. The second position in area and production of sugar is occupied by Maharashtra and the third by Bihar. The principal oil seeds grown are groundnut, sesame, rapeseed, mustard, linseed and castor seeds. Oil seeds are grown in coarse grain zones along with or in place of cotton. Cotton is the most important fibre plant of India and grows well in drier parts of the black cotton soil of the Deccan Plateau in Maharashtra, adjoining MP and Gujarat. The other important growing tracts are Punjab-Haryana and their adjoining areas in the north-west. Please note the distribution pattern of other primary crops in the map.

(To be concluded)

Coffee Break

The Anatomy Of Terrorism

Why are certain sections of society more vulnerable to the call of terrorism than others?

Because, by virtue of their education, they are able to see the limitations of a social order.

Because they are fanatical believers in a cause or a faith and are more than willing to employ violence and terror to further it.

Because they are prepared to kill and be killed in the process; because they prefer death to life.

Because participation in a terrorist movement fills them with a sense of glorious mission and gives them a romantic identity.

In a well-researched write-up, published in The Indian Express, HIRANMAY KARLEKAR analyses the rise and growth of terrorism in India and the world. Excerpts:

What sort of people become terrorists? Why do they become terrorists? What makes terrorism grow? How can one contain it? The blasts of May 10 and 11, which left 77 dead and many more wounded in Delhi, Haryana and UP and more recently the Air India crash over the Atlantic on Jun 23 in which 329 lives were lost, have lent a new urgency to these questions.

For answers, one must see the events in Punjab and the spillover violence into other states in a historical and an international perspective. Historically, these do not constitute the first outbreak of terrorism in the country. As early as the second half of the 19th century, the Wahhabis, a puritanical Islamic sect originating in West Asia and steeped in fundamentalism, had unleashed a wave of violence in India. In 1872, one of its members assassinated Lord Mayo, the Viceroy, in the Andaman Islands.

Around the turn of the century emerged revolutionary terrorism which continued (despite harsh repression which produced periods of quiescence) as a highly romantic and admired strand of the freedom movement with its own legends and pantheon of heroes. Independence was followed by the adoption of an insurrectionary line by the CPI at its second Congress in Calcutta in February-March 1948

and the intensification of the violent, peasant movements in Telengana in Andhra Pradesh and Kakdwip in West Bengal. These were crushed before their formal withdrawal in 1951. Insurrectionary violence, involving acts of terrorism, erupted in Nagaland in the early '50s, in Mizoram in 1966, in Manipur in the late '70s, in Assam in 1979 and in Tripura in 1980. Extremists in the CPI-M emerged as a distinct stream in 1967 and formed the CPI (Marxist-Leninist) on May 1, 1969. They unleashed revolutionary violence in almost the whole of West Bengal and parts of Assam, Tripura, Bihar, Orissa, Andhra Pradesh, Tamil Nadu, Kerala, Maharashtra and Punjab before they were suppressed.

Terrorism is not a phenomenon exclusive to India. The US, Canada, almost all the Latin American countries, Ireland, Britain, France, the Federal Republic of Germany, Spain, Italy, Turkey, Lebanon, Egypt, Jordan, Israel, Burma, Thailand, Malaysia, Philippines, Indonesia and Japan have had a taste of it in the last two decades. The Symbionese Liberation Army of the US, the Front de Liberation du Quebec (Front for the Liberation of Quebec) in Canada, the Provisional IRA of Ireland, the Baader-Meinhoff group of the Federal Republic of Germany, the Red Brigades of Italy, the Palestinian guerrillas and the Arab terrorist groups such as the Black September organisation and the Red Army of Japan are familiar names.

As in India, terrorism has a long history outside. In Europe, for example, secret societies were a feature of almost the whole of the 19th century. Two of the earliest, formed in 1810 to resist Napoleon Bonaparte, were the Tugendbund (League of Virtue) of Germany and the Carbonari (charcoal burners) of Italy.

There were a number of successful and unsuccessful attempts at assassination. Napoleon III of France and the Empress escaped unhurt in 1859 when Felicio Orsini, a Piedmontese supporter of Giuseppe Mazzini who established the Young Italy movement in 1831, threw a bomb at them while they were on their way to the theatre. An attempt to kill Queen Victoria failed in 1872. Two attempts to assassinate the German Emperor produced Bismarck's anti-socialist law of 1878. Alexander II, a liberal Tsar, if there could ever be one, was assassinated in 1881; President Sadi Carnot of France in 1894; Empress Elizabeth of Austria in 1898; King Humbert of Italy in 1900; King Alexander and Queen Draga of Serbia in 1903

and King Carlos of Portugal in 1908. The assassination of the Austrian Archduke, Franz Ferdinand, at Sarajevo, catalysed World War I.

The terrorists who formed secret societies in 19th century Europe came from the ranks of army officers, students, teachers, professionals, intellectuals, the lower clergy and small proprietors. They also included some adventurers and criminals. As for the contemporary terrorists in Europe and the two Americas, Richard Clutterbuck writes in *Living With Terrorism* that "with rare exceptions (such as the provisional IRA) they are led and predominantly recruited from university students, graduates and sons and daughters of the affluent. They make the most of the few working class recruits they do manage to attract to their ranks, and especially so when these come from the deprived or coloured communities—as, for example, in the Symbionese Lebanon Army."

Revolutionary terrorism for India's independence drew its recruits from the students, particularly those from lower middle class homes, teachers of both schools and colleges, professionals and the white collar-lower middle class, which formed a part of a wider status group. Its striking arm was almost wholly made up of students and youth.

Though they had peasant support, the communist revolutionaries who implemented the line laid down at the CPI's second Congress in 1948 were mainly white-collar persons from the upper and middle classes. Several had been educated abroad and were known for their intellectual attainments. The leadership of the insurrections in Nagaland, Mizoram, Manipur and Tripura has also come from the educated middle class elements, with the youth playing a particularly important role in Tripura and Manipur.

Naxalites in West Bengal and elsewhere included some of the best and most idealistic students from the colleges and universities as well as some of the finest youth of the country. Their leaders were mostly intellectuals with upper and middle class backgrounds; their rank and file had a lunatic and criminal fringe.

Most of the elements mentioned above are to be found among the Punjab terrorists. Shahbeg Singh, a former Major-General of the Indian Army, who was killed during Operation Blue Star, and other military personnel like Major-General Jaswant Singh Bhuller (retd.) provided the military element present in the

Jarnail Singh Bhindranwale and others like him were the counterparts of the religious functionaries involved in the Wahhabi movement in the 19th century. Leaders and office holders of the All-India Sikh Students' Federation (AISSF), the movement's striking arm, represented the student element active in almost all terrorist groups mentioned above.

Like the pre-independence terrorists in Bengal, the ones in Punjab are also attracting high school students. As in the case of secret societies of 19th century Europe and the Naxalites of the late '60s and early '70s, they have had a lumpen and criminal component with a large part of their arms and ammunition reportedly arriving through smuggling channels.

As the examples since the 19th century show, there are certain sections which are more vulnerable to the call of terrorism than others. Why is it so? By virtue of their education, army officers, students, teachers, professionals, intellectuals and religious functionaries are able to see the limitations of a social order. They are also exposed to the influence of causes and ideologies which the uneducated may not comprehend. Their cause and the belief in the inevitability of its ultimate triumph enables them to take on the existing order which others would leave well alone. Besides, they have the intellectual and organisational skills to launch such movements. The abject poor do not have these. Besides, they are generally too overawed by the world around them and too preoccupied with survival, to think of a change. The very rich fear upheavals which might cost them their fortunes.

Significantly, all revolutions in the modern age have been led by the middle class intelligentsia sometimes with the support of a section of the army—the St. Petersburg Garrison during the Russian Revolution, for example.

As for the criminals, Hitler says, "It sometimes seems that mass movements are custom made to fit the needs of the criminal—not only for the catharsis of his soul but also for the exercise of his inclinations and talents. The technique of a proselytising mass movement aims at evoking in the faithful the mood and frame of mind of the repentant criminal."

The relevance of this observation becomes clear on recalling that the terrorist represents the same human material as the person who joins a mass movement. He is a fanatical believer in a cause or a faith and employs violence and terror to further it. He is prepared to kill and be killed in the process. He subordinates his entire existence to the cause and is bitterly opposed to anything antithetical to it. Hitler writes of mass movements in the preface to his book: "All mass movements generate in their adherents a readiness to die and a proclivity for united action. All of them, irrespective of the doctrine they preach and the programme they project, breed fanaticism, enthusiasm, fervent hope, hatred and intolerance...all of them demand blind faith and single-hearted allegiance."

What is it that turns these sections to terrorism at specific junctures? Terrorism, like mass movements, demands a readiness to die and proclaims the inevitability of the cause's final triumph. Besides, it promises the millennium and lends a new, romantic identity tinged

G.G.

with a sense of glory, to its practitioners.

People take to it when they prefer death to life. A major cause of their doing so is often a sense of humiliation or an unbearable affront to one's self-respect. A terrorist is a rebel, who "proceeds to put self-respect above everything else and proclaims that it is preferable to life itself. It becomes for him the supreme blessing. (Albert Camus in *The Rebel*)."

Equally important is frustrated aspiration, which is felt all the more acutely in a general climate of success. The resultant feeling of resentment is directed against the prevailing order even when failure is due to one's own inadequacy. Hoffer writes, "There is a tendency to locate the shaping causes of our existence outside ourselves. Success or failure is looked in our minds with the state of things around us."

"Success brings recognition. Lack of it need not mean anonymity in a closely-knit community where everyone is known, recognised, and has an assigned place in a warm inclusive web of collective life. It means anonymity in an impersonal urban society where one's neighbour is a stranger and one has no friends. Anonymity conduces to a feeling of insignificance and erodes one's sense of identity. Participation in a terrorist movement fills one with a sense of a glorious mission and gives one a romantic, esteemed identity. Not only anonymity but marginalisation also draws people to terrorism by instilling in them a sense of their insignificance and impotence which is galling because it is contrary to the thrust of human life which lies in self-affirmation and signification leading to recognition."

Poverty is another major cause. The abjectly poor, as we have seen, are not inclined to become terrorists. But poverty and injustice can deeply move sensitive people even when they are not the victims. Mahatma Gandhi, once a successful lawyer, took up the cause of India's poor masses and Harijans as no other leader before him. Frederic Engels, a prosperous mill owner, was deeply moved by the condition of the British working class and wrote a powerful tract on it.

Apart from all this, there must be a belief that the existing order is about to collapse. It is one thing to risk one's life for a millennial and realisable cause and quite another to commit suicide. According to Lenin, one of the conditions making for a revolutionary situation is the inability of the existing order to carry on as before.

The humiliation of foreign rule and domestic autocracy which rode roughshod over the sensitivities of the rising middle classes led to

the 19th century terrorism in Europe. The racial discrimination, humiliation and exploitation of the British rule led to the terrorism which formed a stream of the national struggle. The suicidal insurrectionary line was adopted at the CPI's second Congress in 1948 in the hope that it would end poverty and exploitation.

The insurrections in Nagaland, Mizoram, Manipur and Tripura were caused mainly by the humiliation inflicted on the tribals by the exploiting traders and money lenders from the plains.

The revolutionary terrorism of the Naxalites was the result of many factors. Sensitivity to poverty and criminal exploitation, impotence in the face of an economic order which frustrated their legitimate ambitions and made unemployment the lot of most Indian students and youth, and the humiliation meted out to them and others daily by all in authority including the staff and heads of educational institutions. They opted for the revolutionary doctrine of Mao Zedong, but ended up practising terrorism.

Some of the conditions making for the rise of the Naxalite movement prevail in Punjab. Though the state has the country's highest per capita income, lopsided economic development has led to inadequate expansion of opportunities (causing unemployment or unavailability of the kind of employment sought), sectors of relative deprivation, and the displacement and marginalisation of certain categories. Along with competition for water resources and territorial claims, this has also made for tension with the Centre and the neighbouring states.

What could have been no more than strong regional economicism, assumed an intensely communal and terrorist character given the religious intensity of a section of Sikhs, their martial tradition, the usurious and exploitative role of Hindu money lenders and traders, the communal politics of both the Akalis and the Congress (I) and the unitarist policies of the latter which hurt state sensitivities in all parts of India.

Once terrorism emerged, it assumed its own logic and dynamics and grew almost unchecked in the initial stages, thanks to New Delhi's earlier approach bordering on the indulgent. It has, however, no future. No group in modern times has achieved its aims by terrorism alone. The modern State with its powerful machinery of surveillance and repression, is too powerful for them. Their elusiveness and invisibility are doubtless advantages. And they can continue for a long time in their violent ways. But failure to make headway with their wider cause eventually destroys what sustains them—most hope of external success. Violence, particularly of the brutal, cowardly type involved in the blasts of May 10 and 11, creates revulsion. The repressive measures that follow violence are galling even to those who sympathise with the terrorists.

Repressive measures like the Terrorist and Disruptive Activities (prevention) Bill of 1985 and the recent amendments to the Arms Act, however, need to be supplemented by the acceptance of legitimate demands. A combination of firmness and concessions has invariably defeated terrorism which remains as it has always been—a tragic, heroic and an indignant gesture doomed to futility.

UNIFORMED APPROACH

The rejection rate of candidates appearing before the Services Selection Boards (SSBs) for selection to officer commission in the armed forces is quite high. One major reason for this is that most candidates are not equipped, mentally and emotionally, to face the battery of selection tests given at the SSBs, with confidence. They are generally not aware of, or have wrong notions about, what the selection boards are looking for and what the correct approach should be.

There is hardly any standard book on the subject which one could recommend to prospective candidates. However, in writing his book **A Way To Success At SSBs**,* Wing Commander A.K. Das (Retd) brings to bear on his work his field experience as a senior Group Testing Officer (G.T.O.), Interviewing Officer and Deputy President of numerous selection boards. He was also associated with the psychological Research Panel, Ministry of Defence. He is, therefore, well-qualified to treat each part of the three selection techniques employed at the SSBs to assess the candidates, namely psychological testing, G.T.O. series and the interview, with first-hand knowledge and expertise.

The first part of the book—preparation for the SSBs—caters to the needs of the candidates. The author gives a correct and clear exposition of the tasks and exercises which the candidate may expect to find at the selection board, of the leadership factors which are assessed and evaluated, and the leadership qualities that can be developed by study and training.

The author has covered the psychological part (107 pages) more comprehensively than the G.T.O. series (50 pages only). Inclusion of so many exercises relating to the intelligence tests and 'responses' to the projective tests like TAT and WAT was not really necessary or even desirable. For the tendency of an average candidate is to cram the suggested responses and reproduce them verbatim in his written attempt resulting in lack of spontaneity in his performance which is considered an important requirement by the assessing officer.

When dealing with the G.T.O. tests, the interview and the Pilot's Aptitude Battery Test (PAT), the author's exposition is brief and to the point, and he has given pertinent tips with regard to tests like Group Planning Exercises, Group Discussions and Progressive Group Tasks.

All in all, the book is useful for those appearing for the SSB tests and those who are concerned with giving guidance and coaching to such candidates.

Brig R.L. Mullick (Retd), New Delhi

A WAY TO SUCCESS AT SSBs by Wing Commander A.K. DAS: published by Soni Book Agency (India), New Delhi; pages : 301; price: Rs 45.

Stars And Careers

LEO

If you were born between Jul 22 and Aug 21, the Sun at the time of your birth occupied the sign Leo. You are extremely astute and have an inherent organising ability, faith, truthfulness, believing all to be good and pure until found to be otherwise. You are magnanimous, forgiving, self-controlled, determined, generous, impulsive, ambitious and have deep emotions. You have an attractive and sympathetic nature, unique in its power to feel and to harmonise itself with others. You are either dreadfully careless and sloppy or meticulously neat and orderly.

Leo generally gives a permanent position in life. All government services and those in government departments are preferred by Leons. It may also give an independent business financed by the father or a business taken over from him. It assures success in dealing with red or orange-coloured articles, copper, gold, wheat, medicine and chemicals. Some Leons develop good taste in art, literature and drama. They achieve resounding success in their careers and become very popular.

There are three classes of Leo individuals. Those born between Jul 21 and the end of the month are social, loving, firm and faithful, keen to love and associate with others. Those born between Aug 1 and 10 are more self-confident and self-reliant, more ambitious and assertive; they rise in life by dint of their own efforts; they are born leaders and directors. Those born between Aug 10 and 21 are more philosophical, philanthropic, and sympathetic, ardently affectionate and kind in their speech and action. They are adaptable, as also impulsive and diffusive, but always revolve around a centre of feeling in which the good of others is studied before their own welfare.

Socially, the period upto January next year is wonderful. You will be elevated to the position of a leader and will be able to build a good rapport with your superiors. Success will not come easily upto the middle of November. But from December onwards success is likely to be achieved without much effort. Till November your career may not become quite clear. From December you will be able to concentrate on career prospects and will achieve distinctive success before February 1986.

There is a strong possibility of your becoming strong-headed and impulsive between the end of July and the first week of September. Financial gains may accrue to you in the period from the second week of September to the end of October. You are likely to become more practical, courageous and enterprising from the end of October, and before February next year you can achieve your targets in career and education.

Lechman Das Madan, New Delhi

OBSERVE & DESERVE

TO BE OR NOT TO BE?

You'll have to be a really keen observer to get past this one. Actually it's very simple, like all other brain teasers from Gopi Gajwani's bag of tricks. But then simplicity is what makes it a teaser and that much more fun. Don't you agree? Well, let's see. Try your luck in not more than 20 words.

2. German name of Aix-la-Chapelle, ancient city of Germany, the scene of coronation of German kings till 16th century (6).
3. An odd, fanciful notion (6).
4. One of the major classical dances of India (returns) (6).
6. These twins, created by Enid Blyton, go to St Clare's School (9).
7. The most talked about part of the Golden Temple (9).
8. Trade alliance among developed countries (3).
12. A famous novel by Vladimir Nabokov (6).
13. In desperate situations, cricketers and thieves resort to this (3).
14. An open gallery at the end of the service side of a tennis court (6).
15. A festival of lights (6).
18. To cast amorous glances (4).

HOW TO ENTER

● Print the answers neatly in capital letters alongwith your name, age and address. Each crossword must be pasted/clipped to a bigger piece of paper and each apperception entry written **only** on a postcard.

● You may send in any number of entries, but each must be numbered accordingly and accompanied by its CROSSWORD/COUPON.

● Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the contests: August 25

Address your entries to: The Editor, Career & Competition Times, 10 Daryaganj, New Delhi-110 002.

Solutions in October.

PRIZES

KENWORDS-45:

2 First Prizes

Alistair Maclean's *San Andreas* and Salman Rushdie's *Shame* from **Rupa & Co., New Delhi** to the first two **all-correct** entries (or **one-error** entries if there are no all-corrects) pulled out of the hat.

Bagley's *Bahama Crisis* from **Rupa & Co.**

APPERCEPTION TEST-3:

10 First Prizes

An exciting package from **Rupa & Co., New Delhi** to the **correct** entries pulled out of the hat.

SOLUTIONS... SOLU

KENWORDS-43

Across: 1. Shatila 4. Vodka 6. Zen 7. Dutch 8. Alfalfa 10. Foggia 12. Melody 15. Picasso 18. Mahdi 19. Ner 20. Gauss 21. Swinton

Down: 1. Shura 2. Theta 3. Aizwal 4. Vandye 5. Alchemy 9. Fog 10. Fleming 11. Ictinus 13. Orc 14. Cortes 16. Argon 17. Pupin

Winners

First Prize (all-correct/one-error): 1. Rajeev Dwivedi, Lucknow. 2. Sumita Gupta, Kanpur.

Consolation Prize (one-error): 1. Anand Kumar N. Rajahmundry (Andhra Pradesh). 2. Praween Kumar Verma, New Delhi 3. Deepak Khare, Bhopal 4. Rakesh Gupta, Sunder Nagar (Himachal Pradesh). 5. Jasbir S. Nischal, New Delhi.

Prizes awarded by

Rupa & Co

3831, Pataudi House Road, Daryaganj, New Delhi-110 002

APPERCEPTION TEST-1

The entries were just too many. The participants came up with various interpretations ranging from "bats not coming out of burrows when the sun's out" to "the presence of trees being an unnatural phenomenon in a polluted landscape". But those who didn't "grope in the dark for long" observed correctly:

"The sun being to the left of the chimneys, the shadows on them should have been on the right hand side, that is, the side away from the sun."

The seven lucky 'deservers' are: 1. A.K. Singh, Nalokher (Haryana) 2. Stanley Carvalho, Bangalore 3. Debashish Mittra, Lucknow 4. Rachna Yadav, Ahmedabad 5. Savitri Ratho, Cuttack 6. Hemant Kumar Das, New Delhi. 7. Taranjit Singh Kushwaha, Allahabad

Prizes awarded by

Rupa & Co

3831, Pataudi House Road, Daryaganj, New Delhi-110 002.

Here's How

TO DINE

Dinners are social occasions and society demands certain norms. To help you become a party hit, some ways on how to conduct yourself at formal dinners.

When invited to dinner:

General

1. Plan to arrive at the exact time specified.
2. After a short social hour, your hostess will lead the way into the dining-room. The men should stand aside until all the ladies have followed her into the room.
3. To make for smoothness when several people eat together, each person should sit down from the left of his chair.
4. No man should sit down until all the women are seated.
5. Normally, guests begin eating when the hostess begins. But should she say "Go ahead," do so. At a large dinner party or banquet, when your immediate section has been served, you may begin eating.

Your dinner napkin

1. Unfold it halfway and place it on your lap.
2. If called away from the table or compelled to leave early, crumple it neatly and place it at the left of your plate. Leave the clean side showing.
3. If you should drop your napkin on the floor at a family dinner, pick it up and continue to use it.
4. What to do with it at the end of a meal: crumple it neatly and place it at the left of your plate just before you leave the table.

Eating technique

1. **Put small amounts of food into your mouth at a time:** You are expected to contribute to the conversation throughout the meal

2. Close your mouth when chewing your food. Otherwise, the sound of chewing, as well as the sight of food being chewed, might prove disconcerting to your neighbours.
3. Swallow most of the food you have in your mouth before answering a question or making a comment.
4. Ask for things rather than reach across the table for them. Avoid helping yourself with a 'boardinghouse reach'. Even though you might have to bother your neighbours many times, it is much better to ask them to pass you things than to reach for them yourself.
5. Avoid directing a question to someone who has just put food into his mouth.
6. Avoid passing food to someone who is just lifting food to his mouth.
7. Do not rinse your mouth with water, tea or any other beverage. The ensuing noise might embarrass someone.
8. You may find that you have no time to eat because you are being asked too many questions by your host family or the other guests. You may even find that you are only halfway through your meal even though everyone is through. You can avoid this pitfall by remembering the conversational gambit of tossing the ball: **you** ask the questions, and while they are busy answering your questions or making comments, chew away, while at the same time being very attentive to

what is being said. Do not ask questions requiring a yes or a no for an answer; instead, ask questions beginning with "Why..." "What do you think...".

9. **Elbows on the table:** This is permissible only before and after meals and between courses, **never** while you're eating.

10. If your left hand is not being used, let it lie comfortably on your lap. Do not use it to lean against the table.

11. Do not use your fingers to push food onto your fork. A knife may be used. Better yet, rice, peas, etc might well be partly squashed between the tines of your fork, then picked up.

12. **Alley you're through eating, do not stack the dishes for your hostess** (in a restaurant, for the waiter). Dishes should be removed one by one from the table.

Silverware

1. If you are lacking a piece of silver, quietly ask your hostess for the piece you need. Catch her eye and say, "May I have a teaspoon, please?"
2. Place used silver on your plate, never on the tablecloth.
3. At a sitdown dinner at home, when you are passing your plate for second helpings, place your fork and knife across the centre of the plate, the handles just over the edge of the plate, so that they are not likely to slide off.
4. When you drop unused silver on the floor, pick it up if you can do so without disturbing the person beside you - and ask for another. If you are going to have to disturb the person beside you, say, "I'm sorry" to your hostess and let it go at that; she will get you another.
5. Should you drop a utensil you are using, ask your hostess for another. Pick up the soiled piece if you can do so gracefully; otherwise, let your hostess retrieve it.

From **ORIENTATION HANDBOOK FOR VISITORS FROM ABROAD** by Sunnie F. McCabe

GREENLAND: THE BIGGEST MINI-STATE?

The European Economic Community (EEC) is about to shrink to less than half its present size, and the average Greek or German could not care less. Indeed, the average citizen of the Common Market is totally oblivious to the imminent contraction of its frontiers—which is perfectly reasonable because it won't hurt him at all.

The hall of the EEC that is leaving the fold is Greenland (840,000 square miles—2.2m sq km), and the departure of only 50,000 Greenlanders will not leave the other 260m citizens of the Common Market feeling lonely. But the decision to quit the EEC is only a first step: what is happening in Greenland is a slow-motion national liberation movement. Decolonisation has finally reached the Eskimos.

Although most Greenlanders have some European blood after 250 years of Danish colonial rule, 80% of the population is still Inuit (Eskimo) in culture and language. It is the one part of the polar regions where an independent Inuit nation could ever emerge. Everywhere else, the native northern peoples have been incorporated into larger nations ruled from the south: Canada, the US (Alaska), Norway, Finland and the USSR. But though in practice other northern natives have no chance ever of achieving independence, an independent Eskimo-ruled Greenland is bound to become the focus and symbol of their aspirations

Denmark is unhappy at the trend of events in Greenland, but it did not openly condemn the arguments which allowed the socialist Siumut (Forward) Party to win the 1979 poll on a platform of complete autonomy for Greenland except in defence and foreign affairs. Nor did the Danes stop PM Jonathan Mottelet's Siumut Government from holding (and winning) last year's referendum on Greenland's departure from the EEC.

Siumut won the referendum on EEC membership with the slogan "It's high time that we end government from Europe," and last month the European Commission finally faced up to reality. Brussels announced that it would open negotiations for the withdrawal of Greenland from the EEC, offering the Greenlanders generous access to European markets for their fish and minerals in return for limited European fishing rights in Greenland waters.

The logical next step is full independence from Denmark, but that cannot come at once. Not only is 18% of Greenland's budget provided by Danish aid, but the Inuit society of Greenland has been almost as devastated by its contact with whites as are the Eskimos of North America. More than 25% of Greenland's population suffers from venereal disease, and perhaps an even higher proportion from alcoholism. Only a quarter of Greenland's 800 teachers are native-born, and only one of its

doctors. The skills needed for running an independent country are all desperately scarce in Greenland, but the number of young Greenlanders who are acquiring these skills is growing rapidly.

Even the two small Marxist-Leninist parties, the Workers' Party and Inuit Ataqatigi (Inuit Brotherhood), have laid aside their demands for independence "for the moment" but it will come, probably within five or 10 years. And when the biggest mini-state in the world gains its independence, the other nations around the polar regions will have more to worry about than just its unsettling influence on their own northern native populations.

Greenland is strategically important territory to both Russians and Americans, for it sits in the middle of the ocean gap through which each side's submarines must pass to approach the other's shores. At the moment the gap bristles with NATO bases and weapons, and the Greenlanders wisely do not make a fuss about the two US bases on their territory. "The only way to build a true socialist society in this country," a leader of the Siumut Party observed cynically, "is not to bother the Americans." But the conservative opposition party, Atassut, is already making the outrageous claim that the ultimate goal of the left-wing parties is a communist Greenland. From the day it is born, an independent Greenland will be a major area of contention between the superpowers.

Gwynne Dyer, London

From The Club Desk

CCTimes Club, Coimbatore in action

Activities galore... from all accounts, CCTimes Clubs throughout the country are doing really well for themselves. Evidently, our exhortation three issues back to activate your clubs did not go unnoticed. Needless to say, we are delighted and encouraged by your enthusiastic response. At the same time, we would like to caution you against self-satisfaction and complacency. You have made commendable progress, but there is so much more to achieve. As far as your personal and collective growth is concerned, the sky is the limit. So, be on your toes always, never falling back on your heels, come winter, spring, summer or fall. Strive to be more and more active. And do keep us informed, because good communication will go a long way in making your clubs healthy and strong.

The 'Club of the Month'...choosing a club for this coveted distinction proved to be rather difficult this time, what with each of the activity reports that flooded the Club Desk showing a brilliant track record. However, that did not prevent us from making a unanimous choice—the CCTimes Club, Coimbatore, M.No C-8/10. What distinguishes it from the rest is the variety and relevance of its activities—from organising an inter-college quiz competition, a trek to the Nilgiris, a 'treasure hunt', a first aid demonstration, a symposium on 'Coping with the oil crisis', to conducting yoga and meditation classes for members and others, visiting hospitals, orphanages, homes for the aged and entertaining their inmates. It has even started a lending library, with each member donating one book to it. To beat the summer heat, it had 10 days of swimming classes; no doubt, it must have been a 'cool' experience. A photography contest is in the offing. 'Nature', 'Youth' and 'Monuments' are the suggested captions and since the club is keen on an all-India participation in its contest, we publish here its address—CCTimes Club, C/o N. Mahendran, Visweswarayya Street, Coimbatore-641025. Since the prizes are attractive and the last date for entries, which is Aug-5, is fast approaching, you would do well to hurry. By the way, CCTimes Club, Coimbatore, thanks a lot for the photograph.

Close on the heels of the 'Club of the Month' is CCTimes Club (Arun Kumar Bose), Calcutta. Its activities have attracted the attention of a widely read local Bengali fortnightly which is going to carry a report on it in its very next issue. Congratulations! We are also very pleased to know that one of its members secured the 21st position in the West Bengal Civil Services Exam. Congratulations again! A quiz contest, a debate, a seminar and an essay competition have been its major preoccupations. We hope that this club will maintain its tempo and never allow the flow of its enthusiasm to cease.

We would also like to specially mention CCTimes Club, Digapahandi (Orissa) and a CCTimes Club from REC, Durgapur for making an active beginning. We hope that in the months and years to come, they will blaze a trail of success and help many youngsters to become capable individuals, at home, in society and at their places of work or study.

There has been a flow of requests for information regarding the setting up of CCTimes Clubs. For the benefit of J.Y. Rao from Akola (Maharashtra), Anuj Kr Gupta, Morebad, Vivek Patil, Bombay, V. Prebhakera Reddy, Guntur, Shailendra Singh, Gwalior and C.P. Gadi, Fatehpur, please refer back to our March '85 issue for details.

We have made many suggestions in the past about how you can make your clubs more progressive and dynamic. This time, we recommend travel and study of India's art and culture. In fact, the two go hand in hand. And it cannot be denied that they are an imperative necessity for any Indian who wishes to widen his horizons and develop his personality and character. Many youngsters today are keen to see what lies beyond the exams and they are exerting themselves no end to go abroad. Our only advice to them: please see your own country first, learn to appreciate what it has to offer in terms of knowledge and culture, feel genuine pride about being an Indian, and then go abroad. And it is on this note that we would like to conclude.

THE LETTER 'J'

Announcing 1985-86 Edition of

CAREER PLANNING IN MANAGEMENT IN INDIA & ABROAD

A Comprehensive Digest of Information on Higher Education in India & Abroad

HIGHLIGHTS:

MANAGEMENT EDUCATION IN INDIA, AND SHORT DURATION COURSES IN INDIA AND ABROAD FOR WORKING EXECUTIVES

- Dr. K SHAMANNA of NITIE, also a distinguished member of the Indian Society for Training and Development offers a detailed survey of management institutes and the programmes they offer. Also specific details relating to their Admission Procedures.

COMPUTERS - Courses & Career Opportunities

- Prof. P.V.S. RAO of TIFR, an authority on Computer education, analyses in detail myriad career opportunities for the young in this fast growing field. What course should you take? What specific details you must consider seriously BEFORE you join a Computer Course?

HOTEL MANAGEMENT Career & Courses in India & Abroad

- Dr. Ms. DINAZ GOKIBAR of Institute of Hotel Management, Catering Technology and Applied Nutrition, Bombay, outlines important courses offered in the country and abroad in Hotel Management and the lucrative career opportunities available in this field.

ENTRANCE TESTS - What were They Like, These 3 Years?

- N.R. RANE offers a cogent analysis of the formats of 3 years Entrance Tests of the Indian Institutes of Management IIM's XLRI, FMS(Delhi), BAJAJ INSTITUTE, Test formats GMAT/GRE - The Main Testing Areas - The exact level of Competence Needed - Changing Testing Trends - How to prepare.

COMPUTER EDUCATION IN THE UNITED STATES

- T GOPALKRISHNAN, editor of "Plus", the computer monthly, surveys the U.S. Universities and what they offer in the field of Computer Science and Computer Engineering to our students.

JMP - JAPAN - AMERICA INSTITUTES OF MANAGEMENT SCIENCE, HAWAII

- D HARIHARAN highlights the features of this unique nine months program conducted by the above institutes in Honolulu, comprising a 5 month intensive in Hawaii, and a 4 month rigorous internship in Japan.

HIGHER EDUCATION IN THE U.S., U.K., CANADA AND AUSTRALIA

- Dr. DINA DALAL, who has worked for long years as the Student Counselor of the United States Education Foundation in India, in an exhaustive article of our 40 pages guides you on all aspects of applying abroad for higher education - Very useful reference material indeed!

If you're over 18, and have stopped growing, but are still not as tall as you'd like to be, INSTA-HEIGHT guarantees to increase your height upto 15 cms.

"INSTA-HEIGHT is a new, safe and scientific method of s-t-r-e-t-c-h-i-n-g- your body to increase your present height. Permanently. Thousands of men and women in the U.S.A. have reported height gains of upto 15 cms. by following this revolutionary new height increasing method. I am not surprised. I have thoroughly analysed INSTA-HEIGHT. Unlike other so-called height improvements methods, I can fully endorse INSTA-HEIGHT-and say it works. Effectively and permanently"

Dr. (Mrs) D. U. GIANANI
Dr. (Mrs) D. U. GIANANI

TALL MEN AND WOMEN DOMINATE OTHERS !

You are judged by your looks ! Often, your whole career depends on the first impression you create. Look around you and see for yourself, most people who are successful have the added asset of a tall and imposing personality.

INCREASE YOUR CHANCES FOR SUCCESS !

The taller a person, the more easily he seems to reach social success, love, sports, jobs and other pleasures. You too, can now enjoy the benefits of being tall.

Whether you are 18 or 30, you can still possess the tremendous assets of a striking figure. Just 2 weeks after going through and practising this simple step-by-step course, you will be able to gain as much as 5 cms. to 15 cms. in height. Thousands of men and women in America have experienced phenomenal height increases by following the revolutionary new INSTA-HEIGHT method.

SPECIAL 7-DAY MONEY-BACK GUARANTEE !

INSTA-HEIGHT (a division of Business Development Associates)
3/305 Mayman Society, Langdon Road, Bombay 400 006

Please rush me your Insta-Height programme immediately under your one-week guarantee period. If I am not satisfied I understand I can return it within a week for a full refund (less packing and postage)—no questions asked. Please tick ☐ appropriate box.

☐ I am enclosing Rs. 27 (Plus Rs. 3) by cheque/bank draft/A.P.O.

☐ Money Order for Rs. 30 sent (M.O. No. dated ..)

☐ I am not enclosing any money but shall pay postman Rs. 30 on delivery by V.P.P.

GROW MAN GROW!

AND LADIES TOO!

Are you fed up with being called 'Shorty', 'Little Man' or even 'Hey you down there'?

Now for the first time in Asia, a complete step-by-step illustrated method that shows you how to add centimetres to your height.

Grow as much as 5 to 15 cms. in just 2 short weeks...or pay nothing!

Presenting the NEW HEIGHT method for growing taller—whether you're young or old; men or women. No gadgets or strenuous exercises, no artificial aids like elevator shoes, no appliances. New Height is an all-new, scientific method based on an exclusive Swiss principle which reactivates the whole body.

New Height is remarkably effective in both men and women, has been proved in thousands of cases all over Europe. Now spend only a few minutes each day following the step-by-step instructions—in 2 short weeks, measure your height!

You will find it has increased—perhaps by as much as 15 full centimetres. And if you do not obtain satisfactory results, we will immediately refund the price.

BETALLER

A TORRENT OF TRIBUTES FROM NEW HEIGHT USERS:-

"I didn't think it was possible to gain height. But to my delight, New Height helped me to keep going until I reached 185 cms!"
S.R.K.

"The New Height course is worth its weight in gold and more! My life has changed since I gained 11 cms. in height."
R II

LETTERS

A Matter Of Religion

It is good to find a religion that is to be good, and not just a religion to be a test, and be a Sikh.

Vishwadeep Bajaj, Gwalior

Best Letter: Rs 40

Higher Education—Of What Use

Higher education is not the only thing which is useful in life.

R K Bhinde, Ahmedabad

Prize-winning Letter: Rs 25

Education—A Farce?

In the article 'Higher Education: Some View points' (July '85) a very knowledgeable and hard-headed man have benefited by the education they received in India and have come to the conclusion that education is a farce.

Education does not mean obtaining what is written in text books and memorising it. The ability to think, to learn and to apply what is learned. Unfortunately, these are the things which are not taught in our schools.

Yogesh Kalra, New Delhi

Education is not just a matter of literacy. It is a matter of quality. No amount of literacy can ever replace the quality of education which is not taught in our schools.

Ali Akbar Tehrali, Madras

Pause Please!

Pause with a little rest. It can be used as both a word and a verb. (Hello Folks, July '85) Many people have been using the word 'pause' in a wrong way.

Samarendranath Mohapatra, Bhubaneswar

Pats On The Back

My sincere congratulations to CCTimes on my success in the National English Academy Exam, 1984. The secret of my success is regular reading of your Practice Test and English features.

Manoj Kumar Singh, Patna

At the instance of my success in the State Bank of India Probationary Officers Exam, 1984-85, I cannot forget to thank you for the feature 'Test Of Reasoning' which enabled me to achieve the goal.

Kamalaraj Johnson, Madurai

Leading Women

In 'You Ask, We Answer' (July '85), apart from Margaret Thatcher and more women at the helm of national affairs, Vigdis Finnbogadóttir, the President of Iceland.

Sources: Statesman Year Book 1984; International 'Who's Who' and Keesing's Contemporary Archives 1984.

Aliens In Assam

With reference to the letter 'Where's The Indian' (July '85) we the Assamese are agitating only against the foreigners. Our movement is not against the Indians since we are also Indians. Assam is for both the Assamese and non-Assamese Indians.

Ghanashyam Goswami, Gauhati

Year Of Unrest

The Year Of Youth (1985) is the year of participation, development and peace. But all around there are lockouts, bandhs and strikes.

L. Shridhar, Bhillai

Five-day Week

The new five-day week can be counterproductive for a developing country like ours. It will only enhance the already prevalent laziness in our people. Regular and steady innovation is the need of the hour.

F. Ramakrishnan, Bombay

Violent End

I was extremely sorry to learn about the death of the young MP, Lalit Maken, after reading about him in A Politician's Progress (Aug '85). The progress of a young, energetic and promising politician had to be cut short by the growing rate of violence.

K. Pham Raja Rao, Anantapur (A.P.)

Even after I was reading about Lalit Maken in CCTimes, the shocking news of his murder came in. I was shocked to know that the young and progressive politician was no longer amongst us.

S.G. Nanda, Nanded

A TRIBUTE

The brutal day-light murder of the young dynamic Congress(I) MP Lalit Maken, along with his wife Geetanjali Maken, and an unemployed youth was yet another despicable act of terrorism. And although CCTimes had conducted an exclusive interview with him about a month back, it was published only in our August issue—sadly coinciding with Maken's untimely demise. In this context CCTimes is one of the last magazines to have carried an article on Maken.

Ways Of The Government

If we analyse the causes behind the present political mess in the country, two factors are evident—firstly, the lust for political power and secondly, the tendency of our government to procrastinate and allow situations to worsen till they become dangerous for the country. If our leaders continue to pursue the present policy (of divide and rule) then the day is not far when India will become another Lebanon.

Harish Jaitak, New Delhi

Faulty Planning

With reference to Planning In India (July '85) the health service facilities no doubt exist all over the country. But they are neither trustworthy nor efficient. There is a complete lack of professional management skills in the administration of hospitals and health centres.

Ramesh P. Gurbani, Jaipur

No doubt, we had a record harvest of 140m ton-

nes of foodgrains this year. But they have not been stored properly. Why do we not care to improve the basic infrastructure before setting high targets? We ought to learn to coordinate our economic development, and plan at the grassroot level.

Neeraj Hatekar, Wai (Maharashtra)

Mahatma Vs Gandhi

Mahatma Gandhi dreamt of a self-sustained growth of employment with the help of the charkha. Rajiv Gandhi today thinks of a restrained growth of the nation by introducing computers.

Saroj Kumar Mishra, Mayurbhanj

Irony In Our History

How ironical that we won freedom with the help of non-violence and are functioning in a democracy with violence.

Vijay Kumar Soni, Baikunthpur (MP)

Code For The Transnationals?

David Colman in his book says, "the relationship which has emerged in many LDCs between the local power elite and both transnational corporations and major aid-giving bodies, has often led to projects and actions which have not seemed to be in the best interests of development in the broader sense."

In this context our PM Rajiv Gandhi's call for framing a code of conduct for the transnational corporations (in his recent address to the L.O.) is both timely and imperative. Economic cooperation among developing and socialist countries of the world proves beneficial to the former.

K. Devindra Singh, Nasik

Delightful Forecasts

Thanks for introducing Stars And Careers (July '85) I was delighted to read the forecast for 'Cancer' which tallied with circumstances in my own life, I being a Cancerean.

A.K. Singh, Nilokheri

Ominous Dates

Certain dates in Indian history appear to be ominous. Five years ago on Jun 23 Sanjay Gandhi, the young and dynamic leader lost his life in a plane crash.

Again it was on this sinister day this year, that the ill-fated Bombay bound Air-India Jumbo jet, Kanishka, with 329 people aboard plunged into the Atlantic Ocean.

Ghazali Imam, Distt. Munghyr (Bihar)

Kanishka Tragedy

Nothing is cheaper today than human lives.

Manas Ranjan Ghosh, Baripada

WIN A PRIZE

Do our articles provoke you to say something? Is there anything else you feel strongly about? Here's your chance to say it and make some money in the bargain. The best letter will win Rs 40, the second Rs 25.

So, why don't you get cracking?

Your letters should be legibly written/typed, not exceed 200 words and include your full name and address. We may edit them for purposes of clarity or space.

Hello folks...

Rosa Parks, 45, a black lady entered the bus and moved towards the rear to occupy a seat. A few whites were sitting there and they refused to vacate the seat for her. She went up and occupied a front seat. Soon she was approached and asked to get off the seat as only the whites could sit in the front. She refused to get up as she was tired and the rear seats were occupied by whites who did not vacate them. She was taken to the police station for breaking the state law. This happened in Montgomery, Alabama (USA).

The word spread and the blacks all over Alabama boycotted the buses. A car pool system was started and those who had cars ensured that their black brethren did not suffer. Blacks preferred to walk miles rather than use buses. This gave rise to the civil rights movement and Martin Luther King, who emerged as its powerful leader, succeeded in getting civil rights for the blacks.

The story establishes that the consumer is sovereign and even the weakest sections of society, if united, can break the most powerful system. The American whites are

the strongest group, probably in the world, and the blacks (hardly 10% of the US population) are the poorest in the US. They brought the whites to their knees because the bus system was sustained by the blacks.

Unfortunately, in India the consumer is not taken seriously and does not exert much influence on the quality and quantity of production. Two factors have weakened the Indian consumer. One, we have a predominantly seller's market where the producer is assured of his product much before the production starts. Since the producer does not have to make much of an effort in selling the commodity and the buyers vie with one another to get it, the producer does not bother to improve the quality of his product or reduce its cost of production. So quality remains low and the price high. Once accustomed to it, he does not want the situation to change. So he uses all methods, ethical or unethical, to maintain the seller's market.

Second, the consumer is neither alert nor insists on his rights. The Indian consumer cannot believe that a consumer can afford to protest. He is so afraid of losing the favour of the seller that he accepts whatever is offered to him. In such a situation those who protest, a miniscule group, are not heard. In fact, they are insulted. Also we have developed an environment in which a protesting consumer does not get the support of other consumers. You go to a shop with a defective piece and argue with the shopkeeper. The buyers around you will not say a word, much less support you.

This must change and, fortunately, some positive signs have begun to appear on the horizon. The consumers, particularly in cities, have started demanding their rights. Thanks to a few Doordarshan serials like *Rajni* and *Janwani*. In the former the dedicated, determined and dogged fighting by a lone girl is changing the attitudes of the masses and instances of consumer resistance are coming to light. *Janwani* is providing further strength to those who want to protest.

To be effective, a consumer has to

realise that he is the real bread and butter of the producer. If he does not buy the commodity the seller cannot sell it and if the seller cannot sell it the manufacturer would not make it. There have been instances where consumers have forced the manufacturer to change the product. This happened recently in the US. When Coca Cola wanted to change the formula of its popular drink the consumers protested by not buying the new drink, which forced the company to revert to the old one.

The consumers and the youth in particular should realise that if they are spending money they must get their money's worth in return. This can be done by:

- Taking the product to the seller and demanding return or replacement
- Writing to the manufacturer and insisting that the loss be made good
- Taking legal action against the manufacturer if the product has done any damage to the person
- Writing letters to government agencies and consumer organisations giving details about the wrong product
- Switching over to the other brand or altogether stopping the use of the commodity for a certain period of time.

The consumer is a great force and the real cause of prosperity of the country. The manufacturer merely produces the commodity. Prosperity comes only when it is sold in the market. Unsold commodity makes the manufacturer bankrupt. This happened during the Great Depression in the early '30s when tens of thousands of companies were closed down all over the world and thousands committed suicide. In developed countries, the consumer is aware of his strength and, therefore, he is powerful. In India also the consumer should make his presence felt and demand his money's worth.

R. Thakur.

TEST YOUR WORD POWER

The per-fect WORD. Is it on the tip of your tongue or is it hidden in the back of your mind? Either way, we agree, it's an eloquent problem.

And so each month we bring you this column, tailor-made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about our word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

Tick the word or phrase you believe is *nearest in meaning* to the key word

1. **barren**: A: uncultivated B: uncouth C: uncultured D: unfruitful
2. **berth**: A: to bring forth a child B: provide with a place to dock C: movable wooden stand D: surround
3. **coeval**: A: equally wicked B: contemporary C: equally eternal with another D: happening together
4. **confluence**: A: combination of events B: method of arrangement C: mixture of a number of things D: place where two rivers unite
5. **debacle**: A: weakness B: shortage C: set-back D: disaster
6. **ebullient**: A: rock-like B: peculiar C: high-spirited D: sweet-tempered
7. **expatriate**: A: person visiting another country B: person who leaves his country for political reasons C: person who no more supports his country D: person living outside his own country
8. **filthy**: A: resentful B: intense C: disgustingly dirty D: tiresome
9. **gimmick**: A: an ingenious device B: talent C: supposition D: small tool
10. **insurgent**: A: betrayer B: dissenter C: freedom-fighter D: rebel
11. **lobby**: A: to influence the members of a law-making body B: actively participate C: supply a place to sleep in D: solicit votes
12. **mayhem**: A: state of bewilderment B: threat C: distress signal D: any situation of violence
13. **obliterate**: A: to destroy utterly B: block up C: harass constantly D: punish for a wrong-doing or commit an offence
14. **pendant**: A: pleasant excitement B: liking C: piece of jewellery D: disposition
15. **pliant**: A: friendly B: calm C: soft D: easily bent
16. **putrid**: A: fresh B: ill-smelling C: poisonous D: impure
17. **rugged**: A: healthy B: rocky C: earthy D: crude
18. **tenet**: A: form of worship B: principle C: lecture D: one who pays rent for the use of a building
19. **tenure**: A: quality of life B: stretch of land C: period of holding office D: short period of time
20. **tranquil**: A: gentle B: peaceful C: excellent D: sleep-inducing

(Answers on page 62)

THOUGHTS

Here's some food for thought ... provided you pause to ponder over it. These passing thoughts on various social, political and economic issues, expressed by a few observant minds, often portray the bare realities of life. They may even set your thought processes in motion!

The TV, more than any other single force, has nominated and elected Rajiv Gandhi, established his authority, and will keep him in power barring an act of God or a blatant, though unlikely, misuse of power.

Iqbal Masud in *Indian Express*

It's (Britain) expensive, the drinks are too small that they do not reach the back of your throat before evaporating, the weather forecasts are useless, and all Londoners are infested with the it-can't-be-done bug. The bug makes all Londoners tell all Americans that everything they want is sold out, not on the menu, not available, gone home, not due until next week, against the law, or never heard of it.

Indian Express

Playing billiards has a striking similarity with the game of politics. As in billiards, a player has to use one ball to hit another to derive advantage, in politics one is used against another to stay in the driver's seat.

PM Rajiv Gandhi

Nearly 40 years after independence we have not learned how to resolve differences across a table.

The Sunday Observer

Another factor which facilitated the accord between Rajiv Gandhi and Sant Longowal was that the Opposition was kept out of the talks.

The Telegraph

The "examination hell" certainly turns out students able to translate the written word, to parse a page of Shakespeare, but incapable of putting a spoken sentence together.

Far Eastern Economic Review on the standard of

English language in Japan

Bombay is the only city where leaders who should know better are trying to solve their problems by rousing parochial passions. They should know that appeals to local pride can be dangerously ineffective. If Mumbai sneezes today other cities will go down with cold tomorrow.

Khushwant Singh in *Sunday*

QUOTABLE QUOTES

Time: That which man is always trying to kill, but which ends in killing him.

Herbert Spencer

Bad men live to eat and drink whereas good men eat and drink in order to live.

Socrates

I've made it a rule never to drink by daylight and never to refuse a drink after dark.

H.L. Mencken

A woman will always sacrifice herself if you give her the opportunity. It is her favourite form of self-indulgence.

W. Somerset Maugham

When I am dead and opened, you shall find 'Calais' lying in my heart.

Mary Tudor

Genius does what it must, and Talent does what it can.

Owen Meredith

Who rises from prayer a better man, his prayer is answered.

George Meredith

Where more is meant than meets the ear.

John Milton

One should examine oneself for a very long time before thinking of condemning others.

Moliere

The continuous labour of your life is to build the house of death.

Michel De Montaigne

Liberty is the right to do everything which the laws allow.

Montesquieu

A man travels the world over in search of what he needs and returns home to find it.

George Moore

Soldiers, consider that from the summit of these pyramids, forty centuries look down upon you. (Speech before the Battle of the Pyramids, 1798)

Napoleon Bonaparte

The masters have been abolished; the mortality of the common man has triumphed.

Friedrich Nietzsche

The creatures outside looked from pig to man, and from man to pig, and from pig to man again; but already it was impossible to say which was which.

George Orwell

The sublime and the ridiculous are often so nearly related that it is difficult to class them separately. One step above the sublime makes the ridiculous; and one step above the ridiculous makes the sublime again.

Thomas Paine

A CULTURE UNVEILED

BY PRABHA GOPAL

"People need a story to dress by, and this year it's India."

Malavika Sarukkai: Sculptured pose.

The land of mysticism and snake charmers. This obscure vision of India has clouded the radiance of her vibrant cultural ethos.

Not many are aware of India's significant contribution to the world of art, architecture, music, dance and literature—the Mahabharata with its 9,000 couplets being the longest single epic poem in the world.

Very few have known the dynamism of this 5,000-year-old civilisation which gave the world the zero—the very basis of today's computer culture.

Many are yet to delve into India's deep-rooted culture which has stood the test of time, is resilient and has moulded the country to become one of the 10 top industrial powers in the world.

Not to be blamed, for India has never made a successful attempt to lift her cultural veil. This year India decided to reveal her true identity to the world at large. Sporting the best of her cultural fabrics and decked in the most intricate of her traditional jewels, she attempted to dance her way into the hearts of the Western

milieu swaying to the tune of Indian music. The results were spectacular and were displayed through a veritable tangle of events at the Festival of India in France and the US.

Dedicated to the memory of late Mr. Indira Gandhi, whose creation it was, the Festival of India (1985-86) is an exposition par excellence which promises to create a deeper understanding of India's traditional skills and contemporary life patterns. The rich panorama of exhibitions, music concerts, dance recitals, cinema and theatre, seminars, symposia, workshops and lectures will attempt to bridge the existing cultural gap between India and the world. In the words of Pupa Jayakar, the champion of the festival: "For the first time we are facing the West in complete equality. Our generation, the older generation is passing away. This festival is about how the young eyes of India see tradition."

Rendezvous A Paris

The Mela

The unprecedented year-long *Annee de L'Inde* (The Year of India), as the festival is known in France, came alive on June 1 in all its colourful gaiety with the inauguration of a *mela* on the embankments of Seine, in Paris, by PM Rajiv Gandhi. Richly caparisoned elephants and camels ambled along the *mela* site around the Eiffel Tower; Indian music waited across the area while the aroma of Indian cuisine captured the hearts of 1,00,000 visitors who came to share the festive joy of an India in Paris.

The heart of Paris, from the Eiffel Tower to the one-and-a-half kilometres, known as Trocadero, throbbed with the pulse of India. The area was draped with 100m-long, French and Indian flags. Imaginative welcome arches designed by Indian craftsmen with pith and bamboo, dried grass and embroidered cloth, adorned the Lena Bridge to welcome the visitors to the *mela*. And the true spirit of a 'cultural *sangam*' came to the fore as Rajiv handed over a jar of Ganges water in the French President, Francois Mitterrand. The water was later poured into the River Seine symbolising the meeting of the world's two greatest civilisations. Rajiv also presented a baby elephant to the French President (signifying the invocation of Lord Ganesha, the elephant God, at the start of a major

Kelucharan Mohapatra: Enriching Odissi.

event) following which the *mela* was declared open.

All the essential elements of an Indian *mela* were recreated. Soundscapes recaptured the noisier lullaby to the Indian ear: the babel of its regional languages, the cry of street vendors, the full-throated cry of the peacock rejoicing in the monsoon, and the splashing of water being drawn from a well. About 30 shops, including 18 foodstalls, selling Indian artefacts, handicrafts, toys and posters from Shivakashi were thrown open to the visitors.

Items typically found at an Indian *mela*, viz. kites, bangles, rings, headwork, traditional cosmetics, sandalwood, wooden and stone objects were on display. A variety of food and snacks from *dosas* to sugarcane juice to *kababs* and sweets, representing the authentic taste and flavours of every day India—were being instantly prepared and served in terracotta vessels and in plates and cups made of dried leaves.

Performing Arts

Whereas the earlier festivals in London and New York were entirely exhibition-oriented, the French festival lays stress on

both rural and urban performing arts. The French elite has always had a deeper and more comprehensive knowledge of Indian classical and folk culture than that of any other Western country. Not surprisingly the largest section of the festival constitutes a variety of Indian dance and music—both folk and classical.

Non-classical Arts

The inaugural two-day *mela* featured more than 200 jugglers, puppeteers, dancers, musicians, and folk artistes who simultaneously performed on the sprawling *mela* ground.

The Maison Des Cultures Du Monde. House of World Culture, Paris has drawn up an attractive programme of non-classical performing arts spread over the entire festival period. The programmes commenced with the lifting sounds of a percussion concert on Jun 9 and 10 followed by a Pandavani performance from Jun 10-20. Pandavani is a narrative art form of MP where the artiste narrates a story singing, dancing and miming accompanied by musicians. Lee Jau Bai, the most famous of the living Pandavani artistes, was chosen for the festival to introduce the glory of the Mahabharata to the audience. Also included were Naga dances and songs, presented by the Zaliangrong tribe and the Sema of Nagaland in north-east India.

Puppets and shadow theatre, the more popular of Indian folk art, will be presented in mid-November. Besides, Yakshagana, Kathputli and Chhatarcothli, the Tolu Bomalatta from Andhra Pradesh will be presented. Tolu Bomalatta is an ancient form of shadow puppetry portrayed on a huge screen. The puppets will narrate the epic story of Mahabharata and Ramayana, to the accompaniment of music.

A display of Chhau and martial arts at the *Theatre de la Ville*, Paris, will include Chhau dances from Mayurbhanj (Orissa), Purulia (Bengal) and Sevakella (Bihar) as well as the martial art of Kalaripayattu

Panchavadyam: Attuned to the beat of 'five instruments'—three drums, a horn and cymbals.

(Kerala)

The festival will ring in the new year, 1986, with Bauls from Bengal and folk songs of Chhakri and Bhakha singers. Chhakri is the most popular form of music in Kashmir. A young man, disguised as a woman sings as he dances. Bhakha is a chorus sung by both men and women.

Ras Lila, a ritual dance based on Lord Krishna usually performed in the premises of Indian temples, epic songs and ballads (Maharashtra), Mando (Goa) songs and the desert songs of Rajasthan sung by Langurs, the Mangavans and the Nuns will add up to make the festival lively and informative.

The festival will conclude with the better known performing art of India—Kathakali by the Kerala Kalamandalam.

Classical Arts

Avignon Festival: The pride of

southern France, the Avignon Festival is one of the most prestigious annual festivals of theatre, dance and music in France. This year the festival has given due weightage to the Year of India. The programmes commenced in July with a rich variety of 12 music concerts, in open air, ranging from Hindustani to Carnatic styles, with vocal recitals by Kumar Gandharva, Balamurali Krishna and Fahimuddin Dagar and instrumental recitals by N. Ramani (flute), Ram Narayan (sarangi) and Dr L. Subramaniam (violin).

Drawing packed houses is Peter Brook's Mahabharata staged in three parts—the game of dice, the exile in the forest and the war—of three hours each, at Avignon. The theatre adaptation in French is by Jean-Claude Carriere. Mahabharata is the world's largest literary work running to some 12,000 pages (about 15 times the length of the Bible) and is also the oldest book of mankind. The fulcrum of this epic is the Bhagavad Gita—the sacred book of the Hindus.

Written in Sanskrit the Mahabharata is the source of Indian myths, religion, history and thought. This incomparable work is believed to have been composed during a time span of over a 1,000 years and it assumed a definitive form only in 4 A.D. The Mahabharata has its relevance in the present day world in its portrayal of the quarrel between two groups of first cousins, the Pandavas and the Kauravas, leading to a war. It signifies that we live in times of destruction and the prime need of the hour is to avoid a conflagration.

Autumn Festival: Indian classical styles will again be in the limelight in the Autumn Festival held in the French capital since 1972. All the major music and dance forms—over 67 events—will be presented in Paris and in other cities in

THE FRENCH RIVEIRA

The Seine: Paris stands as if risen from a river, and married to the Seine. The river has protected the city and brought it affluence. The Seine, once wild, now tamed, flows through the historic part of Paris. If one could choose only a single long itinerary through the French capital, it's along the Seine that one should go. The Seine is also a waterway, frequented by vessels other than barges.

The Trocadero: The great *Place du Trocadero*—ringed with cafes, guarded by a terraced cemetery, and affording a fine view of the Eiffel Tower bears the name of a small Andalusian fort captured by the Duke of Angoulême during a military expedition in 1823.

The Eiffel Tower: This is the 'sign of beloved Paris and a sign beloved of Paris', the 'l'empereur of the clouds' immortalised

by Apollinaire's verse, the delight of poets and tourists alike. It stretches up just over 1,000 ft—1,600 ft, if you throw in the television emitter stuck way up on the top. It is not the world's highest antenna—the US record is 1,970 ft and in Moscow it's 1,750 ft—but it's got to be the only one whose supporting framework hails from the 19th century! It's also the only one that's swarmed over each year by millions of visitors whose only exertion consists in having to queue up in front of the elevators (there aren't many takers for the 1,800-step stairway hike). The Eiffel Tower (*Tour Eiffel*) forms a cosy cosmos all of its own, a sort of vertical sailing ship complete with bars, shops, restaurants, a post office with its own distinctive cancellation stamp...and a weather bureau laboratory.

Year of India by French experts, who came to India regularly over the last few years, reflects their discriminating interest in India. New dancers like Malavika Sarukkai (Bharata Natyam), Kelucharan Mohapatra (Odissi), Kshemavati (Mohiniattam) Vedantam Satyanarayana (Kuchipudi) and Birju Maharaj (Kathak) were on the list of classical dancers who performed at this festival.

The classical music programmes featured lesser known artistes along with Hindustani and Carnatic heavyweights. Bhimsen Joshi (Hindustani vocal) Vijay Raghav Rao (flute), Amjad Ali Khan (sarod), D.K. Pattammal and D.K. Jayaraman (Carnatic vocal) Shivkumar Sharma (santur), K.J. Yesudas (Carnatic vocal), Parveen Sultana (Hindustani vocal), Thiruviza R. Jayashankar (nadaswaram), Bismillah Khan (shehnai), N. Rajam (violin), Budhatiya Mukherjee (sitar), E. Gayatri (veena), U. Srinivas (mandolin), Ravikiran (gottuvadyam) Zia Mohinuddin Dagar (rudra, veena), etc.

Besides this veritable fare of live performances, the French festival will also feature exhibitions of Indian art, films, architecture, textiles, hairstyles, miniature paintings—the number of artistic skills that go to make up the Indian cultural heritage. There are also forums for cultural exchange of ideas and opinions through seminars and conferences on poetry, literature, urban development and industrial and economic cooperation.

East Meets West

The Inaugural

Unlike the Festival of India in France, which is a government-to-government affair, with a pronounced emphasis on the performing arts, the US Festival is the creation of institutions and business houses to expose the skills and talents of some of India's finest artistes and craftsmen. Shepherded by members of various committees comprising luminaries like Jacqueline Kennedy, Zubin Mehta, Senator Pat Moynihan, Aditya Birla, Sanjay Dalmia, Girish Karnad and architect Charles Correa, the US Festival has the patronage of Nancy Reagan and Rajiv Gandhi. President Ronald Reagan personally dedicated the Year of India to the memory of Indira Gandhi.

Commencing with a symposium on 'India 2000: The Next Fifteen Years' as early as February 1985, the festival, for the next 18 months will course through the social cultural academic and intellectual life of 80 American cities. The formal inauguration of the festival by the Prime Minister, on Jun 13, at Washington's Kennedy Centre was, in a way, a tribute to the resounding music world of India.

The inaugural concert which presented

Bronze Charioteer, Maharashtra.

the splendid dialogue of two stringed instruments—Ravi Shankar's sitar and Ali Akbar Khan's sarod—was applauded by a full house of 2,000. The maestros *jugalbandi* (duet) was accompanied by Allah Rakha and Zakir Hussain on the tabla. The music concert had its grand finale in the crescendo of two Kathakali dancers—Kalamandalam Krishnan Nair and Kalamandalam Ramankutti Nair. Kathakali is one of the most developed and sophisticated of Indian dance-dramas. Its themes are usually drawn from the Ramayana or the Mahabharata.

Visual Arts

Sculpture

The exposition The Sculpture Of India:

2500 B.C.-1300 A.D. at the National Gallery of Art, bears testimony to the magnificence of the country's rich heritage. And, according to Indian canons, the highest expression of visual art form is through *Chitra* (drawing) or sculpture.

Indian sculpture is designed to comprehend the world of plant, animal or human life. The art pieces on display at Sculpture Of India are mainly in stone and bronze and represent the rich diversity in style and form that flourished in ancient India.

The intimate relationship between sculpture and architectural forms in the world has been exemplified by including among the exhibits, a few miniature temples and *stupas*, architectural fragments and ornamental sculpture. Some of the

US CULTURAL TREASURES

John F. Kennedy Centre for the Performing Arts, Washington: Officially opened on Sep 8, 1971 with the premiere of Leonard Bernstein's Mass in the Opera House as the National cultural centre. Designated as a memorial to the late President, the Kennedy Centre presents classical and contemporary music, opera, drama, dance and poetry from the US and other countries. Comprises three magnificent theatres: the Opera House with 2,200 seats, the Eisenhower Theatre with 1,100 seats and the Concert Hall with 2,750 seats. The building, 630 ft long and 300 ft wide, is faced with carrara marble.

The Smithsonian Institution: An independent establishment dedicated to the spread of knowledge. It is a great complex of museums and art galleries, scholars, experts etc. Devoted to public education, basic research, and national service in the arts, sciences and history, with major facilities in Washington, other US cities and overseas. A number of research centres operating under it offer massive facilities and vast intellectual resources for research and education

National Museum of Natural History, New York: One of the world's greatest centres for the study of man and his natural surroundings — in terms of both collections and programmes of research on plants, animals rocks and minerals, fossil organisms and man himself. The items exhibited represent only 10% of the collections totalling more than 55m specimens of plants, animals, minerals and artefacts that are stored in laboratories and offices in the building where over 100 scientists are engaged in research

National Gallery of Art: Maintains a permanent exhibition of masterworks by European and American artists and presents a continuing series of temporary exhibitions.

The Metropolitan Museum of Art: A store house of one of the best and most representative collections of American art. Opened in 1924 it incorporates major examples of American paintings, sculpture and decorative arts. Has extensive collection of the arts of China and Japan, and very recently is improving its holdings of Indian and South-East Asian art.

THE INDO-US HANDSHAKE

A black-tie-suit-event, the inaugural concert, was more of an elite affair," remarked Avinash Pasricha, Photo Editor, *Span*, who visited the Festival of India in the US in June this year. "Many who went to the Kennedy Centre (the concert venue) did so either to see Rajiv Gandhi or to hear Ravi Shankar," he opined.

Apparently even an overdose of culture can go undigested. The audience at the concert having had their fill with the sitar-sarod *jugalbandi* by Ravi Shankar and Allah Rakha, had no appetite left for the final Kathakali performance by the Kerala Kalamandalam troupe. "The audience response to Kathakali was poor; it should not have been combined with a music performance," Pasricha reiterated.

Among the few events he witnessed, Pasricha rated Rajeev Sethi's 'Aditi' as the "most exuberant and absorbing" part of the US festival. "The audience response to 'Aditi' was remarkable since the artefacts on display were also being designed by our craftsmen, working alongside in the exhibition," he said. "It was like walking through India transplanted live in the US." The rhythm of the Rajasthani street performers, the audacity of the women rope walkers, even the amazing world of our roadside photographers came alive at 'Aditi'.

"But, except for Rajiv Gandhi's presence, the festival by itself did not have the kind of impact expected by us here," Pasricha emphasised. The much talked about sculptures exhibited at the National Art Gallery were "mere additions to the wide variety already on display," he added.

Despite the unprecedented media attention to the festival (*The Washington Post*, *The New York Times*, *The Washington Times*, *USA Today* and a variety of American magazines have given considerable space to Indian art, fashion, etc), "the common man was not to be seen rushing to the festival unless he had been motivated by word-of-mouth".

Talking about its long-range benefits, Pasricha was optimistic that the festival would create enough interest that may lead to economic and foreign policy benefits for India. "It may also help in changing the existing prejudices against India—the result of Mrs Gandhi's assassination, the Bhopal tragedy and the army action in the Golden Temple complex," Pasricha exemplified. "The Americans were enthusiastic to know the truth behind the Punjab tangle."

The festival is nevertheless likely to have immediate benefits for India in the areas of tourism, books, films and trade besides strengthening Indo-US ties.

Natraja—Dancing Shiva (C. 11th century)

exquisite pieces include the Didarganj Yakshi (goddess of fertility) in sandstone belonging to the 3rd century B.C., a grinning dwarf Yaksha, in stone, from the 2nd century B.C. (one of the rare pieces in Indian art that conveys a definite emotion); a miniature bronze charioteer (c. 1600 B.C.) in the old wax technique, made from the original in wood, and a standing Buddha in bronze from the 6th century A.D. Several other museums and galleries all over the US have been inundated by bodhisattvas, dancing Shivas, gilded toys of Vishnu and an assortment of erotic sculptures.

Of particular interest is the exhibition on Indian terracotta art—a "people's art"—which will be housed in the American Craft Museum, New York, in September. The exhibits will trace the significance of this art right from the Indus Valley Civilisation (c. 2500-1500 B.C.) till the contemporary period. Some Indian potters will demonstrate the technique of making terracotta objects.

The Metropolitan Museum of Art, New York, will present masterpieces from India's stream of sacred and secular traditions. They will represent our religious and courtly traditions as well as the lesser known art and artefacts of the tribal and folk communities.

Architecture

A cultural exposition cannot afford to neglect the extraordinary range of architectural skills generated by India over the centuries.

Exhibits, including a Khajuraho temple, the Padmanabhapuram Palace in Trivandrum, the Sanchi *Stupa* and the master plan for the city of Jaipur, will be displayed. India's ability to interact with and assimilate influences outside the traditional folds find an expression in the interesting

array of buildings from the Mughal, Lodi and British periods. Miniatures exhibited will include the Muslim capital of Mandu in MP, works by Edwin Lutyens in New Delhi, Claude Batley's designs, the work of Corbusier in Chandigarh, as well as examples of current urban typologies. Besides, the important principles of Indian architecture will be presented through photographs, drawings, models, audio visuals etc.

Festival Of Science

Science and technology have been a part of Indian tradition since ancient times. India's contribution to astronomy, chemistry, mathematics, metallurgy, medical sciences, architecture and ship building, to name a few, have been significant. Modern India continues to forge ahead in making India a technological success. Besides, the country has gained notable success in food production and in the increase of life expectancy. India has also been a pioneer in the small-scale sector, has set up a station in Antarctica, has acquired self-reliance in nuclear power generation and is fast developing her space programme. The

(Continued on page 55)

CULTURAL DISCORD

Much water flowed down the Ganges before its waters reached Paris to be mingled with the Seine. The culture war that raged in the capital over the non-selection of the prima donnas Yamini Krishnamurthy, Sonal Mansingh and Uma Sharma, for the Paris festival, went to the extent of their staging a walk-out in a programme organised by the Sangeet Natak Akademi, to pay homage to the legendary dancer Balasaraswati, on May 13.

Some grist to the controversy mill was added by the Chairman of the Akademi, Dr Krishna Menon, in a TV interview where he suggested the idea of new, young dancers representing India at the festival.

Matters again came to a head over the issue of the shipment of Indian art treasures and objects of worship which could be misappropriated or damaged during transit. A citizen's group in Tamil Nadu obtained a court order staying the shipment of four bronze sculptures from the Paruthiyur Temple in Tanjavur on the ground that the display of the images in a foreign land could offend local religious sentiments.

Even Pupul Jayakar, chairperson of the festival committee, came under fire when she made a public disclaimer that she had seen the list of objects to be sent. An angry Dr Lakshmi P. Sihare, Director of the National Museum, reportedly called her a "liar" and condemned the "cultural exploitation" of Indian art treasures.

ARMING FOR PEACE

BY U. N. KUMRIA

The Indian Ocean is to remain a zone of peace, despite the fact that the super-powers are aiming to establish a new military equation in the region. Inevitably our defence forces are being strengthened by boosting indigenous production of defence equipment.

High stakes: India is rapidly acquiring sophisticated weaponry for any eventuality.

National defence depends upon a number of factors that span the fields of geo-strategy, national interests and international relations. India's location as a littoral state in the Indian Ocean, is one reason for its being a dominant nation committed to the establishment of peace and stability in the region.

The Indian Ocean is bound by the east coast of Africa, Sri Lanka, Burma, Indonesia, Malaya, Singapore and Thailand. The Red Sea, the Arabian Sea and the Bay of Bengal form a part of this ocean. At one time the Indian Ocean was considered a 'British Lake' as the entry and exit points at the Cape of Good Hope, Aden, and Malaccan Straits were in the hands of the British and its sway was felt in South Africa, East Africa, Aden, India, Burma, Malaya, Australia and New Zealand.

This ocean is a major area of concern for India due to its increased military and naval interest and the presence of super-powers as well as extra-regional powers in the area. The changed US military perceptions have created a crescent of conflict extending from Egypt in the west to Pakistan in the east and Kenya to the south.

The focal point of this crescent is the Persian Gulf and Arabian Peninsula which contain about two-thirds of the world's oil deposits. However, those deposits have now started dwindling at a fast pace. The prolonged conflict between Iran and Iraq has further heightened the tensions around the Gulf region whose oil resources are of vital importance to the world. In order to safeguard her interest in the troubled crescent, the US has created CENCOM (Central Command) which has superseded the earlier Rapid Deployment Force of over 1

lakh troops located in Tampa (Florida) and which can be ferried to the scene of action in fast moving ships and aircraft. Incidentally, the headquarters are proposed to be shifted to Masirah, Oman. CENCOM is closely linked with PACOM (Pacific Command) whose jurisdiction will cover the entire Indian Ocean, including Diego Garcia and South-East Asian Region, extending from Malaccan straits to Japan, which is updating her armed forces (self-defence forces) in order to defend the region to a radius of 1,000 km.

The countervailing force in the region is USSR which has a naval base with facilities from Vietnam and Kampuchea in the east to Aden in the west. The vast military and naval presence in this region of Indian Ocean poses a great threat to the sovereignty and independence of the littoral states. The responsibilities of the Indian Navy have considerably increased and it has to play a major role in defending India's maritime interests. We have an exclusive economic zone of 320 km from the coast-line that consists of an area of 25 lakh sq km containing off-shore oil installations, mineral and oil wealth.

Indian Navy

Our indigenous construction programme has received a boost with the commissioning of two seaward-defence boats, two survey crafts and one torpedo launch and recovery vessel during late 1984 and early 1985. The indigenous construction of our first submarine has also started.

The most notable amongst the acquisition of the Indian Navy has been the Sea-Harrier from the UK. Equipped with a modern radar and guided missiles, the primary role of the Sea-Harrier would be

the air-defence of the fleet by day and night. This aircraft can deliver very effective anti-shipping strikes with guns, rockets, bombs and missiles at long ranges. Its rotating exhaust nozzles provide the Sea-Harrier with remarkable take-off and landing capability. It can take off in an area of just 300 sq ft and land vertically like a helicopter inside a circle of 70ft radius. While capable of attaining forward speeds of upto 700 miles per hour, it can also fly backwards at 45 miles per hour. The Navy with a budget of nearly Rs 602 crores during 1985-86 has three Godavari class frigates under construction which are totally Indian in concept and design. Though India cannot afford to match the naval strength of the superpowers, she will need fast moving naval task forces with air-craft carriers to provide adequate air-support. She will also need a trained force of infantry marines capable of moving swiftly to the defence of our island territories.

Military Equation

In the sphere of immediate and potent threats, continental India is to be specially wary of the imminent threat from the land frontiers. The situation is not too different from what it was in the early '60s when the Chinese successfully annexed 12,000 sq km in Ladakh to open up the Sikkang road that linked China to their eastern most military outpost of Xingiang on the Russian frontier. The strategic interests of China in the Ladakh region at that time were camouflaged by claims in the north-east where she fought a short but decisive war to lock up Indian forces on two fronts while she consolidated herself in the west. Chinese claim on Arunachal Pradesh, which were defeated during the IXth ASIAD when they objected to the presence of a contingent from that state, is another instance.

In 1983, the Karakoram Highway was constructed through Pakistan-occupied Kashmir which linked China to Pakistan. Despite Indian's protests, the construction continued and it has been interpreted as an attempt to formalise the illegal transfer of about 4,500 sq km in the Karakoram watershed in Shaksgam Valley during the Sino-Pak Agreement of 1963. The 800 km long Karakoram Highway links Sikkang in China to Muzaffarabad in Pak-occupied Kashmir (POK) and passes through the 4,530-m high Khunjerab Pass.

The Pakistani assault on Indian posts in glacial regions of Siachen from June 1984 onwards is another attempt to take advantage of the undelineated area in Ladakh. Both the Karachi Agreement of 1949 and the Simla Agreement of 1972 had terminated the ceasefire line and the line of control respectively at a point near Shyok river in Ladakh and thereafter it was merely mentioned "Thence Northwards to

glacier". The Indian Army had been patrolling these glacial regions since 1948 and was able to defeat repeated Pakistani attempts.

Pakistan has been and still remains India's principal security concern. It has taken full advantage of the continued Soviet presence in Afghanistan and the situation in West Asia to strengthen its role as the frontline state in the US strategic perceptions. Acquisition of highly sophisticated weapons such as the additional supply of F-16s, TOW anti-tank missiles, the Harpoon missiles, the Vulcan phalanx air defence equipment, the Mohawk battlefield surveillance aircraft, the Hawkeye or Equivalent Early Warning System mounted on transport aircraft and now the shoulder-held Stinger Surface to Air Anti-aircraft Missile capable of effectively

engaging low altitude high speed jet aircraft, propeller driven planes and helicopters with its in-built Identification Friend or Foe (IFF) are far beyond Pakistan's legitimate defence needs and give her an edge in offensive capability. As there has been no significant change in our relations with China, the border question has not been settled in spite of five rounds of talks.

In the meantime, China has launched a massive programme of modernisation of its defence forces. The present military balance poses a greater threat from Pakistan which is linked to the US through a security pact. China, too, has the capability to improve her strategic posture in the West while attempting to lock-up the bulk of India's Armed Forces in the north-east.

NEIGHBOURLY STRENGTH

In less than four decades since independence India has faced four attacks—three from Pakistan in 1948, 1965 and 1971 and one from China in 1962. The armed strength of these countries based on statistics published in the 1985 edition of *International Institute of Strategic Studies*, London, and the 1981 *White Paper* published by the Defence Agency, Japan, are described below.

CHINA

Military power is formed by the People's Liberation Army which comprises the Field Armies or the Main Force, Regional Force, Naval force and Air Force as well as 100m strong Peoples' Militia.

Nuclear Forces: These comprise six operational Inter-continental and Ballistic Missiles (ICBMs) with a range of 10-13,000 km and a warhead of 3 to 5 Megatons, between 60 and 85 Intermediate Range Ballistic Missiles (IRBMs) with 2 Megaton warhead with a range of 5,500 km, 50 Medium Range Ballistic Missiles (MRBMs) with a range of 1800 km, and a 20 kiloton warhead. 120 H-6 (TU-16) strategic bombers are also available. ICBM capability has been tested in South Pacific to a range of 12,000 km. China is reported to be having a tactical nuclear force of 150 nuclear war-heads in the 20 kiloton range capable of delivery by 180 mm artillery and T-5 short range ballistic missiles with 100 km range (SRBMs).

Army: The 3.6 m strong army comprises 132 divisions of Field Armies (including 11 armoured divisions, 118 infantry divisions and 3 airborne divisions). The country also has an additional force of 85 divisions of the Regional Forces, equipped with a total of 12,000 tanks.

Air Force: China has some 6,000

combat aircraft in the range of MiG 19 & 21; some later versions are now being developed.

The Navy: The country has 1910 ships including 88 submarines and 39 other ships such as destroyers and frigates.

PAKISTAN

Army: The Pakistani army is comprised of 4½ lakh troops with a reserve of 5 lakh men organised in 7 corps HQ, one Territorial command, two armoured divisions, 16 infantry divisions, four independent armoured brigades, five independent infantry brigades, seven artillery brigades, two anti-aircraft artillery brigades, six armoured reconnaissance regiments, six SAM (Surface to Air Missile) batteries with six crates (each four missiles), two Special Service Groups, 30,000 contract personnel in Saudi Arabia, 20,000 in Jordan, Libya, Oman & UAE, Para-Military Forces over 1 lakh comprising National Guard (22,000), Frontier Corps (65,000), Pakistan Rangers (1,13,000), Coast Guard (2,000) and Frontier constabulary (5,100), 1,370 tanks (370 M-47/48 and 1000 T-59) and some 1000 pieces of guns.

Navy: There are about 11,000 sailors; 11 submarines (two Agosta, four Daphne, five SX-404 midget); eight destroyers (one British country, six US Gearing, one British Battle); one British Cruiser; 19 Coastal patrol craft and Reserve-5000 sailors.

Air Force: The country has a strength of 17,600 airmen with 314 combat aircraft organised into 21 squadrons—nine fighter ground attack (five with Mirage and four with Chinese O-5), nine fighter ground attack/interceptor squadron with Chinese F-6 with one converting into F-16, one reconnaissance squadron with Mirage, and two transport squadrons.

India's Armed Strength

India's response to the changed military equation and perceptions should be three-fold. Firstly, we need strong, mobile and hard hitting forces in the plains from Rajasthan to J & K capable of launching a strong counter stroke to defeat any military adventure. India's planned production of sophisticated T-72 tanks and BMP Infantry Combat Vehicles, at Avadi in Madras and at Medak in AP respectively, is a step in the right direction. Additionally, our indigenous main battle tank, Arjun, has finally emerged in prototype and will take its pride of place amongst Indian mechanised forces by the '90s. This tank would have a new kind of armour known as Kanchan which would be very difficult to pierce. It will also have hydropneumatic suspension and a very powerful gun. Its main feature will be the 1,500 hp engine which is expected to be developed indigenously. Similarly air defence and engineering equipment are also being updated.

In the field of artillery India is in search of a heavy artillery gun. Our main requirement would be a modern and sophisticated communication system along with adequate electronic warfare devices. In order to defend our western and north-eastern borders we will need to equip our armed forces in mountainous regions with sophisticated weapons. Heavy machine guns are being introduced to augment the fire-power of infantry battalions. As modern day battle environment favours night operations especially for our infantry, modernisation measures include procurement of items for infantry which will enhance its night fighting capability. Battle field surveillance radars, night vision binoculars and passive goggles are being introduced. The army's budget estimate for the current year of about Rs 4,787 crores constitutes a major component of the overall budget of Rs 7,118 crores.

The induction of highly sophisticated weapons in Pakistan has increased the responsibilities of the Indian Air Force. The acquisition of Mirage-2000 has provided an additional punch to the Indian Air Force. This aircraft is, perhaps, the answer to Pakistan's F-16. MiG-27m aircraft has already been inducted into the service and with the delivery of more aircraft of this generation like the Jaguar, some of the older aircraft like the Hunter, Canberra and the Sukhoi are on their way out. With the induction of the latest IL-76 long range heavy transport aircraft into the Indian Air Force by the Defence Minister, P.V. Narasimha Rao, in July 1985 our air force has been strategically mobilised. This aircraft can carry a maximum payload of 43 tons over a distance of 4000 km. It

EXORCISING GHOSTS

PUNJAB

THE CLOUD LIFTS

The Centre's concerted efforts to resolve the Punjab imbroglio finally paid off when, on Jul 24, a historic memorandum of understanding was signed between PM Rajiv Gandhi and Sant Harchand Singh Longowal of the Akali Dal. Although the Rajiv Government's sagacious handling of the Akalis had succeeded in mellowing a large number of them and had resulted in bringing a formerly recalcitrant Longowal to the negotiating table, the accord came as a surprise even to the most optimistic of political onlookers.

It goes to the Punjab Governor, Arjun Singh's credit that he justified the trust the Centre had placed in him, that too, in an incredibly short span of less than five months. It was his secret parleys with the higher ranks of the Akali leadership and his sensitive handling of an explosive issue which prepared the ground for the talks. A day prior to the Rajiv-Longowal talks, the Centre came up with yet another announcement designed to placate the Akalis—the abolition of special courts set up in Punjab and Chandigarh for the trial of suspected terrorists. This had

TERMS OF AGREEMENT

Listed below are the main points of agreement included in the memorandum of understanding between the Centre and the Longowal led Shiromani Akali Dal, signed on Jul 24, 1985.

- Portions of the Anandpur Sahib resolution dealing with Centre-state relations to be referred to the Sarkaria Commission.
- Transfer of the Union territory of Chandigarh to Punjab with effect from Jan 26, 1986.
- Setting up of commissions to determine Hindi-speaking areas of Punjab to be transferred to Haryana in lieu of Chandigarh and to go into claims for readjustment of the Punjab-Haryana boundary.
- With respect to the All-India Gurdwara Act, the Centre is to consider legislation to be framed in consultation with concerned authorities which also fulfils constitutional obligations.
- On the issue of distribution of the Ravi-Beas waters, Punjab, Haryana and Rajasthan to continue getting waters as on Jul 1, 1985. Completion of the Sutlej-Yamuna link canal by Aug 15, 1986. Reference of additional claims of Punjab and Haryana to a tribunal.
- Extension of inquiry into the November riots to cover Kanpur and Bokaro in addition to Delhi.
- Rehabilitation of army deserters through gainful employment. Also, merit to remain the sole criteria for further recruitment in the Indian Army.
- Lifting of anti-terrorist laws particularly the Armed Forces Special Powers Act from Punjab.
- Compensation to be made for all those innocent persons killed in the agitation or any action since Aug 1, 1982 as also for any property damaged during the agitation period.
- Special courts to be abolished. Existing special courts to try only cases of waging war against the state and hijacking. All other cases to be transferred to ordinary courts.

been a major pre-condition of the Akali Dal for resumption of talks and was an essential pre-requisite for holding elections in the state. But perhaps more important was the part played by Longowal. Keeping in view the rampant factionalism in the Akali Dal, his willingness to negotiate with the government was indeed commendable.

The 11-point agreement between the Centre and the Akalis covers all matters of dispute between the two sides. Its essential components include transfer of the Union territory of Chandigarh to Punjab with effect from Jan 26, 1986, reference of parts of the Anandpur Sahib resolution dealing with Centre-State relations, to the Sarkaria Commission, rehabilitation of army deserters by providing them with gainful employment, offer of compensation to innocent people killed during the agitation and extension of the inquiry into the November '84 Delhi riots to include Bokaro and Kanpur. (See box)

The signing of such a memorandum of understanding by the PM himself is an unprecedented event in the history of Centre-state relations in India and only goes to underscore the top priority accorded to the Punjab problem by the Centre. Echoing the sentiments of the Indian masses, Rajiv said that he hoped this would "bring to an end a very difficult period through which the country passed. It will be the beginning of a new phase of working together to build the country, to build unity and integrity." This statement was accompanied by an equally heartening declaration by Longowal: "The period of confrontation is over. The morcha stands automatically withdrawn."

But while this victory of amicable talks over the bombs and bullets that ricocheted across Punjab for four traumatic years elicited jubilation from most quarters of the Indian populace, it stirred up a hornet's nest in Punjab. The SGPC President, Gurcharan Tohra and the ex-CM, Prakash Singh Badal were vociferous in their outright disapproval of the accord. And the leader of the United Akali Dal, Baba Joginder Singh rejected it in toto. Longowal's arrival in Amritsar gave the incensed rival Akali groups an opportunity to demonstrate their displeasure. And the Dal's meeting on Jul 30 to discuss the accord resulted in group clashes. The ensuing violence forced the police and para-military forces to intervene. With this the schism in the Akali Dal and the Longowal camp and the Joginder Singh camp has assumed ominous proportions.

Besides this, the Rajiv-Longowal accord has come in for some scathing criticism from the affected states of Haryana and Rajasthan. In fact, all the 29 opposition members of the Haryana Assembly have decided to resign *en bloc* to show their resentment against the sacrifice of their states' interests to appease the Akalis. According to the members, it is blatantly unfair of the Centre to concede Chandigarh to Punjab without simultaneously accepting Haryana's claim of Fazilka and Abohar. They also feel that the wording of the agreement is vague in respect of the award of Hindi-speaking areas to Haryana. On the issue of granting river waters to Punjab, Haryana and Rajasthan, they are opposed to the clause by which the states will get water not less than what they were using from the Ravi-Beas system, on Jul 1, 1985, as then Haryana would be getting less than its allocated share of 3.5 MAF.

Rajasthan is also opposed to clause 9 of the agreement regarding the issue of the Ravi-Beas waters. In fact, CM Harideo Joshi is of the opinion that it is an assault on the state's share of river waters. His resentment is partly based on the fact that the Centre did not even consult him on the issue before formulating the accord.

However, the bickerings among the states fade into insignificance when one views the overall gains of the accord. In all likelihood, it signifies the end of a phase of hatred, violence and distrust and the beginning of a phase of amity, goodwill and understanding. The Centre at the moment is busy taking stock of the situation in Punjab before it gives the green signal for the restoration of the already much-delayed democratic rule in a recuperating Punjab.

INDIA-SRI LANKA

PARLEYS AT THIMPU

Dispelling the uncertainty shrouding them, the Thimpu talks did take place as scheduled. Bringing the Sri Lankan Government and the Tamil militants face to face yet again—but this time across the negotiating table. In the first-ever negotiations between the two warring factions, the Jayewardene government finally accorded recognition to the Tamil militant groups. Their six-day talks at the

isolated Bhutanese capital of Thimpu see the first phase in the discussions aimed at finding a lasting solution to the ethnic problem in the strife-torn island nation.

The Sri Lankan side, headed by Hector Jayewardene, brother of the President, represented the Sri Lankan Government. The Tamil militants, comprising the People's Liberation Organisation of Tamil Eelam (PLOTE) and the four-group alliance, Eelam National Liberation Front (ENLF) which constitutes the Liberation Tigers of Tamil Eelam (LTTE), the Eelam Revolutionary Organisation (ERO), the Tamil Eelam Liberation Organisation (TELO) and the Eelam People's Revolutionary Force (EPRF) sent their representatives. The moderate Tamil United Liberation Front (TULF) was also represented by Amrithalingam. It goes to the credit of the Tamils that for once they exhibited a semblance of unity. It is believed that the closed door talks at Thimpu were restricted to violations of the ceasefire. But even as some headway in the negotiations was reported with the Sri Lankan government lifting curfew restrictions in the northern province—a measure agreed upon in the talks—and announcing its decision to free over 600 Tamil guerilla suspects, an abortive bid on the life of the Sri Lankan President very nearly jeopardised them. The arrest of two suspects allegedly assembling timing devices on two packages of Indian-made gelignite (an explosive) implicated not only the Eelam Revolutionary Organisation of Student but also hinted at an Indian involvement. The ERO and other Tamil militant groups immediately issued denials and, in fact, accused the Sri Lankan authorities of planning a hatchet job to lower their credibility.

The talks at Thimpu predictably ran into rough weather with the Tamil representatives rejecting the proposals of the Jayewardene government with regard to regional autonomy. The Sri Lankan Government's proposals for devolution of powers at district and provincial levels were according to them a replay of Jayewardene's 1984 proposal package and did not even remotely meet the basic aspirations of the Tamils.

Fearing a breakdown of negotiations, India once again decided to act as mediator and Foreign Secretary, Romesh Bhandari, rushed to Thimpu to placate the two sides. With the result that the negotiating teams ended the first phase of discussions on an amicable note. The second round of talks scheduled to commence on Aug 12 are expected to deal with substantive issues. In any case, the Thimpu sojourn gave the two sides a chance to air their grievances, if nothing more.

GUJARAT

SOME HEADWAY

One of the first major moves by the new CM Amarsinh Chaudhary to restore normalcy in the ravaged state of Gujarat was the complete withdrawal of the army on Jul 16—three months after its deployment in the state in the wake of violent disturbances. In fact, right from the word 'go', Chaudhary has handled the jinxed reservations issue with tact and deftness. Even while forming his new cabinet he dropped five Kshatriya ministers and inducted *bania* and *patel* legislators to give more representation to major communities. He also appointed two cabinet sub-committees to negotiate with the agitating anti-reservationist leaders and the striking government and panchayat employees in the wake of a call for 'jail bhara' programme by the agitationists for Jul 19.

These concerted efforts yielded results when after prolonged discussions with the state government, the agitation leaders announced, on Jul 18, that an accord had finally been reached with the government and decided to postpone the 'jail bhara' programme. This was followed by a withdrawal of the Gujarat agitation on Jul 19 following an agreement between the two sides. For, unlike his predecessor, Chaudhary decided to tackle the bull by the horns. His four-point package exhibited an amazing political shrewdness and was accepted by both the Akhil Gujarat Navrachna Samiti (AGNS) and the Akhil Gujarat Vali Mahamandal (AGVM). With regard to the 18% hike in reservations quota for backward classes, Chaudhary decided to scrap the increase altogether until a national consensus on the issue is evolved. Also, the existing 10% reservations for other backward classes listed by the Baxi-commission, which expires in March 1988, would be reviewed by a committee comprising a sitting high court judge and two retired high court judges, which is to submit its report latest by December 1987. An inquiry commission headed by a high court judge would also be constituted to probe into the incidents of violence in April. And finally Chaudhary also agreed to release the detained student leaders and agitation leaders and withdraw charges against them.

But apparently violence has taken firm roots in the state. Within 36 hours of the army withdrawal, violence escalated in the state with

reports of killing, loot and arson going in at an alarming frequency. Obviously the reservations issue has receded into the background, for the violence in Gujarat now has a distinct communal tint. And to complicate matters further, splinter groups of the spearheading AGVM and AGNS, not satisfied with the agreement between the government and the anti-reservationists, decided to continue with their stir. Also the government's refusal to abolish the caste based roster has served to increase the striking panchayat and government employees further.

The ceaseless violence prompted Chaudhary to take stringent measures, which include the imposition of the Anti-terrorist Act, providing for capital sentence of death or life imprisonment depending on the magnitude of the crime, in the state. And the attaching of properties of persons wanted by the police and framing of legislation preventing the distress sale of houses in disturbed localities.

Meanwhile undeterred efforts by the state government have met with success once again. On Jul 30, the Gujarat hardliners including the agitating splinter groups signed an agreement with the government. When the government agreed to their demands of setting up engineering and medical colleges in the state during 1986-87; consideration of economic criteria as one of the yardsticks of reservations and initiating administrative measures to give preference to Gujarat in-class three and four services of statutory boards and corporations.

Despite the sporadic incidents of violence, some semblance of normalcy has already been restored in the state. Schools and colleges have reopened although the attendance is still poor. There are indications that the much-delayed exams will also be conducted. And the state government is taking all possible steps to facilitate Gujarat's limping progress.

INDIA-PAKISTAN

ARMS TALKS FUTILE

Once again not much headway was made in the Indo-Pak talks. Coming as they did in the wake of Pakistan Foreign Minister, Sahibzada Yaqub Khan's visit, the latest four-day official level talks failed to cover any fresh ground.

The delegations of the two countries, led by their respective foreign secretaries—Romesh Bhandari from India and Niaz Naik from Pakistan—once again discussed the entire gamut of Indo-Pak relations as well as regional issues like Afghanistan, Sri Lanka and South Asian regional cooperation. While these talks were specially arranged for discussing proposals for a non-aggression pact and a treaty of peace, friendship and cooperation between Pakistan and India, no constructive steps were actually taken in this direction.

However, the talks provided India with the opportunity to convey its concern over Pakistan's nuclear war programme and get Pakistan's version about its testing a trigger for nuclear bombs. The acquisition of sophisticated US arms by Pakistan and its role in the Punjab developments also figured in the talks. Naik also had a meeting with PM Rajiv Gandhi.

The talks concluded with both countries issuing a joint statement in which it was emphasised that they would continue with their efforts aimed at the conclusion of a comprehensive treaty between the two countries. They also agreed to continue with the exchange of ministerial-level visits to promote mutually beneficial programmes in areas of common interest.

KANISHKA

DELVING INTO THE UNKNOWN

It is too early yet to pass judgment on the happenings on Jun 23, the Black Sunday. Even though, the vital black box constituting the Cockpit Voice Recorder (CVR) and Digital Flight Data Recorder (DFDR) was brought to India following a remarkable recovery from the Atlantic Ocean, no breakthrough has been made in ascertaining the cause of Air India's Boeing 747, Emperor Kanishka's crash. In which all 329 people aboard the ill fated plane plunged to a watery grave in the choppy ocean.

A crash probe team headed by Justice B.N. Kripal of the Delhi High Court initiated investigations on Jul 15. Preliminary runs revealed that both the CVR and the DFDR are in good condition despite the numerous shocks they must have sustained during and after the crash. The Kripal Commission hopes to complete preliminary investigations within six weeks.

Up until now all indications point towards a mid-air explosion. The CVR tape has recorded a muffled bang indicative of a blast or explosion seconds before the plane disappeared off the radar screen of Shannon Air Tower Control. However, the noise of the engines and radio disturban-

Another finding which indicates the possibility of an explosion is that all four major electronic components of the aircraft namely the CVR, DFDR, transponder and air data computer failed abruptly and simultaneously. These vital components are designed in such a way that even if one or more of them fails the others keep working unhampered. Therefore, only some instantaneous and extremely forceful shock could have caused their collective and abrupt failure.

J&K

Minor upheavals time and again have become part and parcel of life in J & K. But when an alleged abortive bid was made on the life of the still popular ousted CM Farooq Abdullah, the clamourings within the state became audible. Abdullah alleged that one of the ministers of the G.M. Shah regime had masterminded the attempt. And the bombs that exploded at the scene of the Martyr's Day rally being addressed by the former CM only serve to lend credence to the allegations. Further, Shah's refusal to order a judicial probe into the incident were viewed with suspicion.

Initially, the Congress(I) leadership had, after the formation of the G.M. Shah ministry, refrained from taking part in the governance of the state and only extended support from outside. But the fact that the Shah government has lately been under attack for non-performance and mounting corruption from all quarters obviously perturbed the Centre sufficiently to summon 40-odd Congress(I) leaders of the state including the Pradesh Congress Committee President to New Delhi. Apparently to make an assessment of the prevailing situation in the state.

TELUGU-GANGA PROJECT HIGH AND DRY

Use of surplus water in the Krishna river to his state

The Krishna Water Disputes Tribunal or the Bachawat Tribunal, as it is popularly called, was set up in 1973 to resolve the water disputes. It held that if the inflow of waters into the Krishna was 62,640 bly against the norm of 57,680 bly established on the basis of 75% dependability, then the surplus would be shared between Karnataka, AP and Maharashtra in the ratio 50:35:15. However, if the inflow exceeded 62,640 bly, then the share ratio was to be 50:25:25. Also, the water flow of 2,060 thousand million cubic feet (tmcft, one tmcft=28 bly) was allocated to AP, Maharashtra and Karnataka to the tune of 800 tmcft, 700 tmcft and 560 tmcft respectively. Further, the three states had agreed to part with 5 tmcft or 140 bly to provide Madras with drinking water in 1976.

And while Hegde is justified in his opposition of NTR's claims, the latter is also to be held responsible for the shelving of a project which would have benefitted a large number of people in the long run. For, AP could have gone ahead with the project without necessitating a significant tap on Krishna waters surplus. Under the Godavari Water Disputes Tribunal, of 2,240 bly of the Godavari waters diverted to the Krishna 1,568 bly have been awarded to AP—enough water to float the Telugu Ganga project. The matter has now been placed before the Centre for consideration.

FACILITATING DISMISSALS

Value of rupee in different cities
(May 1984)

City	Value of Rupee
Bangalore	4.89
Bombay	16.2
Hyderabad	16.5
New Delhi	16.6
Ahmedabad	16.29
Calcutta	16.31
Rangoon	17.0

dismissed or removed from service without an inquiry under Article 311 (2) (B) of the constitution—for 'public good' and in 'public interest.'

Article 311 (2) (B) states that a person can be removed or reduced in rank without an inquiry if the disciplinary authority is satisfied that an inquiry is not reasonably practicable. Also, an inquiry need not be held in the case where the government servant is convicted on a criminal charge or if the President or Governor is satisfied that it is not expedient to hold such an inquiry under Article 311 (2)(A) and (C) for preserving the security of the state. The Supreme Court has, however, ruled that denying the civil servants a right to be heard does not violate the principles of natural justice and Article 14 (which concerns equality before law) of the Constitution. Rather the court went on to state that 'sympathy and commiseration cannot be allowed to outweigh considerations of public policy, concern for public interest, regard for public good and the prerogative dictate of a constitutional prohibition.'

With this judgment, the Supreme Court has overruled the three-judge bench's ruling in the Challappan case which held that a delinquent civil servant can only be dismissed or removed from service after he has been given an opportunity to be heard. In addition to this, the Supreme Court also rejected a batch of writ petitions filed by railway employees dismissed from service for taking part in all India strikes as well as a large number of petitions of officials of the MP district police force and MP special armed police force, who were dismissed for alleged involvement in violent incidents, on the grounds that in these cases the public interest and public good had been jeopardised and the country held at ransom.

As such, Article 311(2) stipulates three conditions in which an inquiry need not be held prior to removing or dismissing a civil servant. These include cases where a person is dismissed or removed or reduced in rank on ground of conduct which has led to his conviction on a criminal charge; the authority empowered to dismiss or remove a person or to reduce him in rank is satisfied that for some reason, to be recorded by that authority in writing, it is not reasonably practicable to hold such an inquiry; the President or the Governor, as the case may be, is satisfied that in the interest of the security of the state it is not expedient to hold such an inquiry.

A dismissed civil servant now has only two remedies left with him. He can either make a departmental appeal or make a judicial review. Thus, this Supreme Court ruling should be able to weed out undeserving civil servants from the ranks of the government services.

HARIJANS

UNLEASHING TEMPERS

Karamchedu is a small, prosperous village in Andhra Pradesh. Hundreds of kilometers away in the state of UP is another village—Sinhpur-Rawal. Both have suddenly come into the news, and that too for the same appalling reason. Atrocities inflicted by caste Hindus on the Harijans.

In Karamchedu, on Jul 17, five Harijans were massacred and numerous others injured when a mob of about a thousand caste Hindus armed with lathis and blunt instruments cordoned off the predominantly Harijan section of the village and attacked the inhabitants. What triggered off this assault was the scuffle that followed an upper caste boy's attempt to bathe his bullocks in a tank from which the Harijans drew their drinking water. Fearing for their lives the Harijans fled their village and sought refuge in a church in the nearest town of Chirala. The Union Minister of State for Home Affairs, Ram Dulari Sinha, went to make an on-the-spot assessment of the Karamchedu massacre which resulted in an open confrontation between the NTR Government and the Centre over the minister's alleged high-handed treatment of government officials in Andhra.

Meanwhile, four days later on Jul 21, Harijans in Sinhpur-Rawal village were subjected to similar treatment when six of them were ruthlessly shot by caste Hindus of their village for opposing bonded labour. The incident prompted the Harijan community to flee.

In both these macabre incidents, considerable amount of property was destroyed and the womenfolk humiliated by the socially privileged classes. Which only goes to prove that even 38 years after independence, the roots of casteism are still prevalent among the Indian masses.

ASSAM

THE COUNTDOWN BEGINS

There is cautious optimism in the government camps as well as those of the agitating Assamese leaders regarding the possibility of a settlement to the festering Assam problem. For past experiences have made both sides wary of raising too many hopes. This time though

Union Home Secretary, R.D. Pradhan, sent to Shillong to prepare ground for a political dialogue between the agitating All Assam Gana Sangram Parishad (AAGSP), and All Assam Students Union (AASU), returned as a harbinger of hope. According to him, the atmosphere in the troubled state was now conducive for the holding of talks as considerable progress had been made in narrowing down differences.

Pradhan's two-day Shillong talks with the Assam agitation leaders primarily centred around the demand of the movement leaders to detect and deport foreign nationals, the dissolution of the state Assembly and proper revision of electoral rolls. Both the Centre and the Assam leaders appear keen on an early solution to the vexed issues as both have yielded considerable ground to facilitate a settlement. The agitation leaders have dropped their demand for 1961 as the cut-off date for detection of illegal immigrants. The Centre too appears willing to concede that 1971 need not be the cut-off year for deportation. However, since the electoral rolls on the basis of 1971 as the cut-off year are nearly complete the selection of any other cut-off year will entail revision of rolls which will undoubtedly delay elections.

There is no likelihood of a package settlement, however, since the Centre has made it clear that the dissolution of the state Assembly is the constitutional prerogative of the CM. Meanwhile, CM Hiteswar Saikia has made no secret of the fact that his loyalties lie with the Centre for solving the issue of foreign nationals. At the moment, then, a formal invitation to the AASU and AAGSP for talks, to solve the Assam problem features prominently on the Centre's cards. **The accord was finally signed on Aug 15 at 2:45 am. For details see next issue.**

FLOODS

WATER, WATER EVERYWHERE

The weather gods are playing havoc in the country again. Practically the entire country is reeling under floods or drought. While major parts of the north, north-east, west and south lie submerged in flood waters, MP is facing the worst drought in over 50 years with monsoons already a month late.

In the north, unprecedented rains in J & K, Punjab, Himachal Pradesh, Bihar and UP have been accompanied by calamitous flash floods which have drawn the states into a chaotic whirlpool. Punjab being probably the worst affected. In all, 800 villages in this state have been seriously affected by flash floods. And the city of Jalandhar, lashed by the heaviest rains since 1955, is at the vortex of the whirlpool. Virtually cut off from the rest of the country, it is a marooned city. Already the death toll in the city has crossed the 80 mark. The Ganga has also crossed the danger mark in Bihar which is, in addition being threatened by the rising Mahananda, Kosi, Gandak and Burhi Gandak. Flash floods have also wrought destruction in W.P. and J & K.

The flood situation in the north-east is also grim with the Brahmaputra flooding its embankment. All major rivers in Arunachal and West Bengal are in high spate too. In the south, Kerala, in particular, faces a serious flood menace. Already the floods have affected over 10 lakh people in Punjab and Himachal Pradesh, nearly 3 lakh people in Assam, 1.36 lakh in 129 villages spread over six districts in Bihar in addition to mammoth losses of life, cattle and property. And although the army is engaged in relief operations in the critically affected areas and has put up temporary relief camps for the deluged, it will take quite some time to rehabilitate the thousands of flood victims all over the country.

Meanwhile MP is fast turning into a wasteland for want of rain. Combating against these natural catastrophes will prove to be an uphill task in itself.

SHARE PRICES

UNPRECEDENTED BUOYANCY

Ever since the announcement of the 1985 Budget, there has been an unprecedented buoyancy in the stock markets. During the past five months, *The Economic Times* all-India share price index (base 1969-70=100) has shot up by 200 points touching an all-time peak of 494.1 in the process.

Frantic efforts by worried stock exchange authorities have failed to curb the upsurge. The measures taken in this direction included the imposition of an exorbitant 40% daily margin against gross purchase of all categories of shares, restrictions on trading in specified share, ban on fresh business and so on.

This increase in share prices is perhaps justifiable to some extent keeping in view various steps taken by the government. The liberal

(Continued on page 60)

UGANDA

OBOTE OUSTED

President Milton Obote of Uganda was removed in a bloodless military coup by rebel Ugandan soldiers led by Brig Bazilio Olara Okello, on Jul 27. Ugandan Army Chief, Lt Gen Tito Okello (who is not related to Brig Bazilio Okello) has been installed as President. Though the exact whereabouts of the deposed President are uncertain, it is widely believed that he may have fled to Kenya. Over 20 ministers of the Obote Government have been arrested, and many killed.

The seizure of power by the new military rulers led to a series of bomb explosions that shook the Ugandan capital, Kampala and the Ugandan soldiers went on a rampage looting shops and houses. The new military government sealed the country's borders, dissolved the Parliament and suspended the Constitution. It promised that elections would be held in a short while. In a surprise move, Paul Muwanga, Defence Minister in the Obote Government was appointed PM by the military rulers.

The coup was instigated by tribal rivalries within the army between the Acholi and Langi tribes. Obote was accused of favouring the Langi tribe to which he belongs, and fanning the flames of resentment even further when he promoted his cousin Brig Opon Acak to the post of Army Chief of Staff, thereby bypassing other senior officials like Lt Gen Tito Okello, a member of the Acholi tribe. Continuous guerilla warfare advocated by the National Resistance Army (NRA) and a ruined economy were other factors that eventually led to the downfall of the Obote Government.

Obote, who was Uganda's first President since independence, in 1962, was initially ousted by Maj Gen Idi Amin in 1971. Amin, who unleashed a reign of terror for the next eight years was eventually overthrown by Tanzanian troops in 1979 and Obote was reinstalled as President.

A week after the coup, the military regime opened up the sealed borders and several Asians—especially Ugandan Indians—crossed over to Kenya. In an effort to appease the NRA guerilla faction offers for talks were made to the NRA leader, Musoveni, by the new Ugandan leaders.

SOUTH AFRICA

UNDER EMERGENCY

On Jul 20, the South African President Pieter Botha clamped a state of Emergency on 36 districts in the Eastern Cape provinces, Transvaal and Johannesburg, in an attempt to quell the continuing violence that has rocked the country for the past 11 months. Botha invoked the Emergency powers under the Public Security Act 1953, which arms the government with a set of harsh measures including tight Press censorship, the power to impose curfew and arrest people indefinitely without warrants. After two weeks of imposition of Emergency, the death toll rose to 22 with more than 1,400 arrests. School boycotts were strictly observed in the Emergency areas and more than 1,00,000 black students kept away from their classes. It is the first time after 25 years that South Africa has been placed under Emergency, the last being in 1960, when the Sharpeville massacre left 69 dead and 178 injured.

The imposition of Emergency in South Africa was met with international disapproval. The UN Security Council adopted a resolution supporting global economic sanctions against the Pretoria regime. France, which played a major role in sponsoring this resolution, has frozen all new investments in South Africa and withdrawn its ambassador from Pretoria. Britain and the US, South Africa's largest commercial partner, however, vetoed the resolution and stated that extreme measures would, on the contrary, produce negative results. Though the US House of Representatives adopted a Bill supporting moderate economic sanctions against the Pretoria regime, the final vote was debated by the Conservative Republicans and will only be known after the month long Congressional break.

The Reagan Administration's policy of 'constructive engagement' is strongly opposed to such measures and it remains to be seen what the outcome will be. The European Economic Community (EEC) has also recalled its envoys for consultations and unanimously demanded the release of the jailed African National Congress (ANC) leader Nelson

Mandela. Denmark became the first EEC country to close its consulate in protest against the Pretoria regime's policy of apartheid. With pressures mounting, the South African Government hurriedly called back its envoy from the US for a review of the situation. The US ambassador had earlier been recalled after South Africa had illegally raided neighbouring Botswana to flush out ANC guerillas.

The latest series of disturbances began last August when a new Constitution, granting the country's coloureds as well as the Indians, representative rights in the Parliament, was implemented. The blacks, who constitute a majority of the South African population, were still excluded. This exclusion from political power, combined with high inflation and unemployment rates, had made South Africa's blacks less tolerant of the existing state of affairs.

The rallying event for the blacks turned out to be the funeral of four leaders of the United Democratic Front (UDF) party who were mysteriously murdered. At Craddock in the Eastern Cape provinces more than 30,000 blacks congregated, and Allan Boesak, one of the UDF leaders gave a call to boycott the white shops. The effectiveness of the boycott promptly led the repressive white regime to impose a ban on political funerals for riot victims.

Today South Africa is on the brink of a civil war. In July, hundreds of black youths in Soweto went on a rampage to protest against the detonation of 105 black students who were being charged for holding an illegal demonstration at the Soweto mayor's residence. In another incident at Nonwakazi, a black woman who violated the boycott order of white shops was found murdered.

Whether the recent developments in South Africa will diminish the power of the white racist regime or not is difficult to tell. The declaration of Emergency by President Botha is being seen by many as more of a symbolic action to placate the white population and also to reassure his investors that all is within control. Yet it may also be interpreted as a sign that the white regime is finding the already prevalent repressive laws insufficient to suppress the growing tide of black discontent.

USSR

POLITICAL RESHUFFLES

A major shake-up has been taking place in Russia since Mikhail Gorbachev came to power. Changes in posts were accelerated in July, although the Soviet Ministry of Defence has yet to confirm most of them. The most startling reported appointment was that of Marshal Nikolai Ogarkov to the post of Commander-in-Chief of the Warsaw Pact. Until September 1984 he had been the Chief of Staff and a first deputy minister of defence. Apparently, he clashed with Konstantin Chernenko and was removed. Marshal Ogarkov has reportedly been brought back to the centre of authority and, if the rumours are true, he will replace the Defence Minister, Marshal Sergei Sokolov, after he retires. Ogarkov, like Gorbachev, believes in high technology and the use of electronics in warfare. He may prove to be a challenge for the Reagan Administration's Strategic Defence Initiative (SDI) or Star Wars programme.

Earlier Gorbachev replaced veteran Foreign Minister, Andrei Gromyko, with Edward Shevardnadze, who made his international debut at the meeting of 35 heads of state at Helsinki for the tenth anniversary of the signing of the final act of the Conference on Security and Co-operation in Europe (CSCE). In the military field he made some more changes. The Soviet Commander in East Germany, Mikhail Zaitsev, was replaced by the former commander of the military district, that includes Moscow, Gen Pyotr Lushev. Gen Alexei Lizichev is said to have been promoted as chief political commissar of the Soviet Armed Forces in place of Gen Alexei Yonichev, who held the post for 23 years. The Commander of the Soviet missile forces, Marshal Vladimir Tolubko, has also been replaced. According to Western analysts, the military shake-up signifies that Gorbachev is willing to use talented, aggressive people like Ogarkov in the armed forces to make them more modern and effective.

In another surprising development, the Soviet Union unilaterally declared a moratorium on nuclear blasts from Aug 6 till the new year. Gorbachev timed the beginning of the moratorium with the 40th anniversary of the dropping of the atom bomb on Hiroshima. The US dismissed the unilateral declaration as a propaganda play and the State

Department expressed the view that it was quite meaningless because adequate techniques of neutral verification had not been worked out. Actually, the US needs fresh tests to develop its Star Wars weapons and, therefore, matching the Russian announcement with a similar one is out of question for the Americans.

OAU

SPREADING THE MESSAGE

The summit meeting of the Organisation Of African Unity (OAU) was cancelled in 1982, delayed in 1983 and saw a walk-out by two countries in 1984. This year, remarkably, the leaders met in a more cordial atmosphere in Ethiopia. Although the problems of Chad and Western Sahara, which had disrupted the earlier meetings, still persist, the main issue which affects a large number of African countries is the question of supplying food to Africa's starving millions. The leaders were optimistic and drew out a plan to make Africa self-sufficient in food in five-years time. The flaw in this plan was that very few details were disclosed, and there is speculation in Western circles that it may follow the path of the abandoned Lagos plan of 1980, which called for self-sufficiency in food production and the establishment of an African common market by 2000 A.D. The United Nations Economic Commission (UNEC) for Africa, which met the delegates of the summit before the meeting, has estimated that at least one-fourth of the government spending of the affected countries should be set aside for agriculture. However, most of the countries divert a lot of their resources to defence and to urban food subsidies because they are politically unstable and would at least like to keep the politically troublesome urban population happy.

Another major issue before the summit was Africa's \$170b foreign debt. On this opinions varied. Col Mengistu of Ethiopia blamed the creditors for exploiting the less-developed countries and said that African debts had multiplied as a result of falling world prices for African commodities, cuts in development aid, rising international rates and the protectionist policies of some of the developed states. On the other hand, President Nyerere of Tanzania was more conciliatory and called for an international conference of Western states, African countries and international lending institutions, to work towards a solution. The OAU summit also asked the creditors to waive some debts and ease the repayment term on others. Meanwhile concern over Africa's food shortage has spread all over the world. In July, the Live Aid Foundation organised a 16-hour high-tech teleconcert of rock music which was broadcast live through satellite all over the world. It helped to raise an estimated \$70m for the African famine victims. The moving spirits behind it were Bob Geldof, an Irish rock musician, oil baron T. A. Krishnan, and Michael Mitchell, an executive who had helped stage the 1984 Los Angeles Olympics. The money which has been raised will be

BBC BLACKS OUT

Protesting against the government and the BBC Governor's decision to cancel a 45-minute programme on Northern Ireland, a staff of 300 journalists and a large majority of other BBC staff, including technicians, started a 24-hour blackout from midnight Aug 6, 1985, on both BBC TV and radio. This strike is supported by other TV and radio stations across the country and is the first of its kind in the 50-year-old BBC history.

The Home Secretary, Leon Briten justified the ban on the programme on the ground that it profiled an extremist Sinn Fein leader who had openly propagated the arms struggle against Britain. Hence, to allow such programmes would amount to giving publicity to the cult of violence. The home secretary's action was described as an attempt to impose censorship on the BBC, which enjoys the reputation of being an autonomous body.

In fact the Khalistan movement leaders, mainly Jagjit Singh Chauhan, were given extensive coverage before and after the late Indian PM Mrs Gandhi's assassination. The British Government, even on repeated appeals from the Indian embassy did not take action, claiming that they had no say in the BBC broadcasts. Now, when they are faced with a similar situation a ban has been imposed through the decision of the BBC Governor.

The Board of Governors which is appointed by the government has come in for severe criticism for succumbing to the pressures of the government and over riding the management's decision.

used to purchase food and supplies which will be taken out through established relief agencies. Trucks and vehicles will also be brought to transport food that is already rotting in godowns in African ports. Much of the money will also be used for long-term agricultural development projects to prevent a recurrence of the African tragedy.

MEXICO POLLS

SPRINGING SURPRISES

When Mexico went to the polls in July to elect 300 national deputies, seven governors and a large number of state legislators, attention was riveted on the states of Sonora and Nuevo Leon (which have long been Opposition strongholds),— specially on the former state, where the Opposition National Action Party (PAN) had fielded Adalberto Rosas Lopez, who enjoyed a substantial edge in most opinion polls, for the gubernatorial post. However, as the Mexicans found out as soon as the election results started coming in, it was not so easy to defeat the ruling Institutional Revolutionary Party (PRI), which has enjoyed a virtual monopoly of political power ever since its founding in 1929. Since then, it has elected every Mexican President, filled every Senate seat and held the governorships of all 31 Mexican states.

What was extraordinary, however, was the margin of PRI victory in many instances, for example, 1,000 to 20, 1,800 to 70. In two districts of Rosas' hometown, the PRI won by 400 to 0 and 320 to 0. Although President Miguel de la Madrid Hurtado had promised honest and fair elections, the opposition party suspected vote fraud. As Rosas pointed out, despite the favourable opinion polls, it appeared that even his relatives had not voted for him. PAN collected evidences of voting irregularities and announced plans to seek a court order annulling the Sonora and Nuevo Leon results. PAN had ample evidence: for instance, the party's poll watchers were banned in hundreds of districts, opposition mayoral candidates in Sonora were not listed in 18 out of the 69 municipalities and in one instance, dozens of PAN supporters with valid voting cards were told that they were not on the registration lists. PAN loyalists were naturally upset and there were a few major instances of violence.

Although the PRI has apparently won a resounding victory, the government faces a major economic problem. Mexico had to cut the price of its crude oil, which earns 70% of its foreign exchange, to try to salvage its share of the world market. The peso has declined further and the exchange rate is now 335 pesos to the dollar in Mexico city. When President de la Madrid came to power, he had pledged to pull up Mexico's staggering economy, but so far his vision of a better economy is still a dream.

SOUTH KOREA

GROWING UNREST

The general elections held in February in South Korea appeared promising. President Chun Doo Hwan released political opponents from jail, withdrew the police from university campuses and allowed a much larger degree of freedom to the Press. However, after the elections demonstrations became common in Seoul, and there were big strikes at the textile firm—Daewoo Apparel!—and a car manufacturing firm—Daewoo Motor. In May, some students occupied an American library claiming that the Americans had conspired with President Chun during his bloody repression of an uprising in Kwangju, in 1980.

This was the last straw and the government clamped down on students and trade unionists and warned journalists and politicians to watch their steps. The police went back to the campuses and 56 members of a radical student group called Sammintu were arrested on the grounds that the group was communist, was responsible for the occupation of the library and for stirring up labour disputes. President Chun also dismissed his justice minister and the head of Seoul National University for being too soft.

The President probably adopted a liberal stance after the February elections, on pressure from the US, and because the Opposition New Korea Democrats, who now hold 101 of the 206 parliamentary seats, did very well at the polls. He perhaps hoped that the Opposition would fall apart if he released the rival Opposition leaders Kim Dae Jung and Kim Young Sam from jail. However, so far they have kept politics above rivalry and the Opposition is as strong as ever. In fact, Chun may soon find it difficult to crush criticism totally. Because of his educational reforms, South Korea has a large percentage of students going into universities. The economy, however, is slowing down and jobs are

becoming fewer. Consequently the country may soon face a youth unemployment problem which will lead to a further radicalisation of the youth.

PHILIPPINES

ANOTHER WATERGATE

The latest scandal involving Filipino President Ferdinand Marcos and his wife, Imelda, began in the US when a Californian newspaper, the San Jose *Mercury News* published a series of articles linking Imelda Marcos and several top aides like Chief of Staff Gen Fabian Ver (who is contesting charges that he participated in the cover up of the plot to kill Opposition leader Benigno Aquino) and Energy Minister, Geronimo Velasco, with the purchase of tens of millions of dollars worth of property from Los Angeles to Long Island in America. It charged that Imelda has been doing real-estate transactions and business through agents, representatives and nominees. The scandal has shaken the President's credibility further and has been compared to Nixon's Watergate.

Newspapers in Manila reprinted the articles and Filipino Opposition leaders have now got further ammunition in their hands. Presidential aspirant Salvador Laurel accused the government of moral bankruptcy and promised that the Opposition is going to hit hard on this. Marcos, on his part, denied the charge that he was building up a nest egg in America while his government ran up a foreign debt of \$26.5b. When Information Minister, Francisco Tatad discussed the real estate issues in his newspaper column, Marcos ordered him to be charged on a five-year corruption complaint. He has also asked his justice minister to launch an inquiry, which the Opposition expects will be directed more against them than at the President.

The scandal has come at a time when Manila's relations with Washington have touched a new low. Recently the US House of Representatives voted to cut US aid to Manila by \$15m next year and to divert \$75m from military to economic spending. Actually, such measures are intended to pressurise Marcos into calling fresh elections and clearing up the military. Marcos has promised to reinstate Ver if he is acquitted, but the US wants the Acting Chief of Staff, Lt Gen Fidel Ramos, who is reputed to be a military reformist, to remain in office. In response to the House of Representatives vote, Marcos wanted that if there was any aid cutback, he may abrogate the agreement between the US and the Philippines, allowing the former to use Subic Bay and Clark Air Field in the Philippines as military bases. The Defence Minister, Enrile, wanted to end the agreement with immediate effect but Marcos asked the Philippine National Assembly to study whether to re-negotiate the accord or to abrogate it. The Filipino threat has obviously worried the Americans and according to some sources, the US House will compromise and hold the line at \$40 in military aid. A tougher question is whether bankers abroad will be ready to give more loans to the Philippines. They are worried about the extent of capital flight at a time when the Marcos government has built up a multi-billion dollar foreign debt.

EUREKA

TO COUNTER STAR WARS

The Eureka (European Research Coordination Agency) idea was launched last April by the French President, Francois Mitterrand, partly to counter President Reagan's Strategic Defence Initiative (SDI or, more popularly, Star Wars) which aims at a space-based missile system. The difference between the two programmes is that while the SDI is a military programme developed by the US alone, Eureka is a high-tech civilian programme, which is mainly directed at consumer products, although its research can also be applied in the military field. Initially West Germany and Britain were skeptical about the French initiative and the Americans dismissed it as a "French ploy". But there has definitely been a change of heart of late and Eureka is off the ground.

Foreign and research ministers of the ten European Community countries, plus Spain, Portugal, Austria, Switzerland, Norway, Sweden and Finland as well as Jacques Delors, the President of the European Commission met in July in Paris to launch the project which is expected to bring in a golden era of West European research and technology. Mitterrand announced an initial French Government contribution of 1b French francs (\$116m), and West German Research and Technology Minister, Heinz Riesenhuber, declared that Bonn would probably give 300m marks (\$106m) for the project. Some other countries, too, have promised grants.

The general feeling is that while no single country can compete with the US in high technology by itself, European countries, if they band

together, can do so successfully. Eureka aims at developing a broad range of advanced technologies including software engineering, high-definition television, mobile communications, laser technology and advanced robotics. Many European multinationals have become interested in similar projects. Britain's General Electric Company, Netherlands' Philips, France's Thomson and West Germany's Siemens have announced a \$1b project to do research on microprocessors, high density memory chips and microwave components. Many other companies, too, have decided on similar research projects. Some, like France's Aerospatiale and West Germany's Messerschmitt-Bolkow-Blohm, have also decided to join Eureka research in space, aeronautics and computer guided design. Others, like Italy's Fiat, will participate both in the SDI and the Eureka projects. The Americans, too, have become interested and there is speculation that the US may establish a liaison office with the European project.

OPEC

FROM CRISIS TO CRISIS

The Organisation of Petroleum Exporting Countries (OPEC) is struggling from crisis to crisis. The oil ministers of the 13-member nations met in quick succession at Vienna and Geneva in July, and although an unstable compromise was worked out at Geneva, the issue was far from settled.

The main problem is the reluctance of some member countries to stick to the cartel's pricing and production structure. Discounts are being given by them especially after the end of the British miners' strike, in March, reduced the world demand for fuel oil. To counter the trend, Saudi Arabia threatened to flood the market with 9m barrels per day, by the end of the year, which would result in a further plunge in price and affect all oil economies. Saudi Arabia is now restricting its oil production to 2.2m barrels a day, which is about half its 4.3m barrels-a-day production quota, to keep oil prices stable. As a result, it is running the world's second biggest current account deficit, after the US. At Vienna
(Continued on page 60)

THE DAY AFTER

Date : Aug 6, 1945
Time : 8.15 a.m.
Place : Hiroshima

Event : U.S B-29 Bomber "Enola gay" dropped the first operational nuclear bomb in the history of mankind killing about 80,000 people outright with more than 14,000 people dying subsequently of radiation effects. The citizens of the world had the first taste of the techno-ethnic cult which now dominates human civilisation.

The 2,00,000-plus innocent victims, their pain and agony seem to have been forgotten, as even 40 years after this nightmare, nations of the world are piling up more and more nuclear weapons amounting to a monumental global defence expenditure of roughly \$1.5b a day or \$2m every minute—this at a time when millions of people are dying of hunger and poverty in the less fortunate countries of the world.

It is upto the two superpowers to put an end to this ominous nuclear threat that humanity is facing. An agreement on disarmament at the superpower level is imperative.

The Soviet leader Mikhail Gorbachov, denouncing the Aug 6, 1945 bombing, accused the US of committing 'a crime that cannot be justified or forgiven' and appealed to the US to join hands with USSR in halting nuclear tests: In the past few months there has been a flicker of interest in the US camp. All hopes rest on the forthcoming summit between President Reagan and General Secretary Gorbachov to be held later this year.

Japanese PM Yasuhiro Nakasone, speaking at a prayer ceremony in the Peace Memorial Park on Aug 6, 1985, reasserted his country's stand on nuclear weapons and pledged to work for the ultimate abolition of nuclear weapons and to adhere to the three non-nuclear principles. Japan is the only non-nuclear nation in the world, which is against the manufacture, possession or entry into the country of nuclear weapons. The Mayor of Hiroshima, Takeshi Araki, a survivor of the atomic bomb himself, appealed to the superpowers to speed up disarmament talks, to work towards total abolition of nuclear weapons and demilitarisation of space, for, in the words of Pope John Paul II "Hiroshima is a living witness to what can happen but need not and should not happen."

ILA SRIVASTAVA

CAREERS

R&D SCIENTISTS

Research and development activities, for modernising India's defence capabilities, have opened up an exciting career path for young engineers. An insight into the world of R & D scientists working in various defence research labs in the country.

An engineer's constructive skills, a researcher's passion to know the unknown and a patriot's grit to defend the country. These basic potentials go to make up the R & D scientists working with a network of 44 defence research laboratories in the country. Their vocation is challenging and the opportunities rewarding.

The Defence Research and Development Organisation (DRDO), Ministry of Defence, undertakes research and development projects through its laboratories to meet the diverse defence needs of all the three services—the Army, the Navy and the Air Force. R & D in such sophisticated areas as lasers, solid devices, radar electronics, warfare systems, communications, computer software, artificial intelligence, instrumentation, missile technology, underwater acoustics, software engineering, operations research, etc are being embarked upon from time to time.

The defence research laboratories equipped with excellent R & D facilities are speckled all over the country—New Delhi, Chandigarh, Manali, Dehradun, Kanpur, Jodhpur, Bengal, Hyderabad, Pune, Bombay, Vizag, Cochin, Avadi, Bangalore, Madras etc. The scientists working in these laboratories have the stimulating opportunity to carry out basic and fundamental research specific to (a) the defence requirements of the country and (b) indigenisation of imported components.

The scientists, for example, are developing equipment and processed food to be used by our soldiers guarding the national frontiers at high altitudes. They have also researched into the development of gun and weaponry systems to suit the country's topographical needs—deserts, snowy mountains or marshy soil.

Earlier, 15 to 20 years back the majority of defence equipment (and spares) in use were being imported. Today with consistent and continued efforts of the scientists working in the R & D defence laboratories, the dependence on import has reduced considerably and they are

participating in the exciting responsibility of developing major defence hardware systems such as combat aircrafts, battle tanks, missile radars etc.

The DRDO has now marched along its way successfully towards advanced defence research by inducting bright, young engineers and science graduates directly from universities and technical institutions. They have also recruited Service officers with technical qualifications who provide the feedback of their actual experience with the weapons, material systems and stores. This helps the scientists to be in touch with specific needs in the vital area of defence research.

Recruitment

Until recently the appointment of Scientist 'B' (the basic level of induction into DRDO) was through the UPSC. Since 1985 the DRDO boards have autonomy in matters of recruitment of scientists as it was found that technological innovation could bear better results if preceded by technical orientation in the respective fields of specialisation. The direct recruits were found to be rather too raw to carry out advanced research activities. From 1985, exhaustive training is to be imparted in wide ranging areas of recruitment like Aeronautics, Computer Software, Electronics, Mechanical Engineering, Metallurgy, Naval Architecture, Applied Mathematics, Applied Optics, Instrumentation, Oceanography, Agriculture, Botany, Zoology and Civil Engineering.

This year DRDO has commenced its training programmes with a one-year Fellowship Programme in Electronics. An applicant for this programme needs to be a postgraduate in Physics with specialisation in Electronics or a graduate in Electronics Engineering with aptitude for research and development. Selection will be done on the basis of a qualifying test and interview following which he will have to undergo intensive training at the Institute of Armament Technology, Pune. During the training period he will be entitled to a consolidated stipend of Rs 1,200 per month and a House Rent allowance of Rs 190, in case hostel accommodation is not provided for.

The future of those who successfully complete the training is ensured. They would be placed in one of the laboratories/establishments as Scientist 'B' in an attractive scale of Rs 700-1,300 alongwith additional perquisites of accommodation, advance increments (for exceptionally bright candidates) and medical facilities.

The total emoluments initially would be around Rs 2,000 per month. However, they will be under a contractual obligation to serve the DRDO for a minimum period of three years after completion of training.

Prospects

The R & D scientist working with the DRDO can go several steps up the promotional ladder provided he has the enterprise, motivation and drive to forge ahead to higher levels of responsibility. Unmatched avenues for professional advancement are open in the Scientist 'C' grade (Rs 1,100-1,600), Scientist 'D' grade (1,500-2,000), Scientist 'E' grade (1,800-2,250) Scientist 'F' grade (2,000-2,500) and Scientist 'G' grade (2,500-3,000). The recently evolved Defence Research and Development Service Rules permit scientists to be assessed for promotion to the next higher grade within three to five years of service in any particular grade regardless of the vacancy positions.

And finally for those who look out for incentives in the vital area of professional growth, the DRDO laboratories have extensive and expensive experimental facilities for development of skills in sophisticated areas of research. Opportunities are also open for deputation abroad for specialising in advanced technologies. There is also a provision to grant leave to motivated scientists to pursue advanced research studies while in service.

With all this plus the thrill of a stimulating career why would an aspiring young science graduate ever dream of 'opportunities' abroad?

P.G.

ON GOLDEN POND

If the wild geese and swans of East Germany (GDR) could speak, they would probably have heartily endorsed the GDR scientists' claim that water birds in their highly industrialised country enjoy good living conditions and are well looked after. These beautiful, elegant birds are to be seen floating gracefully in their pristine glory on the surface of countless well-maintained ponds throughout the length and breadth of the country.

Needless to say, a good deal of effort has gone into making GDR a haven for water birds. And the rationale behind this has been that nature will be more suitable for human use where aquatic birds find good living conditions. By virtue of their large or small-scale propagation, these birds, ringed and marked with coloured plastic collars bearing coded data, prove to be an effective indicator of the pollution load of the environment and thus tell when, where and how the potentialities of nature should be used economically.

The GDR's endeavours in water birds research to harmonise the requirements of agriculture, freshwater fishing and nature conservation are, therefore, worth emulating. Indians, please note!

CAREER COUNSELLING

BY G. J. UNNITHAN, Director, Students Advisory Bureau, University of Rajasthan

I am interested in Rehabilitation Sciences/ techniques of the physically handicapped, particularly for the blind. What are the basic qualifications needed for pursuing a career in Rehabilitation and which institution in India offers specialisation in this branch?

Prefulla Hazarika, Dibrugarh

Kindly contact the Director, National Institute for the Visually Handicapped, 116 Rajpur Road, Dehra Dun-248 001.

I am an Arts graduate and wish to do English shorthand through postal coaching. Is there any standard institution providing this course?

D.G. Rajyaguru, Gondal (Gujarat)

Please contact The British Institutes, 72/B 12, P.O. Box 1025; 359 D.N. Road, Bombay-400 023 for a free copy of their prospectus while mentioning the subject.

I have appeared in the stenography test after qualifying the written test of Grade D Stenographers Exam 1984 conducted by the Staff Selection Commission on Oct 22, 1984. Till now I have not received any intimation from their end, nor could I find the result in any publication.

Vaerji Fotadar, Beagam, (Kashmir)

Please go through the back issues of *Employment News*, which will be available at the nearest Employment Exchange, to find out whether the results of the exam have been announced. If these are not contained in *Employment News* you may assume that the results have not been declared.

My brother is studying in 1st year B.Sc. (Education) in Mysore. The course is conducted by NCERT. What are the career prospects of this course? Is he eligible for applying for B.E. in the Indian Institute of Science, Bangalore and also B.Tech. in MIT, Madras?

T.C. Raghuvir, Tiruchirepalli

B.Sc. (Education) is a 4-year professional course for science teachers. Advanced M.Sc. (Education) courses are also available at the Regional College of Education, Mysore. The Indian Institute of Science, Bangalore and the Anna University (includes MIT), Madras require candidates to have B.Sc. (Physics, Chemistry, Mathematics) for B.Tech. courses. The B.Sc. (Education) course is not listed as an eligible course for admission, but you may refer to the institutions concerned.

I shall shortly be finishing my schooling as per 10+2+3 pattern of C.B.S.E. I am interested in Physiotherapy. Kindly tell me what I should do.

Aruna Deshpande, Bhilei

Only a limited number of regular courses are available in Physiotherapy, namely B.Sc. courses at the All India Institute of Physical Medicine and Rehabilitation, Bombay 400 034 and Madras Medical College, Madras. Diploma courses are available at Patna Medical College: SMS Medical College, Jaipur; Physio-Occupational Therapy Institute, Deen Dayal Upadhyaya Marg, New Delhi; Christian Medical College, Ludhiana and at certain hospitals.

Is there any entrance test for admission to the Armed Forces Engineering College, Kirkee? If so, when is it held? How can the form and prospectus be obtained? Is there any scope for Automobile Architecture in India?

Amitav Mishra, Bhubaneswar

There is no direct admission to the Armed Forces Engineering College, Kirkee. Young men with requisite qualifications who are already recruited in the armed forces are sent there for training.

Automobile Design (not Architecture) is a part of the diploma/degree course in Automobile Engineering. There are a limited number of Automobile Engineering courses in India. The minimum admission requirement is Hr.Sec./10+2 with Science and Mathematics.

I have done M.Sc. (Mathematics) with high 2nd class marks and now I am employed in a Central Government department. Is it possible for me to carry on research work for Ph.D.? Is there any Indian university which conducts programmes for Ph.D. through correspondence?

Bhagabat Mandal, Nadia (W.B.)

There is no bar on employed persons with required qualifications to register for Ph. D. in most universities. The universities may, however, require that the scholar spends a minimum period of 2 months per year on the campus. You may contact the head of the department of your alma mater for details. There are no correspondence courses for Ph.D.

I am a post-graduate in Archaeology from Patna University. I am interested in water archaeology. What will I have

to do if I went to work in this field?

Anil Kumar Verma, Patna

As yet, there are no specialised courses in the field of Marine Archaeology. Candidates with considerable field experience in Archaeology will probably be considered for projects in Marine Archaeology.

I am a class XII Science student with Maths as my main subject. I want to do graduation in Science and pursue higher studies in Astrophysics. Which institutes in India have good facilities for this and what are the job and research prospects for an astrophysicist in India and abroad?

Shyam Jaisinghani, Bhopal

After your graduation with Physics and Maths, preferably B.Sc. (Hons) Physics, you may seek admission to the M.Sc. course in the Centre of Advanced Study in Astronomy and Astrophysics, Osmania University, Hyderabad or Punjab University, Patiala. Excellent research facilities in Astrophysics are available at the Tata Institute of Fundamental Research, Bombay and the Indian Institute of Science, Bangalore.

We would like some information on management trainees. What are the necessary qualifications and which firms recruit them?

Madhuri & Renu, Jalandhar

Several of the bigger industrial houses and public sector companies regularly advertise for management trainees. They invite technical graduates, M.B.A.s, C.A.s and postgraduates in Economics, Commerce and related subjects to apply. Smaller private companies as also some of the giants like DCM and JK advertise for graduates as management trainees, but these have a more limited scope than the technically qualified and postgraduates.

NOTE TO READERS

Before rushing in your career problem, check if it can be solved by looking up our sections on *Careers* or *Career Counselling* in the earlier issues. Space is limited; the mail received staggering. Letters chosen are those of general interest or in particular cases where the information is hard to find or has not been published before. Many readers ask for a personal reply. Sorry, this is not possible. So please don't send postage or envelopes. Make your queries specific and brief. Send them to Career Counselling, Career & Competition Times, 10 Daryaganj, New Delhi-110 002. Your letters should be accompanied by the coupon.

SPACE

LAUNCHING INTO THE VOID

BY DR SHIV PRASAD KOSTA

In 1610, Kepler wrote : "Let us create vessels and sails adjusted to the heavenly ether and men will present themselves who are unafraid of the boundless voids." What followed is the unfolding of the history of modern astronomy and space technology. In a six-part serial, let's follow step-by-step the development of rocket technology, the launching of space probes, manned space flights, development of satellites, the advent of the space transportation system, various applications of satellites and the space scene in India.

Until 1543, man thought that earth was stationary and every commonly known celestial object like the sun, the moon and the planets revolved around the earth. But in 1543, Nicolaus Copernicus (1473-1543) established that the Earth, Mercury, Mars, Jupiter, Saturn, etc revolved around the sun. Galileo, who discovered the sun spots and the moons of Jupiter, emphasised that the earth was not the sole centre of motion in the universe. The basic law of planetary motion, formulated by Johannes Kepler (1571-1630) established the fact that the planets moved in elliptical orbit around the sun. Sir Isaac Newton (1642-1727) propounded the Universal Law of Gravitation. These were the scientific discoveries that laid the foundations for modern astronomy and space technology.

In 1610, Kepler wrote: "There will certainly be no lack of human pioneers when we have mastered the art of soaring. Let us create vessels and sails adjusted to the heavenly ether and men will present themselves who are unafraid of the boundless voids. In the meantime, we shall prepare for the brave sky travellers, maps of the celestial bodies—I shall do it for the Moon and you, Galileo, for Jupiter." Similarly Dr Robert H. Goddard wrote : "It is difficult to say what is impossible, for the dream of

yesterday is the hope of today and the reality of tomorrow."

While turning the pages of space history, it will be found that the Chinese fired 'fire arrows' somewhere around 1232 A.D. Later, in 1792, Tipu Sultan successfully demonstrated the effective use of 'fire arrows' against the British Army at Srirangapatnam of the erstwhile Mysore dominion. This prompted the British to work hard and develop rockets based on Tipu's idea. In 1865, Jules Verne, the illustrious prodigy in science fiction, wrote his book *Earth To Moon* and followed it up

with the story *Around The Moon* in 1872. His writings had a sound, scientific basis and were so exciting to read that they amused, inspired and stimulated innumerable people over the years including the great space pioneers Konstantin Tsiolkovsky of USSR, Robert Goddard of USA and Hermann Oberth of Germany; all three acknowledged the influence of Verne's writings in their scientific work.

Konstantin Eduardovich Tsiolkovsky (1857-1935), who was considered an eccentric dreamer, worked out for the first time the theoretical solutions for the scope of projectiles from the earth's atmosphere and gravitational field. In fact, it can emphatically be stated that if space age was born anywhere, it was in the rooms of Tsiolkovsky's timber house in the town of Kaluga, south-west of Moscow, where he worked out the above-mentioned theoretical concepts. In 1895, he mentioned for the first time the possibility of artificial

ROCKET PROPULSION

(Basic Concept)

In its very essentials, a rocket engine consists of a combustion chamber, a nozzle and an exhaust exit. The propellant is injected into the combustion chamber, ignited and the exhaust ejected at high velocity, producing a forward thrust of the rocket system. There are basically two kinds of propellants—mono-propellants and bi-propellants. In the case of a mono propellant like hydrogen peroxide it is made to decompose in the presence of a catalyst to produce the exhaust gas. Such propellants are only rarely used as in the case of midcourse correction. Under bi-propellant systems which consist of a fuel and an oxidiser, we have the solid and liquid propellants. A typical example of a solid propellant is a mixture of cellulose nitrate and nitro-glycerin converted into fine grains and packed into the

combustion chamber. The burning surface of the solid propellant is so arranged that it produces optimum thrust. In the case of liquid propellants the typical fuels used are kerosene, alcohol and hydrogen and the oxidisers are oxygen, fluorine and nitrogen tetroxide. It is simple to see that for forward propulsion the ratio of the total thrust developed by the rocket to the total weight should be greater than 1; in the case of multistage rockets, the first stage usually has this ratio between 1.5 and 2. Another important parameter associated with the effectiveness of a rocket is its specific impulse (I_{sp}) which is defined as

$$I_{sp} = \frac{\text{thrust in kg}}{\text{kg of propellant burnt per second}}$$

It is thus seen that I_{sp} has the dimension of time and is expressed in seconds. We also have $I_{sp} = (V_e/g)$ where V_e is the velocity of exhaust and $V_e = \sqrt{T}$ where T is the fuel burning temperature. While specific impulse, which is the effectiveness of the propellant to produce rocket thrust, is the deciding factor in rockets used for getting out of the earth's atmosphere and its gravitational field, for high speed travel in interplanetary space (and in future perhaps for interstellar travel) the velocity of the exhaust (and the corresponding temperature of fuel burning) is a crucial factor.

Country	Date of first launch	Satellite/ Launcher	Weight of satellite (kg)
USSR	4.10.57	Sputnik-1/ Vostok	83
USA	31.1.58	Explorer-1/ Jupiter	15
France	1.11.65	Astrix-1/ Diomat A	80
Japan	11.2.70	Ohsumi/ Lamda-45	24
China	24.4.70	Long March-1/ CSL-1	173
UK	28.10.71	Bospetu	66
India	17.7.80	Rohini/ SLV-3	40

Goddard (1882-1945) also independently reached theoretical conclusions similar to those of Tsiolkovsky, though ten years later. However, he followed up his theoretical work with many experiments. In 1926, he launched the first-ever liquid-fuelled rocket from a farm in Massachusetts, USA.

In 1952, the International Commission of Scientific Union (ICSU) decided to observe 1957-58 as the International Geo-physical Year (IGY) which later became the inaugural year of space exploration. In July 1955, President Eisenhower announced the decision of the

K. Tsiolkovsky many years ago expressed his conviction that man's ultimate destiny lay among the stars—the universe. Deep space probes were aimed at sampling the fields and particles of the interplanetary medium free from the earth's influence. Pioneer-5, the first interplanetary probe was launched on Mar 11, 1960 into an elliptical orbit just inside the earth's circular orbit. Later, the Pioneer spacecraft series was resumed in 1965 to

<i>Name</i>	<i>Country</i>
Vandenberg AFB	USA (West Coast)
Wallops Island	USA (East Coast)
Kennedy Space Centre	USA (Florida)
Baikonur Cosmodrome	USSR
Volgograd Station	USSR
Northern Cosmodrome	USSR
OTRAG (German Company)	Libya
OTRAG (German Company)	Zaire
Guiana Space Centre	French Guiana
San Marco Platform	Italy
Sriharikota	India (Andhra Pradesh)
Shuang-Cheng-Ize (Each Wind Centre)	China
Osaki Launch Centre	Japan
Kogoshima Space Centre	Japan

President Eisenhower, on Jul 29, 1958, laid the foundation stone of National Aeronautics and Space Administration (NASA) for space science and technology. On Apr 12, 1961 USSR pressed on their initial advantage by making the first manned space flight in which Yuri Gagarin made a single orbit round the earth in Vostok-1. Valentina Tereshkova flew in Vostok-6 in June 1963; she com-

About the author: Dr Kosta is Deputy Director at ISRO Satellite Centre, Bangalore. Group Director of the Spacecraft Electronics Group of the Centre and Director of the Publications and Public Relations Unit of ISRO. He has been and is still actively engaged in R & D programmes of ISRO and also in exploring the possibilities of using nature for the benefit of man. He pioneered the idea of using plants and trees for transmission and reception of electromagnetic waves—generating electricity from trees (1984) and receiving television signals from trees (1983).

pleted 48 revolutions of the earth, a feat which no woman has yet equalled or surpassed. President Kennedy announced on May 25, 1961 the goal to put man on the moon before the end of the decade. On Jul 29, 1969, Neil Armstrong of USA became the first man to put his feet on the moon.

One of the greatest milestones in manned space flight, and an event that evoked worldwide acclaim, was the July 1975 link-up of a Soviet and an American spacecraft in earth orbit (225 km), a fraternisation the mass media was quick to dub as 'Handshake in Orbit'.

The advent of the reusable Space Shuttle Transportation System (SSTS), a cost-benefit approach to space operations by USA, marks another important landmark of the space age during 1975-82. It was also during the same period that the first space-shuttle Columbia was launched from Kennedy Space Centre on Apr. 12, 1981.

(To be continued)

AN AUTHOR-BUREAUCRAT

Who ever said that writing was not the bureaucrat's cup of tea? P.S. Bhatnagar, currently Administrator, New Delhi Municipal Committee, has the rare distinction of having authored the book *Zoramthangi: Daughter Of The Hills*. What's more? He is even planning his next novel. Talking to Y.C. HALAN and JYOTSNA SHARMA, Bhatnagar reveals the secret of his success in his dual responsibility.

The combination of bureaucrat and writer in one person is difficult to come by. However, P.S. Bhatnagar, currently Administrator of the New Delhi Municipal Committee incorporates these varied dimensions into his personality. Belonging to the rare genre of 'intellectual bureaucrats' he is an IAS officer and author of *Zoramthangi: Daughter Of The Hills*—a realistic portrayal of life in Mizoram.

Reading Habits

An avid reader himself, Bhatnagar strongly feels that reading contributes to overall personality development. It has helped him perform his various functions as a bureaucrat more effectively. Firstly, reading has helped him develop a sensitivity to various issues which facilitates considering situations from a humane point of view. Says Bhatnagar: "You no longer handle a file like a file. It represents a person's life and you take your decisions accordingly." Secondly, reading has helped him judge people better which is a great asset.

According to Bhatnagar, a bureaucrat is one who can view a situation from both sides and weigh the pros and cons before taking a decision. In books a given situation is invariably viewed from

various angles and therefore reading helps to assess situations in real life from both sides too.

Despite holding a demanding position in the bureaucracy, Bhatnagar is a voracious reader. Twenty years in the Indian Administrative Services (IAS) haven't dulled his appetite for reading. How does he find time for literary pursuits? Says Bhatnagar: "It is always the busy persons who find time for pursuits despite their multifarious activities. Normally people spend a good part of their time in fruitless activities. However, here some sacrifices have to be made. You have to minimise socialising, cut down on sleep." He devotes about four hours a day to reading which includes two hours in the night as he feels that at this time there are no limitations on reading.

He started reading a book a day since the age of 15. And as a student he was meticulous about preparing notes when reading different books. His favourite author then was Thomas Hardy. However, now he has no particular preferences and reads anything he can lay his hands on—magazines and newspapers mainly.

What prompted him to write a book himself? The main motivation, according to Bhatnagar, was the conspicuous lack of knowledge and information among the masses about the state of Mizoram. He felt the necessity to educate the people "in an interesting yet informative way" and therefore chose the medium of story writing. This, plus the need to give vent to his urge for writing. At the moment he is busy planning his next novel which will deal with the issue of generation gap.

Bhatnagar confesses that an extremely understanding atmosphere at home has helped him cultivate his hobbies of reading and writing. Even as a child, he explains, he was not required to do any household chores or errands. And as a married man he is fortunate to have an understanding wife and children. With the result that despite the long hours spent in office, he is able to devote time to his literary pursuits.

Being a lover of books, however, does not classify Bhatnagar as a 'book worm'. As a student he devoted considerable time to sports—playing cricket and badminton on a night court.

The Bureaucrat

Hailing from Hissar and bred in UP, Bhatnagar received his education in Delhi. The son of a doctor, he had nurtured the ambition of joining the Administrative Services since the age of 15. However, his first job after completion of Masters in English Literature was that of a clerk. It was here

that he got into the Services which offered a wider variety of work involving imagination and dynamism. Also, the IAS, according to Bhatnagar, is a prestigious and well-paid service.

An IAS officer of Union territory cadre for the past 20 years, he feels that the charm of working in the Services has grown over the years owing to the challenges the job offers. He even views political interference as a challenge though he feels that in a democracy, the chosen representatives of the people have the right to guide bureaucrats and lay down the general pattern of work. On the issue of IAS officers being subjected to frequent transfers, Bhatnagar feels that these should be accepted as part of the job and taken in the stride rather than viewed as harassments.

The new officers being recruited into the Services are bright, enthusiastic and eager youngsters. The standard of the Services is, according to Bhatnagar, being maintained and conflicting reports have not dulled the idealism of young IAS officers.

Advice For Young Aspirants

Intellect and determination, Bhatnagar feels, are essential for success in any sphere of life. These, coupled with hard work, are the key to a successful personality.

P.S. Bhatnagar has recently been appointed Delhi's Sales Tax Commissioner.

MIZORAM'S CHILDREN

Paramod Bhatnagar tells his tale in perhaps too simple a style. *Zoramthangi: Daughter Of The Hills*, his maiden attempt at writing, demonstrates this fact all too clearly. His hesitant grappling with words, the spas-

modic, uneven flow of the story leave much to be desired. But what really goes to the author's credit is the obvious knowledge he has of the remote jay hill state of Mizoram and the workings of the Mizo underground. Bhatnagar has based his book on his own experiences in Mizoram and has presented this in the form of a poignant story which is book readable, at least, if doable.

(see page 67)

EDUCATION

WAKING UP TO THE PITFALLS

BY AMRIK SINGH, Former Secretary, Association of Indian Universities

A new educational policy for our country is in the offing. Unless the policy is framed in the light of our social and economic constraints, it would remain a futile exercise.

A constructive education policy is the need of the hour. In his first address to the nation, PM Rajiv Gandhi rightly identified education as the area where new initiative was called for. During the last few months, the subject has been hotly debated upon. The Ministry of Education is also preparing a set of proposals, the draft report of which would then be publicly discussed. The policy is likely to be finalised by the end of the year to be implemented from the next academic year.

The steps taken so far are in the right direction. But one assumption that can be questioned is that the educational policy can be framed without reference to the economic policies of the country. It can be put somewhat differently. Planning includes much more than economic planning. Every new Plan indicates how the country is to be developed. Every Plan document, in that sense, lays down a strategy for development. A progressive educational policy drawn in a social and economic vacuum will not be practicable. The policy would either remain on paper or would fail at the implementation stage. For, education is directly linked with national progress and an educational policy without reference to the strategy of development would remain a futile exercise. The crux of the matter is that education is a sub-system of the whole system and unless it changes, no major changes are possible in the sub-system.

If this line of argument is accepted, it should be clear why we have not achieved 100% literacy in the country. Illiteracy is closely linked with poverty elimination. Having failed on the poverty front, we also failed on the literacy front. Now the question is, how do we go about removing illiteracy? The experience of various countries in the last 50 years shows that illiteracy has been eliminated only through mass mobilisation. In other words, the school system has been expanded to take

care of the growing children. When they grow up, they grow up as literates and not as illiterates. But adults also need to be motivated to make themselves literate. Their motivation comes basically from the fact that in the process of educating themselves their poverty is also eradicated.

How far are we likely to succeed in this battle? We can succeed if we modify the strategy of development in such a way that poverty is wiped off and mass mobilisation is accepted as a pre-condition for success. People must be encouraged to learn. Illiteracy was overcome in North Vietnam even as the country was fighting a bloody and prolonged war with the US.

Primary education, the lynchpin of the educational system, has two problems—poverty and paucity of teachers and schools. The national drop-out rate is approximately 60% because of withdrawal of children of poor parents from schools. The parents either find it difficult to keep the children at school or find it profitable to use them as wage-earners or as helping hands in the family. For example, boys can be asked to tend the cattle and girls can look after their younger brothers and sisters. Besides, in India, approximately 40% of the schools are one-teacher schools. Obviously the teacher is unable to exercise proper control over all the children and the absence of a child for days or weeks together is not considered a serious problem. The country spends about 3% of its gross national product (GNP) on education. The Education Commission in 1968 assumed an expenditure of 6% of the GNP on education. This, however, has not happened and may not happen. This is a question of priorities.

The weakest link in the educational chain is the secondary stage—lower as well as higher. The higher secondary level was sought to be strengthened with the introduction of the plus two stage. An attempt was also made to vocationalise education at that stage. The effort so far has not been particularly successful. However, we would like to comment on the quality of teachers on whom the effectiveness of education depends. Unfortunately, the general quality of teachers is so poor that their teaching is not effective. This could be attributed to their low social status or low monetary gains. The future prospects for a schoolteacher being almost nil he lacks commitment and interest in his career. With the result the

children lose interest in school.

In advanced countries not many people go to colleges or universities. A clerk in a bank, for instance, is someone who has finished school. In our country hardly anybody would be considered for a bank job unless he has graduated. Obviously, knowledge imparted at the school level is unsatisfactory. Any effort towards betterment has to be directed to training and motivation at the postgraduate level.

Out of approximately 3m undergraduate students, only half a million or so are truly and genuinely interested in higher education. The rest are there because they have nowhere else to go. Were the organised sector of the economy working better and generating more jobs, young boys and girls passing out from school would be able to find jobs for themselves. Today they cannot. Why? One, because they are not properly trained and, two, because the number of jobs available is limited.

If the rush in colleges is to be avoided, more jobs will have to be created at the middle level for which appropriate kind of training will have to be given at the school level. Jobs, however, are scarce at all levels. Students, when unable to get jobs, feel that there is nothing wrong in continuing with further studies. Every family cannot afford college education for its children. In such a situation, students have no choice except to enter the job market at an early age and hope for the best.

An important aspect of higher education is the fee structure. The tuition fee, except for one or two states, is more or less what it used to be three or four decades ago though the cost of everything has risen enormously. Buildings, books and equipment cost very much more, and salaries of both teaching and non-teaching staff have also gone up. Consequently, the percentage of fee collection has come down to about 12% of the total expenditure which was 20% in 1950-51. A group of educationists, therefore, demands that tuition fees be raised.

In a society where only 20% of the students at the universities are motivated, the remaining 80% can refuse to pay even this very low tuition fee. They can go to the extent of saying that they are doing a favour to society by attending college even though they know that it is not useful to them. In a way, they are obliging the rest of us by agreeing to be in colleges; it keeps them out of mischief. Imagine a situation when more than 2m students are let loose with nothing to do. With their abundant and reckless energy they could turn things upside down. I still believe, as I did in 1973, that it is a fallacy to imagine that we are imparting education in our educational institutions. Quite a few of them are 'baby-sitting' centres. ■

DATA INTERPRETATION

BY M N GUPTA

The ability to render complex information into tangible figures and graphs is a great asset to any administrator. The aim of data interpretation tests is to assess that ability in future administrators. If your schedule for the coming months includes the CIVIL SERVICES (MAINS), then here's your chance to brush up on data interpretation.

Problem-1

Show the given data in the form of a table, so as to bring out clearly all the facts. Also, indicate the source and give a suitable title.

According to the census of Manufacturers Report, 1975, the John Smith Manufacturing Company employed 400 non-union and 1,250 union employees in 1971. Of these 220 were females of which 140 were non-union. In 1972, the number of union employees increased to 1,475 of which 1,300 were males. Of the 250 non-union employees 200 were males. In 1973, 1,700 employees were union members and 50 were non-union. Of all the employees in 1973, 250 were females of which 240 were union members. In 1974, the total number of employees was 2,000 of which 1% was non-union. Of all the employees in 1974, 300 were females of which only 5% were non-union.

Interpretation

Table

JOHN SMITH MANUFACTURING COMPANY
(Workers according to union membership and sex)

Year	Union members			Non-union members			Total		
	Males	Females	Total	Males	Females	Total	Males	Females	Total
1971	1,170	80	1,250	260	140	400	1,430	220	1,650
1972	1,300	175	1,475	200	50	250	1,500	225	1,725
1973	1,460	240	1,700	40	10	50	1,500	250	1,750
1974	1,685	295	1,980	15	5	20	1,700	300	2,000

Problem-2

Tabulate the following information in a suitable form with proper rulings and headings.

The Annual Report of Ishapore Public Library reveals the following points regarding the reading habits of its members.

Out of a total 3,713 books issued to the members in the month of June 1981, 2,100 were fiction. The library had 467 members during the period and they were classified into five classes A, B, C, D and E. The number of members belonging to the first four classes were respectively 15, 176, 98 and 129, and the number of fiction issued to them were 103, 1,187, 647 and 58 respectively. Number of books, other than textbooks and fiction, issued to these four classes of members were respectively 4, 390, 217 and 341. Textbooks were issued only to members belonging to classes C, D and E and the number of textbooks issued to them were respectively 3, 317 and 160.

During the same period, 1,246 periodicals were issued. These included 396 technical journals of which 36 were issued to members of class B, 45 to class D and 315 to class E.

To members of classes B, C, D and E, the number of other journals issued were 419, 26, 231 and 99 respectively.

The report, however, showed an increase by 3.9% in the number of books issued over last month, though there was a

corresponding decrease by 6.1% in the number of periodicals issued to the members.

Interpretation

Table

ISHAPORE PUBLIC LIBRARY
(Annual Report on June 1983 on reading habits of its members)

	Class of members					This month (June)	Last month (May)
	A	B	C	D	E		
Total number of members	15	176	98	129	49 _a	467	
Books issued							
Fiction	103	1,187	647	58	105	2,100	2,021 _{a2}
Textbooks	—	—	3	317	160	480	462 _{a3}
Other books	4	390	217	341	181	1,133 _a	1,091 _{a4}
Total books	107	1,577	867	716	446	3,713	3,574 _{a1}
Periodicals issued							
Technical	—	36	—	45	315	396	422 _{b2}
Others	75 _d	419	26	231	99	850 _c	905 _{b3}
Total	75	455	26	276	414	1,246	1,327 _{b1}

Notes :

_a = Total number of members = 467. Number of members belonging to class E = $467 - (15 + 176 + 98 + 129) = 49$

_a = Total number of books (fiction, textbooks and other books) issued = 3,713. Total number of textbooks issued = $3 + 317 + 160 = 480$. Total number of fiction issued = 2,100. Total number of other books issued = $3,713 - (2,100 + 480) = 1,133$

_c = Total number of periodicals (technical and other journals) issued = 1,246. Number of technical journals = 396. Number of other journals = $1,246 - 396 = 850$

_d = Number of journals issued to class A = $850 - (419 + 26 + 231 + 99) = 75$

_a = Figures for last month (May)

Books : Since it is reported that there is an increase of 3.9% in the number of books issued in June over the last month, we have

_{a1} = The total number of books issued in the last month = $3,713 \times \frac{100}{103.9} = 3,573.63 = 3,574$

_{a2} = The total number of fiction issued last month = $2,100 \times \frac{100}{103.9} = 2,021.17$ or 2,021

_{a3} = The total number of textbooks issued last month = $480 \times \frac{100}{103.9} = 461.98$ or 462

_{a4} = The total number of other books issued = $3,574 - (2,021 + 462) = 1,091$

Periodicals : Since a decrease of 6.1% is reported in the issue of periodicals in June over the last month, we have

_{b1} = The total number of periodicals issued last month = $1,246 \times \frac{100}{93.9} = 1,326.94$ or 1,327

_{b2} = The number of technical journals issued last month = $396 \times \frac{100}{93.9} = 421.72$ or 422

_{b3} = The number of other journals issued last month = $1,327 - 422 = 905$

Problem-3

The following information is given regarding investment on different heads under the Third Five Year Plan. Draw different types of diagrams that can be used to represent the data :

Item	Proposed investment (Rs. crores)
1. Agriculture, minor irrigation and community development	1,475
2. Major and medium irrigation	640
3. Power	975
4. Village and small industries	435
5. Industries and minerals	2,500
6. Transport and communication	1,650
7. Social services	1,725
8. Inventories	800
Total	10,200

Interpretation

The above-mentioned information can be represented with the help of the Percentage Bar Diagram or Pie Diagram.

Percentage Bar Diagram

In this, different percentages for the purpose of diagram can be obtained as given in Table X.

PERCENTAGE BAR DIAGRAM

Table X

S. No.	Item	Calculations	Percentage investment
1.	Agriculture, minor irrigation and community development	$\frac{1,475 \times 100}{10,200}$	= 14.5
2.	Major and medium irrigation	$\frac{640 \times 100}{10,200}$	= 6.3
3.	Power	$\frac{975 \times 100}{10,200}$	= 9.5

4. Village and small industries	$\frac{435 \times 100}{10,200}$	= 4.3
5. Industries and minerals	$\frac{2,500 \times 100}{10,200}$	= 24.5
6. Transport and communication	$\frac{1,650 \times 100}{10,200}$	= 16.2
7. Social services	$\frac{1,725 \times 100}{10,200}$	= 16.9
8. Inventories	$\frac{800 \times 100}{10,200}$	= 7.8
Total		= 100

Pie diagram

In this diagram, different angles that are to be used can be obtained as follows:

S. No.	Item	Calculations	Angle to be used (degrees)
1.	Agriculture, minor irrigation and community development	$\frac{1,475 \times 360^\circ}{10,200}$	= 52.2
2.	Major and medium irrigation	$\frac{640 \times 360^\circ}{10,200}$	= 22.7
3.	Power	$\frac{975 \times 360^\circ}{10,200}$	= 34.2
4.	Village and small industries	$\frac{435 \times 360^\circ}{10,200}$	= 15.5
5.	Industries and minerals	$\frac{2,500 \times 360^\circ}{10,200}$	= 88.2
6.	Transport and communication	$\frac{1,650 \times 360^\circ}{10,200}$	= 58.3
7.	Social services	$\frac{1,725 \times 360^\circ}{10,200}$	= 60.8
8.	Inventories	$\frac{800 \times 360^\circ}{10,200}$	= 28.1
Total			= 360

PIE DIAGRAM

Problem-4

The actual outlay on the public sector in the First and Third Five Year Plans of India is shown below by head of development:
(Continued on page 39)

HOW TO TACKLE CAT-1

BY EDGAR THORPE

Managers are not born. They are made. And for those who wish to tap their managerial abilities, under professional guidance, the Indian Institute of Management (IIM) is the answer. But there's the tough CAT which guards the IIM doors and needs a bit of taming. A four-part serial on how you can manage to bell the CAT and gain entry into the IIM.

The Common Admission Test (CAT) is a standardised test conducted by the Indian Institutes of Management (IIMs) for the selection of candidates for their Postgraduate Diploma in Management (PGDM) programme or by various university departments for their Master of Business Administration (M.B.A.) degree courses. CAT is intended to assist these institutions in assessing the candidate's mental skills vital to study the science of management. As the admission prerequisite for all courses is graduation in any discipline (Arts, Science, Agriculture, Commerce), these tests are not designed to test the candidate's ability and achievements in any specific academic field, viz. Science, Commerce, Economics, etc., but to measure the "general, verbal and mathematical abilities" and "analytical aptitudes". The purpose of a standard measure in these abilities is to permit the institutions to base their admission decisions on objective comparisons of all the candidates irrespective of their educational background and academic pursuits. They test the candidate's power of reasoning logically under stress. Thereby, time becomes the crucial factor to score high in CAT.

From the data collected from students who appeared for CAT (IIM), it is revealed that the whole paper is divided into seven sections as shown on facing page containing about 220 to 250 objective-type (multiple choice) questions to be answered in about 2 hours and 40 minutes.

What To Prepare

Having looked at the time schedule and format of the CAT question paper, you must have realised the scheme of the exam. While preparing for CAT you should keep in mind the various sections and the content of the syllabi which, no doubt, vary from university to university and institution to institution but there are certain common elements which are to be borne in mind in order to prepare thoroughly.

- Familiarity with the questions is an important asset for scoring high in CAT. For this purpose, go through the Practice

Tests that follow.

- Practise the art of answering questions under stress, paying attention to the time allowed for each section. This will help you save time which is very important in objective-type tests.

- Collect as much study material as possible based on the format given above. This will help you familiarise yourself with the material to be studied.

- In a CAT exam you have to score as high as possible in order to be selected. Thereby time management assumes importance. Make sure that you undertake the practice tests keeping in view the time constraints.

Time Management

This is an important requisite as in competitive exams there are a large number of questions to be answered in a limited time. From the first overall look at the question paper, you should be able to adjust your time by roughly dividing the time available between each question. The following technique will help you to budget your time:

- About 25% of the questions should be solved in less than 25% of the total time available; 50% of the questions in 50% of the time and so on.

- Do the easy questions first. This will help you save time for answering difficult questions.

- Answer all questions you know well and can answer with 100% accuracy.

- Meanwhile, focus your sub-conscious mind on the difficult questions you have left unattempted. Thus you may be able to find the answers without wasting your time.

- If you strike at the correct answer in the middle of the paper, return to the unat-

tempted question and solve it. Or from the time saved, you can go back to the unanswered questions towards the end just before revising your answer paper.

Pay Attention To Details

Read the instructions given at the beginning of the paper carefully. Then read the instructions given at the beginning of each question. Take note of words like some, almost, mostly, generally, all, best, etc. These are qualifying words and change the meaning of the questions.

Reject Wrong Answers

Objective-type questions have four to six answer choices and you have to select the correct one (sometimes two are also correct). If you are able to locate the correct answer immediately from the answer choice, there is no need to waste time thinking of other answers.

Rephrasing The Question

Questions based on true-false/valid-invalid/probably true/etc. involve a complete understanding of the subject area. The phrasing of such questions is very important. A statement to be chosen as true should be completely true and if false it should be completely false. Very often rephrasing of these questions might help in clearly understanding the meaning.

Vocabulary Building

To attempt the verbal section of CAT, you are expected to have a good vocabulary and an excellent command over word usage. It is not possible to memorise long lists of words with their meanings, spellings and usage. The following suggestions to enlarge your vocabulary should prove helpful:

Use a dictionary: If you come across a new word, make note of it and look for its meaning. Make a notebook wherein you can note down any new word you come across. Find out all the possible meanings of the word. This is the best way of enlarging your vocabulary gradually.

Make use of word lists: In some books you may find lists of words 'commonly mis-spelt'. Different books have such lists. Go through these and note the spellings of the words. Herein, such a list has been reproduced and the commonly

Time Schedule And Format Of CAT Question Paper

Section	Type of questions	No. of questions	Time (In minutes)
SECTION I			
Verbal Ability	Synonyms/Antonyms	20	
	Spellings/Fill in the blanks	20	
	One-word substitutes	5	
	Analogies	5	
		50	25

SECTION II			
Quantitative Ability	Basic Algebra &	10	
	Basic Arithmetic	10	
	Miscellaneous questions on quantitative ability	10	
		30	20

SECTION III			
Reading Comprehension	Three long passages followed by 20-25 questions on reading comprehension and basic grammar	20	
	Correct/incorrect sentences	10	
		30	25

SECTION IV			
Quantitative Aptitude	Percentages/fractions	5	
	Averages/Exponents &		
	Roots	5	
	Profit & loss/discount	5	
	Interest/ratio/proportion	5	
	Motion/speed/time/work	5	
	Age & miscellaneous	5	
		30	25

Section	Type of questions	No. of questions	Time (In minutes)
SECTION V			
Analytical Ability	Questions on data sufficiency	15	
	Arranging sentences in logical order & other miscellaneous questions	10	
		25	20

SECTION VI			
Analytical Ability	Passage on Business Situation & questions on:		
	Data evaluation	5	
	Problem solving	5	
	Data application	5	
	Managerial aptitude	5	
		20	25

SECTION VII			
Data Interpretation	Interpretation of data given in Graphs		
	Diagrams/Tables. Quick calculation questions	15	20
Total no. of questions & time allowed		200	160

NOTE: The format and time schedule is not always fixed. The above is based on debriefing by candidates who appeared in PGDRI (IIM) and MBA (of various Indian universities). In some papers load from the Verbal section is shifted to the Mathematical and Analytical Ability sections. The crucial element in such papers is time and it is essential that practice tests are tried under stress conditions.

confusing and mis-spelt letters have been underlined for convenience.

Cultivate a reading habit: Read as much as you can. If you get into this habit, your vocabulary will grow by leaps and bounds. Read all posters and ads in magazines. Here you will find several new words. Also make a careful note of their spellings. Sometimes the word is very familiar but you may not be able to spell it out properly.

Etymology learning: This is an important and interesting way of enlarging your vocabulary. A word, for example, consists of the following elements:

- **Prefixes**—letter combinations which appear at the beginning of words.
- **Root/Stems**—70% of which carry the basic meaning. This forms the main part of the word.
- **Suffixes**—Letter combination which appears at the end of the word.

Learn the roots (stems), prefixes and suffixes of every new word you come across, and you will be able to master the spellings and familiarise yourself with their meanings. Roots/stems are generally taken from Latin or Greek. Following are

some examples of word analysis:

Prefix	Meaning	Usage
Contra-	against	contrary/contradictory
Poly-	many/several	polygamous/polytheism
Post-	after	post-operative/postpone/post-mortem/postgraduate
Super-	above	supermarket/superimpose
In/im/Ii/Ir/Un	not	impossible/illegal/invalid/irregular/irrelevant/undesirable
Suffix	Meaning	Usage
-ment	result	filament/settlement/document/statement
-ious	full of	rebellious/religious
-action	action of	transaction/transcription
-ary	relating to	elementary/rudimentary

Stems	Meaning	Usage
ject-	throw	inject/project/reject/eject
tele-	distance	telecommunication/television/telephone/telegraph/telepathy
phono-	sound	phonograms/telephones/phonography
hydr-	water	hydroscope/hydro-electric/dehydration
chromo-	colour	chromosome
cede	go	precede/supersede/proceed
gamous-	marriage	monogamous/polygamous

When you come across a word, analyse it in terms of its prefix/suffix and stem. With the help of the examples given above, analyse the word and you will soon find common elements in several words. This is the most scientific approach to develop word power. If you read a new

word somewhere, immediately look for its meaning and try to relate it with other words having the same prefix/suffix/stem configuration.

Recommended Books

- A good dictionary
- A good book on synonyms and antonyms, e.g., *Pitman Book Of Synonyms & Antonyms*, Indian edition published by A.H. Wheeler Pvt Limited; *Use The Right Word & Modern Guide To Synonyms* (a Reader's Digest

publication).

- For correct usage of words, *Words Misused And Confused* by Maurice H. Weseen, originally published by Pitmans, Indian edition available from A.H. Wheeler & Co Limited.

- For spelling rules, preposition usage, grammar, etc., *English Grammar, Composition & Correspondence* by Pink & Thomas.

- A book on GMAT, preferably an ARCO or BARRON publication (Eugene D. Jafee).

find five synonyms of the main word CONSUME. In fact, there are no exact synonyms—no exact meanings. This argument can be upheld if by 'meaning' we refer to the range of contexts in which a word may be used. Certainly there are no two words that are interchangeable in all the contexts in which either might appear. However, within a given context there are often exact synonyms. One more point to be noted is that words which are synonyms in one of their meanings may differ considerably in their other meanings.

Therefore, in such questions we have to look for the meaning which is nearly the same as the main/key word. If more than one answer choice corresponds to the meaning of the main word, select the one which is more *closely* related. For this you have to analyse the key/main word and its various meanings. Here again you have to bear in mind the part of speech, tense, different meanings, etc as already explained. The following illustrative examples should prove helpful:

Illustration I: Select the word or phrase which is *nearest in meaning* to the capitalised word :

AMBIGUOUS

- (a) Clear
- (b) Simple
- (c) Doubtful
- (d) Obvious
- (e) Equivocal

Answer : (c)

Illustration II: Select the word or phrase which is *not nearest in meaning* to the capitalised word :

DISORDERLY

- (a) Untidy
- (b) Indisciplined
- (c) Turbulent
- (d) Noisy
- (e) Disciplined

Answer : (e)

Illustration III: Select the word or phrase which is *most nearly opposite* in meaning to the capitalised word :

FLUTTER

- (a) Quivering
- (b) Agitation
- (c) Tumult
- (d) Confusion
- (e) Calm

Answer : (e)

Illustration IV: Select the word or phrase which is *not opposite* to the meaning of the capitalised word :

HALE

- (a) Healthy
- (b) Sound
- (c) Hearty
- (d) Weakly
- (e) Robust

Answer : (d)

Illustration V: Select the word or phrase which is *most nearly the same as* or the *opposite* of the capitalised words :

VERBAL ABILITY

Section I of CAT usually consists of the Verbal Ability test in which 35 to 40 questions are to be answered in 15-20 minutes. This section consists of questions on the following aspects of Verbal Ability:

Antonyms

An antonym is a word which is opposite in meaning to another word. For example, an antonym for Rich is Poor. In your Verbal section of the exam, you are given a key word printed in capitals following points may be borne in mind:

Your task is to select the word that comes closest to being opposite in meaning to the key word. To solve such questions, the following points may be borne in mind :

(a) Make a very careful note of the spellings, e.g., Proceed/Precede, Advice/Advise, etc. Try to read all the letters of the word before arriving at the right answer choice.

(b) When selecting the right antonym for the key word, make sure that both words (the key/main word and the answer choice) correspond in tense, e.g., present to present, past to past, etc. Note the following examples:

Main word	Corresponding Antonym
-----------	-----------------------

Diffusion	Concentration (not concentrate)
-----------	---------------------------------

Harmony	Conflict (not conflicting)
---------	----------------------------

(c) Sometimes you will find that at the first glance, the key word seems unknown to you. But after a second look you may realise that it is a familiar word, except that it is somewhat different in form because it is a different part of speech. Therefore, make sure that you compare noun with noun, adverb with adverb, etc. Otherwise

your choice won't be the exact opposite

Note the following examples :

Main word	Corresponding Antonym
-----------	-----------------------

Consonant	Dissonant (both adjectives)
-----------	-----------------------------

Corroboration	Invalidation (both nouns)
---------------	---------------------------

Concise	Wordy (both adjectives)
---------	-------------------------

Concisely	Wordily (both adverbs)
-----------	------------------------

(d) Words are of two types, viz. root words and derivatives. You must be aware of word formation and the change in the meanings of root words by addition of prefixes and suffixes. Hence, analyse the given word and the alternative answer choice. You will be able to find the exact word from the answer choice by such an analysis.

(e) English language is very rich in synonyms. It may be possible that a particular word may have more than one meaning. Therefore, in case you are unable to find the correct word choice immediately, examine all the possible meanings (synonyms) of the word. This will help you to select the right choice. The point (e) above may be transformed into a formula for answering the antonyms.

Formula: Suppose word X is the key/main word for which the opposite word (antonym) has to be selected from the given choice. First, examine the synonyms (all alternative meanings) for the word X. For example, word X = DISSOLVE. The word dissolve has the following possible alternative meanings—to melt, to break up, to fade away, to waste away. Applying the above formula, DISSOLVE means 'melt' or 'break up', the opposite of which will be SOLIDIFY.

Synonyms

The second type of question in the Verbal section consists of selecting the right synonym. English language has the largest vocabulary and an equally large variety of synonyms compared to any language in the world. The synonymous words—words which convey more or less the same meaning can be substituted for a given word. E.g., CONSUME = destroy/exhaust/devour/spend/squander. Here we

ANALOGICAL RELATIONSHIPS

Type of relationship	Example	Explanation
1. Antonymous relationship	Slim : Stout Poor : Rich Never : Always	Opposite in meaning
2. Synonymous relationship	Slim : Thin Kind : Benevolent Stout : Portly	Similar in meaning
3. Cause & Effect relationship	Germ : Disease Mosquito : Malaria Insult : Humiliate	Action of the first word results in the effect of the second.
4. Worker & Article relationship	Author : Book Carpenter : Chair Cobbler : Shoe	
5. Worker & Tool relationship	Tailor : Sewing machine Surgeon : Forceps Writer : Pen	Tools used by various technicians.
6. Tool & Object relationship	Pen : Paper Saw : Wood Oven : Bread Brake : Car Knife : Meat Starter : Motor	Tools used on the object. Brakes stop the car. Knife cuts the meat. Starter starts the motor.
7. Whole & Part, Part & Whole, Part & Part relationships	Car : Wheel Coils : Motor Soldier : Regiment	Wheel is part of a car. Coil is part of a motor. Soldier is part of a regiment.
8. Degree of Difference relationship	Tap : Slam Nip : Crash Admiration : Love	Same meanings but difference in degree only.
9. Classification relationship	Cow : Mammal Ice : Water	Biological classification. Similarly there can be chemical/physical classification.
10. Functional relationship	Axe : Wood Scissors : Cloth General : Command	First term describes the function of the second.
11. Sex relationship	Man : Women Male : Female Bull : Cow	
12. Time Sequence relationship	Morning : Evening Day : Night	First word meaning follows the second.
13. Finished product and raw material relationship	Flour : Bread Grape : Wine Fresh milk : Milk powder	
14. Symbolic relationship	Flag : Nation Insignia : Rank Stars : Rank	
15. Specialist and Subject relationship	Skin : Dermatologist Bone : Orthopaedist Heart : Cardiologist	
16. Numerical relationship	4 : 16 :: 5 : 25 ::	Multiplication relationship. Similarly there can be relationships of addition/subtraction/division.
17. Place relationship	Delhi : Red Fort Punjab : Ludhiana Chandigarh : Punjab	Red Fort is in Delhi. Ludhiana is in Punjab. Chandigarh is the capital of Punjab, etc.
18. Association relationship	Time : Clock Pen : Ink	Clock is associated with time. Similarly

(Continued on page 38)

1. WARRANTY
 - (a) Threat
 - (b) Guarantee
 - (c) Order for arrest
 - (d) Issue
 - (e) Fund
2. VALEDICTORY
 - (a) Bidding farewell
 - (b) Sad
 - (c) Collegiate
 - (d) Derivative
 - (e) Promising

Answers : 1. (a) 2. (a)

Analogy/Word Relationship

In such questions, the candidate is presented with a pair of words (usually in capitals) followed by five additional pairs of words, marked (a) to (e). The candidate is expected to select the pair of words from among the five choices (a-e) that best matches the relationship existing between the first two words.

The given pair of words is set off by a colon or ratio sign (:). The colon is merely a kind of code or symbol that *signifies that word A is related to word B*. The double colon (::) that separates the given pair from the five choices stands for 'in the same way that'. For example: DARK : LIGHT ::

- (a) Thin : Slim
- (b) Stout : Strong
- (c) Germs : Disease
- (d) Tree : Forest
- (e) Hot : Cold

In the above example, the answer is (e)—Hot : Cold. Because *Hot* is related to *Cold* in the same way as *Dark* to *Light*. In other words they have an antonymous relationship.

You are required to find the significant relationship between the second word of a given pair of words and find, 'among the choices offered' an analogous or similar relationship between each pair of words.

Solving of analogical questions can be made simple by following the pattern given below:

(a) Establish the relationship between the given pair before looking at the answer choices. After you have found the relationship look at the answer choices to find similar relationship among them.

(b) Base your final decision after going through all the answer choices.

(c) Note grammatical relationship for same part of speech/tense, etc. For instance, if a given pair consists of two words of the same part of speech (e.g., two nouns/ or two verbs), then in the answer choice also

(Continued from page 37)

Type of relationship	Example	Explanation
	Air Pressure : Barometer	other terms have a relationship.
19. Purpose relationship	Sand paper : Abrasion Oil : Lubrication	Sand paper is used for abrasion and oil for lubrication.
20. Age relationship	Boy : Man Cow : Calf	
21. Comparative relationship	Black : Coal Red : Blood	Examples used while comparing colour, etc.
22. Habit relationship	Meant : Non-vegetarian Buffalo : Herbivorous Lion : Carnivorous	Food habit relationship
23. Quantitative relationship	Kilogram : Gram Litre : Millilitre	
24. Qualitative relationship	Hot : Cold Big : Small	Can also be classified under antonyms.
25. Utility relationship	Chair : Sitting Bed : Sleeping Car : Driving	Relationship of the article to the purpose for which they are used.
26. Blood/family relationship	Father : Mother Brother : Sister	

the word pair should have the same relationship, i.e., both having the same part of speech.

The list of probable relationships (see pages 37-38) found in analogical questions should be helpful.

Spellings

The Verbal Ability section contains two types of questions on spellings.

Example 1: In the following set of words, one is wrongly spelt. Tick mark the incorrectly spelt word:

- (a) Athlete (b) Auxilliary
(c) Abscess (d) Agressor
(e) Catalogue

Answer : (b) The word auxiliary has only one T

Example 2 : Select the word correctly spelt out in the following alternative answer choices:

- (a) Acquaintence (b) Acquaintance
(c) Acquaintance (d) Acquentece
(d) Acquittance

Answer : (C)

To solve spelling questions follow the given strategy:

- Read the words in the answer choices very carefully.
- Note the instruction very carefully, whether the examiner is asking you for the 'correctly' or the 'incorrectly' spelt word.
- For practice purposes, follow the instructions/suggestions given in the section on 'How to build your vocabulary'.
- Given below is a list of commonly mis-spelt words. The important letters in the words are underlined. Note these words.

THE MIS-SPELT MANIA

A accommodation
accordance
acknowledged

address
adjournment
advertisement
agreeable
alleviate
allotted
amelioration
antagonism
apparatus
archive
arithmetic
ascertain
B
beginning
believe
benefited
C
catalogue
challenge
circumstances
column
commissioner
committee
competent
complementary
concealment
conciliation
considerable
consignment
consistent
correspondent
D
defendant
definition
demurrage
denote
denoting
depreciation
depression
description
diaphragm
diarrhoea
dinner

dining
difference
discrepancy
dissatisfy
E
eligible
emigration
entanglement
entance
enumeration
envelope

tuition
tutor
U
unprecedented
unsolicited
V
vacant
vacuum
vicissitude
W
welcome

MENTAL (SLIP) ABILITY

In *Non-Verbal Tests*—Multirelational Analogies—in *The Right Approach To Mental Ability And Quantitative Aptitude* (June '85) the Problem Figure should be marked 1, 2, 3, 4 and 5 while Answer Figure should be marked A, B, C, D, and E. Similarly in Series Completion the Problem Figure should be marked 1, 2, 3, 4 and 5 while the Answer Figure should be marked A, B, C, D and E.

In *Verbal Tests*—Jumbled letter relationship—read G N I K : K I N G instead of G N I K : K T N G and in Mixed Coding read "A 3 T 5 D" in place of "A 3 I 5 D". In Example 7 of Direction Tests substitute "left" for "right."

In *Quantitative Aptitude*—Table 1 read 25 = $\frac{1}{4}$ " instead of 20 = $\frac{1}{4}$ " Also the formula for interest calculation should read as $P \times I_1 / 100 = I_1$
 $(P + I_1) \times I_2 / 100 = I_2$
 $(P + I_1 + I_2) \times I_3 / 100 = I_3$

The steps for calculating compound interest in the problem—Calculate compound interest for 3 years on Rs 1,000 at 5% rate of interest per annum—should be
 $P = \text{Rs } 1,000$ $t = 3$ years $r = 5\% \text{ p.a.}$
5% for 1st year Rs 1,000 (.05) = 50
5% for 2nd year Rs 1,050
Hence
5% for 2nd year Rs (1,050) (.05) = Rs 52.50
Rs 52.50 + Rs 1,050 = Rs 1,102.50
For 3rd year I will be calculated on Rs 1,102.50 = Rs (1,102.50) (.05) = Rs 55.125 = Rs 55.13
Hence after three years P (Rs 1,000) will become Rs 1,157.63 or interest will be Rs 157.63 and not Rs 57.63.

QUANTITATIVE ABILITY

The second section of the CAT question paper deals with Quantitative Ability problems.

Algebraic Problems

Read accurately to ascertain what you are asked to find. This is very important as without proper understanding of the problem, no solution can be found. Be composed and don't be unduly hasty.

Use common sense and think carefully before tackling any problem. Every problem does not require elaborate calculations. Questions like: "Cost of 50 gm if 1 kg costs so much" do not need any rough calculations and if you have read the problem correctly and applied common sense, you are sure to strike at the right answer. Use formulae like $25 = 1/4$, $50 = 1/2$, etc.

Sometimes it is better to translate the problem into algebra. For example, 20 is what % of 10? Convert the problem into algebraic equation, e.g.,

$$20 = x\% \times 10$$

$$\text{or } 20 = \frac{x}{100} \times 10$$

$$\text{or } 20 = \frac{x}{10}$$

Multiplying both sides by 10
 $200 = x$.

Inequalities Manipulation

Addition and/or subtraction can be done from both sides of an inequality without changing the direction of the inequality. Similarly multiplication or division can be done from both sides of the inequality by any positive number and there will be no change in the direction of the equality. However, if a negative number is used for multiplication or division of an inequality, direction of the inequality has to be reversed. Note the following examples:

(a) $3x > y + z$
 $3x + 5 > y + z + 5$

(b) $4 > 3$
 $(-2)(4) < (-2)(3)$
 $-8 < -6$

Equation Solving

In equation solving you have to determine the letter or the value/quantity you are asked to isolate. For instance, solving equation for x means getting it on one side of the = and everything else on the other side of =. For example:

$$5x + 3 = y$$

Subtract 3.

$$5x = y - 3$$

Divide by 5

$$x = \frac{y - 3}{5}$$

If x is to be expressed in terms of y, it means having an equation with x alone on one side of = and some expression of y on the other, such as $x = 4y^2 + 3y + 4$. If there are two variables in an equation, it is helpful to bring all expressions containing one variable on one side and all the others on the other.

The most important point to be borne in mind here is that in algebraic fractions, we must divide the numerator and denominator by the same factor as is done in arithmetic. We should never cancel terms, as this would be adding or subtracting the same number from the numerator or denominator and will change the value of the fraction.

(To be continued)

DATA INTERPRETATION

(Continued from page 33)

Percentage

S. No.	Head of development	First Plan outlay (Rs crores)	Third Plan outlay (Rs crores)
1.	Agriculture and community development	290	1,096
2.	Irrigation and power	583	1,927
3.	Industries and mining	97	1,965
4.	Transport and communication	518	2,113
5.	Social services	412	1,422
6.	Miscellaneous	60	85
Total		1,960	8,608

Draw a suitable diagram that may attach relative importance to the various heads on each Plan. And make a comparison between the First and the Third Plan (same scale should be used).

Interpretation

For the above-mentioned problem, the suitable diagram would be the Percentage Bar Diagram. The percentage can be calculated as follows:

Table

S. No.	Head of development	First Plan outlay calculations	(Approx) Percentages	Third Plan outlay calculations	(Approx) Percentages
1.	Agriculture & community development	$\frac{290 \times 100}{1,960}$	14.8	$\frac{1,096 \times 100}{8,608}$	12.7
2.	Irrigation & power	$\frac{583 \times 100}{1,960}$	29.7	$\frac{1,927 \times 100}{8,608}$	22.4
3.	Industries & mining	$\frac{97 \times 100}{1,960}$	4.9	$\frac{1,965 \times 100}{8,608}$	22.8
4.	Transport & communication	$\frac{518 \times 100}{1,960}$	26.4	$\frac{2,113 \times 100}{8,608}$	24.6
5.	Social services	$\frac{412 \times 100}{1,960}$	21	$\frac{1,422 \times 100}{8,608}$	16.5
6.	Miscellaneous	$\frac{60 \times 100}{1,960}$	3.2	$\frac{85 \times 100}{8,608}$	9.8
Total			100		

Observing the diagrams, we can conclude that

● On the Third Plan, the actual outlay decreased as compared to the First Plan.

● The maximum emphasis was placed on industries and mining in the Third Plan as compared to the First Plan.

(To be continued)

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating : Evaluate your performance on the basis of the following score-card:

- 100 questions in 60 minutes—Excellent
- 60 questions in 60 minutes—Good
- 50 questions in 60 minutes—Fair
- 35 questions in 60 minutes—Poor

Tips: 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

Verbal Ability

FOR CAT

Now that you are familiar with the preparation strategy for the Common Admission Test (CAT), get set to tackle these verbal, mathematical and analytical ability tests in order to sharpen your grey cells and train them for speedy action, under stress.

Time : 25 minutes

Scores : 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer.

Then rate yourself as follows:

Excellent... 45... 50 Very Good... 39-44... Good... 33-38

Fair... 27-32 Poor... Below 27

DIRECTIONS: For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests.

Directions: In questions 1-10 select the word or phrase that is *nearest in meaning* to the word.

1. ABASH

- (a) Lower
- (b) Humiliate
- (c) Embarrass
- (d) Detest
- (e) Depart

2. ACIDULOUS

- (a) Vinegary
- (b) Slightly sour
- (c) Very sour
- (d) Bitter
- (e) None of the above

3. ABJURE

- (a) Renounce
- (b) Discuss
- (c) Run away
- (d) Unclaimed
- (e) Perjure

4. BOISTEROUS

- (a) Noisy
- (b) Cloudy
- (c) Grateful
- (d) Conflicting
- (e) Calm

5. CACOPHONY

- (a) A type of dance

(b) Discord

(c) Applause

(d) Special sound

(e) A typical sound instrument

6. CONSTRUE

- (a) Inform
- (b) Advise
- (c) Explain
- (d) Promote
- (e) Relief

7. PINNACLE

- (a) Lean
- (b) Peak
- (c) Riding on motor-bike
- (d) Taunt
- (e) A typical game

8. CHICANERY

- (a) A special flavour
- (b) An aromatic plant
- (c) Affluence
- (d) Disinclined
- (e) Trickery

9. VESTIGE

- (a) Clothing
- (b) Sound of a wind-mill
- (c) Trace
- (d) Sly
- (e) Inactivity

10. EFFIGY

(a) Proxy

(b) Dummy

(c) Doll like structure

(d) None of the above

Directions : In questions 11-20 select the lettered word or phrase that comes closest to being *opposite in meaning* to the capitalised word.

11. INSIPID

- (a) Sour
- (b) Tasteless
- (c) Tasty
- (d) Without flavour
- (e) Silly

12. BLASE

- (a) Fire
- (b) Keen
- (c) Worldly
- (d) Hot
- (e) Cold winds

13. COMPENDIOUS

- (a) Inflated
- (b) Large
- (c) Profound
- (d) Bigger
- (e) None of the above

14. FECUND

- (a) Pure
- (b) Barren
- (c) Young
- (d) Sinister
- (e) Impure

15. PRATE

- (a) Unlawful copying of printed material
- (b) Talk meaningfully
- (c) Laugh loudly
- (d) Remark hurriedly
- (e) Fearful

16. SAVANT

- (a) Gambler
- (b) Deceiver
- (c) Simpleton
- (d) A type of plant
- (e) None of the above

17. INTERDICT

- (a) Dictate
- (b) Apprehend
- (c) Delegate

- (d) Sanction
(e) Dread
18. **PUISSANT**
(a) Clear
(b) Concise
(c) Lucid
(d) Brief
(e) Impotent
19. **DEXTEROUS**
(a) Without carbohydrate
(b) Sour taste
(c) Bitter
(d) Sinister
(e) Maladroit
20. **ANOMALOUS**
(a) Maculate
(b) Organised
(c) Regular
(d) Impertinent
(e) Coordinated

Directions : In questions 21-30, select the correct spellings from amongst the given alternatives.

21. (a) Questionare
(b) Questionnare
(c) Questionnair
(d) Questionnaire
22. (a) Continueous
(b) Continuous
(c) Continous
(d) Contineous
23. (a) Discrepency
(b) Discrepancy
(c) Descrepency
(d) Descrpency
24. (a) Accommodation
(b) Acommodation
(c) Accommodaation
(d) Accamodation
25. (a) Seperate
(b) Separate
(c) Saparate
(d) Saperate
26. (a) Occurence
(b) Occurrence
(c) Occurrence
(d) Occurance
27. (a) Officous
(b) Officius
(c) Officious
(d) Officeous
28. (a) Omnisent
(b) Omniscient
(c) Omniscient
(d) Omniseint
29. (a) Envelop
(b) Envelope
(c) Envelap
(d) Envolep
30. (a) Ocasionally
(b) Occasionally
(c) Occassionly
(d) Ocassionally

Directions : In questions 31-35, choose the word which very closely replaces the given phrase or definition.

31. To be fond of sensuous enjoyment
(a) Hedonist
(b) Epicure
(c) Jockey
(d) Jolly
32. To close a meeting
(a) Convene
(b) Adjourn
(c) Terminate
(d) Postpone
(e) Alienate
33. A desire for knowledge
(a) Wish
(b) Longing
(c) Curiosity
(d) Craving
(e) Eagerness
34. Large-scale departure of people
(a) Migration
(b) Immigration
(c) Exodus
(d) Aberration
(e) Eagerness
35. Unfit for human consumption
(a) Uneatable
(b) Expired
(c) Inedible
(d) Opulent
(e) Non-consumable

Directions : In questions 36-45, select from the given alternative word(s)/ preposition(s) the word(s) which best fill(s) the blank(s) :

36. He was warned last summer that his _____ nature was dangerous for his cardiac disease.
(a) Fussy
(b) Choleric
(c) Chronic
(d) Capricious
(e) Chimerical
37. It is better to—the last paragraph in order to make the report more—
(a) Concise . . . interesting
(b) Delete . . . succinct
(c) Review . . . worthy
(d) Expunge . . . witty
(e) Revise . . . abstruse
38. Although the committee members wanted to go home, no hope for an early _____ could be entertained.
(a) Postponement
(b) Compromise
(c) Adjournment
(d) Conciliation
(e) Adjustment
39. A person who is _____ cannot be blamed of being _____
(a) Glib . . . ribald
(b) Dexterous . . . gauche
(c) Impolite . . . shy
(d) Shy . . . partial
(e) Partial . . . shy
40. As we know that he is _____ we cannot predict what course he will follow.
(a) Sedate

- (b) Capricious
(c) Incoherent
(d) Over-intelligent
(e) Weak
41. Ram had to write a pronote _____ security _____ the loan secured by him.
(a) For, for
(b) Of, for
(c) For, of
(d) With, for
(e) With, of
42. Rakesh was trying to side _____ Joginder who is known _____ his bad behaviour.
(a) For, to
(b) With, by
(c) For, by
(d) By, for
(e) With, for
43. If you all agree, I will proceed _____ my lecture till lunch-break today.
(a) On
(b) With
(c) For
(d) Upon
(e) In
44. Nights in Delhi always remain alive _____ people on the roads.
(a) With
(b) By
(c) To
(d) For
(e) In
45. This is the right time to study the problem—_____ all aspects.
(a) With
(b) By
(c) To
(d) From
(e) For

Directions : In questions 46-50, select the littered pair that expresses a relationship similar to that between the capitalised word-pair.

46. **EVANESCENT : TEMPORARY ::**
(a) Shining : Brief
(b) Laconic : Stationary
(c) Lethargic : Napping
(d) Ephemeral : Transient
47. **MILLIMETER : CENTIMETER ::**
(a) Large : Small
(b) Century : Decade
(c) Quart : Gallon
(d) Ten-rupee note : Hundred-rupee note
48. **BASEBALL : DIAMOND ::**
(a) Court : Badminton
(b) Football : Gridiron
(c) Court : Tennis
(d) Cricket : Bat
49. **SEDATIVE : PAIN ::**
(a) Narcotic : Oblivion
(b) Hypnotic : Sleep
(c) Solace : Grief
(d) Irritant : Eye

Quantitative Ability

FOR CAT

Now attempt these practice tests which require the ability to reason with numbers, using common sense as well as quick calculation techniques.

Time : 20 minutes

Scores : 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer.

Then rate yourself as follows

Excellent30-35 Very Good...24-29 Good...18-23 Fair...17-22 Poor... Below 17

DIRECTIONS : For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests.

1. If $x = +5$, then $(x-8)(x+3)$ is

(a) 24 (b) -18
(c) -24 (d) 0
(e) 18

2. A class of 50 girls and 70 boys offered Economics. If 40% of the girls and 50% of the boys attended the Economics class, approximately what percentage attended the class?

(a) 43 (b) 46
(c) 40 (d) 41
(e) 44

3. Which of the following fractions is the smallest?

(a) $1/2$ (b) $6/17$
(c) $7/12$ (d) $7/8$
(e) $8/9$

4. Add $4x+2y$ to $x-4y$

(a) $4x-2y$ (b) $5x-2y$
(c) $4x-4y$ (d) $5x-4y$
(e) $5x-6y$

5. Divide $(8x^3-5x^2+2x)$ by $2x$

(a) $3x^2-3x-1$
(b) $3x^2-3x+1$
(c) $3x^2-2x-1$
(d) $3x^2-6x+1$
(e) $3x^2-2x+1$

6. Multiply $(2r-3)$ by (r^2-5rs)

(a) $2r^3-1-r^2s-3r+15rs$
(b) $2r^3-10r^2s-3r^2+15rs$
(c) $2r^3-10r^2s-3r+15rs$
(d) $2r^3-15rs$
(e) $2r^3-10r^2s+15rs$

7. Which of the following numbers has no predecessor but only a successor?

(a) 1 (b) 0
(c) 2 (d) 5
(e) 10

8. Which of the following are the first six prime numbers?

(a) 1, 2, 3, 4, 5, 6
(b) 3, 5, 6, 9, 11, 13

(c) 2, 3, 5, 7, 11, 13
(d) 2, 3, 5, 7, 9, 11
(e) 2, 3, 5, 7, 11, 15

9. Which of the following equations has a solution in rational numbers?

(a) $x^2=25$ (b) $x^2=9$
(c) $\frac{5x}{3} + \frac{1}{2}$ (d) $x^2=16$
(e) $2x^2=14$

10. Which is the smallest of the following?

(a) $3\sqrt{3}$ (b) $\frac{\sqrt{3}}{3}$
(c) $\frac{1}{3}$ (d) $\frac{\sqrt{3}}{3}$
(e) $\frac{1}{\sqrt{3}}$

11. If x and y are two different real numbers and $rx=ry$, then r is

(a) x/y (b) $\frac{x-y}{r}$
(c) y/x (d) $\frac{x-y}{y}$
(e) 0

12. How many of the numbers between 100 and 300 begin with 2?

(a) 2 (b) 20
(c) 180 (d) 110
(e) 100

13. How many of the numbers between 100 and 300 end with 2?

(a) 20 (b) 120
(c) 180 (d) 10
(e) 40

14. Find the sum of $\frac{n}{6} + \frac{2n}{5}$

(a) $17n$ (b) $\frac{3n}{5}$
(c) $\frac{3n}{30}$ (d) $\frac{17n}{30}$

(e) $\frac{n+2n}{30}$

15. If $x = 3$ and $(x-y)^2 = 4$, then y could be

(a) 5 (b) 8
(c) 7 (d) 0
(e) None of the above

16. Which of the following is the most convenient association you will adopt to find the product of $25 \times 73 \times 40 \times 10$?

(a) $(25 \times 40) \times 73 \times 10$
(b) $(25 \times 73) \times 40 \times 10$
(c) $(73 \times 40) \times 25 \times 10$
(d) $(25 \times 10) \times 40 \times 73$
(e) $(73 \times 25) \times 40 \times 10$

17. To find the sum of the numbers 45, 55, 77 and 23 which one of the following alternative pairs is most convenient?

(a) $(45+77) + (55+23)$
(b) $(45+55) + (77+23)$
(c) $(55+77) + (45+23)$
(d) $(77+45) + (23+55)$
(e) $(55+23) + (77+45)$

18. Sohan is 20 years older than his sister Lata. However, y years back, Sohan was twice as old as Lata. If Lata is now b years old and $b > y$, find the value of $b-y$.

(a) 13 (b) 15
(c) 16 (d) 20
(e) 14

19. In B.A. (Part I), three optional subjects are available, viz. Economics, Sociology and Public Administration. If $1/8$ th of the class offered Economics and $1/3$ rd offered Sociology, what percentage of the class would have opted for Public Administration?

(a) 33 (b) $1/4$
(c) 47 (d) 28
(e) 50

20. If a cyclist covers a distance of 88 feet in 4.5 seconds, what is his speed per mile/hour?

(a) 20 miles/hour
(b) 15 miles/hour
(c) 12 miles/hour
(d) 10 miles/hour
(e) None of the above

21. To compute $26 \times 3\frac{1}{2}$, which of the following may be used conveniently and correctly?

(a) $(26 \times 1/2) + (20 \times 3) + (6 \times 3)$
(b) $(26 \times 20) + (26 \times 1/2)$
(c) $(20 \times 26) + (1/2 \times 26)$
(d) $(20 \times 2\frac{1}{2}) + (6 \times 3)$
(e) None of the above

22. 10^6 may be

- (a) 10×5 (b) $70 - 10$
 (c) $10 \times 10 \times 10 \times 10 \times 10$
 (d) $10^{10} \div 10^5$
 (e) $5^2 \times 5^2$
23. $3\sqrt{-\frac{1}{4}}$ is equal to
 (a) -2 (b) -4
 (c) $1/2$ (d) $-1/4$
 (e) $1/4$
24. Mohan drives 522 km in 9 hours. Compute his average speed per hour.
 (a) 50 (b) 51
 (c) 52 (d) 53
 (e) 58
25. Suppose $5y = \frac{45}{y}$, then y is
 (a) -9 (b) + or -3
 (c) -6 (d) -3
 (e) +3
26. Strength of a school increased by 7.5% per year in the last two years. If the current strength is 73,960 students, two years back the strength should have been
 (a) 12,800 (b) 60,000
 (c) 6,400 (d) 65,000
 (e) 64,000
27. How many three-digit numbers can be secured by 0, 3 and 5 if not a single one of them is repeated in any number?
 (a) 5 (b) 8
 (c) 4 (d) 3
 (e) 7

28. Ram, Radha and Rakesh invested in a business Rs 9,000, Rs 5,000 and Rs 6,000, respectively. The profit made was contracted to be divided according to the ratio of their respective investments. If their firm makes a profit of Rs 825 and out of this Radha secures a loan of Rs 230 before computation of the final accounts, how much will she get after the close of the financial year?
 (a) Rs 32.50 (b) Rs 32
 (c) Rs 34 (d) Rs 38.50
 (e) Rs 34.80
29. Convert $4\frac{1}{2}$ to an improper fraction.
 (a) $14/3$ (b) $10/2$
 (c) $8/3$ (d) $12/2$
 (e) None of the above
30. After multiplying $17\frac{1}{2}$ by 128, the result is
 (a) $57\frac{1}{2}$ (b) $57\frac{1}{4}$
 (c) $57\frac{1}{8}$ (d) $57\frac{1}{16}$
 (e) None of the above
31. Rakesh has x number of electric fans out of which 14% are defective and need minor repairs. He gives 80% of the remainder to a temple, free of cost. He is now left with 253 fans. Calculate the value of x.
 (a) 1,000 (b) 1,800
 (c) 1,200 (d) 2,000

- (e) 1,500
32. The personnel strength of a company has increased @ 10% every one decade. The current strength = 48,400 employees. What was it two decades back?
 (a) 42,000 (b) 40,000
 (c) 48,000 (d) 30,000
 (e) None of the above
33. Simplify the following equation:

$$\frac{4}{7} + \frac{4}{7} \left(\frac{3}{4}\right)^2$$

$$\frac{4}{7} - \frac{3}{7}$$

 (a) 0 (b) 1.0
 (c) 2.0 (d) -1
 (e) 10
34. If $1/4$ kg of oil costs Rs 40, how much will 100 gms cost?
 (a) Rs 16 (b) Rs 8
 (c) Rs 4 (d) Rs 2
 (e) Rs 20
35. Puran has more bank balance than Sushma but less than Beant Singh. If the bank balance of Puran, Sushma and Beant Singh are x, y and z respectively, which of the following expressions is true?
 (a) $x < y < z$
 (b) $y < x < z$
 (c) $z < x < y$
 (d) $y < x < z$
 (e) $y < z < x$

E.T.

ANSWERS Verbal Ability

Quantitative Ability

1. (c) Substitute the value +5 for x. $(+5-8)(+5+3) = (-3)(8) = -24$. Substitute before multiplication.
2. (b) $40\% = \frac{2}{5} \times 50 = 20$ girls attended
 $50\% = \frac{1}{2} \times 70 = 35$ boys attended
 55 total girls + boys attended
 $\frac{55}{50+70} = \frac{55}{120} = \frac{11}{24}$
 $= 45.8\% \text{ or } 46\%$
3. (b)
4. (b) $4x + 2y$
 $+x - 4y$
 $5x - 2y$
- Ans 24*
24

5. (e) $\frac{9x^2 - 6x + 3x}{3x} = \frac{9x^2}{3x} - \frac{6x}{3x} + \frac{3x}{3x}$
 $= 3x - 2 + 1$
6. (c) $(2r-3)(r^2-5rs) = 2r(r^2-5rs) - 3(r^2-5rs)$
 $= 2r^3 - 10r^2s - 3r^2 + 15rs$
7. (a) 1 is followed by 2 but there is no number coming before (preceding) it.
8. (c)
9. (e)
10. (a) $\frac{1}{3\sqrt{3}} = \frac{\sqrt{3}}{3 \cdot 3} = \frac{\sqrt{3}}{9} = \frac{1.73}{9} = 0.19$
 Whereas in other cases we get:
 $\frac{\sqrt{3}}{3} = \frac{1.73}{3} = 5.7$
 $1/3 = 0.33333$
 $\sqrt{3} = 1.73$
 $\frac{1}{\sqrt{3}} = \frac{\sqrt{3}}{3} = \frac{1.73}{3} = 0.57$
11. (e) Because r cannot equal any number other than 0. If we divide by r, x would equal y. Since $x \neq y$, it follows that $r = 0$
12. (e) All numbers from 200 to 299 begin with 2. There are 100 such numbers.
13. (c) All numbers like 102, 112—192 end with 2. There are 10 such numbers in this

(Continued on page 47)

Quantitative Aptitude

BY KAVITA KAPOOR & B.L. ARORA

FOR ASST'S GDE, CDSE, NDA, CLERKS' GDE EXAMS...

This section is designed to help those appearing in the forthcoming CDSE, Assistant's Grade, NDA and Clerks' Grade (Regional Recruitment Board) exams. And also forms an important part of the Maths paper for most other competitive exams.

DIRECTIONS: For each question tick mark the choice that best answers the question. Answers with explanations appear at the end of this test.

- If $a/b = 3/4$, then $12a =$
(a) 16b (b) 9b
(c) 8b (d) 7.5b
- Which of the following numbers is the smallest?
(a) $1/\sqrt{2}$ (b) $3/4$
(c) 0.78 (d) $7/9$
- What should be added to the number 98765 to make it a perfect square?
(a) 7 (b) 6
(c) 5 (d) None of the above
- The square of any odd number divided by 4 always gives a remainder of
(a) 1 (b) 2
(c) 3 (d) 1 or 3
- 62½% of a number can be obtained by multiplying it with
(a) $9/11$ (b) $7/9$
(c) $5/8$ (d) $4/7$
- If $\sqrt{11} = 3.316$, the value of $\sqrt{176}$ correct to two decimal places is
(a) 13.14 (b) 13.26
(c) 13.44 (d) 12.88
- If $\sqrt{x} = .04$, x is equal to
(a) 0.2 (b) 0.02
(c) 0.0016 (d) 0.16
- One third of a pole is in mud, one half is in water and 2 m is above water. The length of the pole in water is
(a) 1 m (b) 3 m
(c) 4.5 m (d) 6 m
- A typist can finish a job in $2\frac{1}{2}$ hours. If she reduces her speed by 25%, in 3 hours what percentage of the job will remain unfinished?
(a) 4% (b) 7.5%
(c) 8% (d) 10%
- The ages of four brothers are in the ratio 3:4:5:7. If the sum of their ages is 76, the age of the eldest brother is
(a) 24 (b) 28
(c) 30 (d) 36
- The average temperature of five consecutive days is 32°C . If the average of the first three days is 29°C and the average of the last three days is 34°C , the temperature of the third day was
(a) 27°C (b) 29°C
(c) 30°C (d) 31.5°C
- Out of four members of a family, the average age of the first three (youngest) members is 24 years and of the three eldest members is 27. If the age of the eldest member is 31, the age of youngest member is
(a) 17 years (b) 19 years
(c) 21 years (d) 22 years
- The product of two numbers is 9576. If their H.C.F. is 21, their L.C.M. would be
(a) 426 (b) 456
(c) 201096 (d) Cannot be determined by using the given information
- The L.C.M. of $4/7$, $5/14$ and $8/7$ is
(a) $5/7$ (b) $1\frac{7}{7}$
(c) $29/14$ (d) $40/7$
- A shopkeeper increases the prices of the articles in his shop by 12% and then announces a sale at 25% discount. If his original profit margin was 25%, the profit he would now earn would be
(a) 5% (b) 4%
(c) 10% (d) 12%
- If the cost of 15 pens is equal to the selling price of 12 pens, the profit percentage would be
(a) 20% (b) 25%
(c) 27.5% (d) 22.5%
- It is not possible to have a triangle with sides of lengths
(a) 7, 8, 12 (b) 6, 9, 14
(c) 3, 4, 8 (d) 2, 5, 6
units units units units
- Ram's father is 36 years older than him. Three years ago, he was nine times as old as Ram. The sum of their ages is
(a) 32 years (b) 36 years
(c) 40 years (d) 45 years
- In the annual exam, 45% of the students fail in English and 35% fail in Maths. If 15% of the students fail in both Maths and English, the percentage of students who pass in both the subjects is
(a) 5% (b) 15%
(c) 25% (d) 35%
- In a locality 40% of the house owners subscribe to English magazines, while 30% subscribe to Hindi magazines. If 12% subscribe to both Hindi and English magazines, what percentage does not subscribe to any magazine?
(a) 38% (b) 50%
(c) 42% (d) 18%
- A swimmer can swim 8 km/hr in a stationary river. If the river is flowing at the rate of 4 km/hr, the time taken by him to travel 12 km from one place to another along the river and come back is
(a) 2 hours (b) 3 hours
(c) 3.4 hours (d) 4 hours
- The H.C.F. of $3/5$, $6/25$ and $9/45$ is
(a) $3/45$ (b) $9/5$
(c) $3/225$ (d) $1/25$
- The numbers between 201 and 300 which begin or end in 2 are—in number.
(a) 99 (b) 108
(c) 109 (d) 119
- The number of times 7 will occur when you write numbers from 701 to 800 is
(a) 99 (b) 104
(c) 109 (d) 119
- The cost of 5 pens and 10 pencils is Rs 35.50, while the cost of 3 pens and 20 pencils is Rs 33.50. The cost of 6 pens and 12 pencils would be
(a) Rs 42.60 (b) Rs 37.80
(c) Rs 44.40 (d) Rs 46.20
- A shopkeeper buys 12 pencils for Rs 10 and sells 10 pencils for Rs 12. He earns a profit of
(a) 12½% (b) 22%
(c) 24.8% (d) 44%
- The value of $(5838)^2 - (5835)^2$ is equal to
(a) 33229 (b) 34269
(c) 35019 (d) 36249
- The value of the expression $\sqrt{125} \times 17\sqrt{5}$ is equal to
(a) 425 (b) $425\sqrt{5}$

29. If the interest on Rs. 1000 at 10% per annum is Rs. 200, the principal should be

- (a) 267 (b) 272
(c) 282 (d) 287

30. A sum of money would become four times at simple interest in 10 years at the rate of

- (a) 25% (b) 30%
(c) 32.75% (d) 40%

31. A circle is inscribed in a square. If the area between the square and the circle is A, the area of the circle will be

- (a) $A/(4-\pi)$
(b) $\pi A/(4-\pi)$
(c) $4A/(4-\pi)$
(d) $4A$

32. ABCD is a square. If the shaded area in the figure is equal to π , the area of the square is equal to

- (a) 4 (b) 16
(c) 4π (d) 8π

33. The diagonals of a quadrilateral are equal in length and are perpendicular to each other, when the quadrilateral is a

- (a) Rectangle (b) Rhombus
(c) Parallelogram (d) Square

34. Two parallel sides of a trapezium are 12 cm and 8 cm and the distance between them is 7.5 cm. The area of the trapezium is

- (a) 150 cm^2 (b) 45 cm^2
(c) 75 cm^2 (d) 90 cm^2

35. ABC is a right angle triangle of area A. If D, E are the mid points of AE and BC respectively, the area ADEC is equal to

- (a) $A/2$
(b) $A/4$

(c) None of the above

36. If the perimeter of a rectangle is 32 cm and its area is 60 cm^2 , its breadth will be

- (a) 4 cm (b) 5 cm
(c) 6 cm (d) 7 cm

Directions: In questions 37-40, select the alternative which will come in place of ? out of the given choices:

37. 57, 51, 39, 21, ?, 3

- (a) 9 (b) 12
(c) 15 (d) 17

38. 3, 10, 101, ?

- (a) 1002 (b) 10202
(c) 10002 (d) 100001

39. 1, 3, 3, 7, 9, 13, ?, 21

- (a) 17 (b) 19
(c) 23 (d) 27

40. 1, 4, 4, 16, 64, ?

- (a) 256 (b) 512
(c) 1024 (d) 1280

Directions: The growth in operation of the Industrial Development Bank of India from 1980-81 to 1983-84 is given below. Answer questions 41-43 on the basis of this data:

GROWTH IN OPERATIONS:	(Rs crores)			
	1980-81	1981-82	1982-83	1983-84
Capital	145	200	255	385
Reserves	128	178	224	271
Profit	40	53	61	69
Annual Sanctions	1561	1742	2149	2625
Annual Disbursements	1066	1340	1577	1948
Outstanding Assistance	3063	4019	5092	6363
Assistance sanctioned to				
—Small sector	498	588	866	704
—Backward areas	711	645	841	1086

41. The percentage profit on the capital was highest during the year

- (a) 1980-81 (b) 1981-82
(c) 1982-83 (d) 1983-84

42. During this period the combined assistance to small sectors and backward areas increased by nearly

- (a) 36% (b) 43%
(c) 48% (d) 51%

43. The difference between outstanding assistance and the

annual disbursements was

- (a) 1980-81 (b) 1981-82
(c) 1982-83 (d) 1983-84

Directions: The diagrams shown above indicate the time-distribution of students A and B to various subjects they study. Answer questions 44-46 on basis of this data.

44. If A studies for 6 hours per day and B for 9 hours per day, how many hours per day (more or less) does A devote to Maths than B?

- (a) Half hour less
(b) One hour less
(c) Half hour more
(d) One hour more

45. The time devoted by B to Biology is—percentage of the time denoted by A to

(Rs crores)

GROWTH IN OPERATIONS:	(Rs crores)			
	1980-81	1981-82	1982-83	1983-84
Capital	145	200	255	385
Reserves	128	178	224	271
Profit	40	53	61	69
Annual Sanctions	1561	1742	2149	2625
Annual Disbursements	1066	1340	1577	1948
Outstanding Assistance	3063	4019	5092	6363
Assistance sanctioned to				
—Small sector	498	588	866	704
—Backward areas	711	645	841	1086

Drawing.

- (a) 100% (b) 150%
(c) 200% (d) 300%

46. A third student C divides his time in the same proportion for Physics and Maths as B, but gives equal time to Chemistry and Biology. If he devotes one hour daily to Biology, he must be devoting—hours to Physics.

- (a) 1.12 (b) 1.2
(c) 1.33 (d) 1.4

ANSWERS

1. (b) Since $a=3/4$ b, $12a=12 \times 3/4 b=9b$.
2. (a) $1/\sqrt{2}=1/1.414=0.707$ All other numbers are larger than this.
3. (d) Finding the square root as shown here, we note that addition of none of the numbers 5, 6, 7 will make it a perfect square.
4. (a) The square of an odd number divided by 4 can be written as $(2n+1)^2/4 = (4n^2+4n+1)/4 = 4n(n+1)/4 + 1/4$. The remainder will thus always be 1.
5. (c) $62\frac{1}{2}\% = 62.5/100 = 12.5/20 = 5/8$.
6. (b) $\sqrt{176} = \sqrt{16 \times 11} = 4\sqrt{11} = 4 \times 3.316 = 13.264$
7. (c) Let $x=7$. Squaring both sides, we get $x=.0016$
8. (d) If L is the length of the pole, then the portion of the pole above water is $L - (L/3 + L/2) = 2m$. Thus $L/6 = 2m$ or $L = 12m$. Length of the pole in water $= L/2 = 6m$.
9. (d) Suppose she types x pages/hour. Then number of pages to be typed is $2.5x$. Pages typed at the new speed $= 3X(0.75x) = 2.25x$. Percentage of job unfinished $= 0.25x/2.5x \times 100 = 10\%$.
10. (b) Let their ages be $3x, 4x, 5x$ and $7x$. Then $3x+4x+5x+7x=76$ or $x=4$. The age of the eldest brother is thus $7x=28$ years.
11. (b) Let the temperatures of the five days be v, w, x, y & z .
Then $v+w+x+y+z = 32 \times 5 = 160$ (1)
 $v+w+x = 29 \times 3 = 87$ (2)
 $x+y+z = 34 \times 3 = 102$ (3)
Adding (2) and (3), we get $(v+w+x+y+z)+x=189$. Comparison with (1) gives $x=29$.
12. (d) Let their ages be x, y, z and w , then $x+y+z = 24 \times 3 = 72$
 $y+z+w = 27 \times 3 = 81$
Since $w=31$ (given), $y+z=50$ and hence $x=22$ years.
13. (b) Since product of H.C.F. and L.C.M. is equal to the product of numbers, $L.C.M. = 9576/21 = 456$
14. (d) L.C.M. of a given set of fractions is equal to the ratio of L.C.M. of numerator to the H.C.F. of denominator; thus $L.C.M. = 40/7$.
15. (a) Let his list price be Rs 100.
Then S.P. = Rs $(112-28) =$ Rs 84
C.P. = Rs $100/125 \times 100 =$ Rs 80
Profit = Rs $4 = 4/80 \times 100\% = 5\%$.
16. (b) If C is the cost price and S the selling price of one pen, then $15C = 12S$, $S = 15/12C$
Profit $= S - C = 15/12C - C = 3/12C = C/4$
Profit % $= C/4C \times 100 = 25\%$
17. (c) Sum of any two sides of a triangle must always be greater than the third side.
18. (b) If Ram's age is R and his father's age is F , $F=5R$, $F-3=9(R-3)$. Solving these we get $R=6$. Thus $F+R=6R=36$
19. (d) Let the students who fail in English and Maths be represented by the Venn diagram shown in the figure. Since 15% fail in both, it is clear that 30% fail in English only and 20% fail in Maths only. The total percentage of students who fail

$(30+20+15)=65$. Thus 35% students pass in both the subjects.

20. (c) As is evident from the Venn diagram, the percentage of people who subscribe to English or Hindi magazines is $(28+12+18)\% = 58\%$. Thus, the percentage of those who do not subscribe to any magazine is 42%.

21. (d) Total time taken $= (12/(8+4) + 12/(8-4))$ hours $= 4$ hours.
22. (c) The H.C.F. of a set of fractions is equal to H.C.F. of numerators over the L.C.M. of denominators. Thus, in the present case $H.C.F. = 3/225$.
23. (a) There are 99 numbers which begin with 2 (202 to 299). Some of these also end in 2.
24. (d) Seven occurs 99 times in the first place (in numbers 701—799), 10 times in the third place (707, 717, ... 797) and ten times in the second place (770—779).
25. (a) Let x and y denote the cost of a pen and a pencil respectively; then $5x+10y=35.50$, $3x+20y=33.50$.
Simplifying we get $x=5.50$ and $y=0.80$.
Then $6x+12y=42.60$
26. (d) Cost Price for one pencil = Rs 10/12
Selling Price = Rs 12/10
Profit $= 12/10 - 10/12 = 22/60$
% Profit $= 22/60 \times 12/10 \times 100 = 44\%$
27. (c) The expression is equal to $(5838+5835) \times (5838-5835) = 11673 \times 3 = 35019$
28. (a) The given expression is equal to $5\sqrt{5} \times 17\sqrt{5} = 5 \times 17 \times 5 = 425$
29. (d) If the number is x , then $5/7x = 1025$ or $x = 1025 \times 7/5 = 1435$. 20% of $1435 = 1435/5 = 287$
30. (b) If A is the sum, then interest $= 3A$
Thus, $3A = A.R.t./100 = A.R.10/100$ or $R=30$
31. (b) If L is the side of the square, the radius of the inscribed circle is $L/2$. The area between the square and the circle is $A = L^2 - \pi L^2/4 = L^2(1 - \pi/4) = L^2(4 - \pi)/4$
Area of the circle $= \pi L^2/4 = \pi A/(4 - \pi)$
32. (b) If L is the side of the square, the shaded area $= 1/4 (\pi L^2/4) = \pi L^2/16$.
Since $\pi L^2/16 = \pi$, $L^2 = 16$.

35. (c) Area of a trapezium = $\frac{1}{2}$ (sum of parallel sides) \times height = $\frac{1}{2} (12+8) \times 7.5 = 75 \text{ cm}^2$
36. (b) Since D, E are midpoints of AB and BC, DE \parallel AC. Area of DBE = $\frac{1}{2}$ DB \times BE = $\frac{1}{2} (\frac{1}{2} AB \times \frac{1}{2} BC) = \frac{1}{4} A$
36. (c) Thus area ADEC = $A - \frac{1}{4} A = \frac{3}{4} A$.
37. (c) If l and b are the length and breadth of the rectangle, $2(l+b) = 32$, $1b = 60$, Therefore $(l-b)^2 = (l+b)^2 - 4lb = 256 - 240 = 16$
37. (c) Therefore $l-b = 4$; Also $l+b = 16$ which means $b = 6 \text{ cm}$.
38. (b) The terms are obtained by successively subtracting 6, 12, 6, 12 ... from the previous term.
38. (b) Succeeding term = (Previous term² + 1)
39. (d) The given series is a composite series—the odd terms form the series 1, 3, 9, ... while the even terms form the series 3, 7, 13, 21, ...
40. (c) Each term, from third onwards, is the product of the two previous terms.

41. (c) $\times 100$ which is maximum during 1980-81.
42. (c) The combined assistance during 1980-81 is Rs (498+711) crores = Rs 1,209 crores. During 1983-84, it is Rs (704+1,086) crores = Rs 1,790 crores. Percentage increase = $\frac{581}{1209} \times 100 = 48.05\%$
43. (d)
44. (a) Obviously A devotes one-fourth of his study time (=1.5 hours) to Physics and Chemistry; $\frac{1}{3}$ rd of this (=0.5 hour) to Drawing and remaining (2.5 hours) to Maths. For B, the angle corresponding to the Maths sector is 120° . Thus B devotes $\frac{1}{3}$ rd of the time (=3 hours) to Maths
45. (d) B devotes $\frac{1}{3} \times 9 \text{ hours} = 3 \text{ hours}$ to Biology while A devotes 0.5 hour to Drawing.
46. (b) The angle corresponding to Chemistry (or Biology) would be $(360^\circ - 210^\circ) / 2 = 75^\circ$. Time devoted to Physics and Chemistry would thus be in the ratio $90:75 = 6:5 = 1.2:1$.

ANSWERS TO QUANTITATIVE ABILITY

(Continued from page 43)

- series.
14. (d) $\frac{n}{6} + \frac{2n}{5} = \frac{5n+12n}{30} = \frac{17n}{30}$
15. (a) Multiply $(x-y)^2$ and then substitute the value 3 for x . $(x-y)^2 = 4$, so $x^2 - 2xy + y^2 = 4$. Then if $x=3$, we have $(3)^2 - 2(3)y + y^2 = 4$ or $9 - 6y + y^2 = 4$. Now rewrite: $y^2 - 6y + 5 = 0$. By factor the expression $(y-5)(y-1) = 0$
16. (a)
17. (b)
18. (d) b = Lata's age now.
 $b+20$ = Sohan's age now
 $b-y$ = Lata's age y years back
 $b+20-y$ = Sohan's age y years back
 $b+20-y=2(b-y)$
 $b+20-y=2b-2y$
 $20=b-y$
19. (e) Let x be number of total students in the class. Then $\frac{1}{6}x$ = Students who opted for Economics and $\frac{1}{3}x$ = Students who opted for Sociology
 $\frac{1}{6}x + \frac{1}{3}x = \frac{1}{6}x + \frac{2}{6}x = \frac{3}{6}x = \frac{1}{2}x$ number of students.
 $\frac{1}{2} = 50\%$ who offered Public Administration.
20. (d) Convert 4.5 seconds into double for convenience = 9 and double the distance 66 = 132 ft. Hence 132 ft covered in 9 seconds.
 $132 \times 400 \text{ ft in } 9 \times 400 = 3,600 \text{ seconds}$
 $3,600 \text{ seconds} = 1 \text{ hour}$
 $\frac{132 \times 10}{132} \text{ miles per hour}$
 $= 10 \text{ miles/hour}$
21. (a) $25 \times 3 = (25 \times 3) + (25 \times \frac{1}{3})$ by distributive law.
 $25 \times 3 = (20 \times 3) + (5 \times 3)$ by the same

- law. Hence
 $26 \times 3 = (26 \times \frac{1}{3}) + (20 \times 3) + (6 \times 3)$
22. (b) $10^5 = 10 \times 10 \times 10 \times 10 \times 10 = 1,00,000$
23. (c)
24. (e) Rate of speed = $\frac{\text{Distance}}{\text{Time}} = \frac{522}{9} = 58 \text{ km/hr}$
25. (b) $5y = 45/y$ multiply both sides by y
 $5y^2 = 45$ divide both sides by 5
 $y^2 = 9$. Take square root of both sides = $y = +$ or -3 .
26. (e) Strength one year back was $\frac{11}{10} \times 73,960$. The strength two years ago was:
 $\frac{11}{10} \times \frac{11}{10} \times 73,960 = 64,000$
27. (b) The four three-digit numbers are 305, 350, 503, 530.
28. (a) The ratio of investment is 9,000:7,000:6,000 or 9:7:6. $9+7+6 = 22$. Rs 825 divided by 22 = Rs 37.50. each share of profit.
 $7 \times \text{Rs } 37.50 = \text{Rs } 262.50$ Radha's share.
 $262.50 - 230 = \text{Rs } 32.50$ left to be paid.
29. (a) $4 \times 3 = 12$
 $12 + 2 = 14$
 $4 = \frac{1}{4}$
30. (c) $16\frac{1}{2} = 16\frac{1}{2}$
 $4 = 4\frac{1}{2}$
 $12 = 12\frac{1}{2}$
 $23 = \frac{23 \times 10}{55 \times 11} = 57\frac{1}{11}$
31. (e)
32. (b) Take a decade as a unit (10 years)
 $= 48,400 (-\frac{11}{10})^2$
 $= 48,400 \times \frac{1}{10} \times \frac{1}{10} = 40,000$
33. (a)
34. (a)
35. (b) Since Puran has more money than Sushma, x is greater than y . Then Puran has less money than Beant Singh, so x = less than z . This gives us $x > y$ or $y < x$ and $x < z$. Hence (b) is the correct expression.

ECONOMICS OF FISCAL POLICY

By R. K. SINGHA

INM Institute of Economic Development and Social Change, Patna

India's fiscal policy is undergoing a marked change. Incorporating the much-needed aims and objectives which had been neglected for so long. Analysing the reasons for this shift in fiscal strategy. And its possible outcomes.

Fiscal policy, broadly speaking, deals with the deliberate use of taxes, government spending and public debt operations to influence economic activities in desired ways. In fact, it is that part of the national economic policy which is concerned with the receipts and expenditures of the government. These expenditures affect savings and investment, employment, national income, price level and the balance of payments. The paramount objective of the fiscal policy is to achieve economic stability and growth.

The fiscal policy has become increasingly subtle because the size of the budgetary surplus or deficit is deceptive in its effects on the economy. Various fiscal actions may generate the same surplus or deficit but with dissimilar effects on the economy. This is one reason why some doubt the competence of the government in handling the fiscal policy. They often feel that the political leadership lacks economic information and understanding and their economic advisers are unable to explain the economic situation to them. Political inhibitions also prohibit correct implementation. Consequently, the fiscal policy instead of stabilising the economy destabilises it. The post war experience in Britain is quoted as showing the ineptitude of the government in handling the fiscal policy. The government often followed an expansionary course when the economy was booming and took restrictive action when there was balance-of-payment crises, thus pushing the economy into deeper recession. The British experience motivated many economists to argue that the authorities should let the volume of money and credit increase steadily at a rate determined by the long-term growth trend of the economy.

Aims And Objectives

The fiscal policy in India has the twin objectives of supporting the development

strategy of our Five Year Plans and managing the economy in the short period. The fiscal tools have been used extensively to mobilise resources, raise the level of saving and investment and channel the flow of resources according to the plan priorities. Fiscal policy has also been used to facilitate modernisation and diversification of industries, protect the small scale sector, help export, promote employment and achieve other objectives of social and economic policies. In fact, the fiscal policy is aimed at stabilisation through appropriate demand management of the economy. An analysis of the budgetary policy presented till 1984-85 contained, more or less, the following features (i) to reduce disparities in income distribution (ii) to achieve economic stability (iii) to raise the taxation rates to minimise deficit financing (iv) to rationalise and simplify the tax structure to encourage savings and investments (v) to make tax policy an instrument of capital formation for economic development and growth and (vi) to develop an efficient system of production and equitable pattern of distribution of income and wealth to insure well-balanced progress.

Problems

In spite of such laudable features of the Indian fiscal policy, we are confronted with the problems of low growth rates and sectoral imbalances in the economy. These maladies in the economic system resulted in the shortage of investable capital, lower production, mounting unemployment and under employment, low per capita income and growing poverty. To add to all these, the continuous inflationary trend has aggravated the economic problems further. These maladies are due to improper use of scarce financial resources obtained through fiscal measures. A fiscal policy having a long term view would have avoided all this.

As far as the expenditure aspect of the fiscal policy is concerned, the Economic Survey 1984-85 has emphatically asserted that the government has been living beyond its means; since 1977-78, the government has been having deficits. Consequently, it has to resort to borrowing not to finance capital formation but to meet its day-to-day expenses. The amount of such borrowing has increased from Rs 128 crores in 1978-79 to Rs 2,325 crores in 1984-85. Such borrowing accounted for

expenditure in 1974-75; in 1984-85 it constituted 18.2%. Interest payment in 1984-85 accounted for Rs 5,990 crores as against Rs 1,228 crores in 1975-76. All along these years non-Plan expenditure has been rising at a rate substantially faster than the growth of current revenue. Consequently, budgetary resources for the Plan have been seriously eroded. Also, the increase in non-Plan expenditures of the states often results in larger transfers to states.

A Shift In Fiscal Strategy

The Union Budget 1985-86 takes a leap into the 21st century. The budget ushers in a new philosophy in the management of economic affairs. Throughout post independent India, the main thrust of fiscal strategy has been demand management. However, the budget for 1985-86 has put emphasis on an imaginative supply management. To make the structural changes effective from demand management to supply management, the budget has outlined the following priorities: (i) the process of pruning budgetary expenditure at the Centre and states must begin so that the necessary adjustment can take place over a period of time (ii) the public sector must have sufficient internal resources for its future growth (iii) deficits in balance of payment must be reduced to reconcile a manageable balance of payments with a tolerable debt profile (iv) export earnings would have to finance a larger proportion of imports to help reduce the deficit in the balance of payment (v) to decrease the domestic production of importables wherever underutilised capacities exist (vi) aim at reducing costs and prices and improving competitiveness of industry (vii) regulations must facilitate growth and respond to the changing external and technological environment; and (viii) there is an imperative need for closer coordination in fiscal, industrial and trade policies.

Likewise, the budget has also listed the priorities in the area of taxation. In the area of direct taxation, an important priority is to create an environment of growth, productivity and savings. In respect of indirect taxes the task is to bring about changes which would help in reducing costs of investment in priority sectors, encourage the growth of the small-scale sector and remove certain other distortions.

There is no denying the fact that fiscal strategies built up in the past have proved to be unproductive. All along these years the budgets have been used as an accounting exercise rather than an instrument for promoting production and development. Therefore in order to tackle the basic problem of poverty and unemployment the instruments of fiscal policy need to be rationalised and made growth-oriented. ■

REAGANATOMY OF CANCER

The discovery of a cancerous polyp in the US President Ronald Reagan's colon has made colon cancer the talk of the world. Some scientific facts about this affliction to which the 'low-fibre food' eating West is particularly susceptible.

What started as a routine removal of a non-cancerous polyp led to a finding that stunned millions the world over. Always a picture of health, the robust and vibrant President of the US Ronald Reagan, suffers from what is perhaps still the most dreaded disease—the cancer of colon. But unlike many of his predecessors who thought it best to hide their ailments from the public, the 74-year-old President "had courage enough to acknowledge that he is not Sir Galahad".

However, what gave the ailing President's image a boost was the bold historic decision he took before undergoing surgery. In an unprecedented move, he voluntarily yielded the powers of his office, albeit briefly, to Vice President George Bush. He, however, reclaimed his duties and powers following the surgery.

President Reagan's precaution was a wise one in the light of his ailment. A polyp—a small growth that generally appears on the epithelial tissues, like those that line the intestines. Intestinal polyps are common in people over 50 and can be treated with minor surgery involving cauterisation or snipping off, if detected early. If, however, they remain undetected and are allowed to grow they not only start interfering with the body's functions but may even become cancerous.

The prognosis of colon cancer is based

on a staging system devised by a London pathologist Cuthbert Dukes in the 1930s. The Dukes rating measures the extent of invasion by a cancer in the colon or rectum. According to this rating, Stage A refers to a cancer in the colon's innermost layers only. In this stage chances of the patient's being healthy five years after undergoing surgery are as high as 95-99%. In Stage B the cancer has progressed into the deeper layer of muscles across and along the colon which reduces the five-year survival rate to 75-85%. Stage C refers to cancer which has spread to lymph nodes. The survival rate, where less than three lymph nodes are involved, is 60-70% but is only 15-20% where 10

or more nodes are involved. And in Stage D where the cancer has metastasized to the liver or other organs, the mortality rate is as high as 95% and above. According to the Dukes rating, the polyp in President Reagan's caecum is classified as Stage B.

Research has revealed that unlike other major malignancies, colon cancer is 95%

curable if detected in time. of this cancer peaks at 75 years of age. Also, statistics reveal that a family history of bowel cancer or polyps increases a person's risk two or three times. President Reagan's elder brother Neil Reagan is also a victim of colon cancer.

Drugs have proved largely ineffective in the treatment of bowel cancer. And, therefore, surgical removal still remains a fundamental treatment for colon cancer. In President Reagan's case, the doctors performed a right hemi-colectomy. Adopting a 'no touch' procedure, they excised a two foot section of the colon including the caecum, a portion of the small intestine and some lymph nodes, taking care not to open the section as they removed it in order to minimise the risk of infection and keep the polyp intact so that its cancerous cells would not spill into the body again where they could take root and multiply. A careful visual inspection of the liver and the rest of the abdominal cavity was made for signs of malignancy. None were evident.

In fact, the doctors later remarked: "He has the insides of a 40-year-old." The entire operation took two hours 53 minutes. And even though analysis of the polyp has revealed its cancerous nature, the doctors are optimistic that there is a 95% chance that five years hence Reagan will be free from any signs of the illness.

However, Reagan's health will need close monitoring henceforth, for polyps have a tendency to recur. And the kind of intestine that repeatedly grows polyps is the kind that has to be watched for signs of cancer. Doctors have, in fact, recommended careful follow-up examinations at regular intervals. J.S.

POLYPS IN CROSS-SECTION OF LARGE INTESTINE

CAT: REVOLUTIONISING SCANNING

BY BRIAN KANT

What does the abbreviation CAT stand for? One CAT assesses a person's aptitude for sound evaluation, analysis and interpretation of data before letting him into the managerial fold. But there is also another CAT which stands for Computerised Axial Tomography introduced to the world 14 years ago.

From 1896 onwards X-ray reigned supreme as a diagnostic aid. The X-ray picture or the radiograph, as it is called, is a two-dimensional image of a three-dimensional body organ. Several planes are collapsed into one and no information about the shape, depth and relative position of various structures is obtained. The world was so blinded by the medical application of X-rays that these shortcomings of radiographs were never felt. Attempts to overcome these limitations of simple X-ray pictures have resulted in the development of CAT. In 1971, Atkinson Morley's Hospital, London, received the world's first CAT system. It took four years for a research team in E.M.I. Medical Ltd, under the direction of Godfrey Hounsfield to produce the first commercially viable machine.

Normally, to visualise the soft tissue of the brain in X-ray picture a contrast medium (either a dye in the blood or air through the backbone) has to be injected. These are painful and potentially hazar-

dous procedures. Hounsfield introduced the computerised X-ray scanning of the head and the soft tissues within the skull became visible without recourse to contrast media. CAT scanning involves no hazard or discomfort for the patient. Neuroradiological practice was transformed overnight and Hounsfield was subsequently awarded the Nobel Prize for Medicine in recognition of his magnificent contribution to the investigation and management of patients with cerebral disease. Though head scan was started in 1971, total body scanning was introduced three years later.

How does it work?

CAT is an X-ray technique which uses a computer to reconstruct an image of a thin slice of the body. The images are normally obtained in a cross-sectional axial plane. This avoids the overlapping of superimposed structures involved in most of the conventional radiography. The greatest advantage of CAT over usual X-ray pictures is its ability to detect even small variations in tissue density. A CAT examination consists of a series of cross-sectional scans 1 cm apart through the part of the body to be examined.

A source of the X-ray (tube) is mounted on a gantry opposite to a number of detectors. The gantry moves or rotates round a central tunnel in which the patient lies. As the X-ray tube rotates round the

variation in the amount of X-rays arise from the patient. Data from the detectors in all directions about the linear X-ray absorption of X-rays in different tissues is fed continuously into a computer. The computer calculates an X-ray attenuation value for each point on a cross-section of the body and reconstructs an image. Essentially the CAT scan represents a mathematical reconstruction of anatomy in terms of X-ray absorption. The data is stored on tape or a floppy disc and displayed on a TV screen.

The delineation of the soft tissues by CAT depends on the contrast created because of the difference in the X-ray absorption between the soft tissue and the surrounding fat. In general, the fatter the patient, the better the scan. In very thin individuals and in children the absence of fat may produce a scan which is difficult to interpret. Because of the ability to detect and define the shape, size and extent of a mass, CAT is very helpful in determining the stage and extent of cancer and for monitoring the response to treatment.

With the introduction of CAT scan, a wide spectrum of diseases involving the brain, lungs, liver, pancreas, spleen, kidneys, intestines and vertebral column can be detected easily and rapidly. It has, in fact, revolutionised the diagnosis of diseases. At present, in India, CAT scanning facility is available only at few selected hospitals in the metropolitan cities and is expensive too. It will be some time before it comes within the reach of the common man.

LATEST IN SCIENCE

Hearing Eyes

MEDICAL RESEARCHERS have already found a way of implanting a wholly artificial ear to enable the deaf to hear. But this magic ear cannot help those who have suffered extensive damage to auditory nerves. However there's hope for even such people today. Devices have been developed which enable the deaf to hear indirectly through sensory cues provided by sight and touch.

The Autocue is one such device which aids a deaf person in lip-reading. The microphone and mini computer that are worn on the belt help the deaf 'read' differences between hard-to-distinguish lip movements by projecting digital symbols onto the lens of special eyeglasses. These digital appear next to the speaker's mouth and hence enable the deaf person to lip-read more easily and accurately.

Researchers are now trying to develop portable vibration devices to help the deaf comprehend the range and resonance of spoken language. Like braille, these

devices make use of the sense of touch. This device again complements lip-reading.

Impostor Foods

SCIENTISTS HAVE developed artificial or engineered foods which are just like the natural foods but have many advantages. They are not only cheaper but also provide proteins, vitamins and nutrients that match and sometimes exceed nature's own. In the recent past, research in food engineering, carried out by food specialists and university scientists has concentrated on concocting meat substitutes.

Surimi is one such concoction that has really caught on in the US. The manufacturing process involves mechanical deboning of ocean fish which is then minced and washed repeatedly until it has been stripped of taste, colour and smell. The meat is blended into a whitish viscous paste to which the required natural flavourings are added. It can then be force-pressed through dies and moulds into

all manner of shapes and textures. An example of Surimi is pseudo crab which sells at one-fifth the price of crab meat.

So, what you are eating may not be what you think it is! But does it matter? As long as it is healthier and tastier?

Clickvenience

THE LATEST in Japanese technology is the electronic camera. It does not require any film. For, films are compatible with neither computers nor digital televisions.

Light entering through the lens gets focussed on a small integrated circuit, which responds by generating a pattern of electrical charges that mirrors the incident light and stores it on a miniature floppy disc. To view the pictures one simply has to insert the disc into a shoe-box size converter that is connected to a conventional television set and switch it on. The screen becomes the darkroom when the disc is connected to a digital television. Any adjustments in focus, exposure and framing miscalculations can be corrected to get perfect pictures.

ARJUN SRIVASTAVA

NEWS CAPSULE

AWARDED

The Special Jury Award at the 14th International Film Festival at Moscow to India's official entry *Saarensah*, directed by Mahesh Bhatt. The Golden Award for best feature film was shared by *Come And See* (USSR), *Soldier's Story* (USA) and *End Of The Nine* (Greece).

The Jnanpith Award for 1984, carrying a cash prize of Rs 1.5 lakhs, to Malayalam writer Thakazhi Shiv Shankara Pillai. The 71-year-old Pillai, known better by the name of his village Thakazhi in Kerala, is the author of more than 45 novels and 800 short stories. Among his works are *Puthumalar* (New Blossom), *Thattiyude Maken* (Scavenger's Son) and *Cheemeen* (Prawns). The last novel won him the Sahitya Akademi Award and Ramu Kariat's film based on it won the President's Award for best feature film.

APPOINTED

L.K. Jha, former Chairman of the Economic Administrative Reforms Commission, as Adviser to the Prime Minister on administrative reforms, with effect from Jul 1. The assignment will be for a period of two years.

I.S. Chaudha, Additional Secretary in the Ministry of External Affairs, as the High Commissioner to Bangladesh, succeeding I.P. Khosla.

D.A. La Fontaine, Air Marshal as new Chief of Air Staff with the rank of Air Chief Marshal, succeeding L.M. Katre, who died in office on Jul 1. La Fontaine, the Air Officer Commanding-in-Chief of Western Command, was commissioned in 1950. He was awarded the Param Vishisht Seva Medal in 1984 for rendering distinguished services of an exceptional order.

VISITED

Von Kyung-Lee, South Korean Foreign Minister, on Jul 18 as the head of a high-level delegation for talks with Indian officials and businessmen on economic cooperation.

Hans Dietrich Genscher, West German Vice-Chancellor and Foreign Minister on Jul 10-11, on a two-day official visit during which he had talks with senior Indian leaders on international and bilateral issues.

SCIENCE

Dyplonychus Indicus: Scientists in Madras have found a cannibalistic water bug that gobbles up the larvae of malaria mosquitoes; the bug could be a potential agent for biological control of mosquitoes, say Dr P. Venkatesan, and Dr C.M. Jayachandran. The doctors found the bug to have a particular affinity for mosquito larvae. "Their appetite for mosquitoes increases in direct proportion to the density of mosquitoes." The bug has been named *Dyplonychus Indicus*.

Search for SETI: NASA has launched a monumental ten-year search for extra-terrestrial intelligence (SETI), in which computers and giant antennae will try to make sense of the earth's incoming radio signals. For the purpose, it will develop a highly sophisticated receiver-

analyser able to scrutinise millions of radio frequencies in the cosmic cacophony. SETI emerged from ideas at the University of Stanford. Listening to the stars is not new but this is the first time that it will have been so exhaustive, using several radiotelescopes around the world.

Longevity: A conference on "realistic expectations for a long life" has concluded that elimination of major causes of death like cancer and heart disease is not likely to extend the human life span for more than 12 years. The conference, held in Florida, USA, felt scientists have already done so well in extending the life span that few are still looking for ways to increase it further. Instead, scientists should find ways to keep the elderly active and under little stress for as long as possible. Researchers debunked myths like reports that villagers in Soviet Georgia live to 150 years. Longevity, they noted, depends on an active family life, outdoor living and little lifestyle changes.

NEIGHBOURS

Islamisation of Pakistan's banks: Pakistani banks stopped accepting interest-bearing deposits from Jul 1 in the latest phase of the country's plan to reorganise its banking system along Islamic lines. Existing accounts will be converted into so-called profit-and-loss sharing accounts. The change, which also applies to foreign banks, comes at the start of the new financial year.

Afghanistan has offered friendship to Iran, Pakistan and China but warned of unspecified consequences if they continued to help Afghan guerillas. President Babrak Karmal told the ruling People's Democratic Party politburo that Pakistan had become a tool in the hands of America, that the Iranian regime was training, arming and sending rebels to Afghanistan and added that "the Chinese hegemonists also have a hand with them". Karmal ended by advising them to take "useful steps in accordance with the wishes of their people and principles of peace, coexistence and good neighbourliness."

EDUCATION

Pace-setting schools: The government proposes to set up model schools in every district in the country to act as pace-setting institutions, Union Education Minister K.C. Pant told an NCERT meeting in New Delhi on Jul 17. The schools will have a common medium of instruction and curriculum and students will be largely from the rural areas. The NCERT has already constituted various committees to develop testing and evaluation machinery, orientation of teachers, develop curriculum and instruction models and prepare guidelines for academic inputs. The model schools are expected to serve as a laboratory to try out experiments in regard to providing quality education to poor children.

Three-year B.A. compulsory for M.A.: The UGC has made it mandatory for candidates all over the country to first complete a three-year degree course in B.A. to be eligible for admission to M.A. The new provision is expected

to affect a large number of students as the duration of B.A. in several Indian universities is just two years. Where universities are unable to change over to a three-year course, they may award a B.A. degree after two years but no student of this stream will be eligible for admission to M.A. unless he/she has undergone a one-year bridge course. Other provisions: The number of actual teaching days should not be below 180 in an academic year, or 40 hours in a week; students should attend a minimum of 75% of all lectures for being eligible to take an exam; examination papers shall be framed so as to ensure that no part of the syllabus is left out of study by a student.

DEFENCE

IAF's new transport aircraft: India formally inducted into the air force the Soviet-made long range transport aircraft IL-76, rechristening it *Gajraj*, on Jul 16. The aircraft will provide the Indian Armed Forces the vital strategic mobility and add a new dimension to the country's air lift capacity, said Defence Minister P.V. Narasimha Rao at the formal induction ceremony in New Delhi. The Transport fleet had been allowed to run down because of the concentration of resources in purchasing fighter aircraft. *Gajraj* can carry 225 troops in the pressurised cargo compartment or can be used to transport 43 tonnes of equipment. It can also be used as an ambulance to carry 72 stretchers. It can airdrop 126 paratroopers in 25 seconds in an area of two km.

No Hawkeyes for Pakistan: The US has decided not to supply Hawkeye E-2C aircraft to Pakistan after a Pentagon study team determined that the aircraft would not be useful in the mountainous Pak-Afghan border area. The move is being seen by observers as a sign of the US intentions to improve relations with New Delhi. Islamabad had asked Washington for the Hawkeyes, used for early warning border surveillance, on the ground that they would help combat Afghan armed incursions along the border.

The elusive US-USSR balance: Despite spending more than one trillion dollars on defence during the first Reagan term, the US is no better off than the Soviet Union in a military matchup since 1980, according to a study by the US congressional research service. While the US raised defence spending by large amounts in the past five years, those increases have done little more than to offset Russian spending, says the study. The study says that the "peacetime balance is a whole lot better" than most of the official comparisons made by civilian and military leaders but in wartime, "the balance is pretty bad". That is because the Russians have far greater numbers of men and equipment to throw into a war. The Russian forces are heavily weighted towards land operations while the US forces are widely split among land, sea and air operations. But the Russians need balanced forces "a whole lot less than the US" because the overriding Soviet concern is protection of their homeland while the US has a series of worldwide military alliances.

PLACES

Thimpu: The capital of Bhutan staged talks between the Sri Lankan Government and six Tamil militant groups to thrash out a lasting solution to Sri Lanka's ethnic problems.

Kuala Lumpur: The Malaysian capital was the scene of the 18th annual meeting of foreign ministers of the six ASEAN countries.

Vienna: A three-day OPEC meeting was held in this Austrian capital, to check falling oil prices.

Nairobi: Was for one week (Jul 15-29) the centre of the largest ever gathering of women. The Kenyan capital was the venue of the 140-nation UN conference on the status of women.

Merapani: A town on Assam's border with Nagaland; thousands of people fled this town in the wake of clashes between the security forces of the two states.

Karnal: Will be the site of a six-million tonne oil refinery to be set up in the joint sector involving the Union Petroleum Ministry, the state government and private companies.

Kalpakkam: India's first 500Mw fast breeder reactor will come up in this town near Madras.

Leticia: The southern-most city of Colombia. A DC-6 Colombian Air Force plane carrying 81 people enroute to Bogota, the country's capital, crashed into a jungle 32km off this city killing all passengers.

Addis Ababa: The capital of Ethiopia, hosted a conference of the member-states of the Organisation of African Unity (OAU). The communique released at the end of the conference called for a boycott of South African airports by all international airlines.

Alabama: The home of a school for mercenaries in the US. The infamous academy run by Frank Camper trained the Sikh extremists Lal Singh and Ammand Singh, who are suspected to be responsible for the recent Air India Jumbo air crash over the Atlantic.

Lima: The capital of Peru. An Indian team led by Mohsina Kidwai, Union Health Minister and Arun Singh, Parliamentary Secretary, visited Lima to participate in the inauguration of its new President, Alan Garcia.

Paris: A powerful explosion tore through a building on Jul 21 at the French capital's Le Bourget airport killing two people and injuring nine others.

Haifa: The Atlit military prison holding Lebanese Shias is located in this port city of Israel. It came into news when the Shi'ite Moslems, who hijacked a TWA plane, demanded the release of Lebanese prisoners in return for freedom to the hostages.

Milan: The Italian city hosted a two-day summit meeting of the European Community leaders. The summit was chaired by PM Bettino Craxi of Italy.

Weisbaden: The 39 American TWA hostages were taken to this West German town after they were freed by their Shi'ite captors.

S. R.

ECONOMY—National

The Karnal refinery, initially proposed to be a Seventh Plan public sector project, will now be taken up in the joint sector, involving the Petroleum Ministry, state governments and some private companies. The Petroleum Ministry is in touch with the governments of Haryana and Rajasthan for their participation in the project, estimated to cost Rs 1,360 crores. The six-million tonne refinery is intended to meet the petroleum demands of the northern states from 1990.

NCAER reviews Indian economy: The National Council of Applied Economic Research (NCAER) says in its latest review of the Indian economy that the farm sector's contribution to the overall economic growth fluctuated widely during the Sixth Plan period while the industrial sector's contribution remained "notably below the target" in all five years. The economy was expected to have grown by about 4% in the last year of the Sixth Plan (1984-85) as compared to 7.4%, 1.7%, 4.6%, 7.7% growth recorded in the previous four years. It praised the Union Budget for the current fiscal year for the reforms it introduced even at the cost of revenue. But it disputed the contention that the Rs 3,349-crore deficit left uncovered in the Budget would not be inflationary. It pointed to the sharp rise in railway fares and freights, rise in prices of petroleum products and steel and rise in the overall purchasing power. It called for according priority to supply management of sensitive commodities like sugar, oil and pulses to combat rising prices.

Shares to workers: All public limited companies in the public sector will have to offer 5% of their new public issue of equity shares to their workers, according to a Union Government order. Public limited companies would also offer to their staff a 'special class' of debentures which could be converted into equity shares at the end of five years of their issue. The objective of the schemes is to involve the workers and employees in the well-being of the companies they are working for, according to Finance Minister V.P. Singh.

Apex investigating agency: The Union Government has decided to set up a Central Economic Intelligence Bureau as an apex investigating agency intended to curb tax evasion, black money and smuggling. The bureau, which will coordinate activities of the existing agencies such as the revenue intelligence, customs and excise intelligence, will be headed by a director-general with the rank of an additional secretary. The bureau will act against organised gangs of smugglers, black marketeers and other economic offenders, and investigate bank frauds and insurance frauds.

Bumper harvests lead to acute storage problems: The International Wheat Council (IWC), which monitors world cereal developments from London, says in a market review, that India, after two successive bumper harvests, is facing acute grain storage problems because of its success in agriculture. The last two harvests yielded over 150m tonnes each, making India more than self-sufficient in food, the IWC said. Grain stocks held by government agencies alone in June totalled 28m tonnes—10m tonnes more than India's grain storage capacity. Wheat is being stored mostly in the

open, with only temporary protection against rain and pests. The IWC said an extra 2m tonnes of Indian grain would probably be exported in the current crop year in addition to the sales of 7,00,000 already concluded.

ECONOMY—International

Consensus still eludes OPEC: A three-day meeting of the Organisation of Petroleum Exporting Countries (OPEC) ended in Vienna on Jul 7 after failing to find a new strategy for propping up oil prices. The meeting, however, reached a consensus to stop cheating on OPEC pricing rules but adopted no specific actions. Oil ministers of the 13 OPEC member-states also tentatively agreed on the need to adjust supply to seasonal market demand while maintaining their overall production ceiling.

World Bank warns industrialised countries: The World Bank has warned that industrial countries could trigger a world recession if they did not undertake structural changes in their economic policies. In its World Development Report 1985, the bank says that if they were to continue with their present policies, the industrialised countries would only aggravate the debt servicing difficulties of the developing world. For instance, the US budget deficit deteriorated by \$ 162b between 1979 and 1984 and the deficit is expected to remain high, thus increasing the interest rates on short-term loans. The high dollar rate has stimulated exports to the US and increased production in other countries. But to bring down the interest rates and at the same time avoid the recessionary impact of a policy change, the US would have to coordinate carefully with other industrialised countries. The report also criticises the increased protectionist measures adopted by industrial countries which reduced the export earnings of developing countries. Protectionism, the report says, is a reflection of the failure to take adequate measures to deal with structural problems. In this context, it points to the high unemployment level in industrial countries.

Sino-Soviet accords: China and the Soviet Union have signed an agreement to open up ports, transfer goods and introduce shipping between two border areas in northeast China. The agreement came at the end of week-long talks between the two countries in Beijing. The agreement is expected to boost trade by 43%. It is in addition to an accord signed between Moscow and Beijing to nearly double their barter trade in the next five years to \$ 3.5b dollars.

Developing countries' bid to improve trade: A two-day ministerial conference of the Global System of Trade Preferences (GSTP) concluded in New Delhi on Jul 26 after fixing a time schedule of two years for tariff and non-tariff concessions, including an across-the-board tariff cut of 10%. This is considered an important step taken by developing countries to increase trade among themselves. A negotiating committee was directed to adopt three approaches to increase trade volume—traditional product-by-product approach, an across-the-board reduction of 10% and specific sectors of particular socio-economic importance to developing countries like processed tropical products, non-textile handicrafts, textiles and agricultural products. The time-frame stipulates that the first round of negotiations by the committee, which will meet

south in Central India not start later than May 1, 1986 and should be completed by May 1 1987.

EVENTS—National

India's forest policy is being reoriented to ensure optimum utilisation of land, water, livestock and human resources and restore ecological balance, according to Union Environment Minister, Vir Sain. The country's forest strategy will evolve mainly around three priorities—social forestry for meeting domestic needs of rural and semi-urban communities, production forestry to cater to the needs of forest-based industries and environmental forestry to restore the ecological balance. The reoriented forest policy will also take into account augmenting fuelwood, fodder, small timber and minor forest produce to help fulfil the basic needs of the people.

A two-day conference of Governors concluded in New Delhi on Jul 6 after discussing several national and regional issues. Among other subjects, the conference stressed the need to review and redefine the role of Governors as university chancellors and keeping universities free from political interference. It underlined the need for maintaining the momentum gained in the implementation of various welfare schemes for scheduled castes and tribes and other weaker sections. Eighteen Governors and six Lt Governors took part in the closed-door meeting which was also attended by Vice-President P Venkataraman, PM Rajiv Gandhi and several Central ministers.

Rigorous imprisonment for mutineers: Eleven men of the Punjab battalion were on Jul 12 sentenced to rigorous imprisonment ranging from four to 12 years after being found guilty by a court martial of joining a mutiny in the armed forces on Jun 10, 1984. The 7-member court martial also dismissed all the 11

from service and reduced the ranks of two havaldars and two naiks. The alleged mutiny took place after the army action in the Golden Temple in Amritsar.

Wage boards: The Union Government on Jul 17 announced the constitution of wage boards for sugar workers and newspaper and news agency employees. The sugar wage board will be headed by J. L. Tandon, a former judge of the Punjab and Haryana high court, and the wage board for newspaper and news agency staff by U. N. Bachawat, a retired judge of the Madhya Pradesh high court.

Commission to inquire into Assam-Nagaland clash: Union Home Minister S.B. Chavan on Jul 23 announced the appointment of a commission of inquiry into the armed clashes between Assam and Nagaland police in the Merapani area. Chavan told the Lok Sabha that the commission would inquire into the clashes, the conduct of officials and politicians and fix responsibility. The guilty, however high and mighty, will not be spared, he asserted.

Larkins case verdict: New Delhi's Additional Sessions Judge K.B. Andley on Jul 24 sentenced Maj Gen F.D. Larkins, his brother Air Vice-Marshal K.H. Larkins and Lt Col Jasbir Singh to ten years' rigorous imprisonment for espionage. A fourth accused, businessman Jaspal Singh Gill, was sentenced to two years rigorous imprisonment on two counts of conspiracy. The four were arrested in November 1983 for running an espionage network in collaboration with some US officials and supplying them sensitive and highly classified information on Soviet military equipment.

EVENTS—International

Israel's austerity plan: The nine-month-old Israeli Government on Jul 2 approved a wide-ranging emergency austerity plan including an 18.8% devaluation of the shekel against the dollar. The Shimon Peres Cabinet also decided to freeze wages and prices for three months, increase the prices of petrol and subsidised foods in a bid to improve the sagging economy of Israel.

Mugabe back in the saddle: Zimbabwe PM Robert Mugabe swept back to power on Jul 6 with an easy victory in the country's general election, his Zanu-PF party capturing 63 of 79 seats contested. Mugabe promised to create a one-party state in the next five years and threatened tough action against white minority and black opposition leaders who stood in his way. Mugabe called his party's victory a mandate to unite "our people under one political umbrella". The election was the first in Zimbabwe since independence five years ago and almost 100% of the 2.9m registered voters cast ballots. The main opposition party PF-Zapu of veteran nationalist Joshua Nkomo captured 14 seats in the National Assembly.

ASEAN call to Vietnam: Foreign ministers of ASEAN member-states on Jul 9 ended a two-day conference in Kuala Lumpur by calling upon Vietnam to open proximity talks with the coalition government of Kampuchea. A joint communique issued at the end of the meeting expressed ASEAN support for the coalition government of Kampuchea under the presidency of Prince Norodom Sihanouk. The communique deplored Vietnam's recent offensive along the Thai-Kampuchean border and reaffirmed its solidarity with the government

PERSONS

Andrei Gromyko: Elected President of the Soviet Union by a joint session of the two houses of the Russian Parliament.

Eduard Shevardnadze: Appointed Foreign Minister of the Soviet Union. He replaces Andrei Gromyko who was named President after serving as foreign minister for a record 28 years.

Justice D.N. Kripal: Judge in Delhi High Court, was appointed to head the commission of inquiry set up to probe the Air India plane crash that killed 329 people near Ireland on Jun 23.

Li Xianian: The Chinese President visited the US and Canada; this was the first ever visit to the two North American nations by a Chinese head of state.

Ranganath Mishra: Is heading the commission inquiring into the riots in Delhi, Bokaro and Kanpur that followed Mrs Gandhi's assassination.

O.E. Setubal: The Foreign Minister of Brazil visited India recently. He signed agreements on bilateral cooperation in science and technology and energy systems, following talks with top Indian leaders.

Won Kyung Hee: South Korea's Minister for External Affairs was on a four-day official visit to India (Jul 18-21). During official talks the two sides focussed on bilateral economic relations and the need to rectify trade balance between the two countries.

Hans Dietrich Genscher: The Vice-Chancellor and Foreign Minister of West Germany. A framework for a more active economic, cultural, technological and political cooperation between the two countries, was worked out during his talks with the Indian leadership.

Indu Prakash Singh: Took over as the new Indian Ambassador in Burma on Jul 8.

Chit Hlaing: The Burmese Foreign Minister. During his Rangoon visit the External Affairs Minister, Khurshed Alam Khan, discussed with him ways to strengthen and diversify economic and cultural relations between the two nations.

J.F. Riberio: Was appointed as the new director general of the Gujarat police.

Sharon Mecaulliffe: A 36-year-old social studies teacher from New Hampshire, US, will be the first ordinary citizen to go in space.

B.G. Deshmukh: Chief Secretary to the Maharashtra state government is inquiring into Bombay's 'Dharavi land scandal'.

Vijay K. Nambiar: Director in the Ministry of External Affairs has been appointed India's new Ambassador to Algeria.

Nikolai Ogarkov: Ousted 10 months ago as Soviet Chief of Staff, made a dramatic comeback with his appointment as the Commander-in-Chief of the Warsaw Pact Forces, one of the country's three top military positions.

Jaswant Singh: Retired Supreme Court judge has been appointed to go into charges of corruption, misuse of power and nepotism levelled against the Haryana Chief Minister, Bhajan Lal. S. R.

YOUTH ENTERPRISE

In 1948, seven European countries got together and founded the International Association of Students in Economics and Management (AIESEC). At that time, the founders could hardly have visualised the kind of reputation that AIESEC would one day enjoy. The world's largest student-managed, non-profit and non-political organisation today, its purpose is to help students with interest in management and related fields to explore and develop their managerial skills through seminars and traineeship programmes hosted by companies the world over.

AIESEC IND, as the name suggests, is the Indian wing of the international organisation. Considering the fact that it is still an infant, having been established only in 1980, it has done very well for itself. AIESEC IND hosted the 2th Asia Pacific Congress in New Delhi from Aug 2 to 18, 1985. A big achievement that.

Students with enthusiasm, dedication and a fervent wish to move ahead are welcome to join its exclusive ranks.

and the people of Thailand in their actions to defend themselves.

Declaration for world unity and peace: An Indian-drafted declaration seeking to provide a basis for bringing together governments with diverse positions has been submitted to members of the United Nations. The seven-page draft deals with a wide range of major global issues such as the arms race and conflicts, apartheid, economic crisis and human rights. "The enormous wealth in human resources, and scientific talents should be turned from destructive pursuits to constructive ends," the draft emphasises. The draft spells out four basic prerequisites of a stable world order; realisation of international peace and security, disarmament, especially nuclear disarmament, global economic and social development, independence of peoples under colonial and foreign domination.

Political fallout of soccer riot in Brussels: The coalition government of Belgian PM Wilfred

Martens resigned on Jul 16 after being splintered over the handling of a soccer riot in May. Martens took the decision to resign the government during an emergency cabinet meeting, a day after Deputy PM Jean Gol resigned in protest against the refusal of Interior Minister Charles Ferdinand-Nothomb to accept blame for the soccer riot in Brussels on May 29 in which 38 people were killed.

Tragedy in Italy: At least 200 people were killed when a dam burst in the north Italian region of Trient, sweeping away houses and three hotels. Numerous tourists, mainly Italians and Austrians, were thought to be among the victims.

Addis Declaration: The Organisation of African Unity (OAU) ended its 21st summit meeting in Addis Ababa on Jul 21 after resolving to take measures to bail out African states facing debt and hunger. The summit adopted a plan, described as the 'Addis Declaration', which envisages a multi-pronged approach to

improve the food situation, rehabilitate agricultural development and alleviate external debt. The three-day summit also adopted a priority programme for the next five years to pave the way for self-reliance and growth.

Dubious Sino-US accord: China and the United States on Jul 23 signed a nuclear cooperation agreement, after almost a year of debate. The agreement does not contain any assurance from China that it would not transfer the nuclear technology to countries like Pakistan to make a bomb. The US is believed to have accepted Chinese verbal assurances in this regard at their face value though the Pentagon remained unconvinced. Pentagon objections were understood to have been overruled by the higher authorities.

Iraq not to host non-aligned summit: Iraq announced on Jul 28 that it was bowing out from hosting this year's eight non-aligned summit. A foreign ministry statement said the decision had been prompted by "the huge responsibilities imposed on Iraq by the present circumstances in the region which make it unable to shoulder the burden of hosting the summit".

STATES

Left Front's dominance in Tripura: The CPI (M)-led Left Front retained its majority in the 28-member Tripura tribal areas autonomous district council by winning 15 seats in the election held early July. The Congress (I)-Tripura Upejati Juba Samiti (TUJS) alliance took the remaining seats. The CPI (M) alone captured all the 15 seats won by the Left Front while its partners drew a blank. The TUJS won ten of the 13 seats won by the alliance.

Haryana's ecology project: The Centre has cleared a Rs 16-crore project aimed at improving Haryana's ecology. The project envisages developing a network of woodlots, water harvesting dams, plantation ponds and fodder blocks in about 300 sub-mountainous villages of Faridabad, Gurgaon and Mahendragarh districts.

Assam's formal return to normalcy: Assam CM Hiteswar Saikia on Jul 18 announced his government was revoking the Assam Disturbed Areas Act, 1955, and the Armed Forces (Special Powers) Act, 1958, with immediate effect. Saikia said the state is now "completely back on the rails" and asked everyone to cooperate with the government in ushering a new era of peace and progress in the state. The revocation will not cover the reserved forest areas of Sib-sagar, Jorhat and Karbi Anglong districts, which have been disturbed areas for the last three decades.

End of decade-old alliance in Kerala: The Muslim League on Jul 20 decided to end its decade-old alliance with the CPI (M) and quit the opposition Left Democratic Front in Kerala. The decision, ratified by the League's state working committee, was taken to protest Marxist attacks on the Muslim personal law. The League, which has four seats in the 141-member state Assembly, will function independently.

MISCELLANY

Pakistan, Uganda get top honours for human rights abuses: Torture and the use of military courts increased in Pakistan and in Uganda, the army continues to commit

DID YOU KNOW THAT...

■ for 14b people affected by serious mental disorders, there are just over 21,000 beds in 46 mental hospitals in India? Another 2,000 or so beds can be provided in teaching hospitals

■ 'boycott', refusal of a group of persons to have dealings with another individual or group in order to reprimand the latter or exercise pressure, is named after Charles Cunningham Boycott, land agent in Mayo, Ireland? Boycott's merciless evictions led the Land League in 1880 to forbid any social or business interaction with him

■ Asha Purna Kachru, a mathematician and computer scientist who works at a research institute near Bonn, is the first Indian member in Bonn's City Council in West Germany (Federal Republic of Germany)?

■ 2,339 cases of fraud involving approximately Rs 40.25 crores were reported to the RBI by 28 public sector banks during the financial year 1984-85?

■ Giotto, an unmanned European spacecraft, which will cruise within 300 miles range of Halley's Comet on Mar 13, is named after Giotto di Bondone, the 14th century painter who saw the comet in 1301 and depicted it in his painting, *The Adoration of the Magi*, as the star of Bethlehem?

■ Japan has about 24m female workers, most of them employed as OL - office ladies? They have one of 12.1 jobs, either serving tea or running errands; much like our male peons. The average wage of a woman worker in Japan is less than half that earned by men. After years of discussion, this year, the Japanese Parliament finally passed a Bill ensuring equality at the workplace

■ the Nobel Prize money has been increased by 1,50,000 crowns (\$16,000) to compensate the decline in the value of crowns, the Swedish currency? In dollar terms, the value of the award remains the same, \$1,90,000.

■ an estimated 28m people live in urban slums, out of which 4.3m are in Madras?

■ the world's highest university, 3,666 m above the sea level, is in Lhasa, the capital of Tibet?

■ SCARAB, the system which picked up the

Kanishka's black box, is the abbreviation for Submersible Craft Assisting Repair and Burial? It is a robot built by an American company in 1976. A complete system with its own launching equipment, power generation, and the submersible vehicle, the system can be transported in the cargo-hold of a 707 type aircraft.

The black box was pinpointed by SCARAB with its 360 degree search sonar and then photographed with its still and video cameras that can view objects 200 m in the darkness of the deep ocean with the help of searchlights.

■ INTELSAT, the world's first multinational communications satellite conglomerate, had launched its first satellite, Early Bird, on Jun 28, 1965? It is a non-profit organisation with a membership of 110 countries. It has 1/1 users. It was started with a membership of 17.

Each country pays capital investment and receives 14% interest on it. The revenue last year was \$411m. The Early Bird weighed 150 lbs, handled only 240 telephone calls, and one TV channel. The latest 38th orbiter launched on Jun 29, 1985, weighs 4,440 lbs and can handle 15,000 telephone calls plus two television programmes at the same time.

■ the population of the world in 1985 is estimated at 4,795.8m residing in 167 sovereign states and 54 related territories and a total of 221 places?

■ widely cited projections conclude that by the year 2025, the world will need four-and-a-half times the hydro power and three-and-a-half times the coal used today, along with a total of 365 large nuclear power plants? They typically forecast a 125% increase in energy demand over the next 40 years.

■ Italy and Spain rank highest in energy efficiency in steel manufacturing because they are major recyclers? Recycling enables producers to save up to two-thirds of the energy used to produce steel from ore.

■ for a country with only 2.9m people, Albania is a land of surprising superlatives? It is Europe's poorest nation (estimated annual per capita income of \$830); the world's most closed society and the last bastion of strict Stalinism.

atrocities and human rights abuses, the International Commission of Jurists says in a survey.

Pakistan, the continuation of martial law is disturbing, the survey said quoting Lahore reports about systematic torture in prisons there. Military courts are used increasingly to clear the backlog of cases in ordinary courts, it said. Repression continued in Pakistan against trade unions and students, and press censorship was tightened. The report also criticised discrimination against the Ahmadiya community.

DIED

Air Chief Marshal L.M. Katre, Chief of Air Staff, 58, on Jul 1 after a massive heart attack in his New Delhi official residence. Katre, acknowledged as one of the country's finest pilots of jet fighter aircraft, took over as Chief of Air Staff on Sept 4, 1984. He was commissioned in April 1945.

Pavanamma Nayudamma, 58, wife of noted scientist and former JNU Vice-Chancellor Y. Nayudamma, on Jul 1 in a Madras hospital where she was admitted with severe burns on June 23. Pavanamma attempted suicide after hearing of her husband's death in the crash of the Air India jet in the Atlantic.

Padma Bahadur Khatri, 69, former Nepalese Foreign Minister, in Kathmandu on Jul 19 after a year-long illness.

Narwaz Khan Bhutto, 27, the son of executed Pakistan President Zulfikar Ali Bhutto, in Cannes, France, on Jul 18 of unknown causes.

Mahua Roy Choudhary, 30, well-known Bengali film actress, on Jul 22 in a Calcutta hospital of burns she suffered in a kitchen mishap ten days earlier. Roy Choudhary acted in more than 50 films as the leading lady.

Rama Choudhury, 86, an eminent Sarvodaya leader and social worker besides being a close associate of Mahatma Gandhi, on Jul 22 in Cuttack, Orissa.

A. P.

KIDSTUFF

Klinik-Rundschau, the first of its kind, and certainly very unusual, is a newspaper produced by child patients at a Tuebingen hospital in the Federal Republic of Germany. Stories, cartoons, drawings and poems contributed by sick children aged between three and 14, hog *Klinik's* pages. The publication's location is made clear by drawings on the title page of the second number of a thermometer, a hypodermic needle and blood pressure apparatus.

Not all contributors can get out of bed and go to the play-room to write their contributions, paint or make tin-cuts. Adults sit beside those who are bed-ridden and take down their contributions through dictation. Importance is given to the fact that nothing is "manipulated".

The newspaper stand is at the bed of a small boy 'treasurer'. Purchasers from the whole hospital must come to him to pick up a copy. *Klinik-Rundschau* has been a runaway success with 200 copies of the first issue taken up so quickly that a rush 800 extra copies had to be printed which is done free of charge in the printing office.

FESTIVAL OF INDIA

(Continued from page 16)

exhibition 'India A Festival Of Science' portrays our progress in science

Aditi

Truly representative of the diversities of the Indian way of life is the 'Aditi' exhibition currently on at the Smithsonian Institution, National Museum of Natural History, Washington. A great success with the milling American audience, 'Aditi' has been described as a "unique living exhibition of some 1,500 artefacts and 40 traditional performers, artisans and craftsmen, bringing together people and their products—contemporary and historical, regal and popular—from all over India, in a joyous celebration of life".

'Aditi' symbolises the creative force that sustains the universe and provides the skills that characterise human endeavour. Each cycle of life—from birth to death—is portrayed through folk songs, dances, rituals, designs and crafts, indicative of the close bond between artists, craftsmen and the rhythm of daily Indian life.

To the West, exposed only to the extremes of the exotic traditions and faceless poverty of the East, the contents of Aditi present a human view of the little known India. The exhibition is a visual treat in that a host of balladeers, folk dancers, *kumharas*, potters, *dhanaks*, weavers, puppeteers, magicians, *mehndi* artistes, Madhubani artists and acrobats can be seen demonstrating their deft skills, unselfconsciously. One can wade through a flood of art objects and objects of everyday use. The exhibition attempts to answer a relevant question: "Can our craftsman modify or easily develop old products to meet the changing demands?"

Going through the calendar of the mammoth US exposition, one wonders at the enormous variety of programmes that are yet to come. There will be an Indian wildlife portfolio, Tiger, Tiger Burning Bright, at the American Museum of Natural History; exhibitions on the 'New Tantra Art'; on 'Akbar's India'; on 'Kushan Sculpture'; and an exhibition of 'Manuscripts And Books From India'. The 'film Utsav' will reel out through Los Angeles, Berkeley, Chicago, Houston, Austin and New York. A series of programmes entitled 'Salute To India' will feature The New York Philharmonic Orchestra under its director Zubin Mehta who will conduct works by Indian composers. An opera on 'Satyagraha' by Philip Glass will be presented by the New York City Opera.

Whether this cultural blitz-wrath will shake the West out of its blissful ignorance of India, it is too early to tell. But the resounding echoe of this 'Westward Ho!' will continue to reverberate throughout the globe for years to come!

DEFENCE POLICY

(Continued from page 18)

can operate from high altitude airfields and land in zero visibility conditions. It can carry 225 passengers, 145 in the lower deck and 80 in the detachable upper deck. This transport aircraft will phase out the Carribous, Dakotas, Fair Child Packets, and Avro 748. In the field of light air transport, the Dornier-228, to be manufactured under licence in India at Hindustan Aeronautics Limited in Kanpur, will replace older aircraft like Devon and the Otters.

The Indian Air Force needs a modern early warning system for detecting low flying aircraft and for guiding surface to air missiles. Additionally, SAM (Surface to Air Missiles) system needs modernisation and air defence radars are to be replaced.

Research and Development plays an important part in indigenising military production. Fortunately today we have over 40 well-equipped laboratories of the Defence Research and Development Organisation (DRDO) which are engaged in the challenging task of research and development in the fields of armaments, weapon systems, missiles, aeronautics, naval technology and electronics. 105 mm towed field guns with ammunition designed to meet the requirement of mountain, plain and desert warfare have been developed by the laboratories dealing with the design and development of armament and explosives in Pune and Chandigarh. Combat Research Vehicle Development Establishment at Avadi has incorporated latest improvements in firepower, mobility, guidance and fire control in its prototype of the tank of '90s christened Arjun.

In the field of aeronautics, wholly indigenised jet engine capable of powering a light combat aircraft is being designed at Bangalore to meet the air force requirements. Other research laboratories at New Delhi and Dehra Dun are developing electronic, laser and electro-optic materials and systems. The research establishment at Manali has developed the know-how for avalanche forecasting and also warning systems to help the local population and units located in high altitude areas. The naval laboratories at Visakhapatnam and Cochin are developing a sonar system that compares with the best in the world. The value of production of the design projects of our defence research has already exceeded Rs 400 crores.

The ultimate objective, of course, is complete technological self-reliance so that our armed forces do not have to look over their shoulders in times of operational emergencies.

SPORTS

New Delhi dreams of holding the 1992 Olympics. But does it have the infrastructure for such a mammoth affair? An analysis of our non-runner status. And a curtain-raiser on the forthcoming Asian Athletic Meet, the FIFA Coca-Cola Cup and the Universiade.

BIDDING FOR THE OLYMPICS

BY RANJIT BHATIA

The selection of an Olympic venue is almost as complex a process as the actual organisation of the world's most important sports extravaganza. With growing political and commercial involvement in the Olympic Games, it is not surprising that there have been as many as 11 bidders for the 1992 Games for which the battle royal began, at least formally, at the 90th session of the International Olympic Committee (IOC) in East Berlin early last June.

Dress rehearsal: Samaranch (centre) watches as the Mayor of Paris explains their preparations for the Games at the Paris Pavilion in Berlin.

During the past two and a half years, ever since the IX Asian Games, there have been indications that India would also put in her claim for hosting these Olympics. In fact, there has been, for some time, a great deal of discussion on India's chances for getting the XXVI Games allotted to New Delhi, ever since the President of the IOC, Juan Antonio Samaranch made complimentary remarks about our organisational capabilities at the time of the last Asiad. It appears, however, that very little was done to put the Indian case before the voting members of the Olympic body, and at this stage one can be quite sure that New Delhi is nowhere in the running for 1992. The structural and propagandist homework that other cities have done—they carried with them video-tapes of their preparation—certainly convinces one of our non-runner status. We were probably led to believe that the infrastructure for the Asian Games would be sufficient to enable the Indian Olympic Association (IOA) stage the Summer Games of 1992. The reality of the situation would point to the contrary. In fact, New Delhi does not fulfill even half the requirements for such a mammoth task. It is one thing to host an Asiad or a Commonwealth Games, but quite another to risk holding the Olympics. The requirements for participants, be they sports people, coaches, media-experts, delegates and officials, are extraordinary and

would require a totally professional management of such an international meeting.

The main contenders for 1992, at the time of writing, are Barcelona and Paris, with Amsterdam and Birmingham also in fairly strong positions to stake their claims. Barcelona has reportedly spent as much as \$2m in promoting its case for the past two years. It has also the advantage of having fellow Spaniard Samaranch at the helm of the apex Olympic body. The IOC President may just about help Spain attain her ambition which they could not fulfil in 1924 and 1936. Close on Barcelona's heels comes Paris, whose appeal to Olympic members would be on very special grounds 1992 would, after all, signify the completion of 100 years of the Olympic movement which was inspired by French nobleman Baron De Coubertin, and formalised in Paris in 1892. Paris is also in a position to call upon the assistance of Madame Monique Berlioux, the French Olympian who lost her position as Director of the IOC at the recent East Berlin meeting. It is reported that the vital clause contained in her termination orders compels her not to be associated officially with any city bidding for the Olympics. That should, however, not prevent her from putting her compatriots through the kind of exercises that would enable them to put their case strongly enough. The Paris council for the 1992 Olympic candidacy has a budget of 14m francs, which are certainly not going to be wasted.

Amsterdam too has a formidable case in terms of its commercial sponsorship status. Birmingham, relatively speaking a late-comer, is

VIOLENT TIDINGS

Just after the violence in the European Cup final in Brussels, there has been more football violence—this time in India. The Senior Division Calcutta league match at the Salt Lake Stadium between East Bengal and Mohammedan Sporting on Jul 27 was stopped, six minutes before the final whistle, due to incessant brickbating and fighting by rival supporters. East Bengal were then leading 2-1 and Mohammedan Sporting officials refused to continue the match owing to the incessant barrage of missiles. After consulting the referee's report, the Indian Football Association had a special meeting a fortnight later and awarded the match to East Bengal.

Mohammedan Sporting have refused to play any more matches at Salt Lake as they feel the West Bengal police posted there are partisan. However, the CM Jyoti Basu has been able to persuade them to play later.

N.K.

relying on the British reputation for quality organisation of all sports activity in purely technical terms. Lower down the list comes Brisbane in Australia with somewhat modest pretensions. Compared to all these, New Delhi's may well be a toss-up. Yet another factor that may go against India is the fact that the 1988 Games are to be staged in Seoul, South Korea, and promise to be the most extravagant in the history of the Olympics. After the Asian effort, it may logically be the turn of another continent, and a city with as well-coordinated plans as Seoul.

Looking at it in realistic terms, it would not be easy for India to hold an Olympics in the next five to 10 years. An interesting and equally useful exercise might be to hold the Commonwealth Games or even the Universiade.

AROUND THE TRACK IN 30 DAYS

Basketball

Pro-basketball at its best is seen in the National Basketball Association (NBA) league in the US. This year's final, played at the Boston Garden, was between the two great teams Boston Celtics and Los Angeles Lakers—the latter fielding the legendary Kareem Abdul-Jabbar (original name Lew Alcindor) now 38 years old. Although history was against Lakers, as they had not won even one of the eight finals played against the Celtics, yet they took the title back to L.A. with a fine 111-100 pts win.

Athletics

On Jul 21, 1985, at the Grand Prix Track and Field Meet at London's Crystal Palace Stadium, Mary Decker Slaney, meeting Zola Budd, for the first time in a race since their collision at the Olympics 11 months ago, clocked the fastest 3,000-mile of this year in just 8:32.71. The South African born Zola trailed a distant fourth. The previous best for this year, set up by Cornelia Burki of Switzerland, was 8:40.10.

Badminton

The most prestigious of the three tournaments in the Orient, the Indonesian Open (ending on Jul 28 at Jakarta) was once again a triumph for the Chinese.

Results: Men's Singles: Han Jian (China) b Xu Biao (China) 15-4, 15-3; **Doubles:** Liam Swie King & Kartono (Indonesia) b Tian Bingyi & Li Yongbo (China) 15-5, 15-10.

Women's Singles: Li Ling Wei (China) b Han Aiping (China) 11-9, 11-9; **Doubles:** Li Ling Wei & Han Aiping b Rosiana Tendean & Ivana Lie (Indonesia) 15-7, 15-8; **Mixed Doubles:** Martin Dew & Gillian Gilks (England) b Nigel Tier & Gillian Gowers (England) 15-2, 15-9.

Cricket

The Third and Fourth Tests between England and Australia, played at Nottingham and Old Trafford respectively, ended in a draw—thus making the Ashes series 1-all with two to go.

One of the three limited-overs competitions for English counties was decided on Jul 20 at Lord's, London, when the Benson & Hedges Cup (for 55-overs matches) final was won by Leicestershire.

The All-England Lawn Tennis Championships, considered the premier event in tennis circles, ended at Wimbledon in London, on Jul 7.

Results: Men's Singles: Boris Becker (FRG) b Kevin Curren (USA) 6-3, 6-7, 7-6, 6-3.

Doubles: Heinz Gunthardt (Switz) and Balazs Taroczy (Hungary) b Pat Cash & John Fitzgerald (Aus) 6-4, 6-3, 4-6, 6-3.

Women's Singles: Martina Navratilova (USA) b Chris Evert Lloyd (USA) 4-6, 6-3, 6-2.

RECORDS OF THE MONTH

Cram: Put his best foot forward in 1,500 m at the Nice track.

Men: Pole vault: 6.00 m Sergei Bubka (USSR); **1,500 m:** 3:29.67 Steve Cram (GBR); **mile:** 3:46.30 Cram (GBR); **5,000 m:** 13:00.40 Said Aouita (Morocco).

Women: 10,000 m: 30:59.42 Ingrid Kristiansen (Norway).

Cram, the World, European and Commonwealth Games champion, became the first to go under 3:30.0 for the 1,500 m. In fact, Aouita was close behind Cram, and his time of 3:29.71 also beat the old record (3:30.77) by Steve Ovett in 1983.

Doubles: Kathy Jordan (USA) & Elisabeth Sayers-Smylie (Aus) b Martina & Pam Shriver (USA) 5-7, 6-3, 6-4. **Mixed Doubles:** Paul McNamee (Aus) & Martina b Fitzgerald and Elisabeth 7-5, 4-6, 6-2.

India lost to Sweden 1-4 in the Davis Cup quarter-finals played in Bangalore from Aug 2-6. Vijay Amritraj lost to Anders Jarryd 6-3, 5-7, 2-3, 6-4. Mats Wilander b Ramesh Krishnan 6-3, 6-3, 6-2. In the doubles tie, Jarryd & Stefan Edberg b Vijay and Anand 21-9, 2-6, 6-3, 6-4. In the reverse singles Vijay lost to Wilander, the world No. 3, 8-6, 9-7 while Krishnan lost to Jarryd, world No. 8, 3-6, 6-4, 1-6.

SANJEEV GUPTA

SPORTSTARS OF THE MONTH

Boris Becker—► is only in his second year on the circuit. ► is the youngest to win the Wimbledon, being 17 years, 7 months and 7 days old (he won on the 7th day of the 7th month). ► is the only unseeded player to win the title. ► is the first German to win the title and only the third to reach the final. Earlier ones being i) Gottfried von Cramm who lost in three consecutive years 1934 and 1935 to Fred Perry and 1936 to Donald Budge. ii) Wilhelm Bungert in 1967 who lost to John Newcombe. ► is younger than the winner of the Junior Wimbledon title, 18-year-old Leonardo Lavalle of Mexico.

Kevin Curren—the South African born, who acquired US citizenship in March this year, was seeded 8th in Wimbledon. But created the greatest sensation by first defeating defending champion and seed No. 1 John McEnroe (USA) 6-2, 6-3, 6-4 in the quarter-finals and then Jimmy Connors (USA) 6-2, 6-2, 6-1 in

the semis.

John McEnroe did not reach the Wimbledon final this year, after his five consecutive appearances. Losing to Bjorn Borg in 1980 and Connors in 1982, he won in 1981, '83 and 84.

Ian Botham hit the fastest century of the summer in just 50 balls for his county Somerset at Edgbaston against Warwickshire. His 100 came from only 26 scoring strokes and easily broke his own record for the season. He previously struck two centuries in 76 balls against Hampshire and Glamorgan.

Geet Sethi, at 24, became the youngest (and unseeded) player ever to win the World Amateur Billiards Championships in his maiden appearance when he beat veteran and four-time title-holder Bob Marshall (75) of Australia 3809-2453 in New Delhi on Aug 7. Reigning champion (and thrice consecutive holder of the title) Michael Ferreira lost to Sethi in the semis.

ASIAN ATHLETIC MEET

The progress of the Asian Athletic Championships, instituted a decade and a half ago, has gone hand in hand with that of the World Cup and World Championships, in track and field events. Prior to them, the Olympics was the main forum for international athletics, and for obvious reasons, the Asian Games for the sport in the Asian region. With the Asian Championships becoming the selection meet for the Asia squad in the World Cup, member nations have begun to take it much more seriously than they used to. Looked at in this way, the coming meeting in Jakarta is likely to provide the stiffest competition in Asian athletics.

It has been accepted for some time now that Asian athletes have lagged behind international stars because they do not get sufficient exposure to big-time competition. In the not-so-distant past, Japan was the sole exception since its athletes were able to compete in Europe and America each summer. Because of this advantage, it did not take the Asian Championships too seriously since the level of competition was somewhat lower than that in the Asian Games; also, there was little prestige involved in winning medals here. All that appears to have changed since the last Asian meet in Kuwait, when China and Taiwan managed to dominate the scene and put the Japan second-string entries in their place. In fact, the Chinese men and women have gone from strength to strength since the last Asian. To a lesser extent, the same was true of the Koreans (North and South), the Thais and the Filipinos.

With tougher competition becoming the order of the day in the Asian Athletics Championships, it was not surprising that India, once the leaders in the sport in the continent, had to take a back seat. Suresh Yadav (1,500 m), Chand Ram (20-km walk) and P.T. Usha (400 m) were the only Indian winners at Kuwait—a fact that gave much cause for concern. The Jakarta meeting is to be the final fling for most hopefuls for the next Asian Games in Seoul, barely a year away. And there is every indication that Asian leaders, China and Japan, will

find their current athletic supremacy challenged by hosts South Korea, who at the time of writing have already selected their squad for 1986. India's hopes would lie mainly in the women's events, with Olympic 400 m hurdles finalist P.T. Usha leading the list. Half-miler Shiny Abraham continues to perform consistently and should get a medal. Suman Rawat would go all out to emulate predecessor Gita Zutshi in the 1,500 m or the 3,000 m. The Indian 4x400 m relay team which reached the finals in the 1984 Olympics is formidable enough to record a win. The women's squad will almost certainly field marathoner Asha Agarwal, who should give a good account of herself. In the men's section Raj Kumar (5,000 m), Charanjit Bajwa (400 m), Bagicha Singh (1,500 m) and Balwinder Singh (shot put) are possible medallists.

The Asian Athletic Federation has already announced that all winners at Jakarta would be selected to represent Asia in the World Cup at Canberra, Australia in October when sports enthusiasts will see an exciting battle for supremacy between the US, USSR and the GDR.

R.B.

5th WORLD YOUTH FOOTBALL TOURNAMENT

The 5th World Youth football tournament will commence in USSR on Aug 25. The final is slated for Sep 7. Popularly known as the Junior World Cup, this championship is played after every two years for the FIFA-Coca Cola Cup. The popular soft drink Coca Cola sponsors all of FIFA's (the governing body of world football) developmental and promotional programmes. Part of the agreement is the sponsorship of the Junior World Cup, held for players below 19 years of age. This tournament was the brain-child of the current FIFA President, Joao Havelange of Brazil.

The importance of this tournament is twofold. Firstly, it enables talented young teenagers in all countries to participate in a world championship, get valuable match experience and familiarity with the exacting rigours of international football. Secondly, the

A NEW GOAL

For the first time in the history of football an African nation has won an international tournament. Nigeria won the recently concluded FIFA's first under-16 world tournament in China. In the finals, Nigeria beat fancied West Germany 2-0. In fact, this is the first time any nation outside Europe or South America has won an international football tournament.

Nigeria's triumph is a vindication of FIFA President Joao Havelange's faith in encouraging football talent in Africa and Asia by integrating the young into big competitions. The FIFA under-16 tournament, sponsored by KODAK, was Havelange's brainchild. African nations excelled in this tournament; unfancied Guinea reached the semi-finals losing via the tie-breaker to holders Nigeria. This indicates that there is a wealth of untapped football talent in Africa and the European-South American hegemony of the game may be challenged by the next decade. N.K.

Above: The best man wins: Jarrod proved too much for Vijay. Left: Not good enough: Wilander lost to veteran Vijay.

tournament is usually held in developing countries or places where the game is not very popular, so that the populace of these countries can witness quality football. The previous four Junior World Cups were held in Tunisia (1977), Japan (1979), Australia (1981) and Mexico (1983).

To qualify for the Junior World Cup proper, qualifying rounds are held on a regional basis in all the continents. So even countries like India, who have never qualified for the cup, can get international experience by participating in the Asian zonal competitions. Sixteen teams participate in the final rounds of the cup. They are divided into four groups of four. In the preliminary phase, matches are held on a round-robin league basis. The top two teams from each group qualify for the quarter-finals. From this stage onwards, the championship is played on a knock-out basis.

A significant feature of the Junior World Cup has been that Asian countries have fared quite creditably and have done much better than in the senior championships. In 1979, unknown and unfancied Qatar created a sensation when they entered the final, beating fancied teams like England and Brazil. They lost in the final 1-4 to powerful West Germany, but became the first Asian nation to reach the final of a

major international soccer competition. Again in 1983, South Korea entered the semi-finals where they lost to the ultimate winners Brazil 1-2.

India have never entered the final phase of the Junior World Cup, always getting eliminated in the regional competitions.

Each Junior World Cup unearths young footballers of exciting skills and great talent. Diego Maradona (Argentina), the costliest football player in the world at present, really came into the limelight at the 1979 Junior World Cup, as did Ramon Diaz, also of Argentina. These two players were the top scorers of the tournament, responsible for Argentina's ultimate victory. In the 1983 cup, Brazil emerged champions and two of their players, striker Casagrande and winger Reinato are now regulars in the senior team. The 1985 Junior World Cup in USSR will as always help in the discovery of players of potential.

Except for the main World Cup, the FIFA-Coca Cola Cup is the most popular international competition, with greater media coverage and spectator interest than even the Olympic football competition. The game is always very keen and not so defensive since the teenaged players are not so cynical and conscious of defeat.

So far, USSR (1977), Argentina (1979),

HOCKEY POLITICS

M.A.M. Ramaswamy is back as **President** of the Indian Hockey Federation (IHF) after an interval of seven years. He had successfully held the post between 1974 and 1978, during which time India won the Kuala Lumpur World Cup and Moscow Olympics.

It was a fiercely contested election with, at one stage, eight big names coveting the prestigious seat of power. Some of those in the running were Buta Singh, Union Minister for Agriculture, Arun Singh, MP, K.S. Dhillon, Director-General of Police, Inder Mohan Mahajan, controversial former President of the IHF, Aslam Sher Khan, former hockey player and Congress(I) MP. The contestants whittled down to two in the final lap—Ramaswamy, the racing mogul, and Dhillon.

Traditionally, hockey has been controlled by police officers from the north. For the last two

years, the IHF had an interim President, Raja Bhalender Singh, with elections being postponed because of factionalism, pressure tactics and flimsy reasons. Interest in the game has mounted because suddenly due to exhibition matches with Pakistan in the Gulf region, a lot of money has flowed in. Besides, politicians and bureaucrats have always wanted to hog the limelight through controlling sports federations. And sports officials encourage this as an influential person at the top means easy access to State aid.

The sordid politics of this election, however, were redeemed when, in a sporting gesture, the defeated Dhillon proposed that the new President be allowed to select the other office-bearers. Ramaswamy reciprocated by naming Dhillon as one of the vice-presidents. And so all's well that ends well.

WORLD UNIVERSITY GAMES

A major sports extravaganza, in fact, a mini Olympics, is being staged in Japan this year. The event is the World University Games (Universiade) being held in Kobe (Japan) from Aug 24 to Sep 4. University students from countries all over the world will participate in the Universiade, held after every two years.

The schedule of the World University Games includes mandatory disciplines (for both men and women) like athletics, basketball, fencing, gymnastics, judo, swimming, diving, water-polo, tennis and volleyball. Football has been included as a mandatory discipline, for the first time, with effect from this year.

As there were many entries in football, the International University Sports Federation (FISU), under whose auspices this competition is being organised, divided the competing teams into four zones on a geographical basis—Africa, Asia, America and Europe. A total of 14 teams—two from the African zone, three from the American zone, four from the Asian zone and five from the European zone—have qualified for the main competition of football at Kobe.

India participated in the preliminary rounds of the Asian zone. They were placed in subgroup 2 and their opponents were China. In contrast to the well-prepared Chinese team, the Indian Universities team appeared a shoddy outfit. In spite of enjoying home ground advantage, India lost the match to China by 1-7.

At the Universiade this year, India is expected to send a small contingent of athletes and maybe a volleyball team. On previous occasions, India have participated in athletics and tennis at the Universiade. We have yet to win a medal here. Standards at the Universiade are very high as colleges are the breeding grounds of Olympic champions (Edwin Moses and Salnikov to name a few), both in the US and in the East European bloc of nations. With present and future Olympic champions participating in nearly all sports at the Universiade, India's medals prospects are remote. N.K.

Should Pavement Dwellers Be Evicted?

On Jul 10, 1985, a five-judge Constitution bench presided over by the then Chief Justice of India, Y.V. Chandrachud, sealed the fate of 47 lakh pavement and slum-dwellers in Bombay by ruling that "the dwellers had no Fundamental Right to encroach upon any place reserved or earmarked for public purposes". The landmark judgment, with wide-ranging ramifications, set the stage for heated debates on the sensitive question involving the survival of 47 lakh humans.

Meanwhile, the slum-dwellers, who will be directly affected by the verdict in November, are bracing themselves to face the worst. To them the fuss over the Supreme Court decision is just a 'much ado about nothing'. For, even without adverse court judgments, the poor folk are used to being harassed and bullied by the city police and surely this judgment cannot worsen matters. However, parts of the 78-page judgment hold out promises which, if kept, could dramatically improve their living conditions.

In the light of this judgment arguments in favour of and against the slum-dwellers continuing to live on the pavements.

For

■ The Constitution bestows upon all citizens the right to reside, settle and carry on business in any part of the country. But it does not allow them to encroach upon public land. Such encroachment cannot be permitted, essentially because a situation in which no legal sanction is required to acquire and utilise public property can lead to serious and widespread civil disorder.

■ Pavements are public property. The main purpose is to ensure that pedestrians are able to move about with a measure of safety and security. Besides, the public shares with the dwellers the right to use pavements, and encroachment of any kind can endanger the general public's right to life. By occupying pavements the dwellers force the pedestrians to walk on busy roads exposing them to accidents. If demolitions seem to deny the dwellers' right to life, then letting them stay on infringes on the pedestrians' right to life.

■ The livelihood of the dwellers will be disturbed only if they are deported from the city. If the government resettles them within the city, as per the Supreme Court order, then their livelihood will not be disrupted. This argument is based on a study conducted on occupational patterns of slum and pavement dwellers by Dr P.K. Muttagi, Tata Institute of Social Studies. According to the study, 53% of (male) pavement dwellers are self-employed while 38% earn a wage as casual labourers. Thus the work of 91% of Bombay's dwellers is not linked to the place where they live. But the earnings of most men is erratic and insufficient even to feed the family for a month. The women chip in with a regular input that ultimately sustains the family. Most of the pavement women work as domestic servants in high-rise buildings that run adjacent to the pavement. So their work does have some relationship with their place of living. However, women in regularised slums, with access to water and electricity and with a larger living space, participate in home-based industries. In the same way, concluded Muttagi, the evicted women who are resettled could find this kind of alternative employment.

■ The purpose of demolitions need not always be destructive. In concert with suitable rehabilitation programmes, demolitions can, in fact, serve a constructive social end. Most cities facing the slum problem have sufficient vacant land to rehabilitate all their unauthorised dwellers, though, due to court cases, it is only in Bombay that facts about such resources have been closely documented. In Bombay there are 2,952 hectares of vacant land which can accommodate an estimated 12 lakh huts housing 60 lakh people (five people to a hut). So, if the city has the will and the workable schemes, then there is enough land to resettle all the dwellers. In Bombay, the schemes are also there. Of these, the World Bank aided projects are most notable. Under the first scheme called the sites and service scheme 85,000 dwellings with basic amenities such as latrines, water supply, and electricity

Against

■ Eviction of pavement dwellers violates one of the basic tenets of the Indian Constitution's Fundamental Rights. It is the Fundamental Right of every citizen to live and earn his livelihood in any part of the country. By evicting pavement dwellers the state denies them this right. Once removed from their hutments the dwellers will be forced to leave the city, for they have no other refuge. Forcing a citizen to leave a city, directly or indirectly, is a violation of his Fundamental Rights.

■ The Supreme Court has itself agreed that right to life includes "adequate nutrition, clothing and shelter". The only shelter the dweller has is the hut on the pavement. Therefore, by removing these dwellings his right to life is threatened. The court had also ruled that a citizen can be deprived of his shelter only by actions that strictly conform to just, fair and reasonable procedures of law. But is it easy to ensure that the actions will in fact be just? The BMC's demolitions were, for instance, not merely unfair, they were inhuman. In violation of human rights, the BMC, in collusion with the Bombay police, picked a particularly wet monsoon day in July 1981 to raze down thousands of hutments and send their hapless inmates packing to places from where they had come. Against this background can we be expected to have unbending faith in the fair-mindedness of law enforcement agencies when they deal with slum-dwellers in the future?

■ Right to life is also tied up with right to livelihood. Hounded out of villages by acute poverty, people move to cities seeking employment. They live in a city because they are employed in the city and they live on pavements because they have no other accommodation. The eviction of these people will lead to deprivation of their livelihood and, consequently, to the deprivation of their life. For eviction results in loss of jobs, starvation, disease and death; and the discretionary powers vested with agencies like the BMC cannot be used in disregard of the nexus between life and livelihood. Moreover, if these hutments are uprooted from the city it is not only they, but also the industries and offices that employ them, that will suffer.

■ Demolitions are, moreover, destructive and futile in nature. The slum-dwellers have got inured to living stoically under the most hostile conditions. Nearly all of them have grittily faced demolition at least once in their lives and lost most of their possessions. And though all these demolitions overlooked the natural justice of giving notice, the dwellers reappeared on other pavements—underlining the futility of such actions. In the wake of the Supreme Court judgment if they are evicted they will, to be sure, reappear. It is all very heart warming to hear about schemes that have been designed to resettle the urban poor. But, in the face of greed, corruption and mismanagement, they will fall just as the earlier schemes have fallen. At any rate, it is wrong to evict

CURRENT EVENTS: International (Continued from page 25)

the Saudis proposed a 7-10% reduction in the production of other member countries to make room for more Saudi oil in the market; but the proposal was rejected. Mexico, which is not a member of OPEC, but has long followed a policy of adhering to OPEC's pricing decisions to bring stability to the market, further complicated matters by slashing its crude prices by an average of \$1.24 a barrel. This led to a downward pressure on the market and further weakened OPEC's influence.

However, in Geneva, the cartel agreed to cut 50 cents a barrel from the price of its heavy crudes and 20 cents a barrel from that of its medium crudes. The deal on price differentials has given Saudi Arabia some scope to increase its production without making good its threat to match the other OPEC-members' discounts. The question of revising quotas was not discussed; but it will be, later this year.

KAMPUCHEA

THE AMERICAN CONNECTION

Recently, the US Secretary of State, George Shultz, visited Kampuchean refugee camps on the Thai-Kampuchean border. He also attended a briefing by Thai military officials about two and a half miles from Kampuchea. The fact that American involvement in the Kampuchean problem was increasing was proved by another event: the US House of Representatives approved \$5m in economic or military aid for non-communist Kampuchean resistance groups. During his visit to Thailand and Malaysia, Shultz also held consultations with the foreign ministers of the Association of South East Asian Nations (ASEAN) in Kuala Lumpur and endorsed the group's latest initiatives for a negotiated settlement of the Kampuchean issue. However, the endorsement was symbolic because Vietnam has already rebuffed the move.

This was ASEAN's 13th initiative since 1979. Earlier Melaya had proposed talks between the three Kampuchean resistance movements, Son Sann's Khmer People's National Liberation Front, Prince Norodom Sihanouk's Sihanoukist National Army and Pol Pot's Khmer Rouge, and delegates of Heng Samrin's Vietnamese-backed government at a neutral site, through an interlocutor. The Malaysian plan failed to draw support and ASEAN then proposed that Vietnam should be the negotiating partner and it could include members of the Heng Samrin regime in its delegation. Washington agreed to this plan but Hanoi has ruled it out.

According to the Indonesian Foreign Minister, Mochtar Kusumaatmadja, Hanoi would sing a different tune if its relations with the US were

better. He has been acting as an intermediary for the ASEAN for some time and has been trying to persuade Hanoi to move closer to Washington. The main problem is that while Vietnam wants to normalise relations without withdrawing from Kampuchea, the US insists that normalisation can only occur after a Vietnamese withdrawal. Hanoi recently pledged to return the remains of 26 American soldiers missing since the Vietnam war, but this did not cut any ice with the Americans. In fact, Shultz warned Kusumaatmadja at Kuala Lumpur that he should not go too far and added "we don't think the US policy can be put in somebody else's hands to work with".

UN DECADE FOR WOMEN

EVE ON THE MARCH

1985 marks the end of the UN Decade for Women; they came to Nairobi from all over the world—10,000 of them from some 160 nations—to participate in a two-phase conference to mark the end of the decade. It began with Forum '85, a meeting of non-governmental organisations (NGOs), from around the world, and the agenda offered many events, from music recitals and meditation classes to panel discussions on wife-beating, incest and the Iran-Iraq war.

The meeting of the NGOs went smoothly enough but the second phase, the official UN conference, was less harmonious. The meeting was designed to assess the status of women in the past decade and also to draw up a strategy for the future. But politics dominated the proceedings. Arab and Israeli women confronted each other; the Soviet Union and its allies attacked the US; Filipino women protested against the Reagan and Marcos Administrations, women from Afghanistan attacked Washington for supporting a 'genocidal war' against its Soviet-backed government; the Vietnamese Minister of Education, Nguyen Thi Binh, too, accused the Americans of fomenting war around the world; and the US delegation and its leader, Maureen Reagan retaliated to all these charges. In spite of all these wranglings, however, a message of hope came out of the conference and its final paper, *Forward Looking Strategies*.

However, despite the decade's notable advances, there are still lingering inequalities, and it is only through a conscious struggle that these must be overcome. While literacy and life expectancy rates have gone up, women in developing countries still have a life expectancy which is 15 years less than that of developed countries. The UN Decade for Women played a positive role in focussing attention on women's problems and 90% of the world's governments now have organisations to promote the advancement of women.

CURRENT EVENTS: National (Continued from page 22)

policies providing incentives for major industries like electronics, computers, pharmaceuticals, textiles, steel and cement have given a phenomenal boost to the private sector. Then the liberal three-year import policy, exemption of over 500 medium sized companies from the Monopolies and Restrictive Trade Practices (MRTP) Act, delicensing of several others and diversification in specified industries too have contributed significantly to this boost, resulting in considerable improvement in profitability of most firms and market leaders. These factors coupled with the onset of favourable monsoons is responsible for optimism in the private corporate sector.

The unabated rise in share prices is, however, viewed as an unhealthy trend too. The shortage of adequate floating stocks has resulted in a frenzied scramble for available shares. Also, substantial tax cuts in the budget have caused an influx of more investable money in the market causing the sky-rocketing of share prices. And keeping these facts in mind the need for regulatory measures for share markets has become crucial.

SHARE PRICES

SOARING HIGH

For people with a sweet tooth, the news from the sugar markets is not particularly toothsome. In recent weeks the price of sugar has scaled dizzy heights. In Bombay the wholesale price shot up from Rs 565-568 per quintal during end-May 1985 to Rs 685-694 per quintal during end-June. The prices at the moment are hovering around

a new high of Rs 800 per quintal. And while the prices spurted, the supplies dwindled, with a mere 2.50 lakh tonnes and 2 lakh tonnes of indigenous sugar being released during June and July as against 3.60 lakh tonnes in May. And although the free market sale quota was maintained at 3.75 lakh tonnes in both June and July, the availability, in actual fact, was much less.

Sugar prices have, in fact, been soaring ever since the current season got underway in October 1984. This rise can be attributed to several factors. First, consumption of sugar has registered a steady increase and has practically doubled during the period of the Sixth Plan alone. The estimated total consumption of 85 lakh tonnes in the current year is a sharp increase of 12.8% over the previous year. Second, the increase in consumption has not been accompanied by increased production. On the contrary, sugar production has exhibited sharp fluctuations and has registered a decline during the past two years. Third, the government has maintained a high order of release which has resulted in a drastic fall in sugar stocks. This high order of monthly releases in the face of fast declining output and stocks has compounded the problem, for, far from checking the prices, this has forced the country to import large quantities of the sweetener. Finally, bottlenecks in distribution of imported stock has led to an unprecedented flare-up of sugar price in June/July.

Keeping in view the stagnant output, the steadily increasing consumption and the fast depleting stocks of sugar, the government has decided to import 10 lakh tonnes during the current season. For the estimated 85 lakh tonnes consumption as against the 95 lakh tonnes availability, of which 62 lakh tonnes is domestic output, 23 lakh tonnes are carry over stocks and 10 lakh tonnes is imports, will result in a critical position in September when the stock position will be a mere 10 lakh tonnes.

PERSONALITY DEVELOPMENT

Preparing For An Interview-2

The personal interview of a candidate essentially involves the technique of judging him from three vital angles—his personality, qualifications and hobbies. This approach helps in adding credibility to his resumé.

Having discussed the preliminary stage of knowing yourself' (CCTimes, Aug '85) as part of the strategy of preparing for an interview, let us go on to analyse the three vital stages that will see you through any interview.

The technique of selecting suitable and efficient personnel to man responsible positions in the government, educational fields, business houses and in the armed forces has assumed increased importance in modern times. Today, with each university giving discriminating weightage to a candidate's performance, marks as a criterion in job selection is fast losing its relevance. Today, the appointing authority of a business house or the government can hardly be convinced by an array of first class academic qualifications decorating a candidate's resumé. It is his personality, initiative, presence of mind and depth of knowledge, displayed before the interview board, that adds credibility to the broad picture of himself portrayed in the resumé.

The interview process comprises three broad stages of assessing the candidate's level of knowledge and ability, viz. (a) the introductory process of knowing the candidate as a person; (b) the secondary process of rating his basic knowledge of his subject of specialisation and his capacity to relate such knowledge to practical life; and (c) the winding up process of assessing the broader aspects of his personality by gauging his interests and hobbies.

Introductory Process

In the initial stage of the interview the board members try to make the candidate feel at home. The discussion commences

informally with an encouraging question on the candidate's name itself, particularly if it happens to be rather unusual like Mandakini, Shaligram or Gargi Mohapatra. But 'What's in a name?', one may ask. A person's name often reminds us of historical or mythological figures and at times brings to light the little known facts about well-known things. Hence, it is essential for an interviewee to know the significance of his own name.

The interviewer usually begins with a general statement like—

"So you are Mr S. Gopal. That's a nice short name!" (This would give the interviewee enough time to stop shaking and for his pulse rate to normalise so that he can face the next question which might be based on his name itself.)

Q: Mr S. Gopal, could you please tell us what 'S' stands for?

A: Sir, I am a south Indian hailing from Tamil Nadu. We south Indians usually prefix our name with the first letter of our father's name. My father was T.P. Subramania Iyer, where T and P stand for Thiruvarur Picchu which is my great-grandfather's name. Earlier, it was the general practice to prefix a man's name with the first letter of his place of domicile or place of birth. Hence my father Subramania Iyer was the son of Picchu Iyer who hailed from Thiruvarur.

Q: Could you elaborate on the origin of your own name, 'Gopal'?

A: Gopal is one of the several names Lord Krishna is known by. Lord Krishna is one of the 10 incarnations of Vishnu, who according to Hindu mythology, is the preserver of this vast universe.

There are a countless number of stories based on the life of Lord Krishna, the most famous being his role as charioteer and advisor to Arjun in the imminent Mahabharata war between the Pandavas and the Kauravas. When Arjun was depressed and hesitated to wage a war against his own kinsmen, Krishna assured

him that it was his duty to uphold justice and truth and to suppress evil. Non-violence was a lofty ideal but so long as the forces of violence remained active, they had to be met with force. Krishna's enlightening advice to Arjun forms the basis of the Bhagavad Gita.

This answer may possibly lead to a question like the following:

Q: Do you think you can live up to such principles in practice?

A: Well, I do my best to fight for justice when I come across people accepting unfair treatment particularly in their dealings with the public utility services like buses, telephones and water.

Having tested the candidate's penchant for in-depth information and knowledge, the interviewers normally move on to the more relevant part of the interview—the candidate's education. Despite the fact that the candidate's educational qualifications are recorded in the application form, the questions put are mainly based on such information itself.

There might even be a ticklish question like the following for which a firm answer is expected from the candidate.

Q: Why did you choose to take up English as your main subject in college after doing Science in school?

A: At school I was good in my Science subjects. But I could not score high in Mathematics. As I was always interested in the English language, I decided to specialise in it.

Such questions in slightly varied form can be put to candidates who have specialised in other subjects like Economics, Political Science, History, etc., depending on the nature of the job.

Having crossed these initial stages of the interview, the candidate is made to take off to the secondary stage where his mastery of the subject of his study is tested.

P.G.

For

ty, are to be raised by the end of next year. The second scheme will focus on upgrading existing slums to more human levels.

The Supreme Court made a special reference to these two projects and also to the various other slum housing and rural employment schemes detailed by the Bombay Municipal Corporation (BMC) in its defence, before giving the verdict. The point to be noted is that if appropriate conditions exist (land, resettlement schemes, etc.), demolitions can lead to positive social change and, therefore, they cannot be deemed unjust.

Against

the dwellers on the presumption that alternate accommodation will be given. Such a step, in fact, should precede the evictions. It is only then that they can serve a social purpose. The Supreme Court in its verdict asks the state to rehabilitate the dwellers but sets no time-frame for doing so. And when we consider the recent shady deal in which 23,000 sq m of land meant for rehabilitating slum-dwellers in Bombay was sold to a builder for Rs 10.73 crores, it seems all the more reasonable to doubt the veracity of such a presumption.

CAREER NEWS

Essay & Photo Competition

If you like to go places, can shoot and write, you are in for a challenge. The Indian Institute of Tourism and Travel Management invites entries for an Essay and Photo competition on tourism.

If you are in the 16-21 age-group you may start digging in material for a 1500-3000 word essay on any one of the following subjects: i) Contribution of tourism to the Indian society ii) Tourism—a vehicle of international understanding and national integration; iii) Parameters of domestic tourism in India; iv) How to promote youth travel in India; v) How to motivate people to travel; vi) Travel and tourism in India through the ages.

The essay may be handwritten or typewritten and should be signed at the end by the competitor with a certificate that the essay is his/her original work.

And for the photo competition you may send in a picture of a place of tourist or historic interest on Indian wildlife, in the size 18 x 12½ cm. Of course the photograph ought not to have been published earlier. Both competitions carry three attractive prizes (for details please see *TOI*, Aug 13, 1985.)

Entries may be sent to the Director, Indian Institute of Tourism & Travel Management, Room No 406, Outab Hostel, Off Sri Aurobindo Marg, New Delhi-110 016, along with a crossed IPO for Rs 5 as entry fee payable at New Delhi Post Office and a certi-

cate or proof in support of age. *TOI* candidates are exempted from this fee if accompanied by a certificate from the proper authority.

Entries should reach the institute not later than Sep 12, 1985.

Flying High

Are you single, young and feminine? Do you dream about hovering amidst the heavenly clouds? But, are you also in search of a paying career that would let you into nothing less exciting than globe-trotting? Well, then, beware! You are perhaps on the wanted list of the British Airways.

The British Airways is in search of young women whom they can appoint as Indian Air Stewardesses. However, a few tough eligibility conditions are to be met. One has to be single (21-24 years), 160 cm in height with proportionate weight and have an excellent health record; be attractive with a pleasant appearance and a friendly personality; be a graduate from a recognised university; have a clear diction with fluency in English and Hindi and preferably have conversational fluency in Gujarati or Punjabi and/or Bengali; and be prepared to be based at Bombay or Delhi.

If you fulfill the above, you may send in a hand-written application along with a full-length postcard size photograph of yourself in a saree before Sep 3, 1985 to The Administrative Officer (Air Stewardesses) India, British Airways, 202B Vir Nariman Road, Churchgate, Bombay-400 020. For further details, please see *TOI*, Aug 13, 1985

For these unmarried Indian citizens aged 18 to 27 who possess a good undergraduate degree, initiative and enterprise, the Inlaks Foundation offers two different scholarships.

The first involves specific projects, research or study-oriented travel, professional programmes and non-degree courses. The second leads to under-graduate or graduate courses in all subjects offered at Cambridge, Harvard Law School, Imperial College (London), London School of Economics, Oxford and Royal College of Art. Or graduate courses in any subject offered by any American and European university, for which candidates have secured admission before applying.

For details and application form, send a 10x23 cm self-addressed envelope with an 85-paise stamp to Inlaks Scholarships, P.O. Box No. 210B, Delhi-110 007. Last date for receipt of completed applications is Aug 31, 1985.

Cambridge Nehru Scholarships

For those who intend pursuing a course of research at Cambridge, leading to a Ph.D. degree, 10 prestigious full-cost scholarships are being awarded by the Nehru Trust for Cambridge University.

Details, preliminary application forms can be obtained before Aug 30, 1985 from the Joint Secretary, Nehru Trust for Cambridge University, No. 10, Janpath, New Delhi-110 001. Completed applications must be sent to the above not later than Sep 20, 1985.

Answers to

TEST YOUR WORD POWER

- barren**: D: unfruitful; not good enough to produce crops; sterile. The black women of South Africa, deprived of basic citizenship rights and consigned to barren 'homelands' by their white government, have no legal redress.
- berth**: B: to provide with a place to dock or moor. New Zealand PM David Lange has been at loggerheads with the US over his refusal to allow nuclear-armed US warships to berth in his country.
- coeval**: B: contemporary; belonging to the same age, time or era. Soviet experts are of the opinion that kids with a swimming experience are much healthier and more physically fit than their untrained coevals.
- confluence**: D: place where two rivers unite. Perched on a bluff above the confluence of the Yangtze and Jialing rivers, the old city of Chongqing in China appears to some visitors to resemble the superstructure of a large ship.
- debacle**: D: sudden and great disaster; utter collapse, downfall. Ten years after the fall of Saigon, the debacle in South-East Asia remains a subject many Americans would rather not discuss.
- ebullient**: C: high-spirited; exuberant; full of life and vigour. Punjabi Hindus are every bit as go-ahead, ebullient and assertive as the Sikhs.
- expatriate**: D: person living outside his own country. While expatriate Americans revel in the dollar's dazzling performance, they are also well aware that their sudden windfall could quickly disappear.
- filthy**: C: disgustingly dirty; unclean; foul. The lowermost stretch of the Ganga in West Bengal, the Bhagirathi-Hooghly is now a filthy drain into which seven municipalities and a host of industries pour 3,79,000 kg of untreated organic waste everyday.
- gimmick**: A: an ingenious or novel device, scheme or deception; trick. Once dismissed by researchers as a mere gimmick, mnemonics (memory enhancing techniques) are now considered an effective means of boosting memory.
- insurgent**: D: rebel. Beginning in the 1950s, China provided guns, money and moral support to communist insurgents in Burma, Malaysia, Indonesia and Thailand.
- lobby**: A: to (try to) influence the members of a law-making body.

As one ceasefire after another fails, Lebanon's Christian President Amin Gemayel is actively lobbying for Syrian military intervention.

- mayhem**: D: any situation of violence, noise, confusion, etc., havoc; needless or wilful damage. Mayhem in the stands is an escalating problem wherever team sports are played.
- obliterate**: A: to destroy utterly, leaving no trace; blot out. The Bomb obliterated Hiroshima at 8.16 a.m. on Aug 6, 1945, and from that moment nothing has been the same.
- pendant**: B: a strong liking or inclination for something or someone. Whether the subject is the beefiest burger or the biggest corporation, Americans have a penchant for making lists of the best and the worst, then arguing about the results.
- pliant**: D: easily bent, shaped or twisted; flexible or supple. Human blood vessels are pliant yet resilient, range in size from the diameter of a large coin to mere millimeters and traverse a complicated path throughout the body.
- putrid**: B: ill-smelling; decomposed; rotten. In the ancient city of Varanasi, formal ablutions take place only a few yards from the putrid cremation pyres, which often deliver half-burned bodies into the water.
- rugged**: B: rocky; rough; uneven. The rugged mountain ranges in northeast Luzon are traditional strongholds for insurgents of the New People's Army.
- tenet**: B: principle; belief; doctrine. Throughout Western Europe a social and economic revolution is in the making—governments are selling off state-owned industries and challenging a cherished tenet of the modern welfare state.
- tenure**: C: period of holding (political) office, land, etc. During the first two years of his White House tenure, Ronald Reagan rarely immersed himself in the arcane details of nuclear issues.
- tranquil**: B: peaceful; calm; quiet; serene; free from commotion or tumult. In the wake of the violence unleashed in the last two years, the tranquil and pastoral image of Punjab as the land which ushered in the Green Revolution has been rapidly eroded.

Vocabulary Ratings:

20-18 correct	exceptional
17-15 correct	excellent
14-12 correct	good

THE INDIAN RENAISSANCE ITS VISIONARIES

ANITA NARAYAN

If there is any period in Indian history that can be said to have shaped the thoughts, ideas and aspirations of modern India, it is the 19th and early 20th centuries. For it was during this period that India's destiny was imperceptibly yet irrevocably changed under the inspiring leadership of several great lives. Due to their dedicated efforts and thought-provoking philosophies, from a culture that was steeped in medieval backwardness and insularity, emerged a wholly progressive and dynamic culture. A culture that Indians could feel proud of.

Who were these great lives? What significant contributions did each one of them make? These are questions which anyone appearing in the Civil Services (Main) must be able to answer. To help you do that, we are introducing a new series on these 'reformers'.

RAJA RAMMOHUN ROY (1772-1833)

Widely considered the first great social reformer of modern India and pioneer of the Indian renaissance, he was also a learned scholar, well-versed in several languages including Sanskrit, Arabic, Persian, English, Latin and Greek. In his thinking, he was guided by the spirit of rationalism and inspired by the intellectual traditions of both East and West. After making a thorough study of the major world religions, Rammohun, in his renowned work *Gift To Monotheists*, put forth views supporting the belief in a single God. In a later published work entitled the *Precepts Of Jesus*, he focussed on the philosophical aspects of the New Testament and believed that Christ's virtuous message should be included in Hinduism.

To propagate his views, Rammohun along with his followers started the Atmiya Sabha and vigorously campaigned against the evils prevalent in Hindu society. Later in 1829 he founded the Brahmo Sabha, later called the Brahmo Samaj whose essence rested in the non-sectarian worship of one God and was based upon the principles of rationalism and the teachings of the Vedas and the Upanishads. The major aims of the Brahmo Samaj was the abolition of idol-worship, caste rigidity, polygamy and social evils such as the practice of *sati*. He openly criticised the priestly class for exploiting the people and for encouraging the practice of meaningless religious rituals. His valiant efforts proved successful when, with Governor-General Bentinck's support, he was instrumental in banning the rite of *sati*.

Rammohun Roy was also a pioneer in the field of Indian journalism and began the printing of the first Indian newspaper and also published several journals to give expression to the views of the public. He greatly believed in the benefits of modern education and opened an English school in Calcutta at his own expense and also found-

ded a Vedanta college. He also provided invaluable assistance to David Hare, an English watchmaker who founded the prestigious Hindu College.

Rammohun was a great defender of women's rights and strongly objected to their subjugation. He believed that by granting them equal status and the rights of inheritance of property their plight could be improved considerably. He was equally vigilant about political issues and strongly condemned the oppressive practices of the zamindars of Bengal. He demanded that the maximum rents paid by the peasants should be fixed so as to prevent their exploitation. He protested against the East India Company's trading rights and the systematic obliteration of local industries by the imposition of heavy export duties on Indian goods. He firmly believed in the equality of all men and supported liberation movements all over the world.

For his bold and courageous views, Rammohun had to pay dearly all his life. He was frequently ostracised and denounced, yet he always remained steadfast about his principles. Many of his views were much ahead of his time and so their significance could not always be fully appreciated then. Rammohun always remained a true patriot. Though he believed that India had a lot to learn from the West, he in no way advocated a blind following of Western values but encouraged assimilation of only those elements which would make India a dynamic and progressive nation. He took great pride in Hindu religion and philosophy and defended it from any kind of misinterpretation. His reforms were aimed at removing the rot and stagnation from society and paved the way for the building of a modern India.

SWAMI DAYANAND (1824-1883)

At a time when Hinduism was steeped in decadent practices and the exploitation of the people by the priestly class assumed enormous propor-

tions, Swami Dayanand Saraswati, the founder of the Arya Samaj, attempted by his teachings to free our society from the shackles of hypocrisy and stagnation and lead it to the more enlightened path of reason and progress.

Dayanand looked to the Vedas for guidance because he considered them to be the source of all wisdom and believed that society should be structured on the basis of their teachings. He discarded the Puranic scriptures and held them to be false teachings designed to fulfill the selfish interests of priests and preachers. Despite his complete faith in the Vedas, Dayanand relied heavily on the principle of reason, and considered it to be the ultimate determining factor for the individual. He presented his views in his famous book *Satyarth Prakash*.

Dayanand was against polytheism and believed in the worship of a single God. He condemned idol worship, child marriage and existing caste prejudices, and greatly favoured widow remarriage and the spread of education among women. He was an ardent nationalist and wanted to build a strong and united India. It was with this view in mind that he started the Suddhi movement which converted non-Hindus to Hinduism. Unfortunately, it later acquired communalistic undertones and contributed in many ways to the growth of communalism in India.

To reach a wider audience, Dayanand gave his discourses in Hindi and acquired a large following especially in the states of Punjab and the United Provinces. The Arya Samaj which he founded in 1875 worked vigorously for the upliftment of women's status and sought to promote equality among all individuals. In many ways it was similar to the Brahmo Samaj and the Prarthana Samaj, yet unlike the Brahmo Samaj, whose reach was basically limited to the intellectual elite, the Arya Samaj acquired a mass appeal.

After Swami Dayanand's death, his work was carried on by his followers such as Swami Shradhananda, Lala Lajpat Rai, Pandit Guru Dutt and Lala Hansraj. Lala Hansraj made tremendous contributions in the field of education and organised the opening of many schools and colleges to impart English education to students. Swami Shradhananda began the Gurukul near Haridwar to revive the traditional virtues of education.

The significance of Swami Dayanand's work lies in the fact that he popularised the message of social reform and managed to reach out to all sections of society. His teachings were held in very high esteem in north India and by virtue of this mass appeal, he and his followers were able to make substantial progress in social and educational reform.

FOR CIVIL SERVICES (MAINS)

DEFENCE AGAINST DEHUMANISATION

The world is fast moving towards a technological revolution, with the invaluable assistance of international agencies like the United Nations Educational, Scientific and Cultural Organisation (UNESCO) which is busy promoting the new educational-cum-scientific cult in developing countries. PM Rajiv Gandhi, in his address before the UNESCO on Jun 7, 1985, while underlining its significant contribution to mankind, reiterated India's full support to UNESCO. Excerpts from his speech :

The purpose of UNESCO, in the words of Dr Radhakrishnan, is to foster liberality, understanding and freedom, the truth of the spirit. UNESCO deals with Education, Science and Culture. It is possible for a person to have gone to school and yet be uncultured; it is also possible to be uneducated in the formal sense, yet cultured, as millions of people who are bred on orally-transmitted wisdom are. One may be so exclusively immersed in a highly specialised discipline as to be impervious to larger impulses. A few years ago we used to hear a great deal about the two cultures and their mutual exclusiveness. The very debate led to the introduction of Humanities and Social Sciences in Science courses. The rigid categorisations of yesterday are giving way to broader-based scientific disciplines.

We are becoming increasingly aware of the interrelationship of various branches of knowledge and of various phenomena. Sages with insight have always known and proclaimed the wholeness of life and of knowledge. But lesser people, as in the story of the blind men and the elephant, claim that only their own perception is valid. Science has begun to obliterate the dividing line between matter and energy, between mind and matter, between the living and the non-living.

Education has a key note to play in understanding the world, in coping with life, in adding savour to existence. There is practically no country in the world which is satisfied with its educational system. For centuries education was the preserve of the few. But all societies now are casting aside old hierarchies, castes and vested interests. Education has come to be regar-

ded as a basic human right.

True education, Ruskin said, is training which makes people happiest in themselves and also most serviceable to others. One of the basic functions of education is evidently to make a person productive. But it is more important to enlarge his total personality. Excessive emphasis on the utilitarian has led to materialism that bedevils modern life. In fact it is not even very practical. The acquisition of today's vocational skills, will not suffice when technologies are changing fast. The silicon chip has already joined the wheel, steam-power and the internal combustion engine as a major turning point in the development of technology. The technological revolution which is upon us, is changing types of occupations, patterns of employment, levels of productivity and techniques of training. What serves is not just a skill but the skill to imbibit new skills, a mind that can cope with new situations and challenges, a temperament that is confident, cooperative and creative.

Education has made impressive quantitative progress in India. We have about 120m children at school. Our universities have grown. But a large number of our youth do not know what to do with themselves. They are ill-equipped to deal with today's problems, not to speak of tomorrow's challenges. We have taken up the task of educational restructuring. New advances in communication and transfer of knowledge provide us an opportunity to overcome some of the limitations of conventional ideas that will help people overcome social and economic handicaps and also give them access to the best by way of quality and authenticity.

That does not mean we are neglecting institutionalised education. We are emphasising the schooling of girls. We are working on strategies to reduce the rate of drop-outs. We are redesigning the linkages between the world of learning and the world of work. We are establishing Open Universities and centres of excellence.

All this is a gigantic task. It needs vast resources. Even more, it needs the best available intellectual talent and dedication. Non-formal education calls for considerably greater imagination and the innovative use of information technology.

It is not enough if we set out to do what has been done in the more affluent countries. The answer to the educational problems of developing countries is not

imitation. Conventional indices do not tell the full story. Total literacy need not lead to great wisdom or less of violence and venality. The educational challenges of the so called advanced are no less daunting than those in supposedly backward countries. Both must join hands in the endeavour of moulding better minds and better hearts.

Civilisations such as India's which stretch back into antiquity, have a special responsibility to ensure that they modernise themselves without losing the inner core of their spirituality and traditions. Tradition, said Indira Gandhi, who represented India on UNESCO's Executive Board for several years, is not just the past. It is that part of the past which lives on in the present, and enables the people to face the challenges of the future.

UNESCO has done notable work in helping to preserve some of such priceless treasures of the human heritage as Abu Simbel, Mohenjo-Daro, the Acropolis, Bamiya and Borobudur. India is seeking the organisation's support in preserving our monuments at Ajanta, Ellora, Mahabalipuram, Konarak, and that marvel in marble, the Taj Mahal at Agra. Besides ensuring that archaeological monuments withstand the ravages of the elements, societies must also be helped to conserve their songs and stories. Inculcation of an instinct of conservation is the best antidote to the exploitative tendency.

In Science, the emphasis has been too much on utility and not so much on the joy of discovering the laws that govern natural phenomena, on casting aside prejudice, on being ready to give up what is not tenable. Science has been so submissive to the purpose of the state that the globe is today burdened with a destructive power which can extinguish all life and reduce us to a planet of grey ash and silence. Martin Luther King bemoaned that we have guided missiles and misguided men. Working for peace is one of the functions assigned to UNESCO by its very charter.

The peoples of the world must know more about one another. Modern communications, it is said, have made the world a global village. We in India are indeed using satellite technology to take the world to everyone's doorstep. But people are very often at the mercy of the media. More information must lead to greater strength for the individual, and not greater manipulation of his mind by image-builders and propagators of prejudice. Excessive power over the means of communication on the part of a handful of countries is not conducive to real freedom as it affects the right to inform and the right to be informed of people in the less developed countries. UNESCO's constitution asks it to promote communication in

order to foster understanding. In doing so, it is not our desire to put information in any straitjacket to suborn the institutions of others. We support UNESCO's New World Information and Communication Order in order to ensure the participation of all peoples in life-enhancing knowledge.

UNESCO has problems. We know that almost all international organisations are under pressure today because strong nations have tried to bend them to their purposes. There is an unfortunate retreat from multilateralism and internationalism. All who care for a saner and more equitable world order must come to the help of UNESCO in its hour of trial. India will support any constructive effort which will resolve UNESCO's dilemmas. There is no human institution which cannot work better than it is doing. But to turn away from UNESCO is to turn away from universal cooperation and to reject the democracy of international relations in world bodies.

Human history is a story of bondage and freedom, of strife and harmony, of rivalry and cooperation, of aggression and accommodation. As the great Indian saint, Guru Nanak, proclaimed, "Man is born to be free." History is basically the record of man's fulfilment. It is only through acceptance of co-existence through a willingness to preserve the wonderful diversity of the earth, through seeking the new and fusing it with the old, that civilisation built with the bricks of education, science and culture, can be preserved and enriched.

"I shall tell you a great secret, my friend," wrote Albert Camus. "Do not wait for the Last Judgment. It takes place everyday." It is inner strength and repose that help us to survive that judgment. UNESCO must build not only defences against war in the minds of men and women, but defences against dehumanisation.

SOCIETY AND POLITICS IN INDIA

No political institution can be studied exclusively through legal-institutional and historical approaches. Marxian emphasis on the importance of economic factors and the sociologist's concern for the relevance of social variables are, of course, valid but cannot reveal the ultimate truth. In fact, the relationship between politics and socio-economic factors is one of reciprocal interaction. A political system, in fact, is a part of the larger socio-economic system. Thereby politics of a developing country like India, despite institutional similarities, an economy of scarcity and a social system maintaining loyalties to caste, region, language, religion, etc., differs from that of a developed country like England which has an economy of abundance and an

atmosphere of freedom from feudal bonds. There is thus 'incoherence' between polity and society in the new states in the Third World because "under alien rule, society and polity did not grow together in the same way."

The situation has not changed even today. The paradoxical situation of a modern polity operating in a predominantly traditional society still exists. The final outcome may result in a convergence between polity and society but during the transition, Indian politics will continue to be marked by strains and non-political factors. Rajni Kothari has rightly observed that modern political institutions—Parliaments, parties and opposition movements are "simply a super structure over wholly alien culture or is the communication between them showing signs of fusion and interaction".

Tradition and modernity

The Indian political process bears the imprint of both traditional and modern influences. Moris Johns explains the interaction of tradition and modernity in India through three idioms or styles through which the political life in India is conducted. These idioms are: 'modern', 'traditional', and 'saintly'. The modernity of Indian politics is found in the language of the Indian Constitution and the courts, in parliamentary debates, in higher administration, in the upper level of the main political parties, in the English Press and the like.

A great part in Indian politics is conducted in the traditional style. It exists in rural India, where the consideration of caste, tribe, religion, language and region play an important role. The 'saintly' idiom is found 'at the margin' of Indian politics. It is a kind of moral and spiritual standard of judgment and it provides but little of the dynamics of political activity. It is the language of rare individuals like Mahatma Gandhi, Jai Prakash Narayan and Vinoba Bhave who placed principles above self interest or party benefit and to whom moral values meant more than power or influence. This is, of course, not the idiom of today's politician.

Caste in Indian politics

Although caste seems to be declining in importance as a social factor, it is increasing its importance as a political factor because the establishment of a democratic polity has drawn caste beyond the sphere of social relations into the arena of competitive politics. This process started in the beginning of the 20th century during the British rule, but it received a vigorous boost with the introduction of adult franchise under the Constitution of free India. Consequently, caste has become an important factor in the democratic front. This is probably the single factor which has received an elaborate investigation by foreign and Indian scholars. The influence of caste is

felt in varying degrees in all areas and in various levels of government. It is, however, in electoral politics that the impact of caste is effectively demonstrated. All political parties select their candidates with an eye on caste consideration of the constituencies.

Caste has become a major factor in Indian politics because it provides an extensive basis for mobilising support in the elections. Caste clusters in rural India are attractive to politicians who find it immensely rewarding to woo them to get support. But the impact of caste is not uniform at all levels of politics in India. Its impact is maximum at the local level. Thus panchayati raj institutions reflect almost exclusive caste politics. At higher levels of politics, the influence of caste declines because constituencies become larger in area and thus comprise many castes in their social composition. Moreover in bigger constituencies non-personal and secular issues overshadow personal and sectional interests. Caste considerations get diluted at the national level but their impact at that level is marginal rather than decisive.

Moreover, the influence of caste is not universal throughout India. It varies from region to region. Bihar, for example, is known as the most caste-ridden state in politics followed by UP. The mobilisation of lower castes known as Harijans, into politics and the more recent but fast growing assertiveness of land owning middle-castes like Jats, Yadavs, Kunbis and Gujars are manifestations of the politicisation of caste in India. The Harijans have been an exploited lot for centuries but they have become conscious now. The middle castes are the recent beneficiaries of the land reforms and of the Green Revolution. Thus there is confrontation in rural areas of two camps competing for limited resources. The result: violence and atrocities on the weaker sections of society.

Communalism and secular polity

"Religion, like caste, is a social factor which has a profound influence on Indian politics". It distorts the democratic process as it helps in the continuation of semi-feudal relations in the social structure of India. India is a multi-religious state. It is a secular state wherein Hindus constitute a predominant majority and the Muslim population constitutes the second largest number of followers of Islam in the world. It has other religious followers as well like Sikhs, Christians, Parsis, Buddhists and Jains. It is interesting to note that sometimes in rural areas, Hindus, who are in a majority articulate their interests in terms of caste and the minority through their religion.

Communalism is considered to be the malady of Indian politics. It has two dimensions. On the one hand, it means a

narrow and fanatical attitude which leads to hostility among the members of different communities. On the other hand, it involves exploitation of religion for achieving ends which are not religious but essentially political and economic. In other words, communalism uses religion as an instrument of power politics. Communal tensions have a long history in India. The British made use of these tensions by adopting a policy of 'divide and rule' during their regime.

Evidently, communalism is contrary to secular polity. It can be checked by adopting two methods. First, the administrative measures may be strengthened so as to provide quick and reliable means of controlling communal riots as and when they occur. The political system should inspire confidence among the minority without giving them an opportunity to abuse the system for sectarian ends by raising slogans of alleged discrimination or by organised violence. Special anti-riot police force can be of specific help. Secondly, there is a need to cultivate attitudes and orientations consistent with the ethos of a secular polity. There should be an honest acceptance of a separate cultural identity. Each community must realise that all have the right to coexist and live in this country and must give up all claims of superiority over one another.

WHY A 'LEAP' SECOND?

Once every six months or so, the world's standard clocks are stopped for a second to bring them in tune with clocks based on astronomical events such as the movement of the sun in the sky due to the earth's daily rotation around its axis. This is necessary because, otherwise, the time shown by the extremely accurate atomic clocks would drift away from the astronomical time.

Time is often defined as a quantity that can be measured by a clock. But such a definition is ambiguous because it does not specify the type of clock used. Basically there are two ways in which time can be measured. It can be based on the flow of something like sand or water, or it can be based on a repetitive event such as the daily cycle of day and night, oscillations of a pendulum or vibrations of a crystal. The first method, though used widely before the invention of pendulum clocks, is not really suitable for a practical clock. It is the second method which finds use in today's time measuring devices.

The pendulum was the first oscillating system used for making really accurate clocks. The swing of a pendulum makes for an excellent time measuring device. The motion is exactly periodic, adjustable, and can be used to drive a pointer about a

dial to show time. Its only disadvantage is its bulk. It cannot be carried around. The oscillating balance-wheel driven by a spring works just like a pendulum but is more compact and rugged. It is ideal for portable clocks and watches. But, both pendulum and balance-wheel controlled time measuring devices have limitations. They are highly dependent on temperature. An oscillating quartz crystal is therefore more practical. Quartz crystal exhibits a unique property known as piezoelectricity—a rapidly vibrating crystal of quartz sets up an oscillating electric voltage which can be used to show time through a digital or analogue readout. The crystal can be set into rapid vibrations by an accurately controlled oscillating voltage supplied through an electronic circuit from a battery.

Quartz clocks are highly accurate, but not accurate enough for scientific research and space navigation where even a millionth of a second counts. Accuracy of such high order can be provided by an atomic clock which uses the natural vibrations of the caesium atom. Here one can reach an accuracy of the order of about one second in 10,000 years. Today the caesium atomic clock is regarded as the most accurate and is the standard by which intervals of time are defined. According to this standard, the second is equal to exactly 9,192,631,770 vibrations of an atom of the element caesium, which can be measured with the help of a spectroscope. Accordingly, on the basis of this standard second, the day and the year are defined.

Surprisingly, however, the high degree of accuracy of the atomic clock has proved to be a problem, in a way. It is too accurate for our day to day use. Such a paradox arises because our daily life is guided by what is commonly known as universal or astronomical time which is obtained from the earth's rotation. After atomic clocks came into being, scientists found to their amazement that the speed of earth's daily rotation was not constant. It varied in an irregular manner due to a variety of causes such as tides in the oceans, and seasonal shifts of large air masses and ice and snow deposits over the surface of the earth. Over a period of time these irregularities in the earth's daily motion add up and cause astronomical time to deviate and generally fall behind the far more accurate atomic timer. It is to correct this discrepancy that an extra second, or a 'leap' second, is inserted in a day, once or twice a year. The extra second is added by stopping the standard atomic clocks throughout the world for just one second at midnight on either Jun 30 or Dec 31, or sometimes on both days of the year.

BIMAN BASU

POTSDAM: MEMORIAL OF PEACE

Aug 2, 1945: The most momentous agreement of human history was signed in Potsdam, by the representatives of the victorious allied powers. The Nazis had been defeated and now Stalin from Russia, Attlee from Britain and Truman from the US, came together in an epochal agreement to ensure that "Germany will never again threaten the peace of the world".

Other important tenets of the agreement were the disarmament and demilitarisation of Germany, eradication of fascism and all fascist organisations, punishment of those guilty of the war and transformation of the whole life on a democratic basis. It was also laid down that the Oder-Neisse line should be the German-Polish border.

Every year lakhs of people visit Cecilienhof, the memorial of the Potsdam agreement, to renew their faith in peace and democratic values that was sparked off here 40 years ago. When animal savagery threatened to overwhelm man, humanity had asserted itself; and in the face of brutal, inhuman violence, the benevolence of humans had spoken most loudly. Shocking pictures in the memorial relate the nameless crimes of the Nazis. The images in the memorial bring to light the inhuman cruelty of concentration camps, and Hitler's plans of conquest, even as the visitor is informed of the stipulations of Potsdam and of how its implementation had rooted out fascism from Germany—the place of its birth.

Cecilienhof has become the symbol of the ultimate triumph of sanity over insane violence. The documents of anti-Hitler coalition are a living reminder of reason which has lessons for today and as the director of the memorial says: "The Potsdam agreement is a convincing example of peaceful coexistence put into practice. One of the tasks of our memorial is to popularise this knowledge".

MUSICAL MISTAKE

Contrary to the accepted version about Aurangzeb being a confirmed music-hater who had ordered the burial of music, it has now become known that the orthodox ruler had, in fact, banished singing from his court but not the performance of musical instruments. Surprisingly, he was an accomplished veena player himself. And thanks to the patronage extended by Aurangzeb's queens and nobles to all forms of music, the largest number of books on classical Indian music in Persian were written during his reign.

Mizoram's Children (Continued from page 30)

The story essentially revolves around Zoramthangi, a fascinating rustic child-woman. Through her experiences the author narrates the hardships life in Mizoram offers in abundance—the rat menace which causes frequent famines, other natural catastrophes—all evidence of nature's power 'that can be at once beautiful and devastating' and the omnipresent terror of the underground. In fact, the book provides a revealing insight into the clandestine operations of the underground, its modus operandi and the dramatic change in individuals who join this dreaded group.

The IAS officer in the author also surfaces at times when he discusses the measures the government and the police force take to counter the underground's lethal blows. With the result that while one of the book's main characters Ajai Kapoor, a police officer is cast in a hero's mould, Lalthanga, a dare-devil killer of the underground emerges as the clichéd villain of the piece. The book presents a biased view of the situation—with a definite tilt towards the administration.

As far as the depiction of rustic life in Mizoram goes, Bhatnagar has managed to do justice to it. The joy of living is still present among the Mizos even though constantly shrouded by terror and death. Zoramthangi's zest for life cushions the tragic blows of destiny and after each blow she emerges more mature, more capable of handling calamities. And perhaps, what the author wants to convey through his book is summed up in the extract from the prologue:

The moment you enter the school building, a huge board attracts your attention. On it are printed the following words: 'Go placidly amid the noise and remember what peace there may be in silence. As far as possible without surrender be on good terms with all persons. Speak your truth quietly and clearly; and listen to others, even the dull and the ignorant. They too have their story. If you compare yourself with others, you may become vain and bitter, for always there will be greater and lesser persons than yourself. Enjoy your achievements as your plans. Keep interested in your own career, however humble; it is a real possession in the changing fortunes of time. Exercise caution in your business affairs; for the world is full of trickery. But let this not blind you to what virtue there is: many persons strive for high ideals and everywhere life is full of heroism. Be yourself, especially do not feign affection. Neither be cynical about love; for, in the face of all aridity and disenchantment, it is perennial as the grass.'

J.S.

A CLARIFICATION

A few readers have written to us that answers to questions in the test paper of Civil Services Exam, 1984 published in April '85, do not tally with the answers carried by another magazine. All such letters were given to our author who explains as follows:

4. Our alternatives do not give APPLE and, therefore, INSAT 1-B is correct.
5. The dates of different events are
1945 - First nuclear explosion
1954 - Hydrogen Bomb
1957 - Launching of first satellite
1969 - Man lands on the moon
6. Cornage metal.
9. Rupee trade is correct as there is no barter system with the rest European countries. Only with Yugoslavia trade is on normal foreign exchange basis.
13. (b) is correct.
14. Sugarcane takes 10-12 months to mature.
15. Double deal is correct.
22. More water and more fertilisers is correct. You cannot use fertilisers without assured water supply.
35. Any impure milk can cause Typhoid. Cow's milk can lead to Tuberculosis if the cow is suffering from the disease.
37. Stagnation and inflation is correct.
38. The life span of different animals is as follows:

Elephant	-	100 years
Horse	-	20-30 years
Tiger	-	20 years
Wolf	-	10-15 years

39. Mirage-2000 is correct as no deal has been finalised for MiG-29.
42. The question given in CC Times, and in the other magazine do not match.
47. Bhakti cult is correct.
49. Shah Jahan is correct.
52. Chromosomes of the father is correct.
53. The President is correct as the UPSC only selects the persons and does not appoint them.
54. The maximum saving is done by the household sector. Banking sector does not save, it only mobilises.
55. Mixed farming includes rearing of pig, dairy farming, etc. as also farming.
60. Finance Commission is correct.
65. Price rise goes in favour of businessmen.
76. (a) is correct.
79. The dates for three different events
(a) 1526
(b) 1192
(c) 1600
96. (a) is correct.
101. (a) is correct.
102. (a) is correct.
116. William Jones founded the Asiatic Society on Jan 15, 1784. (Source: *Encyclopaedia Asiatic* p. 184 Edition 1976).
121. (a) is correct.
124. (c) is correct.
127. (c) is correct as 1980 was a leap year.
130. (d) is correct.
131. (b) is correct.
132. (a) is correct.
141. (b) is correct. (Source: *Sixth Plan Document, Planning Commission*).

NOTES FROM ALL OVER

America Sobers Down

We are what we eat. But if we accept the latest American indications, we're also what we drink. At least, that's what they believe.

All over America, wine, mineral water and fruit juices are replacing distilled spirits. Trends indicate that the martini, in so many ways a symbol of the American lifestyle, is on its way out. In bars and restaurant lounges, in hotels and at home, the demand is for cool: clear water, iced tea and exotic fruit and wine concoctions. Most Americans are tapering off their drinking habits at a faster pace than at any time since the Prohibition (1920-1933). They're drinking less, they're drinking lighter and they're proud of it.

The trend is a reversal of America's long standing love affair with the bottle. American hospitality was drinking together. Indeed, some said, "The family that sways together, stays together." The movies portrayed most Americans as hard drinkers, whether journalists, truck drivers, actors, businessmen or family men. Alcohol, the social lubricant par excellence, smoothened a business deal, lent a romantic haze to wooing ("winning and dining"), alcohol made one happy and benign, a few drinks livened up a dull evening and loosened tongues.

The new trend away from hard drinking is not a moral crusade. It reflects the changing social landscape in America. People tend to drink differently as they grow older. The 'cool' sixties generation has grown up and mellowed under the burdens of family and career respon-

sibilities. The work ethic of the contemporary young urban professionals ("yuppies") does not allow them much time for drinking. There is little sympathy for those with hangovers and to be seen drunk in public is strictly no-no.

The increasing abstinence is also a reflection of the average American's obsession with physical fitness. "There is no such thing as a fat yuppie," observes the owner of a fashionable restaurant. Alcohol has joined the ranks of sodium and cholesterol, as food items to be strictly avoided by the health-conscious. The 'demon rum' apparently holds more terror for some people than even cocaine.

In their mania for fitness, the Americans jogged, swam and exercised. They ate fresh fruits and salads, wheatgerm and 'nature' foods. And now they're going teetotal. Perhaps it makes them feel pure and clean.

The trend towards temperance is evident in the way increasing numbers of Americans are working, playing and socialising. Their attitude towards their career, health and self-image is bound up in their tipping habits. Even television is attempting to reverse the approach which lent an aura of glamour to drinking by portraying it as "macho, cute and acceptable". Fewer people will now appear on the idiot-box nursing a drink.

Americans are now ordering their bottled water by name as they once did their Scotch. Connoisseurs select their brand carefully on the basis of flavour and fizz. The Italian San Pellegrino has a clear spring-water flavour, the German Apollinaris tastes of minerals, while Perrier of France is neutral when cold.

The consumption of distilled spirits fell from 2.88 gallons per adult in 1974 to 2.46 gallons in 1984, while the sales of bottled water soared. The changing tastes of drinkers, cutting down on quantity and going for quality is no more evident than in the wine industry.

The \$66.4b alcohol industry is facing trouble coping with the new fashion. It took the industry a little time to develop a softer and lighter line of alcoholic beverages to meet the market demand. St Regis, the first mass-marketed non-alcoholic vintage, introduced last year, is already selling briskly. Some 40 brands of wine coolers, carbonated mixtures of fruit juice and gin have captured 5 to 8% of the wine business since they hit the market three years ago.

A store owner in San Francisco estimated that his sales of hard liquor had come down from 70% to 10% in the last five years. Wine and beer account for about 65% and the rest is taken up by bottled water. The results of a recent poll seemed to confirm this trend. About 67% of 170m adults admitted to drinking. However, more than one-third had reduced their consumption while only 6% said they drank more.

Indeed, abstinence has introduced some new drinking and socialising trends. Parties at which people drink less, or not at all, are longer and actually afford opportunities for proper conversations. Bars and saloons are emptying out early—around 1 a.m. Deals are now struck over iced tea and sandwiches, and not martinis or bourbon.

The new sobriety pattern is being helped along by firms penalising employees who drink on the job and by tough anti-drinking laws to combat highway automobile accidents.

Could this neo-temperance mood lead to a new prohibition era? No, not until moderation is exercised and each person is left to do his or her own thing.

Malini Sood, New Delhi

Reincarnation Of Nero

The young Emperor Nero's name has been synonymous with blazé and ruthless deeds. The sadistic Roman Emperor had become anathema to the Roman populace by ordering his mother's execution, persecuting Christians and Jews and committing innumerable savage deeds without compunction.

Roman literature, known well to its victims, has fully avenged its wrongs by

NOTES FROM ALL OVER

painting Nero as a monster of wickedness. In Christian tradition he even appears as the mystic anti-Christ. In the Middle Ages Nero was the symbol of splendid inequity.

Nero's behaviour has come under fresh scholarly discussion due to the light thrown on it by recent study of ancient Roman chronicles, sculpture, ruins and coins. Though Nero is still seen as profoundly ruthless, new research has made him seem more understandable by accentuating the fact that his reign was shaped by his enthusiasm for art and baffling political problems. With this discovery the limelight has now shifted from the ruthlessness of Nero's character to the socio-political problems of the age that made him the man he was.

Stepson of Emperor Claudius and born in A.D. 37, Nero became Emperor at 16 and reigned for a tenure of 14 years. Widely loathed and challenged by revolts, he committed suicide in A.D. 68, bringing to an end the line of the Caesars, begun by Emperor Augustus.

Opinions of the various scholars differ with regard to Nero's personality. Miriam T. Griffin, a scholar at Oxford University, defends Nero by opining that Nero suffered "from a lack of intellectual equipment to deal with the strains of the complex political system" of his day. Her book *Nero: The End Of A Dynasty* depicts Nero as a great connoisseur of art. Experts feel the book has shifted its accent from Nero's sadism to the weaknesses inherent in the Roman political system. Glen Bowersock, a

professor at the Institute for Advanced Study, New Jersey, though fiercely anti-Nero, agrees that Nero's reign was "a great time for literature". Miriam, known for her sympathetic stance for Nero, feels that "Nero was a man of taste rather than intellect" and by the time of his death, she feels, he was losing his mental balance.

A long-held view buttressed by ancient writings has been that Nero's reign started well after his mother, Agrippina, crowned him as the Emperor. His prestige and his good traits were carefully fostered by his able advisers. Yet within one year of coming to power Nero caused the death of Claudius' son Britannicus, who had been expected to become Emperor. And Bowersock argues that all sensational events of sadism only underline his naturally ruthless character.

In A.D. 64 Rome was caught in the grip of a huge conflagration and it is alleged to have been deliberately caused by Nero. In fact, it is alleged that he declaimed poetry (not, as the popular saying has it, that he fiddled) while Rome was ablaze. However, Miriam defends Nero by stating that recent findings point to the fact that Nero was fond of some of his quarters damaged by fire and hence the allegation should be dismissed as a rumour.

What is so novel about Miriam's viewpoint is that she has held inherent weaknesses in the political system of the Roman Empire squarely responsible for Nero's downfall. The light that she has shed on Nero's character has been crucial in changing his image from a "monster of the order of Idi Amin" to "a man of taste".

Nesta Lal, New Delhi

in the north and south of republics, or sometimes the provinces. Unlike *Derrick* or the *Old Fox*, it is not always the same investigator: several are at work, such as Chief Superintendent Stover (Manfred Krug), who likes to emulate Columbo, or Superintendent Lutz (Werner Schumacher), who has been chasing screen bandits around Stuttgart since 1971, and is handicapped by his assistant's chronic propensity for taking offence.

In the Federal Republic of Germany (FRG) some 20m viewers see every instalment of *Tatort*. But also in other countries, particularly Sweden and the Netherlands, a type like Schimanski (Götz George) has many fans. He is one of the new *Tatort* investigators: a rough diamond, a hard hitter who can use his elbows. In the *Old Fox* and *Derrick* set-up, Superintendent Schimanski would be more likely to get the role of the villain.

The Third Pole

They call it the 'Roof of the World' or the 'Third Pole'. The temperatures here dip down to minus 50° with howling and freezing gales from Central Asia that make life of any kind well nigh impossible. Only trained mountaineers dare to trek these desolate heights which have now become an improbable battle ground where the Indian Army's long vigil since 1948 was shattered in the summer of 1984 when Pakistani troops attacked Indian posts in these glacial regions.

This is the Siachen glacier—a vast expanse of drifting ice that rises to a height of 19,000 ft at its head known as Indira Col—located north-west of Leh in the high altitudes of Ladakh. Or means rose in Ladakh. It can be reached through Leh, the capital of Ladakh, from where a road winds through high mountains and later descends into the Nubra river valley which con-

The Scene Of The Crime

Gentle but cunning: Lowitz as Old Fox.

With cautious cunning, TV Inspector Koster, known as the Old Fox, solves intricate cases, is courteous and urbane, turns up at the homes of victims, witnesses and suspects, and TV viewers sense that the investigation is in the right hands. His opposite number, *Derrick*, is likewise not out for quick results. The tall, easy-going detective puts his questions with great circumspection, although there is occasionally something reproachful in his look.

The Old Fox and *Derrick* are among the gentlest—and most popular—heroes of the West German TV network ZDF. Every episode brings 15-20m people to the screen to see Koster and *Derrick* on the trail of the murderers. Even abroad, the crime busters from Mainz are

very popular. The Old Fox's investigations are screened nearly everywhere: all over Europe, in 25 African and 12 Latin American countries, two in the Caribbean and seven in the Middle and Far East (including India). *Derrick*, who has been in search of offenders and their motives for the last 10 years, is also a screen globe-trotter. The countries where he is known include Japan, Australia, Iceland, South Korea, Poland and Czechoslovakia. He is particularly appreciated in Italy, where in 1983-52 instalments were televised on consecutive evenings. Heinz Ugureit, head of the ZDF department for TV plays and films, once observed *Derrick* on Italian television: "He spoke like an Italian, and behaved like an Italian. All at once he didn't look like a German superintendent any more."

What seems to be appreciated about *Derrick* and the *Old Fox* is the gentle touch. They are classified as 'soft crime' series, dispense largely with scenes of violence, take place mostly in respectable circles, and set out to elucidate psychological backgrounds.

Very different from these is *Tatort* (literally: the scene of the crime). The series is generally more violent, has feature film length and goes in for action, which tends to take the form of cars regularly being smashed up. Statisticians have ascertained that per 100 *Tatort* screenings, 40 cars end up - fit for the scrapheap. The scene for *Tatort* stories is set in regularly varying, but constantly recurring, locations—for instance, the Ruhr areas, cities

NOTES FROM ALL OVER

ries the melted water of the Siachen glacier.

The glacier is approximately 76 km long from its snout to the head and is considered to be the longest in the world. It meets the Saltoro glacier at the 24,350 ft high Indian peak of Sia-Kangri which was climbed by Col Narendra Kumar in the summer of 1981. From the summit of Sia-Kangri, Col Kumar had gazed into Tibet, China, Pak-occupied Kashmir (POK), Afghanistan and Soviet Turkistan. Saltoro is described as the second largest glacier in the world and together with Siachen, is known as the 'Third Pole'—being the largest glaciers outside the Polar region.

The borders of the erstwhile state of J&K with Pakistan alone are recognised by the Indian Government. The tribal invasion from the Pakistan border in 1948 and the Indo-Pak war of 1971, when Pakistani troops were further pushed into the territory of POK, left these inhospitable glaciers untouched. Both the Karachi Agreement of 1949 and the Simla Agreement of 1972 terminated the ceasefire line and line of control respectively at a point near River Shyok in Ladakh, and thereafter merely specified "thence northwards to Glaciers".

India had been patrolling these glaciers since 1948, but Pakistan, with the help of vested foreign interests, sponsored a few foreign expeditions through this uninhabited area to establish an illegal claim.

This brings us to the oropolitical side of the

issue over Siachen, especially a political aspect and use of mountains in mountaineering. The demonstration of Pakistani control in Siachen began in a rather novel manner: a 1957 Imperial College expedition under Eric Shipton, mountain-explorer and climber extraordinary, was permitted access to it for mountaineering and scientific research. Unlike British probes during the Gilgit Game, Shipton was no agent in disguise. But the fact that the expedition made its way to the Siachen across Bilafond La, and reconnoitred Saltoro Kangri without let or hindrance, tended to convince foreigners that the area was firmly under Pakistani control. The expeditions that followed with "Pakistani permission" reinforced this opinion. These included expeditions by an international (1960), an Austrian (1961), and at least three Japanese (1962, 1975 and 1976) teams. Between themselves they recorded several ascents of peaks in the Siachen area and further afield.

Thereafter, the Saltoro and Siachen ranges which had been patrolled by Indian troops had now to be physically held in order to prevent Pakistani incursions. The Pakistani designs to substantiate their illegal claims became evident.

WHAT WAS THAT?

While waiting at Jharsuguda railway station for the Utkal Express, I asked a fellow traveller about the train timings. He replied, "Oh, the Utkal Express? Its *aperture* is at 3.50 p.m. and *departure* at 4 p.m."

Mohsin Ali Khan, Sambalpur

assault on our positions on the 'Roof of the World'. Pakistani troops were especially trained and equipped with modern and sophisticated equipment. Officers and men of the Indian Army fought heroically in these hazardous areas and did not give an inch to these aggressors. They in turn inflicted heavy casualties on the Pak Army. The last of these attacks was launched on May 29 when Pakistani aircraft had overflown the area on a reconnaissance mission. This was accompanied by ground clashes which were defeated.

The glacial regions are now an integral part of Indian territory. In June 1985, a 10-member Indo-British expedition led by Hareish Kapadia was sponsored by the Indian Mountaineering Expedition to climb certain peaks in these glacial regions.

Indian troops have defeated the cartographic aggression followed by repeated attacks by Pakistani troops. They are operating at altitudes varying between 18,000 and 22,000 ft. These battles at such formidable altitudes are, perhaps, a record. Logistics pose a severe problem in these areas where the 'chopper boys' of the Indian Air Force along with the pilots of transport aircraft fight high velocity winds and sub-zero temperatures to land and airdrop supplies, evacuate casualties and provide logistic support to the brave jawans. The men of the Indian Army are trained extensively before induction in these altitudes and are also fully acclimatised to combat diseases common in high-altitude regions.

Philately

BANKING ON POSTAGE STAMPS

Afixing a postage stamp (of the required value, of course), on a letter denotes payment of postal fees and is, therefore, a kind of passport to its destination. Traditionally, this has been the function of postage stamps. Over the years, however, they have come to acquire a significance of their own. They commemorate special events in the life of a nation, its celebrities in various spheres, and depict the significant aspects of its culture and economy.

The role of banking in modern life being what it is, it is small wonder that stamps should fea-

ture it. The first stamp on banking was issued by Sweden in 1934 to mark the 50th anniversary of the Swedish Post Office Saving Bank. At least 35 countries have since depicted bankers and banking on their postage stamps. The stamps on banking have motifs which are symbolic of savings namely nut trees, nests, squirrels, bees, ants and passbooks.

Various banking anniversaries have also been honoured with commemorative stamps. The 1950 US commemorative stamp for the 75th anniversary of the formation of the American Bankers Association is the oldest among the American stamps on

banking. In 1967, Australia issued a stamp showing old vault keys and a modern vault lock to commemorate the completion of 150 years of banking on the continent. Some of the best designs of stamps were those issued by a number of African nations in 1969 to mark the fifth anniversary of the African Development Bank. Rwanda featured reproductions of medieval Flemish paintings depicting bankers and their wives. Kenya, Uganda and Tanzania issued a design showing the Uprobia tree, the emblem of the African Development Bank.

National Banks of many countries have often featured on stamps; mention may be made in particular of Pakistan, Turkey, Syria, Mauritius, Nigeria and Malaysia. Bankers, too, have been honoured on many stamps. Amadeo P. Giannini, founder of the Bank of America, was honoured with a US stamp in 1973. Jacob Fugger the Rich was portrayed on a German commemorative stamp issued in 1959 to mark his 500th birth anniversary. (Fugger financed Kings and Popes of his time in 1915 he established the Fuggerei, a philanthropic foundation which is operating to this day.) Belgium issued a stamp in 1966 honouring its celebrated

banker A.N. Janssen.

The latest banking stamps are from Sweden again. To celebrate the centenary of the Swedish postal savings they issued three stamps last year depicting old post office savings symbols. From a modest start postal savings have grown to a comprehensive activity of great importance to millions of people and to the economic life of Sweden. For a long time the postal savings bankbook account was the only type of savings account. But gradually new bank services were introduced. Among them, the Postal Savings Bank made a pioneer effort in collecting savings by automatic paycheck deductions. Over the years, the post office staff of Sweden have worked hard for the postal savings cause. The postal savings movement has had different organisational forms at different periods. Since June 1974, when the Postal Bank and the Credit Bank of Sweden merged into the PK Bank, the PK Bank has administered the movement in close cooperation with the post office.

The stamps on banking issued so far by various postal authorities throughout the world help us in gaining knowledge of world history of banking in an entertaining way.

Tapan Roy, Howrah

MONKEYS OF INDIA

No country has such an ancient and close association with monkeys as India. Over the vast spread of Karnataka, there are innumerable shrines to Hanumanthadevara, the monkey god celebrated in the epic, the Ramayana. These shrines, besides being live centres of worship, serve varied social needs in remote areas. And outside Karnataka, indeed, all over India, monkeys are still tolerated and indulged even in places where they are a problem to people.

We have only one ape, the hooklock gibbon whose habitat is limited to the extreme north-east, but we have many monkeys, and all belong to two large families; they are all either macaques or langurs. That may sound rather technical, but actually the difference between the two is quite apparent.

Macaques are thickset and (except for the bonnet monkey) short-tailed: they have cheek-pouches into which they stuff food, to be chewed up at leisure, and compared to langurs they have well-developed muzzles. They are omnivorous, and though mainly vegetarian, also hunt insects and such other small prey as they can. The rhesus, the familiar *bandar* of north India, is typical of the macaques.

Langurs, on the other hand are tall and gracefully built, and have long muscular tails: they have no cheek-pouches and have flat faces, encircled by whiskers. The long hair of the crown forms a shading peak low over the eyes. They are all vegetarians, so heavily dependent on foliage and leafbuds for their subsistence that they are also called 'leaf monkeys'. The common langur, found all over India, the big, grey, black-faced, long-tailed monkey called Hanuman in the north (more about the aptness of this name later) is quite representative of its tribe.

Though we have a good many monkeys, only three belong solely to us: the bonnet and lion-tailed monkeys (both macaques) and the Nilgiri langur. All three are south Indian, and the last two the only black monkeys of India.

Our best-known monkey, in fact the best-known monkey in the world is the rhesus, because it is a suitable substitute for mankind in testing the efficacy of therapeutic drugs, and in assessing the course of diseases, it has been universally used in experimental investigations. The 'Rh' in the term 'Rh-factor' (so important in blood grouping and human genetics) stands for rhesus.

The rhesus is also to be found below the Godavari river in south India, but its main home is the great tract above the river extending right

up to the Himalayas. It is predominantly Indian, but is also found outside, in Burma and southern China. It is common in small parties and troops in most open forests, but it is where people assemble in crowds, as at some shrines, railway stations and bazaars, that it is to be seen in a regular battalion, made up of several troops. In such places it depends for its living on human charity and negligence, scrounging for food and sometimes even resorting to robbery. It is also in such places that it attains its most robust development, human food evidently being more nutritious than what it can get in the forest. The rhesus is equally at home up on the trees (or the spires of shrines) and on the ground and is a strong swimmer, taking freely to water.

In and around the north-eastern state of Assam, extending into countries beyond, there are some macaques that are obvious cousins of the rhesus—the stump-tailed, pig-tailed and Assamese macaques. These are bigger than the rhesus and shorter in the tail, but they also have grey-brown coats and reddish facial skin. South of the Godavari river, right down to the southernmost tip of India at Kanyakumari, the bonnet monkeys replace the rhesus. These two are the only Indian monkeys given to haunting human settlements in large numbers. Though they are of much the same size and both grey-coated and red-faced, the bonnet monkey is unmistakable, its long tail and flat crown of radiating hair, neatly parted in the middle, being so distinctive. It is at some shrines (Tirupati, for instance) that it attains its best size, and in such places gathers in large numbers and begs and steals for its living.

The lion-tailed monkey has a very restricted range, limited to the shola forests of the Western Ghats. Overgrown by its limited habitat preference and to its being intensively hunted by poachers, it was seriously in danger of extinction. Strict protection has saved it, though it is still rare. It is a strong monkey, jet black, with a great mane of pale grey hair surrounding its head in a massive halo. Its short tail ends in a slight tuft, which its old dominant males, forms a tassel—the prefix 'lion-maned' would have been far more appropriate to it than 'lion-tailed'. It is gregarious, living in troops, and highly arboreal, and though all

macaques eat some animal food, it is the most assiduous hunter of them all—insects and grubs scraped from under the bark of trees, lizards and tree snakes (including the poisonous green pitviper), are all eagerly hunted. But its main sustenance is provided by wild fruits, buds and leaves.

The common (grey) langur is the only monkey with an all-India range. It may be seen from the foothills of the Himalayas to the southern tip of India. At one time it was even suggested that the fabulous Yeti might, perhaps, be some gigantic variety of this langur that had taken to the high snows. The grey langur lives in troops, and favours open, rocky forests. In places, as at Bhatian in the Sariska Tiger Reserve in Rajasthan, it assembles in troops at shrines, but never pesters people the way macaques do. It is, like others of its tribe, a vegetarian and does not enter water. It is well known for its keen sight and its rasping, compulsive alarm calls at the sight of predators such as tigers or leopards.

All over the north, the grey langur is known as the Hanuman, which seems to be a misnomer. The Puranic figure belongs very much to south India, and everywhere in the south it is the bonnet monkey that is specifically depicted in classical carvings and graphic depictions of the monkey-god.

The Nilgiri langur favours much the same rain forest, and sholas as the lion-tailed monkey, and is limited to the Western Ghats in Tamil Nadu and Kerala. However it is by no means limited to the Nilgiri range as its name might suggest. It is also jet black, with the crown and spine whiskers brownish grey, but even in the gloom of a shola forest is easily distinguishable from the lion-tailed monkey by its much longer tail and its much more energetic and noisy movements in the tree-tops. It is given to bounding along high branches and to prodigious leaps from tree to tree. The common langur, too, indulges in such leaps at times. Like the lion-tail, the Nilgiri langur was also hunted to rarity, but with adequate protection it has recovered much more rapidly, mainly because it is more adaptable and more enterprising in taking to "fresh fields and pastures new". Today it is to be found even in mixed deciduous forests, as in the Annamalai and Mandanthurai sanctuaries. It is especially fond of flower buds and leaf buds, and will vent even dry forests in search of such titbits.

Two other langurs that might be mentioned here have an extremely limited distribution in India—only along the north-eastern border of the country. Along the border with Burma and with Bangladesh, there is the capped langur, jet black grey and arched, with the stiff long hair on its forehead not forming a shading peak above the eyes but sloping upwards in a crest over the crown. The beautiful golden langur occurs along the Bihar border, and is related to the capped langur taxonomically, though it looks very like a common langur which has such a lustrous crown and whiskers that its ears are hidden. It is black-faced and its hands and feet are also black-skinned, but its coat is golden yellow, darkening to red-gold on the flanks—when the sun hits its coat, its opulence is eloquently displayed.

Kenwords has had a long innings on these pages. How about training your mind to play other games? Games that could be equally amusing—and infuriating.

All you have to do here is look for the names of 22 authors (all English and American) *plus* the title of one book by one of them hidden in

the grid. They have been set horizontally, vertically or diagonally, forwards or backwards. No letter has been used more than once. The following clues should make your job easier:

1. Suffers from chronic colds and shakes.
2. He's a meek one.
3. The grass is greener on the other side of the citadel.
4. A 'ton' who hands out fives and sevens.
5. He is the tough one.
6. He believes in quick travel.
7. The way the bell tolls.
8. The butler of the woods.
9. The law of the jungle prevails in his yard.
10. What a shame, he's always in such a hurry.
11. Life's as exciting under the sea as it is around the world.
12. My fair lady.
13. She claims to have advised Atlas under a fountain.
14. Cure for hunchbacks, go down and!
15. Machines or wells, it is the shape that counts.
16. Just let the car roll!
17. Heard of canyon with looks?
18. Is it or is it not a marked tin?
19. He found his goliath in the copperfield.
20. He believes in triple chivalry.
21. She is the prejudiced one.
22. Whenever she says 'mama' it sounds like 'nana'.

● Though all your entries will be included in the draw of lots, you will be entitled to only one prize—the highest in case you're getting more than one.

Closing date for the contests: September 25.
Address your entries to: The Editor, Career & Competition Times, 19 Daryaganj, New Delhi-110 002.

Solutions in November.

RED DREAD

A story about Russia's late Chairman Leonid Brezhnev tells of the time when he took his mother on a tour. First he showed her his luxurious flat in Moscow, then they travelled by a chauffeur-driven car to his 'dacha' near Ussovo. Afterwards he arranged for a helicopter to fly them to his hunting lodge.

Throughout the day, the old lady said little and seemed strangely ill at ease. Finally, in the banquet hall of the lodge, Brezhnev turned to her and said, "Tell me mother, what do you think of it all?"

"Well, it's very nice, Leonid," she said after a moment. "But what if the Reds come back?"

Anuhsya Krishna Pattanaik, Banpur

THE WEIRD BEARDS

Since antiquity man has sported a beard in various shapes, sizes and fashions—during different periods in history. The beard has been a symbol of maturity, wisdom and age. It is also associated with manhood and virility. Today it has even come to be associated with intellectual depth. It is not uncommon for an artist or a poet to groom and sport a stylish beard.

Alexander the Great ordered his army men to shave off their beards. He was just trying to be practical; according to him, a man might be seized by his beard by the opponent in hand-to-hand fighting. However, some historians are of the opinion that the real motive was to emphasise the distinct character of his subjects.

In the 18th century, Peter the Great not only shaved off his own beard but ordered that of those who kept beards be taxed. This was because of modernising Russia. However, Lenin, the leader of the Russian revolution wore a quarter-moon beard. Since then the beard has also become a sign of revolutionary fervour in the man who wears it.

In the 18th century, Peter the Great not only shaved off his own beard but ordered that of those who kept beards be taxed. This was because of modernising Russia. However, Lenin, the leader of the Russian revolution wore a quarter-moon beard. Since then the beard has also become a sign of revolutionary fervour in the man who wears it.

The beard has also served as a disguise for many murderers, swindlers, scoundrels, crooks and thieves. Also a patriot like Netaji Subhash Chandra Bose grew a beard to disguise himself as a *pathan* when he escaped to Afghanistan.

The beard has also been a symbol of prestige, so much so that men have suffered untold afflictions, to retain their beards. In 1185 when Prince John of England ordered that the beards of Irish chieftains be plucked, many chieftains resisted and even died fighting for the cause of their beards.

Sir Walter Scott's grandfather swore that he would not shave off his beard until the Stuarts were restored to the throne of England. All his property was confiscated but he preferred to retain his beard.

Viva la beard!

Michael R. Patrao, Mangalore

HANGING BY A THREAD

If you were a spider you would. All spiders produce silk, whether they make webs or not. The spider's elaborate web is made from sticky silk, which is what traps the insects. The silk is also used to wrap up its eggs, and acts as a life-line for a spider that falls from its

home. Young spiders also use silk to make gliders. They let a strand of silk blow in the breeze until it whisks them up into the air. Drifting spiders have been caught thousands of feet up in the air.

The silk that is used for so many purposes is produced in the spider's abdomen. The silk glands open through tiny pores near the spider's hind end. The silk, which is liquid at first, is pushed out, and it hardens as soon as it meets the air. Another gland secretes gum to make it sticky.

Star And Careers

VIRGO

If you were born between Aug 22 and Sep 21, the Sun at the time of your birth occupied the sign Virgo. You are discriminative, critical and fastidious. The keynote to your character is a practical mentality. There is nothing haphazard and superficial about you. You are painstakingly thorough, methodical and exact. Your critical and discerning faculties are well-developed. Good service is your aim in life and you set about it in an intelligent way. You learn easily and are interested in all intellectual matters. You are trustworthy, decent, quiet and modest. You are usually gifted with considerable artistic and literary taste, but artistic endeavours are difficult for you as you cannot put the needed emotional expression into them. As a rule, you are slow to anger, but when hurt by others, you are slow to forgive and capable of long-sustained resentment.

You are dedicated to your work and exceptionally industrious. You even like routine work and are the sort to stay in the same position for a long time. You can make great sacrifices for the sake of an ideal or goal. You have a deferential nature and do not stir up antagonism in seniors. You may have many ups and downs in your struggle for security, but you will come out on top through effort and hard work.

You are discriminating in your choice of friends and are often shy and retiring, making few friends. You are quite particular about whom you meet socially. You are a good friend.

Your steady qualities inspire admiration and respect from all those with whom you come in contact. You accomplish whatever you set out to do because you stick to your job no matter how long it takes or how tiresome it is.

The coming year will be a much better year for you than 1985. Career and finances are likely to brighten up. If you are completing your education in 1986, jobs will be knocking at your door. However, from the first week of September till about the end of October 1985, you are likely to be misunderstood unless you are discreet in what you say and in your criticism of others. Your health may also need greater attention. In the academic sphere, guard against becoming overconfident. Money matters may cause problems from October end to middle of November. The period from middle of December to middle of March next year promises resounding success in educational activities, career and financial affairs. From middle of March to end of April your health may need more careful attention. From May onwards you are likely to make steady but sound progress. Your financial position is likely to improve and some notable person will come forward to boost your career. *Lachman Das Madan, New Delhi*

DESIGNED FOR YOUR SUCCESS

CCTIMES **VOLUME '84**

Here come 12 information-packed ready-reference issues of CC Times in an attractively bound volume covering every single ingredient for your success!

There are simply no tricks to INSTA-MEMORY

once you master
its simple secrets,
the results are
simply amazing...
automatic...
instant...
permanent.

The trouble with most memory systems is that they try to train your memory without removing the mental 'road blocks', without activating its inherent power, without giving it a chance to come into its own. The result usually is disaster... no real gain beyond (perhaps) a bag of memory tricks for after-dinner entertainment.

INSTA-MEMORY is Permanent Memory. Because Insta-Memory does not give you awkward and troublesome memorization gimmicks. Instead, you'll learn the Extrasensory Instant Recall Technique that literally turns your memory into a power-packed mental magnet... makes forgetting virtually impossible.

INSTA-MEMORY is Automatic Success Power. In just a few hours after you master the simple Insta-Memory secrets, you'll be able to instantly memorize 20-digit numbers like 18765439086543214569 and recall them effortlessly a month later. Remembering telephone numbers and names will be no trouble at all.

INSTA-MEMORY is Effortless Memory. Insta-Memory requires no energy-draining efforts... no memorization... no word associations... no key words... no will power... no positive thinking tricks. In fact, no super-human efforts on your part!

Institute of Human Dynamics is a division of
Business Development Associates.

INSTA-MEMORY is Result-oriented Memory. Insta-Memory will help you to master...

- Fool-proof Cure for Forgetting
- Secrets of Extrasensory Instant Automatic Recall
- Techniques of Automatic Mind Search and Memory Scanning
- Art of Controlled Intuition and Mind Storming
- Ways of Strengthening Powers of Observation
- Craft of Instant Speed Reading
- Winning 'Exam Secrets'
- Public Speaking without Nervousness
- Dynamic Personality and Confidence Building
- Secrets of Extrasensory Perception

Plus, a whole wide range of tips on how to gain greater success, prestige, popularity and recognition.

INSTA-MEMORY—a U.S. Best Seller at Rs. 120/-... now yours for less than 1/2 the original price! Thanks to our exclusive association with the New York Institute of Personality Development, we are now able to offer you INSTA-MEMORY at 1/2 the original U. S. price (\$15). It will cost you no more than the price of a medium-priced briefcase: only Rs. 54/- (plus Rs. 6/- for postage, packing, handling). And you've our 7-day Full Satisfaction Guarantee—you pay nothing if not absolutely delighted!

Amazing Testimony about Insta-Memory—straight from U.S.A.

"I have had tremendous improvement in my job... my superiors are astounded with my super memory."—Mr. H. D. (New York)

"After going through your course I am a very different person!"—Miss P.K. (Bombay)

"Insta-Memory has helped me to gain a new type of self-confidence!"—Mr. S.P. (Pune)

INSTITUTE OF HUMAN DYNAMICS
(CCT-1) 3/305 Navjivan Society,
Lamington Road, Bombay 400 008

Yes! Please rush me your astounding INSTA-MEMORY Course by V.P.P. I will pay postman Rs. 54/- (Plus Rs. 6/- for packing and postage.)

I understand if I am anyway dissatisfied, I shall return the course within 7 days for a full refund (less packing and postage)

NSB **Your Course** **to a Career in** **Banking**

Bank Recruitment tests are considered toughest among the objective competitive exams. Examination blues and jitters are not an uncommon spectacle at Bank Recruitment exam halls.

In these intensely competitive exams—and particularly those of Bank Probationary Officers'—what ultimately leads you to success is not only how well you prepare before the exam, but also how well you gear up yourself to think spontaneously while you are in the examination hall. What a candidate, therefore, needs most is the **TOP OF THE WORLD FEELING**, before and during the exam in the examination hall.

NSB accomplishes exactly this critical task. A candidate, who studies thoroughly, our specialised Books and materials,—developed and perfected over the years—can alone marshal his mind and thoughts to accept the gauntlet and challenge of the P.O. examinations. Besides, our unique and well-known achievement of having succeeded in building a parallel Question Bank, years of specialisation and research, analysis and on-going study of P.O. exams, their changing patterns—and timely revision of our Courses—is what has enabled NSB to fully unravel the mystery of Bank P.O. exams and place our students—and

resultantly NSB—on the Top—as a coaching Institute of All-India repute and unrivalled distinction.

No wonder our students join Banks as Probationary Officers and Clerks, in their thousands.

TECHNOLOGY SPECIAL: A comprehensive feature on the technological aspects of nuclear energy, computers, ocean development, environment. Plus the state of Indian technology • **CAREERS:** LAW: Detailed information about the job avenues open to law graduates • **JUDICIARY VS LEGISLATURE:** Discussing the numerous aspects of such confrontations • **HOW TO MANAGE MANAGEMENT-2** • **HOW TO TACKLE CAT-3** • **DATA INTERPRETATION-3** • **SPACE-3.** Plus our regular features.

LETTERS

Police The Police

In India we need a police to police the police.
Lalitendu Panda, Calicut

Best Letter: Rs 40

Is Peace Divisible?

Our country which preaches peace to the rest of the world doesn't find peace in her own land. Ironical indeed!

A. Rajeswari, Hyderabad

Prize-winning Letter: Rs 25

United We Stand

If our dictatorship is dangerously foolish, could Indian democracy praise it by nuclear retaliation? If the Indian people are democratically united and socially committed our freedom will be guarded by the last Indian alive.

Manojkumar Bhatta, Ahmedabad

Unity is bound

Towards prosperity we are bound.

Unity is needed in every activity.

And that unity, may even lead to creativity.

Unity is needed for prospering minds.

Unity is seen in persons affectionate and kind.

In the world unity we have to bind.

Then a true, real, happy life we will find.

D. Chattenathan, Guntakal

Arms To The Fore

The extent to which arms are being accumulated by the superpowers is unfathomable. And now, President Reagan is unwell—his stars are warring (Star Wars) with each other. In the midst of this tension and anarchy, the peace programme 'Eureka' launched by President Mitterrand of France is a good gesture. All the countries should join hands to promote this promising programme.

Yogesh Kalra, New Delhi

Our world is now in the midst of an arms race so fierce that it has no parallel in history. Perhaps, our tussle with destiny has a nuclear dimension.

C.M. Bhatt, Ahmedabad

We could not have expected a better tribute from President Reagan than his Star Wars programme, on the 40th anniversary of Hiroshima.

Pradip Samantasingh, Erandiaswar

"If you want peace, prepare for war." The proverb holds true today. Reagan's fight to keep world peace will be much more effective than Rajiv's method of peace keeping.

Himadri Dasg, Calcutta

Chipko Parallel

Talking about the Chipko movement (*Did You Know That*, Aug '85), way back in 1787, in the reign of Maharaja Jodwant Singh II of Jodhpur, Amrita Devi, a brave Bishnoi lady, protested against the cutting of trees by the Maharaja's soldiers. She clung to the trees along with her two daughters. The

three were axed to death. At the same time 363 Bishnoi men, women and children met with the same fate. The Maharaja, on hearing this, immediately ordered his men to stop cutting the trees.

Shamim M. Khan, Jodhpur

Youth Triumph

Victory of Boris Becker (17) and victory of Geet Sethi (24) indeed are a triumph for the International Youth Year.

Manikrao N. Patil, Thane

Congress Centenary

The Congress(I) is busy celebrating the 100th year of the formation of the Congress Party. But the fact remains that the Congress(I) doesn't form the main body that brought India freedom. The erstwhile Indian National Congress (INC) subsequently broke up into a number of parties. Basically, all the leaders of the country are Congressmen.

Rajesh Kalra, New Delhi

Woman President

Milka Planinc is, at present, the President of the Federal Executive Council of Yugoslavia. Her position corresponds to that of a Prime Minister in some countries.

Yugoslavia Embassy, New Delhi

Population Explosion

Motivation should form the basis of family planning programmes, both at the national and international levels (*Population: Its Various Dimensions*, Aug '85). Otherwise our world, as Rebecca West warned, may become an 'over-crowded slum'.

S. Rajee Swaminathan, Allahabad

The present generation has an edge over the past generations in two important ways. Firstly it, has the largest number of living beings. Secondly it has the largest number of lethal weapons to exterminate mankind.

Jaetendra B. Joshi, Bhavnagar

I was delighted to read the article *Population Its Various Dimensions* (Aug '85). The article was, completely laden with facts and figures and threw light on every aspect of the problem.

Ranajee Sharma, Howrah

Terrorism's Motto

"Neither live nor let live." This is the updated version of "Live and let live".

Jai Jai Chaudhary, Nainital

Apropos *Hello Folks* (Aug '85) on terrorism, preading for cooperation in this world is like building castles in the air. Terrorism will lead us to the road of annihilation only if we failed on the domestic front also. Hence it's high time we solved our own problems like poverty, regional imbalances, etc.

Prabhat Kumar, Patna

Twisted Development

Development: all around indeed—population, pollution, corruption, terrorism, violence, etc. We

certainly are a developing nation.

Rakesh K. Agarwal, Kanpur

Punjab Tangle

Chandigarh is to be transferred to Punjab, the river waters sharing problem has been entrusted to the Supreme Court and several other cases under dispute have been given to commissions etc. But, whether these steps would strengthen the unity of India or that of the Khalistan movement is yet to be seen.

Vinod Kumar Singh, Gonda (UP)

Partisan Laws

The article on the Supreme Court's decision scrapping the domicile requirement for admission into medical colleges (Aug '85) brought to light the partisan laws that were detrimental to the hopes and aspirations of deserving students and violated the right to education, employment and free movement.

Kandarp Jani, Surat

For The Governor

Why should the Governor's post be abolished when he has a lot of work to do like making speeches, hosting dinners, laying foundations, toppling governments, etc?

Nearaj Anu Jha, Patna

Sheer Callousness?

We often read about tight security arrangements for VIPs. But what is the government doing about the safety of common people?

Rajeev Jhingan, New Delhi

Hi-Tech India

Surely 1985 will go down in history as a year of resolutions, agreements and accords! Is our PM keen on introducing hi-tech in politics also?

K. Phani Raja Rao, Anantapur

Why do we tend to think of hi-tech only in terms of computers and robots? (Aug '85). With India's increasing population, we need to increase our food production and in such fields, hi-tech can play a crucial role. For instance, weather forecasting through satellites, genetic engineering giving rise to quality seeds and high productivity seeds, chemical fertilisers, scientific methods of irrigation, etc., can increase food production resulting in more employment opportunities in the agricultural sector.

Ali Akbar Teharally, Madras

Why do people cry for such minor things like water and food when our PM is giving us TVs and computers?

P.K. Amoorkar, Dist. Aurangabad, Maharashtra

QUANTISLIP

In Quantitative Aptitude (Jul '85), read 80 instead of 80 π in Q. 4 and 10^{-6} instead of 10^{-7} in Q. 7. Also the answer to Q. 11 should read as (d); the solution:

$$\frac{L^2}{4} - \frac{1}{4} \pi \frac{L^2}{4} = A \text{ or } A = \frac{L^2}{4} \left(1 - \frac{\pi}{4}\right)$$

which gives $L = \sqrt{\frac{16A}{4 - \pi}}$

Hello folks...

A country of 748m is dazed and finds itself hamstringing, shattered and ineffectual because of the activities of a small, misguided group of persons who are under the influence of the criminal minded god fathers. In no time in history did the nation feel so dejected as it has in the last 10 months. The period may go down as the 'darkest period of the 20th century.' In the five major happenings—Indira Gandhi's assassination, bomb explosions in May 1984, the downing of Air India's Jumbo *Kanishka*, Lalit-Gitanjali Maken's murders and the assassination of Sant Longowal—what the terrorists will achieve ultimately is known only to their godfathers.

For us, three things are clear. Firstly, the terrorists have a sound knowledge of history and have linked their misdeeds with important historical dates: explosions in May were on the day Indian sepoy revolted against the Britishers; *Kanishka* exploded in the air on Sanjay Gandhi's death anniversary; and the Makens were murdered exactly nine months after Indira Gandhi's killing. And the Sant was shot dead on Rajiv Gandhi's birthday.

Secondly they are well trained, well-supported and well-linked by and with certain powerful vested interests inside and outside the country. The way they plan their strategy, implement it and disappear into thin air indicates that some shrewd minds are backing them.

Thirdly, to say that the terrorists are motivated by a religious fervour is absurd. The way they have been operating proves that they are least concerned with religion and their operations will never fulfil any religious cause.

A terrorist, a supporter of violence and intimidation especially for political purposes, is not motivated by an ardent con-

cern for human welfare. He is remote controlled and, more often than not, does not know whom and what he is working for. Brain washed and usually drugged he becomes a sadist. Many terrorists who have been arrested have proved this theory.

For whom is the Sikh terrorist working? Definitely not on behalf of Sikhs in India. Every Sikh in India knows that he cannot benefit by isolating himself from the Indian mainstream. Being a farmer, trader, industrialist or warrior, he knows that he needs wide support and a broad area to operate. He would lose economically if his area of activity were to be narrowed.

The large section of Sikhs settled abroad could not be behind the terrorist activities. They cannot benefit if the turmoil and the terror-stricken atmosphere in Punjab continues since a bulk of their relatives and even families live there.

It is, therefore, not difficult to understand who is supporting the terrorists. World history is replete with examples where terrorist activities have been deliberately used by countries to destabilise the political and economic set-up of another country. It is only when powerful foreign nations are supporting the terrorists that their control and arrest becomes difficult. Terrorism is an indirect and unannounced war. The American experts call it low intensity war and have used it widely to dethrone governments.

There is sufficient evidence to believe that certain foreign powers are patronising the terrorists. The RAW had prepared a report in 1984 detailing extensively the Pakistan connection in Sikh terrorism. It gives an accurate datewise account of Pakistani involvement till the time of Operation Bluestar. Indian agents from the IB have trained themselves in Pakistan posing as Sikh extremists. In fact, Sahebzada Yakub Khan, Pakistan Foreign Minister, was shown numerous files on the Pakistan connection.

The American and European governments are contributing in various ways. Commando schools, for centuries, particularly Frank Compton's in Alabama, are quite well known. Canadian newspapers are carrying advertisements offering mercenaries \$1,250 per month to train people in the use of weapons and combat techniques to "help them take over the state of Punjab in India." The photographs of a training school in British Columbia were given to the Canadian Government by the Indian Government. The latest reports are that the Sikhs are being trained by the IRA in sabotage

techniques. The terrorists are openly buying sophisticated arms from West Germany and Switzerland.

More alarming are newspaper reports from England that the young extremists are receiving encouragement from the Conservative Party, if not from the Conservative Government. This was evident at the recent annual meeting of the Anglo-Asian Conservative Association held in the Conservative Party office. In return, a number of Tory leaders have been honoured with *Sarapas*.

Why should the foreign powers be interested in destabilising India? It is an old design. M. Rasgotra, the former Foreign Secretary has written about a US State Department policy paper (in 1950) expressing fear that the vigour and inflexibility of India's attitudes and policies, if not controlled, could make India Japan's successor in Asian imperialism. The fear seems to be coming true! The US views India as "a major power in Asia."

The developed countries are not in a happy economic situation. Their rates of economic growth are either falling or stabilising at low levels. This is due to demand saturation as almost everyone has everything, even much more than what he and his family needs. These economies have also become high cost economies and, therefore, their exports are no longer competitive. The expanding markets are in Asia and Africa and many of these markets are not favourable to the US. Because of its support to Israel, a large number of the US manufacturers, like Coca Cola, cannot sell their stuff in Islamic countries. China, considered a potential market and explored by the US during the Nixon Administration, has not shown inclination to give a long hand to the Americans.

India has a huge domestic market. Imagine the sales if each Indian spends an additional Rs 10 per year... Rs 748 crore. The country has also developed a strong infrastructure, an army of well-trained and highly skilled manpower and has achieved a breakthrough in computer and electronic industries. With a diversified industrial set-up, Indian goods are welcome in the international markets.

It is an old strategy that if you want to hit the economy of a country, paralyse its government. That is exactly what certain foreign powers are doing.

Let us now turn to the...

TEST YOUR WORD POWER

BY AYCEE

The per-fect WORD. Is it on the tip of your tongue or is it hidden in the back of your mind? Either way, we agree, it's an eloquent problem.

And so each month we bring you this column, tailor made to suit your requirements. Twenty new words complete with their meanings and usage.

But what's so unique about our word power exercise? The 20 sentences are information-packed and fact-laden—facts which are often not easily available. A weighty two-in-one package, wouldn't you agree?

Tick the word or phrase you believe is *nearest in meaning* to the key word:

1. **amenities**: A: general pardon B: changes in the wording of a law C: something that makes life easy D: peaceful living
2. **blight**: A: pitiable condition B: cry of a sheep C: moral defect D: evil influence
3. **choke**: A: to block up B: bite noisily C: throw up D: cut into pieces
4. **diminutive**: A: lacking intelligence B: unusually small C: very slow D: lacking in spirit
5. **elate**: A: to make happy B: compel to leave C: select D: cause fear
6. **espouse**: A: to support B: catch sight of C: avoid D: consider
7. **forum**: A: exchange of views B: conference for discussion of a subject C: any place for public discussion D: wooden structure
8. **furor**: A: confusion or disorder B: punishment for wrongdoing C: bitter protest D: a fit of great rage
9. **hoax**: A: stupid act B: an act intended to dupe C: innocent deception D: practical joke

10. **hum**: A: to sing with closed lips B: lower the dignity of C: sigh D: cling to
11. **intemperate**: A: savage B: irrational C: uncompromising D: flexible
12. **intrepid**: A: cowardly B: fearless C: lethargic D: humble
13. **pelt**: A: to strike with missiles B: harass C: crush D: push hard
14. **perpetrate**: A: to commit a crime B: keep safe C: continue to do regularly D: punish cruelly
15. **prosecute**: A: to start legal proceedings against B: denounce C: expel D: declare
16. **quadruple**: A: to make four times as much B: divide in four C: dance in fours D: make a four-sided figure
17. **ravine**: A: deep narrow valley B: enthusiastic praise C: unreasonable anger D: large black bird
18. **rubble**: A: disorderly crowd B: bits of broken stone C: low-lying area D: flat, broad piece of wood
19. **serf**: A: slave B: angel C: junior person D: white foam
20. **skirmish**: A: fierce argument B: trickery C: small battle D: woman's garment

(Answers on page 53)

THOUGHTS

Prisons are big business in the US. At times prisoners are used for committing crimes. They are never caught because they are supposed to be behind bars.

Adil Shahryar in *The Hindustan Times*

"Writing a poem is like a short love affair, Writing a short story like a long affair, Writing a novel like marriage."

Israeli novelist Amos Oz, in *The Sunday Observer*

Unfortunately the electoral battles are usually fought without gloves.

I K. Gujral in *Indian Express*

The enemy of the rich is not poverty but sufficiency.

Jeremy Seabrook in *The Guardian*

Democracy claims to be a superior and civilised system because it counts heads instead of breaking heads. In India, the counting of heads has been followed by the breaking of heads. This drives home the lesson that democracy and elections are not enough. There must be a basic consensus in a society if it is to survive peacefully, and the majority must be able to carry the minority with it, at least in terms of principle. If democratic elections are seen merely as devices used by the majority to hit the minority on the head, all hell will break loose. Policies are needed which will weld together different sections of society and give them a national sense of purpose. Such policies can be implemented seriously only if politicians in power obey certain norms of morality and principle.

Swaminathan S. Aiyar in *Indian Express*

A little learning is a dangerous thing;/Drink deep, or taste not the Pierian spring;/There shallow draughts intoxicate the brain,/And drinking largely sobers us again.

Alexander Pope

Nearly all our best men are dead! Carlyle, Tennyson, Browning, George Eliot!—I'm not feeling very well myself!

Punch

We only confess our little faults to persuade people that we have no large ones.

Duc De La Rochefoucauld

A man who is good enough to shed his blood for his country is good enough to be given a square deal afterwards. More than that no man is entitled to, and less than that no man shall have.

Theodore Roosevelt

Choose an author as you choose a friend.

Earl of Roscommon

Death is one of two things. Either it is annihilation, and the dead have no consciousness of anything; or, as we are told, it is really a change: A migration of the soul from this place to another.

Societes

Everything is good when it leaves the Creator's hands; everything degenerates in the hands of man.

Jean-Jacques Rousseau

It is far from easy to determine whether she (Nature) has proved a kind parent to man or a merciless step-mother.

Pliny, The Elder

QUOTABLE QUOTES

All punishment is mischief: all punishment in itself is evil.

Jeremy Bentham

My time has not yet come either, some are born posthumously.

Friedrich Nietzsche

The more intelligence one has the more people one finds original. Commonplace people see no difference between men

Blaise Pascal

He was sent, as usual, to a public school,

where a little learning was painfully beaten into him, and from thence to the university, where it was carefully taken out of him

T.L. Peacock

The man who makes no mistakes does not usually make anything.

E.J. Phelps

Ignorance of the law excuses no man; not that all men know the law, but because 'tis an excuse every man will plead, and no man can tell how to refute him.

John Selden

THE FREEDOM MOVEMENT

100 YEARS OF CONGRESS

The latter part of the 19th century saw the emergence of a centralised imperialist power located in London and supported by the steel-frame of a highly efficient bureaucracy and a well-organised army in India. On the receiving end were the teeming Indians—poor, illiterate, disarmed, divided. Sandwiched between the two was a small, scattered and urbanised Indian middle class, ready to absorb modern ideas and critical in its attitude towards political and economic issues.

Indian nationalism gained respectability with the advent of Raja Ram Mohun Roy as a pioneering social reformer. Socio-political organisations also started coming up. In 1828, Academic Association was formed to debate political, religious and moral issues. Ten years later, Society for the Acquisition of General Knowledge was set up to discuss issues like trial by jury and the freedom of the press. In 1842, Dwarkanath Tagore invited George Thompson, famous in England for organising the slavery agitations, to guide political movement in India. Similar organisations were established in other parts of the country and the Indian leaders tried to form an all-India political body. At this time, A. O. Hume (1829-1912), a retired British civil servant, formed the Indian National Union (INU) in 1884. It appears he consulted and got the approval of Lord Duf-

ferin. The then Governor-General of India Dufferin wanted to know the real voice of the people and thought that a conference, to be convened by Hume, would be good. Hume then visited England to consult India's well-wishers and was assured their help. He returned to participate in the conference, convened by the INU at Poona from Dec 25, 1885. Since the INU received country-wide support, it was named Indian National Congress (INC). The venue of the conference was at the last moment changed from Poona to Bombay. Held at the Gokuldas Tejpal Sanskrit College. It was attended by 72 delegates from all over India. W.C. Bonnerji, an eminent lawyer of Calcutta, was chosen the President.

Modern India... What went into the making of its fabric? Personalities, events and forces of history... above all, Indian nationalism and its *raison d'être*, freedom from the humiliating clutches of British domination.... For over 60 years the Indian National Congress (INC) was its dynamic bulwark. And 38 years after Independence it is still in the limelight of national consciousness.... A review of the historic struggle and the role played by the INC.

The aims of the INC were: (a) to promote friendly relations among nationalist-minded political workers from all over India; (b) develop and consolidate feelings of national unity; (c) formulate popular demands and present them before the government; and (d) create public awareness. Questions regarding why Hume took active interest in the formulation of the INC were raised. Though various explanations were offered, the one given by Lala Lajpat Rai in *Young India* that Hume wanted to prevent the disruption of the Empire, gained wide acceptability.

The situation in India in the 1870s was explosive. Discontent was on the rise after

the 1877 famine. Home, the then Secretary of the Government of India, knew that there was an imminent danger of a mass upheaval. He and other Britishers were afraid that the educated Indians might lead a mass revolt against the British Government. A safety valve was, therefore, needed urgently. The INC was to provide a powerful and constitutional outlet to the discontented among the educated Indians to checkmate popular revolt. This may be marginally correct as the INC was the natural outcome of the efforts of politically conscious Indians to set up a national organisation for the political and economic advancement of the country. Dadabhai Naoroji, Badruddin Tyabji, Pherozshah Mehta, P. Ananda Charlu, Surendranath Banerjee, Ramesh Chandra Dutt, Ananda Mohan Bose and Gopal Krishen Gokhale were the INC's great presidents in its early years.

The dynamic idealism of the Congress elicited varying reactions from different classes. The feudalists, whether Hindu or Muslim, were panicky and clung to the British Government. The business class, taking a long term view, moved towards Congress. The British policies were against their interests and the Congress wanted their cooperation in the economic development of India. The masses identified themselves with the Congress; it became their real well-wisher and representative.

The government, in the beginning, was mildly interested in the Congress. In 1886, Dufferin invited the delegates to a reception at Calcutta. Similar courtesies were extended at the next session in Madras. The government even allowed its officers to attend the Congress sessions. However, by 1888, the attitude changed completely. The resolutions demanding responsible government, speeches criticising the government policies and pamphlets on India's grievances irked the government as all this looked similar to Ireland's Home Rule movements. In fact, the emergence of the Congress crystallised the inherent conflict in the relations between the imperialist power and its subject—the people of India. The conflict raised the moral issue: On what justification did the British Empire demand obedience from the people of India?

The British thought that India as such did not exist. To them, India was merely a geographical expression, a territory consisting of different clans, tribes, communities, races, religions and cultures which did not provide an organic, social or moral unity. The Britishers, therefore, had as much right to rule over them as rulers who had preceded them. They too conquered India with the sword and established peace and order in the land. In addition, they had given a modern administration, a judicial system and an efficient bureaucracy.

The counter argument was that India had a cultural unity, a dominant ancient culture and a number of minority cultures. More important was the emergence in India of a consciousness of a political unity that gave it the status of a nation. Congress presidents one after the other, stressed this point. The INC symbolised this consciousness

of the unconvinced Britishers. The British Native Policy which had two objectives—to supply cheap labour for European enterprises; and to prepare the Indians to accept their supremacy. The latter was to be achieved by providing good government end by understanding and humouring them. The Britishers succeeded admirably in this regard. The educated class, which could not be won over, was the only exception. However, their number was very small—hardly two per cent of the total population. Congress was the organisation of this two per cent, though it concerned itself with the aspirations of all classes. Interestingly, Sir Syed Ahmed Khan exhorted the Muslims to remain aloof from the Congress and support the British rule.

The INC met every year to focus people's attention on the basic defects and temporary lapses of the government. Political conferences were convened all over India. The need for publicity outside India, especially England, was recognised in 1889, when the British Committee of the INC was set up in England with William Wedderburn as Chairman. *India*, a journal, was founded to propagate Congress views.

From almost the very beginning, the Congress had within it a school of militants which did not approve of its supplicatory attitude. Leaders of this school were: Bal Gangadhar Tilak of Maharashtra, Bipin Chandra Pal of Bengal and Lala Lajpat Rai of Punjab. They believed that India would not progress under "the benevolent guidance" and control of the Britishers and wanted *Swaraj* or independence—the goal of the national movement—to be achieved through mass agitation.

On Oct 16, 1905, Lord Curzon divided Bengal in the name of 'administrative efficiency'. The real reason, however, was to stem the tide of nationalism in Bengal. The INC firmly opposed the partition and Oct 16 was declared a day of national mourning throughout Bengal. The leaders felt that demonstrations, public meetings and resolutions were not much effective and, therefore, wanted more positive action. The *Swadeshi* movement—public burning of foreign cloth and picketing of shops selling such cloth was launched. *Swadeshi* and *Swaraj* movements were picked up by other provinces.

The anti-partition movement soon passed into the hands of militant leaders. The reasons: the previous movements by the moderates failed; the East Bengal Government tried to crush the movement by dividing the Hindus and the Muslims; and the repressive policy of the government. The militants gave a call for 'passive resistance', besides the *Swadeshi* and boycott movements. The people were asked to boycott government service, courts, government schools and colleges. They, however, lacked sound organisation and effective leadership. The movement could not reach the masses and remained confined to urban-middle and lower-middle classes. The government, therefore, could crush it easily. The fire of nationalism, however, kept burning.

The agitation against the partition of Bengal made a deep impact on the INC. At

well as the reactionary regime of Lord Curzon. There was, however, a disagreement between the moderates and the militants, also known as extremists. The former wanted to confine the movement to Bengal while the latter called for its extension to the whole country. The two groups fought for the presidency in the 1905 session. Dadabhai Naoroji was elected as a compromise President. He saved the situation by declaring that the aim of the national movement was *Swaraj* or 'self-government'. The differences, however, could not be patched up and the split came in the December 1907 session at Surat when the moderates captured the Congress.

The split did not prove useful to either group. The moderates lost touch with the youth wing of the Congress. The government, with the policy of divide and rule, tried to win over the moderates to isolate and suppress the militants. Constitutional concessions were announced through the Indian Council's Act 1909 known as Morley-Minto Reforms. Also announced in 1911 was the cancellation of the partition of Bengal and the shifting of the capital from Calcutta to Delhi. The reforms raised the number of elected members in the Imperial Legislative Council and Provincial Councils. However, the undemocratic and foreign character of British rule in India and the economic exploitation of the people remained unchanged. The Britishers continued to confuse the moderates, divide their ranks and check unity among the Indians. In the name of protecting the Muslim minority, the reforms introduced separate electorates. The objective was to divide the Hindus and Muslims so that British supremacy was maintained. Though the moderates did not fully support the reforms, they cooperated with the government in its implementation. They thus lost ground to the extremists who became more popular.

After the 1857 revolt, for over a decade the British wrath fell on the Muslims. The Britishers adopted an anti-Mohammedan and pro-Hindu policy. Gradually, the Britishers realised that the situation was changing as the threat from the Muslims had passed over, because the mutiny, the last bid for supremacy, had been crushed. The government also visualised danger from the growing middle classes—westernised and capitalistic—which were overwhelmingly Hindu.

Sir Syed Ahmed Khan and Prindpal Beck of M.A.O. College, Aligarh, particularly worked for Anglo-Muslim friendship. Sir Syed, however, founded Muslim communalism in the 1880s by giving up his earlier views and declaring that the political interests of Hindus and Muslims were not similar but different, even divergent. He propagated complete obedience to the Britishers and said that whenever they decide to leave India, the Hindus, being the overwhelming majority, would overpower the Muslims. He urged the Muslims to ignore Badruddin Tyabji's appeal to join the INC.

The separatist tendencies, also among

Opening of the First Plenary Session of Round Table Conference on India in London.

the educated Muslims, reached a climax in 1906 when the Muslim League was formed under the leadership of the Aga Khan, the Nawab of Dacca and Nawab Mohsin-ul-Mulk. The Muslim League supported the partition of Bengal and demanded special safeguards for the Muslims in government service. Later in 1909, the government helped them in getting separate electorates. Thus while the INC was fighting against the imperialistic, economic and political policies, the Muslim League's political activities were directed against the INC and Hindus. Hereafter, the League opposed every nationalist and democratic demand of the Congress.

During World War I, the Congress adopted a pro-British attitude in the mistaken belief that Britain would repay India's loyalty by granting self-government. However, a few believed that concessions would not be forthcoming unless popular pressure was brought to bear on the government. But this could not be done under the leadership of the moderates who were merely passing respectful resolutions at the Congress sessions. Therefore, two leagues were started in 1915 and 1916—one under Tilak and another under Annie Besant—to propagate Home Rule or self-government after the War. Tilak gave the famous slogan: "Swaraj is my birthright and I shall have it."

The Lucknow session in 1916 was important for two reasons: First, the two wings of the Congress, which had split in 1907, were re-united as they realised that disunity was self-defeating. Second, the Congress and the Muslim League came together by signing the famous Lucknow Pact and placed their common political demands before the government. Though a positive step towards Hindu-Muslim unity, it, unfortunately, in the long run, caused the resurgence of communalism in Indian politics, as the Congress accepted separate electorates for Muslims. Nevertheless, the immediate effects of the Pact were tremendous. The British Government felt it necessary to placate the Congressmen because of the INC-League unity. On Aug 14, 1917, the British Government announced that its policy in India was "the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire". This is known as 'The August Declaration'. This was followed by the declaration of Montagu-Chelmsford Reforms on Jul 8, 1918. But the INC was

not appeased. Tilak regarded the reforms as "entirely unacceptable" while Annie Besant considered them "unworthy of England to offer and unworthy of India to accept". A special Congress session in Bombay on Aug 27 the same year declared that the reforms were "disappointing and unsatisfactory". In December 1918, the Delhi Congress session confirmed the resolution passed at the special session.

The last phase of the national movement was the Gandhian Era (1920-1947) during which Mohan Dass Karamchand Gandhi converted the INC into a fighting force and a revolutionary organisation, non-violent in character but of tremendous strength and potentiality. His political strategy of satyagraha galvanised the millions of Indians into action against the British Raj and baffled the imperial might of Britain. The emergence of Gandhi as the Congress leader in 1920 was timely as the national movement lacked imaginative leadership. Gokhale and Tilak had died. Lala Lajpat Rai had by now become a moderate. Terrorism and constitutionalism, the two recognised methods of political action, offered no hope. A towering personality equipped with a new strategy of political warfare was required. Gandhi guided the thoughts, aspirations and activities of the nation till the end of his life.

The Montagu-Chelmsford (Montford) Reforms led to the enactment of the Government of India Act 1919, providing enlarged Provincial Legislative Councils with the majority of elected members. The system of communal representation was further strengthened and 'Dyarchy' or dual government was introduced in provinces. Subjects were divided into 'reserved' (to be administered by the Governor-in-Council) and 'transferred' (under ministers responsible to the provincial legislature) categories. However, the governor could overrule them. There were provisions giving the Central Government complete control over the provinces. The Congress, however, rejected the reforms.

In pursuance of its policy of reform and repression, the government was acquiring additional powers in the name of suppressing terrorist activities. The Rowlatt Act was enacted whereby a person could be imprisoned without trial and conviction in a court of law. The members of the

Satyagraha Sabha, founded by Gandhiji in February 1919, pledged to disobey the Act and get arrested. This was a *satyagraha* unknown to the Britishers.

In April 1919, came the Jallianwala tragedy. The national agitation against the repressive measures like the Rowlatt Act brought the Hindus and the Muslims together. The Muslims had turned against the Britishers because of the treatment given to Turkey after the World War I. *Khalifa*, the Turkish head of the state, (also the temporal and spiritual head of the Muslims all over the world) directed them to rise against the Britishers. In India the Khilafat Committee was formed.

An All-India Khilafat Conference was held in Delhi in November 1919 which decided to withdraw all cooperation to the government if their demands were not met. The League, now under the leadership of non-separatists, gave support to the Congress. The Congress leaders, Tilak and Mahatma Gandhi included, viewed Khilafat agitation as a golden opportunity for Hindu-Muslim unity and for bringing the Muslims into the fold of the national movement. Meanwhile, the government refused to amend the Rowlatt Act, to make amends for atrocities in Punjab, and to give self-government to India. In June 1920, an all-party conference was held at Allahabad. It approved a programme of boycott of schools, colleges and courts. The Khilafat Committee launched a non-cooperation movement on Aug 31, 1920. Mahatma Gandhi was the first to join in. He returned the Kaiser-i-Hind Medal, awarded to him by the British Government during World War I. The Congress met in a special session in 1920 at Calcutta to support Gandhiji's plan for non-cooperation till the Punjab and Khilafat wrongs were undone and Swaraj established.

The Nagpur Congress session in December 1920 confirmed the programme finalised in Calcutta. Gandhiji declared that if the Britishers "do not want to do justice, it will be the bounden duty of every Indian to destroy the Empire". The session also amended the INC constitution. A Congress Working Committee (CWC) of 15 members, including the President and secretaries, was formed to enable the Congress to function continuously and implement its decision. Any person of 21 years age could become a member of the Congress on payment of four annas (25 paise). In 1921, the age limit was relaxed to 18. With all this, the Congress changed its character and role. It became the leader of the Indian masses in their national struggle to gain freedom. A few old leaders of the Congress did not believe in new methods and opposed strikes, satyagraha, breaking of laws, and courting of arrests. Mohammad Ali Jinnah, G. S. Khaparde, Bipin Chandra Pal, Annie Besant were among the prominent leaders who left Congress at this stage. The years 1921 and 1922 witnessed unprecedented movement when thousands of students left their schools and colleges, and hundreds of lawyers gave up their practice. The All-India Khilafat Committee passed a

MAJOR EVENTS

Demonstration against Simon Commission—1927.

Act For The Better Government Of India 1858: Abolished the Court of Directors and the Board of Control (established by Pitt's India Act 1784) and authorised the Queen of England to rule India. A new office for Indian affairs, Secretary of State for India (a Minister in the British Cabinet) was created. Council of 15 members was to assist him. System known as Home Government. Besides the Governor-General to be appointed by the Crown. All treaties made by the company to be binding on the Crown.

Queen's Proclamation Nov 1, 1858: The assumption of the Government of India by the Crown declared at Allahabad Darbar. When Lord Canning read Queen's Proclamation, which, among other things, promised peace and prosperity, equality of treatment with other subjects of the Queen and above all, a share in the higher services of India. It assured Indian princes of their rights, dignity and honour. Viscount Canning to be the first Viceroy (Queen's representative in respect of states) and Governor-General of India.

Indian Councils Act 1861: Dealt with Executive and Legislative Councils in India; the British Government realised danger of making laws for millions of Indians without consulting their views. The Executive Council of the Governor-General enlarged. A fifth ordinary member added to it. The Governor-General's Executive Council reinforced by some additional members, to serve as the Central Legislature of India. The additional members to be not less than six and not more than 12. Out of these 'Additional Members', not less than one-half to be non-officials (i.e. persons not in the service of the Crown) and some of them to be Indian. No principle of election whatsoever. The

resolution that no Muslim should serve in the British Indian Army. The Ali brothers were arrested for sedition. The Congress stepped up the agitation by permitting Provincial Congress Committees to start civil disobedience including non-payment of taxes, provided the people were ready. The government resorted to repression. All important leaders, except Gandhiji, were jailed. The Congress session in December

Governor-General to nominate them and they were to hold office for two years. This Legislative Council could make laws and regulations for all persons, for all courts of justice, for all places and things and for all public servants in and outside British India. The Governor-General, however, had an absolute right of veto to alter or revoke anything done by this Council.

Indian Councils Act 1892: The first result of the efforts of the Congress. In its first session in 1885, it had demanded expansion of Legislative Councils. This Act extended functions of these Councils. Although the local bodies were given some powers to elect their representatives, the term 'Election' was deliberately and carefully avoided.

Indian Councils Act 1909: Embodied the Morley-Minto Reforms. Considered an important stage in the development of representative institutions in India. Introduced significant changes in the administrative setup of the country. Further expansion in the Central and Provincial Legislative Councils. Principle of separate communal electorates introduced. Had a very great effect on the events that followed. Ultimately led to the partition of the country in 1947.

World War I and Montagu Declaration

Aug 20, 1917: During World War I, the Congress supported the British war effort in the hope that the government, in gratitude, would grant Dominion status to India after the war. It had no such intention. Instead, the then Secretary of State, E. S. Montagu, made a declaration in the House of Commons, laying down two main principles of a new policy—(a) the increasing association of Indians in every branch of administration and (b) the gradual development of the self-governing institutions with a view to progressive realisation of responsible government in India as an integral part of the British Empire.

Montagu-Chelmsford Reforms: In pursuance of his declaration, Montagu arrived in India on Nov 10, 1917 and drew up a scheme alongwith Lord Chelmsford. Also consulted the Congress and the Muslim League. This scheme known as Montagu-Chelmsford Reforms, proposed: (a) popular control over local bodies; (b) partial responsibility or dyarchy in the provinces; (c) increased opportunities of influencing government without any responsibility; (d) relaxation of the control of the Secretary of State over the Government of India and the Provincial Government.

Government of India Act 1919: Enacted on the basis of Montagu-Chelmsford Report. Led to the relaxation of the control of the Secretary of State for India in certain matters. Some structural changes in the Indian Council. Provided for appointment of the High Commission of India. All these changes were cosmetic in nature. Real control of the British Parliament through the Secretary of State for India maintained in this Act. Viceroy's Executive Council slightly

1921 at Ahmedabad resolved to continue the movement till Swaraj was established. On Feb 1, 1922, Gandhiji announced that he would start mass civil disobedience, along with non-payment of taxes, unless within seven days all the political prisoners were released and the freedom of the press was ensured. This mood of struggle was transformed into a retreat when on Feb 5, 1922 the police opened fire on a Congress

meeting. Some significant changes made in the Central Legislature. It was to consist of two chambers—the Council of State and the Legislative Assembly. Both these Houses to be made more representative and influential. A new form of government called dyarchy introduced in some of the provinces. The Congress severely criticised these reforms.

The Swarajists and the policy of obstruction: Congressmen who organised themselves into the Swarajist Party with a programme to wreck the legislature from within through uniform, continuous and consistent obstruction. Came into being in 1922 when civil disobedience movement withdrawn by Gandhiji. C.R. Dass and Moti Lal Nehru prominent leaders of the Swarajists. Staged an impressive triumph after the elections in 1923. A big force in the legislatures.

Simon Commission (1927): Stanley Baldwin's Conservative Government appointed an all-white commission with John Simon as Chairman to look into the working of the Indian Government and to propose further reforms. If necessary. It landed in Bombay on Feb 3, 1928, but boycotted by the Congress mainly on the ground that no Indian was associated with it. Recommended: (1) dyarchy be abolished and ministers be entrusted with full control of provincial administration. (2) franchise be lowered and extended; (3) a council of Greater India be set up as an all-India federation was impossible in the near future. (4) Burma be separated from India and Sind from Bombay; (5) army be modernised but maintenance of British forces necessary. Some of the recommendations were incorporated into the Government of India Act 1935.

Nehru Report (1928): All Parties Conference held and a committee appointed under the Chairmanship of Pt Moti Lal Nehru to draft a Constitution satisfactory to all in India. The committee submitted a report as under: (1) Dominion status and not complete independence India's political objective. (2) India to be a secular state. (3) The system of joint electorates with some reservations best suited to the country. (4) An All-India Federation be formed.

First Round Table Conference (1930-31): Nehru Report as the Basis for Constitution of India rejected by government. Lord Irwin invited the Congress and others for a conference in London to sort out matters. Congress wanted an assurance that it will proceed on the basis of granting full dominion status to India. The government did not accept this condition. Gandhiji launched another civil disobedience movement. The first session of RTC was opened on Nov 12, 1930 at James Palace, London without the Congress.

Gandhi-Irwin Pact 1931: Signed by Gandhiji and Lord Irwin, the then Viceroy of India. The Congress discontinued the civil disobedience movement and the government

procession in Chauri Chaura, a village in Gorakhpur district of UP. The crowd in retaliation, burnt the police station killing 22 policemen. Gandhiji took a serious view of the incident as he had asked the people to be non-violent. He withdrew the agitation.

The CWC in its Bardoli (Gujarat) meeting on Feb 12, 1922 decided to withdraw the movement. It urged the Congressmen to

Mahatma Gandhi with Rajendra Prasad and Maulana Azad, Bombay Congress Session—October 1934.

released all political prisoners not wanted for violent acts. The Congress also agreed to participate in Second Round Table Conference.

Second Round Table Conference (1931-32): Met in September 1931. Gandhiji the sole representative of Congress. Jinnah represented the Muslim League. The British Government was not prepared to cede powers. Gandhiji returned without any success and civil disobedience renewed.

Communal Award 1932: Lord Ramsay MacDonald's Communal Award favoured separate electorates for every conceivable group—the Hindus, Muslims, Sikhs and Europeans; seats also reserved for women, labour, commerce, landholders and others. Attempted to separate the so called 'caste Hindus' from the scheduled caste Hindus.

Gandhiji's fast unto death and Poona Pact 1932: Gandhiji started his fast unto death in protest against the Award. Finally the Poona Pact was signed. It was concerned mainly with reservation of seats etc. pertaining to the scheduled castes. On the acceptance of Poona Pact by the British PM, Gandhiji terminated his fast.

Third Round Table Conference 1932: Held in November 1932. Not attended by the Congress. Though not a success, emergence of idea for creating an Indian federation a tangible achievement.

The White Paper (1933): On the basis of Round Table Conferences, the British Government prepared White Paper proposals which formed the basis of the Government of India Act 1935—(1) Responsible government to be set up in provinces, which were to be autonomous as far as possible. (2) Recommen-

ded establishment of Federation of British Indian Provinces and Indian States with a bicameral Legislature at the Centre. (3) Provided demarcation of spheres of Federal and Provincial legislatures. (4) Suggested establishment of Federal Court, Advisory Council, Reserve Bank, Federal Railway Authority, etc.

Government of India Act 1935: A very long and complicated statute, contained 451 clauses and 15 schedules in addition to provisions for the proposed federation and the provinces along with many others of an administrative nature. Came into force completely in April 1937.

August Offer (1940): Made on Aug 8, 1940, promised establishment of full-fledged responsible government on dominion model after the war. Recognised right of Indians to frame their own Constitution and assured minorities that no Constitution would be framed against their consent. Also proposed interim arrangements during the war. Failed to achieve its objective of securing Congress participation in British war effort.

The Cripps Mission (1942): National and international events compelled British Government to send mission to India in 1942 to solve the constitutional issue. Stayed in India from Mar 23 to Apr 13, 1942. Proposed both long-term and interim measures. But failed for a number of reasons.

Quit India Movement (1942): On Jul 14, 1942 Congress Working Committee at Wardha passed 'Quit India Resolution', demanding immediate, complete and unconditional British withdrawal from India. Gandhiji and other leaders arrested and the agitation that followed brutally suppressed.

The Cabinet Mission (1946): Headed by Lord Patrick-Lawrence (the then Secretary of State for India), along with Sir Stafford Cripps (President of Board of Trade) and A.V. Alexander (The First Law of Admiralty). Suggested proposals for a long-term settlement, for constitution-making and for interim government. Accepted by the Congress, the Muslim League and the Sikhs. The Muslim League, however, withdrew its support on Jul 29 and gave a call for 'Direct Action' to achieve Pakistan.

The Mountbatten Plan (July 1947): Communal riots raging in Punjab, N.W.F.P., Assam and Bengal at the time Lord Mountbatten replaced Lord Wavell as Governor-General and Viceroy of India. Recognising that denial of partition would intensify the orgy of violence and death, formulated a plan for the simultaneous grant of independence to India and the creation of Pakistan.

India Wins Freedom: After the Plan was accepted, the constitutional formalities completed in London. With passage of the India Independence Act 1947 India became free and Pakistan was created.

1922, on the charge of spreading disaffection against the government. He was sentenced to six years imprisonment.

The Khilafat movement also lost its relevance at this time. The people of Turkey, under Mustafa Kemal Pasha, overthrew their autocratic ruler and declared Turkey to be a secular state. They also abolished 'caliphate', the institution of the 'caliph'. This broke the backbone of the

Khilafat movement. The suspension of *satyagraha* upset Gandhiji's own colleagues. The differences between Gandhites (non-changers) and opponents (pro-changers) became sharper at the Gaya session of 1922. C.R. Dass and Moti Lal Nehru advocated a new line of political activity under changed conditions and formed the Swaraj Party on Jan 1, 1923. It was to function within the Congress with a difference that it would participate in Council elections. The Swarajists contested the elections of November 1923 and did well. Their main aim was to obstruct the government from within.

Communalism raised its head as the non-cooperation movement petered out. The Muslim League and the Hindu Mahasabha (founded in December 1917) became active. A group named "responsivists" including Madan Mohan Malviya, Lala Lajpat Rai and N.C. Kelkar offered cooperation to the government to safeguard Hindu interests. The situation in the country appeared dark. Gandhiji went into retirement as Congress was split, communalism was spreading and there was general political apathy. But India again emerged out of darkness and entered a new era of political struggle when in November 1927, the Simon Commission was announced.

The Montford Reforms had provided for a review of the working of the reforms after ten years. However, keeping in view the situation in the country, the Britishers appointed a commission, consisting of seven British MPs and headed by Sir John Simon, two years in advance. It arrived in India in early 1928 and was boycotted by all shades of Indian political opinion because there was no Indian on the Commission. The Simon Commission recommended that: (a) dyarchy be abolished in provinces and more powers be given to ministers responsible to their legislature; (b) Governor should be granted special powers to overrule ministers; (c) the Government of India should control provincial governments; (d) franchise should be extended to at least 10 to 15% of the population; and (e) communal representation be retained.

About the Central Government, the commission observed that a Federation was impossible in the near future. However, a Council of Greater India, representing both British India and the Indian states, could be established to discuss matters of common interest. Burma was to be separated from India and Sind from Bombay. The Army needed to be Indianised but the British forces were needed till India was fully equipped. Though universally criticised, the Simon Commission had one general effect on Indian politics: it motivated Indians to think seriously about formulating an Indian constitution acceptable to all parties. The Nehru Report was one such attempt, although it could not get the approval of all the parties.

Anti-Simon Commission demonstrations all over India suggested that the country was again ready for a struggle. Gandhiji

(Continued on page 54)

devote themselves to constructive work like *charkha* spinning. The sudden halt to the movement stunned the country. The reaction was a mixed one. Subhash Chandra Bose in his autobiography *The Indian Struggle* wrote that it was "nothing short of a national calamity". Jawaharlal Nehru had a similar reaction. The government, however, took full advantage of the situation and arrested Gandhiji on Mar. 10,

PUNJAB

OF BULLETS AND BALLOT

When PM Rajiv Gandhi and Sant Harchand Singh Longowal signed an accord on Jul 24 it was widely believed that it was the ultimate step towards the restoration of complete harmony and normalcy in the terrorised state of Punjab. It was also secretly feared that the Sant's life would be in grave danger thereafter as he had acted in blatant defiance of all that the extremists stood for.

The fears were not unfounded. For on Aug 20 terrorists struck a crippling blow in an attempt to nullify what had been achieved by the Punjab agreement. They felled the person instrumental in achieving peace for Punjab—Sant Longowal himself. That too immediately after he had finished addressing a congregation of 5,000 odd people at a gurdwara in Sherpur village near Sangrur. Violating the religious sanctity of yet another place of worship.

The untimely death of Sant Longowal, who, within a span of a few months had emerged as the apostle of peace, unity and reconciliation in Punjab could well have unravelled the yarn of Hindu-Sikh amity which Longowal had so painstakingly spun after the signing of the accord. In fact, he had virtually embarked on a door to door campaign imploring Hindus and Sikhs alike to sink their differences and create a congenial atmosphere in Punjab. And even though the Sant had not initially been in favour of conducting elections in the state as early as Sep 22 because "Elections at this stage would generate heat on both sides and this could vitiate the improving atmosphere in the state. The main question is of peace. Elections can be held after the dust finally settles down," he later relented. In the face of the Centre's reasoning that elections were a natural corollary of the accord and that re-establishment of democratic rule would further improve conditions in the state. PM Rajiv Gandhi also held that poll postponement "would have necessitated constitutional amendment for extension of President's rule in the state beyond Oct 6," setting a bad precedent. Keeping this in view Longowal had begun his campaign of explaining the accord to the unlettered rustics of Punjab, promoting Hindu-Sikh unity and the feasibility of the elections.

But the terrorists and anti-nationals had other designs and could go to any extent to jeopardise the chances of restoration of peace in Punjab. With scant regard for both Hindus and Sikhs. The devious ploy to kill Sant Longowal only goes to underscore this fact. And the last rites of the departed leader were not even complete when the internal squabbles among the Akali Dal ranks, rendered virtually leaderless, intensified manifold, threatening to split the party and render the Rajiv—Longowal accord useless. But then common sense prevailed and S.S. Barnala, one of the staunch loyalists of the Longowal clan was elected acting President of the Akali Dal (L) while Ajit Singh Ropar, another strong contender for the post, was appointed chairman of the party's parliamentary board.

Meanwhile, even the death of Longowal could not make the Centre reverse its decision to conduct early polls in Punjab. For postponing of elections at this stage would be tantamount to submitting to the tactics of terrorists. The Punjab poll, the PM maintained, was "the people's answer to brute force employed by a small section to impose their will on the masses." However, the elections were put off by three days to give the people time to perform the last rites of Longowal and will now be held on Sep 25. Of the 2,064 candidates who had filed their nomination papers for the Assembly elections and 173 for the Lok Sabha elections, 848 candidates have been left in the poll fray for the former and 84 for the latter. The elections for the 13 Lok Sabha seats and 115 Assembly seats (two were countermanded owing to the death of an independent candidate Gurdial Saini) will now be held amidst tight security. The contesting candidates now live in constant fear of becoming the targets of terrorists.

However, apart from the massive deployment of security forces in Punjab, the Centre has also taken another step to ensure the safety of candidates. The President has promulgated an Ordinance amending Section 52 of the Representation Of People Act, 1951 whereby the elections will be countermanded only in the case of the death of a candidate set up by a recognised political party. While this will ensure the safety of independent candidates it will also limit the task of security forces to

protect the lives of candidates of recognised political parties.

It is to be hoped that the amendment will prove effective. For terrorists have demonstrated their scant respect for security measures. Recently Congress (I) Metropolitan Councillor Arjun Dass was shot dead in Delhi along with his security guard. As was Dev Dutt Khullar, a senior Congress (I) leader and former member of the local municipal corporation at his Jalandhar residence on the same day that Longowal was assassinated. Punjab is all geared for the polls now. With everyone keeping their fingers crossed in the fervent hope that the battle of the ballot doesn't become one of bullets.

ASSAM

WELCOME ACCORD

I am happy to share with you the news that an accord with the Assam student leaders was signed last night, in fact early this morning at quarter to three." This announcement, part of PM Rajiv Gandhi's maiden Independence Day speech, must undoubtedly have filled the hearts of his compatriots—particularly those belonging to the strife torn northeast—with relief. For, it proclaimed the end of the festering six-year-old bloody anti-immigrant agitation which not only claimed the lives of more than 4,000 innocent people but also rendered at least 3,50,000 people homeless.

What started as a protest against the steady influx of aliens from across the international border, which threatened the numerical majority of the Assamese in their own homeland, soon assumed the form of a full scale agitation with ominous politico-communal overtones. Spear-

TERMS OF SETTLEMENT

The much-awaited accord among the government, the AASU and the AAGSP leaders has been designed to restore numerical majority to the Assamese people and also preserve their cultural, social and linguistic identity and heritage. The main highlights of the accord:

- The selection of Jan 1, 1966 as the base year for detection and deletion of foreigners. Foreigners who entered Assam between this date (inclusive) and Mar 24, 1971 shall be detected in accordance with the provisions of the Foreigners Act 1946 and the Foreigners (tribunal) Order 1964 and their names deleted from the electoral rolls. However, 10 years following the date of detection their franchise will be restored to them. The government has decided to retain the 1967 electoral rolls as the basic document for identification of these foreigners.
- All persons who entered Assam before Jan 1, 1966 including those whose names appeared on the 1967 electoral rolls shall be regularised while all foreigners who entered Assam on or after Mar 25, 1971 shall continue to be detected, deleted and expelled in accordance with the law. Also all expelled persons who have subsequently re-entered Assam illegally will be expelled. Due consideration will also be given to the difficulties expressed by AASU and AAGSP regarding the implementation of the Illegal Migrants Act 1983.
- Constitutional, legislative and administrative safeguards will be provided to protect the cultural, social and linguistic identity and heritage of the Assamese people.
- The government has promised to view sympathetically the cases of disciplinary action and criminal cases (except heinous crimes) filed in the course of the agitation. It has also proposed to raise the upper age limit in public services. A scheme for ex-gratia payment for those killed during the agitation is also being considered.

headed by the All Assam Students' Union (AASU), and the All Assam Gana Sangram Parishad (AAGSP), as early as 1979, the agitators demanded the removal of Bengali speaking immigrants to Bangladesh. In 1980 the then PM Indira Gandhi made a vain attempt to solve the Assam problem. And just when it appeared that some sort of understanding might be reached between the agitation leaders and the Centre, all hopes were dashed when both sides backed out at the last minute due to some misunderstanding over the cut-off year for detection and deportation of immigrants. This setback was to be regretted bitterly by the Centre when the 1983 Assembly elections had to be

guaranteed in the outbreak of wide-spread communal violence and the shockingly gruesome Nalla massacres which claimed nearly 3,500 lives.

Subsequent efforts by the Centre to resolve the Assam stalemate proved futile, too. And when Rajiv Gandhi became PM he accorded Assam the second topmost priority after Punjab; not that his initial moves were successful. This did not deter him in any way and R.D. Pradhan, Union Home Secretary, was assigned the task of preparing the groundwork for talks between the AASU and AAGSP leaders and the Centre.

Fortunately the diminishing popularity of the agitation leaders in Assam also prompted them to seek a way out. Several rounds of talks with the Centre was evidence of their desire to end the confrontation. But still no satisfactory accord could be reached. The signing of the Punjab agreement on Jul 24 lifted a considerable burden off the PM's shoulders. Thereafter efforts to solve the Assam imbroglio gained considerable momentum, with both Pradhan and the Union Home Minister, S.B. Chavan shuttling between Guwahati and New Delhi to assess the situation, and hold talks. The Centre also indicated its willingness to go to the farthest extent to accommodate the agitation leaders and ensure early elections in Assam. And the deadline for reaching an accord was set for Aug 15.

On Aug 5, the agitation leaders arrived in New Delhi once again for another round of talks with the Centre. Their complaint was that the revision of rolls with 1971 as the cut-off year undertaken by the Election Commission to facilitate elections in the state were not legally valid because they had failed to take into account the abnormal increase in the number of voters in at least 50 of the 126 constituencies. However, when the agitation leaders returned to Guwahati the prospects of a settlement had brightened considerably. To finalise the terms of agreement Chavan went to Guwahati on a day's visit on Aug 8 where he held discussions with CM Hiteswar Saikia and several political parties. And soon after his return the Centre sent invitations to the student leaders summoning them to the negotiating table for the last time. When they arrived in the Capital on Aug 11 they had wide-ranging continuous talks with government officials in which the terms of the accord were thrashed out. PM Rajiv Gandhi, on his one-day visit to Guwahati assured the people that an end to the Assam problem was in sight.

The agitation leaders agreed to have CM Hiteswar Saikia as head of the caretaker government despite the numerous grudges they harboured against him. A long-delayed accord was finally signed (for details see box) in the early hours of India's 38th Independence Day delivering Assam from strife, uncertainty, violence and terror and offering instead peace and security.

SRI LANKA

BACK TO THE WARPATH

Once again the senseless bloodletting has assumed horrific proportions in Sri Lanka. The three-month ceasefire agreement drafted by the Sri Lankan Government on Jun 18 has long since been violated with impunity by the island nation's callous security forces. And the Tamil militants have hit back with swift reprisals.

The second phase of the Thimpu talks scheduled for Aug 12 ended on a dismal note. The Sri Lankan delegation headed by President Jayewardene's brother Hector Jayewardene, on whom the President conferred plenipotentiary powers, put forward a fresh set of proposals and also laid down certain pre-conditions for settlement. The new proposals envisaged giving more powers to police as a step towards devolution of powers to Tamils in the north and eastern provinces. Also, Hector Jayewardene propounded the deeming of district councils in the Tamil-dominated north and east Sri Lanka as provincial councils. The boundary of these councils would be limited to the provinces and the President, in his capacity as head of state, would grant executive powers to whom he thought enjoyed majority in the provincial council. It was a calculated move to nullify the major Tamil demand of amalgamation of the north and eastern provinces. But what perhaps infuriated the Tamil militant leaders the most was Hector Jayewardene's categorical rejection of three of the four cardinal principles spelt out by them viz distinct nationality for the Tamils, traditional homeland for the Tamils, right of self-determination and grant of citizenship rights to Tamils living in Sri Lanka.

Even as the talks at Thimpu were being held violence escalated in the island nation. In Vavuniya an estimated 200 Tamils were massacred in cold blood followed by the killing of about 200 more—comprising mostly women and children in the two villages of Sampanthu and Arankatti—by the Sri Lankan security forces. In Thimpu this genocide of

the Tamils coupled with "the inadequate, unacceptable and three-decade old" government proposals prompted the Tamil guerilla leaders to stage a walkout.

Even India's diplomatic efforts were unsuccessful in resuming the aborted talks. Foreign Secretary Romesh Bhandari's discussions with both sides failed to make either of them give up their unrelenting attitude. Later the Sri Lankan Government indicated its preparedness to discuss the Ceylon Worker's Congress (CWC) proposals placed before the All Party Conference in Colombo in November last, in a bid to pave the way for resumption of talks. These included the provision of separate linguistic regions for the north and eastern provinces and another for the plantation labourers of Indian origin in the central highlands of Sri Lanka. The linguistic regions called regional councils would have powers to enforce law and order. But the overture came too late. For, the Tamil militant leaders who had flown back to Madras, stated that they would agree to resume talks only if the Sri Lankan Government fulfilled certain preconditions, viz to take steps to end state violence and terror against Tamils, adhere to its ceasefire agreement and put forward a set of fresh proposals.

It was then that PM Rajiv Gandhi himself decided to intervene and invited the Tamil leaders for talks in New Delhi. And New Delhi which had been handling the Sri Lankan ethnic issue with admirable tact almost blundered for the first time when it issued deportation orders to three Tamil militant leaders. Presumably under the suspicion that they had tried to prevent the meeting between the Eelam National Liberation Front and the PM. However, the deportation orders against one of them S.C. Chandrasekaran, convener of the PROTEG group (Protection of Tamils of Eelam against Genocide) were later revoked. The deportations incident established the fact that India was not prepared to tolerate hardliners who may jeopardise talks to resolve Sri Lanka's ethnic crisis.

Topmost officials in New Delhi have had intense consultations with Hector Jayewardene during his recent visit to the capital. PM Rajiv Gandhi, too, is keeping in touch with President Jayewardene. Indian authorities are trying to reason with the Tamil militant leaders also. For if the ethnic crisis remains unresolved any longer the worsening state of affairs in Sri Lanka may well culminate in a civil war.

GUJARAT

A TIMELY AGREEMENT

One would have expected that the signing of an accord between the Amarsinh Chaudhary Ministry and the anti-reservationists would be the concluding chapter in Gujarat's tale of woe. But no sooner had the clamour raised by the reservations issue subsided a little that the parallel anti-roster stir acquired additional momentum. Initial rounds of talks between the state government and the striking government and the panchayat employees did nothing to break the stalemate. The Chaudhary Ministry adamantly maintained that the roster system was 'non-negotiable' and issued an ultimatum to the striking employees to rejoin duty or face dismissal. Undaunted by the threat the Gujarat state employees federation on its part issued a call for a Gujarat bandh on Aug 19.

Violence erupted once again. However, last ditch efforts made by the state government finally yielded results and succeeded in averting what could well have been a stir of the same horrifying magnitude as the reservations agitation. On Aug 19 the proposed Gujarat bandh was withdrawn, thanks to the signing of a timely accord between the striking employees and the state government. This ended the 73-day-old anti-roster strike demanding the total abolition of the caste based roster system of promotions.

The highlights of the accord are the introduction of minimum experience rules for promotion as recommended by the Sadhawani Commission, option to fix minimum experience period in consultation with the employees instead of adhering to the set norms of five, seven and eight years recommended by the commission for various categories of promotion. The government also agreed to consider, in retrospect, cases of hardships to upper caste employees who had been by-passed by backward class employees in promotion from Mar 24, 1981. Also, the striking employees would be paid wages for the entire strike period: 60% of the strike period would be considered special leave while the decision for the remaining 40% would be left to the CM.

Not that the accord was widely welcomed. On Aug 26 the Gujarat Karamchari Utkarsha Mandal constituting pro-roster employees organised a protest march to press their demand for the scrapping of the agreement between the anti-roster employees and the Gujarat Government. And when they tried to gate crash into the state Assembly build-

ing there was a major confrontation between them and the police. The pro-ster employees have now threatened to stage a *haste* *hake* agitation if their demand is not met. This only goes to show the extent to which lawlessness has spread in the state.

DUTY CONCESSIONS

CLOTHING THE NATION

In a bid to increase the availability of fabrics at reasonable prices to consumers the Centre announced duty concessions amounting to Rs 131 crores. Substantial duty reliefs have been extended to various categories of synthetic fibre and blended yarn coupled with a scheme for production and distribution of low-priced fabrics by units of the National Textile Corporation (NTC). The relief package is designed to lower the prices of synthetic and blended fabrics. These included polyester fibre, polyester cotton, blended yarn, and polyester blended viscose yarn. Excise duty on acrylic fibre has also been reduced to supplement the availability of raw wool for use in the hosiery and knitwear industries.

While formulating the package of concessions the government has laid greater emphasis on lowering the costs of blends popular among the masses. The NTC scheme is expected to increase production of blended shirting and trousers to 80m sq m. in a full year, from their present level of 24m sq m. Of this 80m sq m about 8m sq m will be allotted to public sector undertakings and the Director General of Supply and Distribution (DGS & D). The remaining 64m sq m will be sold in the open market through fair price shops and NTC outlets.

The scheme is expected to bring down the retail price range of shirtings to about Rs 20 per sq m and that of heavier cloth for trousers to about Rs 40 per m. The government will also give the scheme a trial run of six months during which it will be monitored to see whether the benefits are being passed on to the consumers. Says Textile Minister, C.S. Singh: "The programme is basically designed to impart a price discipline over the market and ensure that duty relief is actually passed on to the consumers in full." If this objective is not fulfilled the government will reconsider the concessions.

Of the 134m m of polyester fabric to be produced this year the NTC has been given the responsibility of producing 80m m of cheap cloth. For this polyester fibre will be made available without payment of excise duty as against Rs 45 per kg at present. Countervailing or additional duty of customs on imported fibre will also be abolished. The NTC scheme will be open to mills of the private sector, too, provided they clearly indicate units which function exclusively under this scheme and also carry out the entire process of spinning, weaving, processing and sales in totally supervised arrangements. They would also be required to submit the full cost structure up to retail price to the government and organise retail sales through their own facilities or fair price shops.

Undoubtedly the new scheme will affect the position of cotton in the textile sector and the handloom weavers. But the government is deliberately pursuing such a scheme of encouraging man-made fibres to reduce dependence on the fluctuating supply of cotton. Some important concessions proposed in the scheme include reduction of excise duty on polyester fibre from Rs 45 to Rs 25 a kg, on acrylic fibre from Rs 17.50 to Rs 10 a kg, on polyester cotton blended yarn from Rs 5 to Rs 2 a kg, on polyester Ramie blended yarn from Rs 8 to Rs 4 a kg and on polyester viscose blended yarn from Rs 10 to Rs 4 a kg.

However, in order to cushion the revenue loss of Rs 131 crores excise duty on fabrics costing more than Rs 25 a sq m is being raised by Rs 2 per sq m.

EXPORTS

GROWTH IN A TEA CUP

The recent price fluctuations in the world market have reduced the availability of resources to finance the process of development. And commercial borrowing has become expensive too. The only alternative left with the government is effective export promotion and import substitution. In a major bid to boost the growth rate of exports, which at present stands at a mediocre 10.6%, and to meet the export target for the current year fixed at Rs 11,736 crores (of which Rs 11,266 crores is for non-oil exports) the government has announced a series of measures.

Notable among these is the decision to assure cash compensatory support (CCS) for eligible items at stipulated rates over a longer time

Credit for sketch on page 19—Courtesy *For Eastern Economic Review*—of Sep 85 issue was inadvertently omitted.

scale. This is particularly helpful for exporters who have to maintain under the CCS scheme. The CCS scheme is a 100% rebate being observed even though they are not to be considered as a fiscal development over the past three years. The CCS scheme is essentially designed to compensate exporters for payments of deferred taxes.

In addition to this the government has also given an assurance that fresh initiatives to stimulate the export of consultancy and other services, computer software and handicrafts will also be taken. In fact it proposes to set up a separate export promotion council for computer software and electronics. The Centre has also announced the extension of the international price replenishment scheme (IPRS) to all steel including alloys.

Bonding charges for export oriented units have been reduced by a drastic 40%. The scheme for export obligation for concessional duty on certain items of textile machinery is also to be continued. To boost the export of spices the Centre has decided to provide the Cardamom Board with Rs 10 lakhs to start the auction system.

The government's decision to allow the import of laboratory chemicals for stock and safe purposes is likely to be advantageous for small research establishments with requirements too small for them to import directly from foreign manufacturers.

But, perhaps the most important measure is the abolition of minimum export price (MEP) on tea. Although the country's tea exports have touched a new high this year, what with outputs from Sri Lanka and East Africa falling woefully short of target, the tea prices in the international market have registered a substantial decline. Sri Lanka itself has recorded a 39% fall. Keeping this in view the Centre has decided to do away with the MEP for Indian tea of Rs 28 per kg. While retaining the ceiling of 220m kg. These collective measures should go a long way in removing the inadequacies from the Centre's long term fiscal policy.

LOK PAL BILL

SCATHING CRITICISM

The Lokpal Bill which was introduced in the Lok Sabha, towards the end of its monsoon session, came in for some scathing criticism from the Opposition, so much so that it forced the ruling party to refer it to a joint select committee of both Houses of Parliament. This committee comprising of 30 members of the Lok Sabha and 15 of the Rajya Sabha is expected to submit its report on the first day of the next session.

The Lokpal Bill, the fourth of its kind to have been placed before the Parliament, seeks to provide for inquiry into allegations of corruption and misconduct levelled against a public functionary. And while the term public functionary, as defined by the Bill, includes ministers, ministers of state, deputy ministers and parliamentary secretaries of the Union Government, the present Bill excludes the PM and the CMs from its purview. And the fact that the PM's office has been excluded has been strongly opposed by the Opposition. Apart from this the Opposition has attacked Sec 21 of the Bill which prohibits the publication of information relating to complaints, including the identity of the complainant and the public functionary against whom the complaint has been made.

While similar bills were passed in 1968 and 1971 (called the Lokpal and Lokayukta Bills) and 1977 (the Lokpal Bill), the latest Bill differs from the Janata Government's 1977 Bill in that while the latter empowers the Lokpal to inquire into other grievances, besides allegations of misconduct, against a public functionary, the former empowered the Lokpal to inquire into complaints that a public functionary has committed any offence punishable under Chapter IX of the Indian Penal Code or under Prevention of Corruption Act, 1947.

The Lokpal Bill specifically excludes the President, the Vice President, the PM, the Speaker of the Lok Sabha, the Chief Justice and judges of the Supreme Court, the Comptroller and Auditor General of India, the Chief Election Commissioner and the Chairman and members of the UPSC.

According to provisions of the Bill the President, in consultation with the Chief Justice of the Supreme Court, can appoint a Lokpal for a term of five years. He must be a serving judge or a former judge of the Supreme Court or qualified to be one. For the selection of an impartial and unbiased Lokpal it has been stipulated that he should not be a Member of Parliament or any state legislature or be connected with any political party or carry on any business or profession while serving as Lokpal. Also he cannot be removed from office except by the President's order on the grounds of proved incapacity or misbehaviour. In fact any attempt to hamper the Lokpal's inquiries or bring him disrepute has been deemed cognisable. The Lokpal, on his part, is empowered to

inquiries conducted by an officer and a security deposit of Rs. 500. The complaints should relate to offences committed within five years of the launching of the complaint. The offences under Sec 9 of IPC include taking gratification in respect of an official Act, by corrupt and illegal means in order to influence a public servant; disobeying the law or framing an incorrect document intended to cause injury to some person; buying or bidding for property or unlawfully engaging in trade or abetting offences defined under Sec 162 or Sec 163 of the IPC. After he has conducted the inquiry the Lokpal is required to submit his report to the PM who will then inform him of the action proposed to be taken against the offender, within three months.

The Bill also makes adequate provisions to discourage false or frivolous complaints and empowers the Lokpal to punish those whose complaints are held to be false. However, now that the Bill has been referred to a committee its outcome is open to speculation. For, it is well-known that the earlier Lokpal Bills after having been referred to committees got shelved for one reason or another. And, whether the government will pursue the Bill with as much enthusiasm, despite the antagonism it has generated, remains to be seen.

JUDICIAL REFORMS AND JUSTICE FOR ALL

The two-day conference of the Chief Justice of India, chief justices of High Courts, law ministers and chief ministers, in New Delhi, proposed several measures to reform the country's judiciary in order to develop a quicker and effective judicial system. PM Rajiv Gandhi, in his inaugural address, stressed the need to mobilise the large sums of government money blocked in the courts. He also favoured the idea of setting up High Courts for smaller states, especially the north-eastern states and defended the policy of having chief justices from outside the states.

The Chief Justice of India P.N. Bhagwati proposed the setting up of mobile courts in rural areas, appellate labour tribunals, administrative tribunals and service tribunals. A system of non-stipendiary magistrates for petty offences punishable with fine was also suggested by him.

A 17-point resolution was unanimously adopted at the end of the conference in a bid to provide the common man with justice, easily and quickly, and eliminate arrears in all courts within the next five years. For the latter steps include setting up of a working group from amongst Chief Justices and chief ministers which would advise the Judicial Reforms Commission in matters pertaining to reforms in civil and criminal procedure courts. It also reiterated Chief Justice Bhagwati's recommendation of setting up mobile courts in rural areas for which the Parliament would have to pass an appropriate legislation. The resolution also suggested that the institution of the Lok Adalats, which are providing commendable services in settling petty disputes outside the court in the states of Tamil Nadu, Gujarat, Maharashtra and UP, should have a statutory basis and should be included in the National Legal Services law proposed to be passed by Parliament.

It had also been agreed upon that state governments should increase the number of courts and also the strength of judges. In fact the Union Law Minister, Asoke Sen, has decided to fill up the 60 odd vacancies in the Supreme Court and High Courts within the next three months.

The feasibility of the resolutions and recommendations will be studied and the situation will then be reviewed by the participants of the conference next month.

NUCLEAR REACTORS INDIGENISING THE SCENE

India is going about the job of indigenising its nuclear power programme in a big way. On Aug 8, Dhruva, a 100 Mw natural uranium reactor designed, constructed and commissioned by scientists of the Bhabha Atomic Research Centre, went critical. It is likely to become operational by November this year. This indigenously produced reactor, the largest of its kind, is one of the new high flux reactors in the world. The heavy water cooled and moderated uranium reactor is 2.5 times larger than the 25-year-old Canadian built Circus reactor which it will replace.

Even its most intricate components like Calandria and fuelling machine have been manufactured in India. Dhruva is likely to create an impact in the fields of medicine, agriculture and industry as it will help increase the production of isotopes like Iodine-131, Chromium-51 and

MOLYBDENUM-99

Meanwhile the 235-Mw second unit of the Madras atomic power plants at Kalpakkam also went critical on Aug.12—another milestone in India's nuclear power programme. The commercial production of power by this unit is expected to start by December this year.

Several new reactors are also in the offing. An indigenously designed fast breeder test reactor at Kalpakkam is expected to become critical by September. This 50Mw reactor will use plutonium-uranium-carbide developed at BARC as fuel. The Maharashtra Atomic Power Plant-II, with a generating capacity of 220 Mw will also become operational by October. The government also proposes to commission the Narora atomic power project by 1986-87 and the Kakrapur atomic project in Gujarat in the Seventh Plan period.

NYERERE'S VISIT STRENGTHENING TIES

The Tanzanian President Julius Nyerere visited India in the last leg of his three Asian nation tour. In an attempt to strengthen the friendly ties between the two countries. The wide-ranging talks he had with Indian leaders were focussed on the state of affairs prevailing in South Africa.

The two countries shared a common concern over the situation in South Africa and strongly condemned Pretoria's racist regime. While applauding Tanzania's unstinted championing of the cause of the South African people, India extended unequivocal support to the liberation movements in South Africa. President Botha's unprincipled racist regime's manoeuvres to thwart a peaceful settlement in Namibia, emboldened as it is by the support extended to it by some powerful nations, came in for some scathing criticism. However the Tanzanian President was hopeful that the racist regime would end. Said Nyerere: "The real process of resolution of apartheid in South Africa by force has begun and the black majority is now prepared to die for its rights."

President Nyerere also lashed out at the US, charging it and some developed countries of hijacking the International Monetary Fund (IMF). He said the IMF had become a mere instrument in the hands of the rich north to control the south and that the IMF funds were being misused for destabilising developing countries.

The Tanzanian President also met the visiting Secretary-General of the Commonwealth, S.S. Ramphal, to give him an assessment of the situation in Africa. It is expected that the current turmoil will figure prominently both in the Commonwealth Heads Of Government Meet in the Bahamas, in October, and the non-aligned foreign ministers conference in Luanda in September.

India, on its part, took this opportunity to express its concern over the militarisation of the Indian Ocean which is posing a grave threat to the security of littoral and hinterland states.

President Nyerere, who has led his country for more than 24 years since independence and is now laying down the office of President, also stated that he had come to India at this juncture to reaffirm his country's friendship with India and gave the assurance that relations between the two countries would remain as friendly under his successor.

CLAUSEN'S VISIT TAKING STOCK OF THE SITUATION

The visit of the World Bank President, A.W. Clausen, to India, has forced the financial institutions of the country to reassess their standing. And, although Clausen has assured India of an increased flow of concessional credit during the Seventh Plan, he also advised that India should rely more on commercial borrowings than on concessional aid. Clausen also underscored the importance of exports as the most prudent way of meeting the Seventh Plan resources requirements.

However in view of the serious gap in internal and external resources, Clausen's assurance comes as a welcome relief. The World Bank, a multilateral affiliate, the International Development Agency (IDA), will try to give more aid to India and speed up disbursements despite the fact that it is presently facing severe constraints. For, the US and other major donor countries have pledged a lesser amount for the IDA replenishment henceforth curbing the bank's lending ability. For, Clausen says, India should not be penalised for its development success. Rather its development experience makes it a strong case for increasing its supply of official long-term development assistance.

(Continued on page 55)

NIGERIA

MISSION UNSUCCESSFUL

There was yet another change in Nigeria's government when an obscure army officer, Brig Jeneru Bogaoro deposed the 20-month-old military government of Maj Gen Mohammad Buhari in a bloodless coup and set up Maj Gen Ibrahim Babangida, Chief of the Army Staff, as President. Maj Gen Babangida was a member of Maj Gen Buhari's Supreme Military Council, and had also masterminded Buhari's coup in 1983, which had overthrown the civilian government of Alhaji Shenu Shagari, following widespread riots after the 1983 general elections. Opposition elements had then charged Shagari of rigging the elections.

The reason for the present coup, according to Bogaoro, was the 'slow pace of reform' of the Buhari regime, which had failed to overcome the economic difficulties of the people, "as expressed in the media", had been ignored repeatedly. The allegation had some truth because recently Buhari had banned all discussions on the country's political future on the grounds that Nigeria was not ripe for such discussions. Editors and others who had criticised this move had been detained.

However, all African countries do not resort to such radical moves to bring about a change in the leadership. On Aug 15, Tanzania's only official party, Chama Cha Mapinduzi, endorsed the appointment of Ali Hassan Mwinyi as President of Tanzania. Mwinyi had been hand-picked by President Julius Nyerere, who will soon retire after 24 years as the country's leader. There will be a presidential election in October but that is expected to be a mere formality. Mwinyi is likely to uphold Nyerere's policies. His take-over is not expected to generate any radical changes.

SOUTH AFRICA

PROTESTING AGAINST RACISM

Violence in South Africa has intensified since August, and black townships in the Cape Town area have become the main focus of turbulence. The country's black miners took to arms as well and struck at a number of gold mines and collieries. There was a mass march in Cape Town's Pollenier jail where Nelson Mandela, the leader of the African National Congress, is imprisoned. This resulted in violent police repression which evoked criticism even from the US. Since the current unrest began last year, over 600 people have died, making it as bloody an uprising as the 1976-1977 Soweto riots. Meanwhile, the South African economy has been subjected to undue strain as foreign investors have begun to withdraw their money. The rand fell from 45 American cents to a record low of 38 cents, and it was only after the Central Bank intervened that it rose again to 41.5 cents which is still less than half its value two years ago. In fact, the South African Reserve Bank Governor went abroad in August to discuss emergency rescue measures with Western governments.

The European community sent a fact-finding mission to the country, despite Pretoria's attempts to prevent it from setting out. In the US, too, a Bill calling for economic sanctions against South Africa is awaiting passage.

Although Pretoria is under pressure both globally and within the country from its black majority, President Pieter W. Botha made it clear by late August that he had no intentions of committing himself to new reforms on power sharing. He said, "I am not prepared to make it (a commitment), not now and not tomorrow." Instead, he offered, as he had done before, to negotiate with some blacks on limited political change, and these blacks appeared to be hand-picked by him. He offered the blacks no incentives to negotiate and no reason to believe that justice could be attained without further struggle.

One point of concern for black sympathisers is the amount of disunity within the black community. On the one hand is the United Democratic Front (UDF), an umbrella group of 600 multi-racial groups. On the other is the Inkatha, a rival political group. The two are, at present, locked in an increasingly violent struggle

to gain more influence within the black community. This kind of infighting can only lead to a weakening of their struggle against their common enemy—the white minority.

JAPAN AIR DISASTER FATAL FLAW

The worst single plane disaster in aviation history occurred when Japan Air Lines (JAL) Flight 123, from Tokyo to Osaka, crashed into Mount Osutaka in mid-August killing 520 of the 524 people on board. Although the cause of the crash is still uncertain, one theory is that there may have been a flaw in the tube that held the front of the vertical stabiliser to the rest of the plane. If this tube snapped, this could have ripped open the cabin's roof thus causing explosive decompression. Before it crashed, the pilot, with an experience of 12,400 hours of flying time, reported that the apparent cause of the trouble was the breaking of the rear-most right hatch door. Investigation later showed this door to be intact. In fact, all the four survivors of the crash had been seated in the rear of the plane. This crash occurred only 10 days after a Lockheed L-1011 crashed in Dallas, Texas, killing 134 people.

It took rescuers about 15 hours to get to the scene of the crash. One of the survivors said that she had heard several children's voices for hours after the crash before they had gradually faded away. A newspaper later reported that according to the police coroners in the nearby town of Fujioka, some of the victims had been alive for hours after the crash. What actually happened was that the search had to be abandoned on the evening of the crash because of poor visibility, and it was only in the morning that airborne troops could slither down ropes attached to helicopters. The JAL president, Yasumoto Takagai, claimed responsibility for the accident and submitted his resignation to Nakasone.

Although JAL has a first-class reputation for maintenance and on-time performance, its overall safety record is questionable. In 1982, a mentally unstable pilot plunged his DC-8 into Tokyo Bay, killing 24 people. In the last 13 years, four other major crashes have taken place, in Moscow, New Delhi, Kuala Lumpur and Anchorage, and a total of 242 people have died. All of these were blamed on pilot error.

Whatever the cause for the crashes, there is at present a global fear of flying. There is also a demand for seats in the rear of planes since the survivors of the JAL crash were all seated in the back. However, according to airline authorities, there is no logic behind this as surviving a plane crash is mostly a matter of chance.

PAKISTAN

GRAVE ISSUES

The death of Shahnawaz Bhutto, the youngest son of the late PM Zulfikar Ali Bhutto, has set off another round of struggle between the Bhutto family and President Zia-ul-Haq which may have far-reaching consequences. Shahnawaz Bhutto was found dead in his Cannes apartment on Jul 18, and the French police kept his body for post-mortem. According to some sources, death occurred due to poisoning. In Pakistan, meanwhile, hundreds of Pakistanis began to congregate at the Bhutto family burial ground of Garhi Khuda Baksh, 200 miles north-east of Karachi. Thousands of others began to move towards the province of Sind, the stronghold of the Bhutto family and the Pakistan People's Party (PPP).

Zia, however, was taking no chances, his main fear being that the outpouring of sympathy may turn into a major political demonstration. He placed military forces on alert in Sind, barred opposition leaders from entering the province and placed many PPP leaders under house arrest. The major factor behind such measures was that Benazir Bhutto, the late PM's daughter and the present leader of the PPP, decided to attend the funeral ceremony. She had moved to London in 1984 after being released from house arrest, but is still Zia's most formidable political enemy. She was given a tumultuous welcome on her return to Karachi to bury her brother and thousands of people lined the 13-mile route from the airport to her residence. Zia retaliated against this expression of sympathy and support by placing her under house arrest, initially for 90 days.

This came as a surprise to PPP supporters in Pakistan because Gous Ali Shah, the CM of Sind had announced only the day before her arrest that she would be allowed to move freely in the province as long as she did not cause trouble. Benazir Bhutto, on her part, had said that the PPP would not start any agitation against the regime till next January. On Aug 15, June had promised to lift the eight-year-old martial law in Pakistan on Jan 1, 1986. Upon which she had, insisted that she would not create any trouble that would lead to a further postponement of the decision to restore democracy. However, many Pakistanis are skeptical about Zia's intentions. He has planned a series of legislative measures which will prolong his rule under what he calls 'controlled democracy'. He recently proposed an amendment to the 1973 Constitution that will give him the authority to hire and fire all the country's top officials, including the PM. He has also planned a National Security Council, dominated by his own hand-picked generals, which would have the power to overrule any moves by a future civilian government.

SYRIA-LEBANON

CAMPS OF CRUELTY

Fighting broke out again in Beirut in late July and August in which at least 300 people were killed. This time the main perpetrators were the Shias and the Druzes. Nabih Berri of the Shia Amal militia and Walid Jumblatt, the leader of the Druzes, formed a new political organisation with the aim of replacing Lebanon's multi-religious state with a secular democratic nation, which would be pro-Arab and anti-Israel, and would do away with the political privileges of the Christian community in Lebanon. Since the new organisation was set up in Damascus, the Christians assumed that it had Syrian backing. Indeed, Syria did give the Shia Amal militia 50 T-54 tanks in late July, which made them even more irresponsible. Artillery battles which began in Beirut on Aug 9 have continued since then. The Shias also used car bombs to take innocent lives.

Although the Christian Maronite groups have closed ranks and have rejected the Shia-Druze plans, they still do not want to break from Syria. President Gemayel visited Damascus, where President Assad of Syria assured him that Syria was committed to gradual reform and supported Gemayel.

Meanwhile, the Palestinians in Lebanon are still suffering. During the Israeli occupation, hundreds of them were slaughtered in Beirut's refugee camps and the slaughter goes on, their executors are the Shias. It is now revealed that earlier this year Shia gunmen surrounded three shanty Palestinian towns in Beirut, two of them being Sabra and Shatila, where in September 1982 Maronite Christians were massacred. The Shias tried to expel all Palestinians who were loyal to Yasser Arafat, and when they refused to budge, they tried to bomb them into submission. Almost 18,000 of the camps' 70,000 inhabitants have fled to other parts of Beirut, and 14,000 have moved to Southern Lebanon. Amal gunmen captured about 1,500, most of whom are feared dead. About 638 other Palestinians were killed in the camps. While in 1982 the massacre received widespread coverage, the present carnage has so far gone unreported.

ARAB LEAGUE

MEETING IN VAIN

The 21-member Arab League held its 13th meeting in 40 years in Casablanca. According to some pessimistic observers the disharmony among the members was so apparent that it may well be its last meeting. Only nine of the Arab Heads of State showed up and Syria, Lebanon, South Yemen, Algeria and Libya did not send any representatives at all. The basic disharmony is between the 'constructionist front' and the 'rejectionists'. To the former group belong the more flexible Arab countries who wish to promote the talk-to-Israel formula drawn up by King Hussein of Jordan and the Palestine Liberation Organisation's (PLO) Yasser Arafat. At the last Arab League meeting held at Fez in 1982, it had been decided that peace would be guaranteed for all states, including Israel by implication, in return for the creation of a Palestinian state coupled with Israel's withdrawal from the territory it has occupied since 1967. This year's February accord was meant to create a mechanism to implement the Fez agreement for the setting up of a joint Palestinian-Jordanian delegation which would hold peace talks through US Assistant Secretary of State, Richard Murphy, with Israel. The rejectionists, led by Syria, however, still refuse to think about a compromise with Israel.

In fact, the Casablanca meet made no substantial gains. The Arab League agreed to send emissaries to mediate between several feuding

Arab states, including Syria and Iraq, and to condemn Iran for its role in the five-year long Persian Gulf war. They also conveyed their appreciation of the February agreement. Jordan, however, intends to use this as a go-ahead signal and will constitute a delegation to talk to Murphy.

Meanwhile, Syria, the rejectionist leader, sponsored another kind of summit in Lebanon. Representatives of 15 Lebanese political parties and organisations and about 30 political independents met at Chitaura and declared the formation of a National Alliance Front. The Front declared that it had a "special and distinctive relationship" with Syria and demanded a separation of Lebanon from Israel and "all its agents". It also said that its purpose was to promote changes in the Lebanese system of representation which at present favours the Maronite Christians.

SOUTH PACIFIC TREATY

SAFETY FIRST

The South Pacific Forum held its annual summit at Nauru, the capital of Cook Islands recently, and the main outcome—a South Pacific Nuclear Free Zone Treaty—caused currents among the major nuclear weapons-holding nations. The 13 members of the forum are Australia, the Cook Islands, Fiji, Kiribati, New Zealand, Niue, Papua New Guinea, the Solomon Islands, Tonga, Nauru, Tuvalu, Vanuatu, and Western Samoa. There is also an observer, the Federated States of Micronesia, which is a US administered UN trust territory.

The Nuclear-Free Zone treaty had been first proposed by Australian PM Bob Hawke two years ago. According to its provisions, the manufacture, stationing and testing of nuclear weapons within the zone are banned. However, nuclear powered ships and those carrying nuclear weapons will still be able to ply in the region's waters, although the decision on docking rights has been left to individual members of the forum. Nauru, Papua New Guinea, the Solomon Islands, Tonga and Vanuatu held out, but the other forum members hoped that they would soon agree. Whether the five big nuclear nations, the US, the USSR, China, France and Britain, would accept the treaty is, however, another question.

Most states in the region appear determined to pursue a nuclear free zone in the South Pacific. New Zealand's David Lange is still keen on pushing legislation that would permanently exclude nuclear ships from New Zealand's waters. France and the US will be most affected by such measures. The forum's treaty provisions would preclude further French underground nuclear testing at the island of Mururoa. The US has long taken the region for granted and its nuclear powered ships have been plying the South Pacific waters. It is now concerned because the Soviet profile has been growing in the region. Recently, Kiribati signed an agreement with USSR giving the Russians permission to fish in their 200-mile coastal zone in return for \$1.5m per year. The Chinese, too, have been establishing their presence. They have set up new embassies in Papua New Guinea, Fiji and Western Samoa. Under the circumstances, the US will have to re-evaluate its strategy for the region.

The forum also discussed the status of the militant Kanak rebels who are now opposing French colonial rule in New Caledonia. The forum's communiqué questioned France's plans to upgrade its military bases in the territory, but at the same time, criticised the current schedule that calls for regional elections in New Caledonia in September (the date may be changed) and a vote on independence by the end of 1987.

LATIN AMERICA

PRESIDENTIAL PROBLEMS

Two of Latin America's major debtor nations have new Presidents and one of them shocked the world's leading bankers during his inaugural speech. Peru's Alan Garcia declared that henceforth Peru would limit the annual payment on its debt to 10% of his country's export earnings which is between \$300m and \$360 m. Peruvian debt amounts to \$14b. and with this kind of repayment, the world's bankers have something to worry about.

Bolivia's new President, Victor Paz Estenssoro, who won actually the runner-up in the presidential elections held in July. Since neither he, with 26.4% of the votes, nor the winner, Hugo Banzer, with 28.6% of the votes, had a clear majority, the election was decided by the Bolivian Congress in August, and here Paz won by 94 votes to 51.

Both the Presidents face serious problems. In Peru, inflation is running out of control, the per capita income has fallen to its lowest level since 1964 and industrial production is rapidly falling. Further, Maoist guerrillas are creating unrest in the Andean highlands and the government is saddled with budget deficits and narcotics related corruption. Inflation in Bolivia is between 8,900% and 34,000%, depending on what

figures the calculation is based on. No payments have been made on its \$3.6b debt in the past 16 months. The black market accounts for three-fourth of the economy. Problems are also being created by trade unions led by leftists.

Both Presidents have unveiled austerity plans. Garcia's plans include a price freeze, a sharp cut in military expenditures and a 12% devaluation of the Peruvian sol. Paz, on the other hand, believes in cutting inflation by holding down state spending, especially by the loss making state financing company. He wants realistic exchange rates, more investment in agriculture and an agreement with the International Monetary Fund (IMF).

Meanwhile, the major bankers of the world are concerned as to whether other Latin American countries would follow the Peruvian example. Nineteen Latin American governments have recently called for a sweeping political "dialogue" with Western creditors to defuse the three-year old debt crisis. To make matters worse, Cuba's President Castro recently told a gathering of representatives from 30 Latin American countries that they should forget about their \$360b debt to Western creditors and not pay it back. However, there is still a silver lining for the Western creditors: Colombia, Venezuela and Ecuador have made considerable progress in meeting their debt obligations and Brazil and Mexico can still receive IMF-sponsored loans and trade credits. Thus, all Latin American borrowers are not in as dire a strait as Bolivia or Peru.

HONG KONG

CHINESE CHECKERS

According to the Hong Kong agreement, reached between China and Britain last September, China promised to keep Hong Kong as it is, for 50 years after Britain hands over the city to China in 1997. However, the people of Hong Kong are already jittery about their future. It was decided to implement some basic laws to safeguard Hong Kong's social and economic freedom when Britain leaves. What is worrying Hong Kong is that these laws are being drafted in China by Chinese experts, and only a few Hong Kongers who have a long record of friendliness towards China are being consulted. Politically, rising stars like Manu Tam and Allen Lee, are nowhere in the picture. Moreover,

Peng Zhen, a member of the Chinese politburo and an expert in socialist law recently stated that the final decision on any point of the basic law should be taken by the Chinese National People's Congress. Under the September agreement, Hong Kong's courts are supposed to have the final word.

Another cause of worry is the Hong Kong Government's own activities. The Attorney General, Michael Thomas proposed some changes in the civil and commercial freedoms, which were all opposed. He proposed that there should be a tribunal to watch over 'objectionable publications'. Although there is no objection to censorship of pornographic material, Hong Kongers felt that China could later use it to curb politically objectionable publications. The proposal is now being reconsidered.

Thomas also proposed that trials of complex commercial crimes were to be heard by a judge and a panel of expert adjudicators. It was felt that this would weaken Hong Kong's legal system. Thomas' third proposal was a 'powers and privileges' Bill, one clause of which would have made it a legal offence to show 'intentional disrespect' to councillors. Already 25 clauses of the 28-clause Bill have been deleted.

Hong Kong's future is also being discussed by the joint liaison group set up under the agreement to discuss trade arrangements and multilateral issues. This group is composed of both British and Chinese members and meets in London. Its work is shrouded in secrecy and this has been criticised by Hong Kongers who want to know which way the wind is blowing. However, there are still 12 years to go before the transfer of power takes place, and much water would have flown down the Yangtze by then.

WEST GERMANY

SPIES IN THE FOLD

In late August, when Hans Joachim Tiedge crossed the border and defected to East Germany, the beginnings of another espionage scandal (see box) became evident in West Germany. Tiedge, an extremely important counter espionage official working on East German affairs, was evidently a Communist spy for the past 19 years and was responsible for exposing East German spies working in West Germany.

Before Tiedge's defection, two secretaries, Sonja Luneburg and

SPY SCANDALS

West Germany has proved to be fertile ground for espionage activities with spy scandals shaking the country with periodic frequency. Among the spy cases to have rocked the country, some notable ones are as follows:

- In 1960, Alfred Frenzel, a Social Democratic Party member specialising in defence matters on the parliamentary committee, who had worked as spy for both East German and the Czech secret service, was arrested. After being given a 15 year prison sentence he was handed over to East Germany in 1966.

- In 1961, Heinz Felfe, who played the part of a double agent spying for both West and East Germany, was caught. Felfe's espionage activities had future repercussions and ultimately led to the departure from office of Chancellor Konrad Adenauer in 1963.

- In 1974, the sensational spy scandal involving Gunter Guillaume, an East German refugee who had become a close confidant of Chancellor Willy Brandt was exposed. Guillaume who was one of Brandt's most trusted secretaries had an intimate knowledge of many confidential NATO records and also much of Brandt's private correspondence with other world leaders. Guillaume's exposure led to the resignation of Brandt in 1974.

- In 1976, Renate Lutze, secretary to Defence Ministry Personnel Head, her husband Lothar Erwin working as a small official in the Defence Ministry and Jurgen Wiegell, a naval department clerk passed classified and secret information amounting to more than 1,000 documents to East Germany. The Lutze scandal forced Defence Minister George Leber to resign.

- In 1984, Manfred Rotsch, head of the aircraft engineering department of West Germany's largest aircraft manufacturer was arrested for being a KGB spy for the last 17 years.

The basic reason why West Germany is so vulnerable to espionage activities is that identification is easy to conceal for a person moving from East to West Germany as ethnic backgrounds for the two countries are similar as also the common border they share with each other.

FLUENCY DEVELOPMENT COURSE

■ By Post ■ In 3 months

You may be well-qualified, and good at writing in English. You may be good at translating, too. But can you **SPEAK** English fluently?

You may be a good scholar and may have a good knowledge of everything. But can you **SPEAK** in English about what you know without faltering?

- Our Course will make you break free of hesitations and speak English with a stream-like flow.
- Our Course will make you speak by juggling with English-speech.

Our learners include All India Service Officers, Judicial Officers, Commissioned Officers, Advocates, Doctors, Engineers, Executives, Businessmen, Civil Service candidates and candidates for all career-competitions.

Booklet and Application Form for Rs. 3/- from:

ADULT FACULTIES COUNCIL
K-69, COCHIN 682 026.

Urges flight—the former working as secretary to the Economic Minister Martin Bengemann and the latter working as a book-keeper in the Association of Exiles, a group dealing with the interests of Germans whose lands had been given to other countries after World War II—also disappeared. Though so far no evidence has surfaced connecting Tiedge and the secretaries disappearance, it is possible that Tiedge tipped them off before crossing the border himself. To complete the mystery, Lorenz Betzing, a West German Armed Forces courier who had also worked on airconditioning installations in a secret government location, also vanished from Bonn. Betzing, it is believed, was a major link in the network of spies operating in Bonn. The recent spy exposure has led to a tightening on security checks in Bonn. Though the Tiedge scandal will not alter West German relations with the NATO countries in any substantial way as these agencies already treat West German intelligence agencies with a little respectful caution, it will certainly affect the process of the normalisation of relations between the two Germanies.

ARGENTINA

TROUBLED TIMES

Recently a tangled tale of espionage and political intrigue surfaced in Argentina. It appears that a right-wing security operative, Raul Guglielminetti, worked his way into the very core of Argentine President Raul Alfonsín's government with the purpose of setting up and leading a network of heavily armed terrorists who would carry out a series of bombings and political kidnappings which would destabilise the civilian government. A police raid on a summer house near Buenos Aires disclosed a right-wing 'death squad', with an arsenal of explosives. The house was owned by Guglielminetti, who shortly afterwards, escaped to Spain. However, the government's inept handling of the matter has led the opponents of Alfonsín to charge that Guglielminetti's group may not have been an anti-Alfonsín group, but one created to spy on political opponents.

Meanwhile, Alfonsín's popularity is on the increase because of his anti-inflationary programme which was announced in June. Inflation had reached 1,010% in May, but things have stabilised somewhat since then. The programme consists mainly of a wage and price freeze. The evidence so far shows that the measures have worked and inflation is coming down. Earlier, the cost of living had risen by about 40% or so a month. In July it rose by 6.2% only. The wholesale price index also fell by 0.9% in July. New money is no longer being put into circulation and this has helped the economy a great deal.

On another front, the trial of the nine former Argentine rulers accused of human rights violation goes on. From 1976 to 1982, these nine generals and admirals were members of the armed forces juntas that governed Argentina, and three of them even served as Presidents. In this period over 9,000 people vanished in the hunt for leftist subversives, and most of them are still missing and are presumed to be dead. Nine hundred people told horror stories before six judges about the treatment meted out to them by the military regime. The judges are expected to give their verdict in December.

THAILAND COUP

THREAT TO TINSULANONDA

Thailand has a long history of coups. Within the past 50 odd years there have been 15 bids for power in this essentially military-dominated oriental nation the latest on Sep. 9. An abortive coup attempt was made to topple the Prem Tinsulanonda Government by a disgruntled former army Colonel, Manoon roopvachoran and his brother Air Force Squadron Leader Mañās. Swift action by the loyalist troops, however, nipped the uprising in the bud.

The latest coup d'état, the second during PM Tinsulanonda's tenure, was apparently masterminded by a former Supreme Commander of the armed forces, also an ex-PM of the country Kriangsab Charnanan. The previous one in 1981, dubbed the April Fool's coup, was also led by Roopbhachoran. This time 22 tanks from the 4th Cavalry Regiment and about 400 to 500 troops participated in the rebellion—in the absence of both PM Tinsulanonda who was away on an official visit to Indonesia and the Supreme Commander, Gen Arthit; Kamlang-ek.

Far from being bloodless like the earlier uprisings this coup turned out to be a violent 10-hour confrontation between the loyalist troops and the rebel forces. In which, according to official estimates, four people including two Western journalists were killed and 59 injured. The apparent cause of the rebellion was discontent generated by Tinsulanonda's economic policies. It is widely believed that these policies are responsible for the present critical state of the economy, rising

unemployment and under-employment. And Tinsulanonda's decision to devalue the Thai currency, baht, came in for some scathing criticism even from Gen Arthit and would have, in all probability, resulted in a coup had it not been for the support of the royalty which he enjoyed. All, then is not well for the Tinsulanonda Government, which is at the moment rather precariously perched.

USA CHEMICAL CHAOS

August was a bad month for the chemical industry and one of the worst hit companies was again Union Carbide. After the Bhopal gas tragedy last December in India, Union Carbide temporarily closed its Institute, West Virginia plant and spent over \$5m to improve safety regulations and implement a new emergency-warning system. But in mid-August, a leak in a chemical storage tank sent toxic gas into the air over the Institute, and the warning siren sounded about half an hour later. The gas was not methyl isocyanate, and, therefore, the damage was not as serious as at Bhopal. About 134 residents complained of chest problems, nausea and dizziness, but no casualties were reported. However, coming after the Bhopal tragedy, this was another black mark for Union Carbide.

A day after the Institute leak, a cargo of hazardous chemicals collided with a tanker truck on the Capital Beltway near Alexandria, Virginia, and about 7,000 cars were trapped on the road. Six hundred nearby residents had also to be evacuated. At Camden, New Jersey, a forklift in a chemical plant struck a storage tank pipe, spilling 3,000 gallons of highly toxic liquid. In Valentine, Arizona, a freight train carting 30 different types of hazardous chemicals derailed, causing several explosions before the 70-car train was finally destroyed by fire. And at yet another Union Carbide plant in West Virginia, 1,000 gallons of non-toxic liquid was spilt. According to critics of the chemical industry, it had always been a hazardous industry; the only difference is that the public is only now becoming aware of the dangers.

FRANCE

ATTACKING STANCE

On Jul 10, Rainbow Warrior, the flagship of the Greenpeace Ecological Movement, was bombed and sunk, and one crew member was killed. Soon afterwards, French journals like *L'Evenement du Jeudi* and *VSD* began to point their fingers at the French Government. The Greenpeace towler had been preparing for a voyage to Mururoa atoll, where the French conduct their nuclear tests, to protest against these tests. To prevent that, the navy, it appears had been planning to put marines in fast small boats off the beaches. Even earlier skirmishes had taken place between Greenpeace ships and the French navy.

President Mitterrand, who had insisted, in 1981, on cleaning the French secret service of agents considered undesirable, immediately sent an apologetic letter to the New Zealand Government and called on his to inquire into the event. Bernard Tricot, a former adviser of Gerde-Gaule was appointed to head an inquiry commission. But the scandal refused to sink. Another journal, *Le Point*, alleged that the Defence Minister, Charles Henru had ordered a watch on the Greenpeace boat and had insisted that it should be kept out of the nuclear test zone of France, although he had not ordered the bombing. Most people now believe that the DGSE was involved, and the affair may lead to political problems for Mitterrand. The Greenpeace protesters, however, have not been disheartened. They have sent out another ship, *The Greenpeace*, to Mururoa. Mitterrand has warned them that they would be kept out of the 50 mile nuclear test zone by force, if necessary.

Meanwhile, in another development the French Constitutional Council turned down a previously passed Bill on New Caledonia, which divided the territory into four regions, each of which would elect a council whose members would come together in a semi-autonomous congress. The council claimed that the statute was unfair as it favoured the independence-minded Kanaks at the expense of the vast French population in the capital of Noumea. Mitterrand called a special summer session of the Parliament and introduced a new Bill which would increase Noumea's representation from 18 to 21 in a new 48-seat Territorial Congress. The National Assembly in France passed this measure and it has gone to the Senate, which can delay but not block the statute. The New Caledonian Territorial Congress elections which were scheduled for September, are now expected to be held in October.

S.P. S. A.N.

GENERAL KNOWLEDGE

No aid against Aids

It is called AIDS: Acquired Immune Deficiency Syndrome. If that is a mouthful it has other, shorter, frightening names—'Gay Plague' and 'Fear'. The disease is deadly. Its main haunt is the US. But it is inexorably spreading around the world. Dr Ward Cates of the US Centre for Disease Control, warns "the potential for this disease is much worse than anything mankind has seen before." A statement that acquires ominous overtones because cures are nowhere in sight: "Cures are not in the vocabulary." It is the greatest challenge to modern science and medicine, even greater than cancer, and if the increasing count of wasting, waning and dying people is any indication, the disease seems invincible.

Origins

One had heard of serious sex-linked diseases, like VD's, but there was no disease quite so lethal till the eruption of AIDS in the US some four years back. Nothing is known about the origin of this disease, though some experts claim to have traced its origin to the African green monkey. But since then AIDS hasn't looked back. It has stomped on leaving thousands dead and dying in its morbid trail. So far 73% of those afflicted have been homosexual or bisexual men, 17% intravenous drug users (they shared the needle with AIDS—infected men) and 1% hemophiliacs (they received AIDS infected blood during transfusion). The rest of its victims are normal heterosexual people from common walks of life. How they contracted the disease is, like much else about AIDS, uncertain. The popular theory, however, is that these men contracted AIDS from the prostitutes they visited. Questions regarding its origin and nature continue to haunt doctors and patients alike. Says Dr William Haseltine, a leading investigator at Harvard's Dana Farber Cancer Institute: "In trying to understand AIDS we have moved from being

explorers in a canoe to explorers with a small sail on the vast sea of what we do not know."

Nature

In a normal, healthy person, viruses entering the body are detected by macrophage cells which alert a specialised cell called a T cell. The T cell is the nerve centre of the human body's disease resisting mechanism (immune system). As soon as it is tipped off about the entry of infectious alien bodies it multiplies itself into several helper T cells. The T cells stimulate the B cells to produce antibodies which attack and kill the invaders.

In an AIDS-infected person, the AIDS virus knocks out the T cells blocking their ability to recognise foreign substances, before turning them into AIDS virus factories. The factory is extraordinarily efficient; due to a unique genetic component the virus reproduces itself about thousand times as fast as any other kind of virus. This explains its rapid and rampant growth. Without the infection sensing T cell, the human body is utterly powerless to fight even minor infections. As a result the victim is preyed upon by an endless sequence of diseases. Even mild diseases become fatal, in the face of complete lack of resistance. Some victims develop rare cancers, neurological disorders and brain damage, before succumbing to the inevitable death.

Remedies

Will this marauding disease ever be conquered? The answer is a big question mark. As doctors feverishly grope for possible remedies the patients die by the thousand. So far doctors and experts have failed to pinpoint a single significant chink in the death-dealing armour of the disease. Doctors are baffled and they dread going into room after room of patients asking what they can do, for at the moment there is little they can do.

One idea, which has emerged with relatively greater promise, is to use several drugs in a

combination to battle the disease on many fronts. Drugs like HPA 23, discovered by France's famed Pasteur Institute could be used to block the replication of the AIDS virus by preventing the transcription of its genetic code while others could be used to revitalise the body's own shattered immune system. But it is not so simple. HPA-23 has serious side effects and the 'other' drugs have not been found. And the doctors are nowhere near the stage of comprehending the disease well enough to be able to strike the right combination of drugs. So for the present the forlorn cry of dying patients is likely to remain unanswered.

Non-resident Indians: How many? two million worldwide. Where are they concentrated? The Gulf States. Of the 1m living in them, 2,50,000 are in the United Arab Emirates.

How much do you know?

Even two decades ago Indian women were holding prominent posts in states. Not that many people are aware of this fact. Shanno Devi was the Speaker of the Haryana Assembly way back in 1966. Then in 1972 K.S. Naganathamma was elected Speaker of the Mysore Legislative Assembly. And this year itself Vidya Stokes has been elected Speaker of the Himachal Pradesh Legislative Assembly. The recent signing of an accord between the Centre and Assam to resolve the foreign nationals issue has brought yet another woman into the limelight—Pratibha Patil Trivedi, Chief Secretary of Assam. Does this make her the first Indian woman to hold the top administrative post in a state? Write in and tell us. Address your replies to: The Editor, Career & Competition Times, 10, Daryaganj, New Delhi-110 002.

You Ask, We Answer

What are the famous theories advocated by Dr Jayant Narlikar and Dr Narendra Karmarkar? Explain briefly.

Dr Jayant Narlikar is credited with developing, jointly with the British astronomer Fred Hoyle, a new theory of the universe called the Steady State Theory to explain the present-day universe without postulating a 'Big Bang' origin. According to the Big-Bang Theory, the universe came into being more than 10,000m years ago with a massive explosion of some sort of a 'primordial atom' which contained all the matter in the universe. Ever since, according to the theory, the universe has been expanding in all directions, with the galaxies receding from each other at extremely high speeds. The Hoyle-Narlikar theory does away with the postulate of a big bang to explain the origin and expansion of the universe, ample evidence of which now exists. Hoyle and Narlikar postulated that the universe has always been as it is today; and that only the masses of all particles making it up have increased with the age of the universe. This postulate, they said, could explain the observed facts about the expansion of the universe. However, the Hoyle-Narlikar theory is not taken very seriously by cosmologists today, and the Big Bang origin is favoured.

Narendra Karmarkar, the 28-year-old India-born mathematician, now working in the US, shot into fame recently with his discovery of a new 'linear programming algorithm'—a step-by-step procedure that dramatically speeds up the search for solutions of complex problems by a computer. The existing methods for solving such problems are all based on a sequence of instructions known as the

simplex algorithm which is basically a trial-and-error method. For his new algorithm Karmarkar made use of a mathematical process known as 'projective transformation', which makes the process extremely fast especially for highly complex problems.

Please elucidate the following: TELETEX and VIDEOTEX.

TELETEX and VIEWDATA systems—jointly termed VIDEOTEX—are systems which allow the common household television receiver to become a versatile information display system. In the TELETEX system the user can pick up on his home TV set, after equipping it with a special decoder, a constant service of news, sports, weather, traffic and business information put out by TV stations in addition to receiving television programmes in the normal way. The information comes in the form of 'pages' which can be selected by the user by punching out its number on a calculator-style keyboard connected to the TV set. The service is generally available free of cost.

The VIEWDATA system is more versatile. It makes use of central computers which can be linked with the home TV receiver through telephone lines. Here too, the information sought appears on the TV screen and can be selected by the viewer, but the range of information available is much larger. In fact, the VIEWDATA user can make use of the almost limitless capacity of the computer. It is even possible to do shopping, plan a holiday trip or transact business from home using the system. But the user has to pay a price for the services.

DATA INTERPRETATION-2

BY M.P. GUPTA

An administrator must have the talent to disseminate complex data by transcribing them into easily understandable graphs and figures. The ICS Main Exams look for this talent in prospective administrators. Here we continue with our series on data interpretation to help you acquire this knack.

Problem-1

The following is the age distribution of 2,000 persons working in a large textile mill:

Age-group	No. of persons
15 but less than 20	80
20 but less than 25	250
25 but less than 30	300
30 but less than 35	325
35 but less than 40	287
40 but less than 45	220
45 but less than 50	268
50 but less than 55	150
55 but less than 60	75
60 but less than 65	25
65 but less than 70	20

Because of heavy losses the management decides to bring down the strength to 40% of the present number according to the following scheme:

- To retrench the first 10% from the lower group
- To absorb the next 40% in the other branches
- To make 10% from the highest age-group retire prematurely

What will be the age limits of the persons retained in the mill and of those transferred to other branches? Also calculate the average age of those retained.

Interpretation

- The number of persons to be retrenched from the lower group is equal to $2000 \times \frac{10}{100} = 200$. Eighty of these will be from the 15-20 age-group and the rest $(200-80) = 120$ from 20-25 age-group.
- The persons to be absorbed in other branches = $2000 \times \frac{40}{100} = 800$. They belong to the following age-group:

Age-group	No. of persons
20-25	$(250-120) = 130$
25-30	300
30-35	325
35-40	45*

* 45 is calculated thus: Total number is 800. In between 20-25 and less than 35 = $130 + 300 + 325 = 755$. Therefore the balance from the age-group: 35-40 is equal to $800-755 = 45$.

Those who are to retire are $2000 \times \frac{10}{100} = 200$ in all and they belong to the highest age-group. Their age-groups are:

Age-group	No. of persons
65-70	20
60-65	25

In our Sep '85 issue M.P. Gupta's name was inadvertently printed as M.N. Gupta. The error is regretted.

55-60	75
50-55	80**
Total	200

** $200-120 = 80$

Hence the age limits of those who are retained in the mill are:

Age-group	No. of persons
35-40	242
40-45	220
45-50	268
50-55	70
Total	800

Calculation of average age of those retained

Age-group	No. of persons (f)	Mid-point*** X	fx
35-40	242	37.5	9075
40-45	220	42.5	9350
45-50	268	47.5	12730
50-55	70	52.5	3675
N = 800		Total =	34,830

***Mid-points are calculated by taking the average of lower limit and upper limit, i.e.

$$\frac{\text{Lower limit} + \text{Upper limit}}{2}$$

For example, in the age-group 35-40, the lower limit is 35 and the upper limit 40. Therefore, the average or mid-point will be $\frac{35+40}{2} = 37.5$. Similar calculations can be done for other groups too.

$$\text{Therefore, average age} = \frac{\sum fx}{N} = \frac{34,830}{800} = 43.5375 \text{ years.}$$

Where \sum = Sum of

$$N = \sum f = 800$$

$$\sum fx = 34,830$$

Problem-2

The number of fully formed apples on 100 plants were counted with the following results:

2 plants had 0 apple	8 plants had 6 apples
5 plants had 1 apple	6 plants had 7 apples
7 plants had 2 apples	4 plants had 8 apples
11 plants had 3 apples	24 plants had 9 apples
18 plants had 4 apples	3 plants had 10 apples
12 plants had 5 apples	

- How many apples are there in all?
- What was the average number of apples per plant?

Interpretation

1. Calculation of total number of apples

Apples	Plants	Total no. of apples (Apples x Plants)
0	2	0
1	5	5
2	7	14
3	11	33
4	18	72
5	12	60
6	8	48
7	6	42
8	4	32
9	24	216
10	3	30
	100	552

Therefore, total number of apples = 552

2. Average number of apples

Total number of apples in all = $\frac{552}{100} = 5.52$ or 6 approx.
Total number of plants

Problem-3

In 500 small-scale industrial units the return on the investment ranged from 0 to 30%, no unit sustaining any loss. Five per cent of the industrial units had returns ranging from 0% to and including 5%. Fifteen per cent of the units earned returns exceeding 5% but not exceeding 10%. The median rate of return was 15% and the upper quartile 20%. The uppermost level of return exceeding 25% was earned by 50 units.

Present the information in the form of a frequency table with intervals of 5% as follows:

Exceeding 0% but not exceeding 5%
Exceeding 5% but not exceeding 10%
Exceeding 10% but not exceeding 15%
Exceeding 15% but not exceeding 20%
Exceeding 20% but not exceeding 25%
Exceeding 25% but not exceeding 30%

Use $N/4$, $\frac{2N}{4}$, $\frac{3N}{4}$ as the ranks of the lower, middle and upper quartiles respectively.

Find out the average rate of return.

Interpretation

In the present problem, terms like median, upper quartile, etc are being used. Median is a value at the centre. Therefore, median covers, 50% of the units. Similarly, lower quartile covers 25% of the unit i.e. $100 \times \frac{1}{4}$. Upto upper quartile, the number of units covered should be 75%, i.e., $\frac{3}{4} \times 100$. Therefore, the given information can be summarised as:

(Showing the distribution of small-scale industrial units according to the rate of return on investment)

Table

Rate of return on investment (in percentages)	Firms % of total	Number of firms
Exceeding 0 but not exceeding 5	5	$\frac{5}{100} \times 500 = 25$
Exceeding 5 but not exceeding 10	15	$\frac{15}{100} \times 500 = 75$
Exceeding 10 but not exceeding 15	30	$\frac{30}{100} \times 500 = 150$

Exceeding 15 but not exceeding 20 $\frac{25}{500} \times 500 = 125$

Exceeding 20 but not exceeding 25 $\frac{15}{100} \times 500 = 75$

Exceeding 25 but not exceeding 30 $\frac{10}{100} \times 500 = 50$

Total 100 500

Notes on calculation

(a) In the problem, the median rate of return is 15%. This means the value of median should lie in the median group, i.e., 10-15, because in this group it is composed of exceeding 10 but not exceeding 15%. With the result, exact 15% should be covered by this group. Moreover, upto this group, the number of firms should be 250 or 50%. As before this we have already covered 5% in the first group and 15% in the second group, in this group there will be $50 - (5 + 15) = 30\%$ of the firms, i.e., $500 \times \frac{30}{100} = 150$.

(b) The upper quartile rate of return was 20%. Therefore, this is clear that upper quartile will lie in the group exceeding 15% but not exceeding 30%. Moreover, upto this group, the percentage of the firms will be $\frac{3}{4} \times 100 = 75$ or $500 \times \frac{3}{4} = 375$. Therefore, in this group exceeding 15 but not exceeding 20%, the percentage of firms will be $75\% - (5\% + 15\% + 30\%) = 25\%$ or $\frac{25}{100} \times 500 = 125$.

(c) In this group, the balance number of firms will be kept, i.e., $100 - (5 + 15 + 30 + 25 + 10)$ is equal to 15% or $\frac{15}{100} \times 500 = 75$.

(d) The upper most level of return on investment is exceeding 25 but not exceeding 30. In this group, number of firms are 50, i.e., $\frac{50}{500} \times 100 = 10\%$.

Calculation of average rate of return on investment

Rate of return on investment %	Number of firms f	Mid-points X	fx
0-5	25	2.5	62.5
5-10	75	7.5	562.5
10-15	150	12.5	1875.0
15-20	125	17.5	2187.5
20-25	75	22.5	1687.5
25-30	50	27.5	1375.0
N = 500		$\Sigma fx = 7750.0$	

Average rate of return = $\frac{\Sigma fx}{N} = \frac{7750}{500} = 15.5\%$

Hence, the average rate of return on investment is 15.5%.

Problem-4

The seasonal index for a particular consumer good for January is 112.87. Actual demand for January 1981 was 1,265 units. Based on just this information, what would be the estimate of sales in 1981?

Interpretation

January, in general, represents a month in which demand is 112.87% above an average month. Average monthly demand based on 1,265 units in January is:

$$\frac{1265}{112.87} \times 100 = 1120.76 \text{ units}$$

From the information provided, the estimated total yearly sales
(Continued on page 66)

Garner together the ability to think logically under stress, a mathematical bent, capacity for consistent hard work, a sound knowledge of written and spoken English and you're ready

TO MANAGE MANAGEMENT

Based on interviews with IIM Ahmedabad students
BY VIJAY KONWAR

Management—the prominent word in the career plans of an increasing number of Indian youth. For, it means a future that is highly lucrative, immensely challenging and glamorous. However, nothing succeeds like success in the competitive world of management. One must, therefore, endeavour to develop those qualities which can be said to be the absolute essentials for success.

A high voltage logical mind is one of them. Right from the word 'go', management demands a tremendous capacity for logical reasoning under stress. After all, a manager cannot afford to vacillate. He must make quick decisions, sometimes under terrible pressure. No wonder the CAT (Common Admission Test for the IIMs) itself is so designed as to enable the management institutions to weed out people who are a bit slow on the uptake. The written test, for instance, evaluates not only the standard of reasoning ability but also the degree of efficient time-management. Mental exhaustion, therefore, becomes a major obstacle. Unless one is able to think logically under duress, it will not be possible to surmount it. Similarly, in the group discussion and interview, the emphasis is not so much on knowledge as on the ability to apply that knowledge to simple everyday situations. Why does a scooter consume more petrol going straight up a hill than when it climbs the hill by going round it? This is one example.

Once access to a reputed institute is gained, the candidate finds that the battle, in fact, has just begun. After all, the very purpose of the institutes is to train the 'disciples' of management to think logically and fast and judiciously use basic analytical tools in the decision-making process. One method they employ to drill logic into them is through teaching a deceptively simple principle. Before making any decision, the manager must, first of all, identify the problem. Then he must clearly set out the objectives. After listing a series of alternatives, he must decide upon the most suitable alternative, keeping in mind the objectives, and then take action. One of the first-year students remarked, "If this principle had been as simple as it looks, it would not have been so difficult to

actualise it, when confronted with vexatious management issues." Asked to comment on this aspect, a second year student said, "One feels so inadequate in the beginning. Having for so long been part of a system where rote-learning is given top honours, it becomes difficult to bring one's reasoning abilities to the fore." From all accounts, it appears that students from the humanities background find the rigours of management education a refreshing change.

Be that as it may, it is an undeniable fact that management is for those minds which are attuned to summoning at any given time the powers of logic and reason. This should not, however, be misconstrued to mean that students of only certain disciplines can go in for management. For the simple reason that the ability to reason logically under stress, though it cannot be created, can certainly be developed and enhanced to the point of becoming what is euphemistically called a 'sharp-edged sword', regardless of one's discipline. Practice is the key-word here. The experience of a second-year student should explain the point. This girl realised about two years before facing the CAT that she was rather slow. Baron and Gruber* came to her rescue. She practised the guides thoroughly. The result was worth the effort and time spent—"They (the guides) taught me how to think fast, but, I suppose, regularity played an equally important role."

The extensive and intensive use of Maths in making management decisions is a natural corollary of the need for high calibre reasoning abilities. One cannot hope to get past the CAT (written) without a powerful aptitude for this branch of knowledge. **Tackling the management courses with any credible degree of success involves the use of Maths to an extent that baffles even students with a technical background.** Said a first-year student, "It is amazing how in almost every course that I have done till now, arithmetical, algebraic and geometrical formulae are invoked to find solutions to the smallest of management problems." Instinct and subjective wisdom are not frowned upon. But they come much later.

*Authors of How to... GRE and GMAT books.

after all the combinations have been reduced to simple equations. An ex-student working with the Bank of America emphatically asserted, "It is absolutely pointless going in for management without a strong mathematical base."

How does one go about acquiring this knack? By picking up a good higher secondary level textbook and mastering its contents. For thorough grounding in the basics is more than enough. A topper from Banaras Hindu University in Electrical Engineering, who made it this year in his second attempt, feels he was unsuccessful the first time because he had lost touch with the basics. "Carefully worded questions can easily deceive a person, unless he is familiar with the fundamentals," said this talented B.E.

The third absolute essential for success is capacity for consistent hard work. Hoping to become a manager without being prepared to drive oneself would be sheer idealism. Stunned by the work load, the girl from second year said, "They are sadists, bent on driving us like oxen. But I suppose it is worth the suffering. After all, we might have to work much harder after we get out of this place."

These absolute essentials for success notwithstanding, **a sound knowledge of written and spoken English can be said to be a must.** However much one might like to think that English is dispensable, it is very much an integral part of the management ethos. One of the students interviewed went to the extent of saying, "English can make a big difference between success and failure in the entrance exam, between prominence and obscurity as a management student and between a smart, impressive manager and a dull, boring manager." It is not difficult to appreciate this comment.

In the admission test itself, clearing the written 'hurdle' would become impossible without a comfortable familiarity with the basics of grammar, comprehension and an extensive vocabulary. For a whole section in the paper is devoted to these. Said one second-year rank holder—"The questions are designed to test not only the candidate's proficiency in English but also his ability to think logically and fast. If his English is poor, far from being able to reason logically, he will find it difficult to understand the questions themselves."

In the group discussion, the candidate must be able to demonstrate his reasoning ability through simple and lucid expression. Without this power, a logical mind will definitely go unnoticed. Similarly, in the interview, a thorough grounding in the fundamentals of one's subject(s) of specialisation and coherent expression can indeed be a dynamite combination.

Studying management itself requires a

HOW TO TACKLE CAT-2

BY EDGAR THORPE

Mastering a business management course is something indeed. But getting past the tough CAT that guards the IIM doors is even more remarkable. Last month we exposed its verbal and quantitative abilities. Now arm yourself with its comprehension and mathematical abilities.

All management entrance exams, including the Common Admission Test (CAT) conducted by the Indian Institutes of Management (IIMs) are designed with the aim to test the candidate's general, verbal, mathematical and analytical abilities under stress. Success in these tests, therefore, calls for intense preparation which ought to be done intelligently, systematically and thorough-

ly. Obviously those who are quick to use their common sense and logical reasoning abilities, will take the cake.

In *How To Tackle CAT-1* (Sep '85), we dealt with Sections 1 & 2 of the CAT paper, viz. Verbal Ability and Quantitative Ability. Now we will deal with Sections 3 & 4 of CAT, viz. Reading Comprehension and Quantitative Aptitude (Mathematical Ability).

READING COMPREHENSION

Section 3 of the CAT paper consists of verbal ability tests based on questions on reading comprehension and basic grammar in which three long passages followed by 20-25 questions are to be answered in 20-25 minutes. Two questions on sequential rearrangement of sentences are sometimes asked, to be answered in one minute. Five questions on rewriting of incorrect sentences are to be cleared in 10

minutes.

While preparing for this section, we suggest you look up our earlier issues for *Basics Of English-1* (Jan '85), *Basics Of English-2* (Feb '85), *Understanding Comprehension-1* (Mar '85), *Understanding Comprehension-2* (Apr '85), and *Understanding Comprehension-3* (May '85). These articles should prove very helpful in answering the questions on comprehension and grammar.

averages, rates of interest, time and work problems, ratio and proportions, problems etc.

Table-I
Percentage Calculations

%	Means	Formula	Example
10%	10 parts	+ by 10	10% of 200 = 20
20%	5 parts	+ by 5	20% of 200 = 40
25%	4 parts	+ by 4	25% of 200 = 50
33½%	3 parts	+ by 3	33½% of 200 = 67
50%	2 parts	+ by 2	50% of 200 = 100

MATHEMATICAL ABILITY

Section 4 of the CAT paper deals with problems solving situations in Arithmetic, Algebra and Geometry. The intention is to judge the candidate's mathematical ability under stress (time constraint). The standard required is that of plus 2 or any high school level. After school most of the students give up Maths and opt for other disciplines at the graduate level. Hence, they all lose touch with Maths.

This section has been specially prepared to help students (a) to brush up their knowledge of the fundamental principles of Arithmetic, Algebra and Geometry, (b) to acquaint them with the type and format of questions which are generally set in competitive exams, and (c) to provide them with some useful hints for solving mathematical problems and formula for purposes of quick calculations.

Hints

- Do not compute too much. Learn oral calculation techniques (see Tables I, II or III) as most of the questions in such exams require less computation. Roughly correct answers are acceptable.

- Use short-cut methods for quick calculations. Learn quick calculation techniques for the four basic operations on numbers, i.e., multiplication, division, subtraction and addition.

- Leave out difficult questions. Since all questions carry equal marks, do not spend too much time on one question. After answering all the questions, attempt the questions that were difficult.

- Focus on what you need to answer. Do not start attempting the question until you have read it carefully and understood what has been asked.

- Know the basic formula and procedures of calculating percentages.

Table-II
Sum X Times Calculations

Expression	Means	Example
Doubling of a sum	100%	Rs 2 becoming 4
Sum becoming 3 times	200% increase	Rs 2 becoming 6
Sum becoming 4 times	300% increase	Rs 2 becoming 8
Sum becoming 5 times	400% increase	Rs 2 becoming 10

Quick Calculation Techniques

By	Multiplication	Division
10	Add one zero	Add decimal point one place to the left
100	Add two zeros	Add decimal point two places to the left
1,000	Add three zeros	Add decimal point three places to the left
Examples		
	$158 \times 10 = 1,580$	$158 \div 10 = 15.8$
	$158 \times 100 = 15,800$	$158 \div 100 = 1.58$
	$158 \times 1,000 = 158,000$	$158 \div 1,000 = 0.158$
5	Add 1 zero and divide by 2 Example $2680 \times 5 = \frac{26800}{2} = 1,340$	Multiply by 2 and divide by 10 $2268 \div 5 = \frac{2268 \times 2}{10} = 453.6$
25	Add 2 zeros and divide by 4 Example $26800 \div 4 = 6,700$	Multiply by 4 and divide by 100 $2268 \div 25 = \frac{2268 \times 4}{100} = 90.72$
125	Add 3 zeros and divide by 8 Example $268000 \div 8 = 33,500$	Multiply by 8 and divide by 1,000 $2268 \div 125 = \frac{2268 \times 8}{1,000} = 18.14$

NOTE: For figures like 20, 200, 3,000 or 4,000, etc., multiply or divide by 2, 3 or 4 (as the case may be) and move zero/decimal points.

Percentage Problems

Percentage is a form of expressing a fraction. Note the following hints for quickly solving percentage problems.

- (1) In % problems, three elements are involved, viz:
 - (a) R (rate) followed by a % sign
 - (b) B (base) followed by "OF"
 - (c) P (amount of %) which is generally followed by "IS"

Illustration

Find 25 % of 200.

$$R = 25$$

$$B = 200$$

$$P = R \times B, \text{ hence } P = 25\% \times 200$$

$$= 0.25 \times 200$$

$$= 50 \text{ or } 25\% \text{ of } 200 = 50$$

- (2) In percentage problems the whole is 100%. If a problem involves 18% of base, the rest of the quantity (qty)/amount (amt) = 82%. If R increases, the new amount/quantity is to be added to the base, e.g. 10% increase

= 10% of the base. Similarly if R reduces, the quantity has to be reduced from the base, e.g. 20% decrease = $100 - 20 = 80\%$.

- (3) Percentage change (increase or decrease) has to be calculated using the following formulae:

$$\text{Increase} = \frac{(\text{new amt}/\text{qty}) - (\text{old amt}/\text{qty})}{(\text{old qty}/\text{amt})} \times 100$$

$$= \% \text{ change}$$

$$\text{Decrease} = \frac{(\text{old qty}/\text{amt}) - (\text{new qty}/\text{amt})}{(\text{old qty}/\text{amt})} \times 100$$

$$= \% \text{ change}$$

If the new quantity/amount is less than the old quantity/amount, the figure on the top becomes a negative number resulting in percentage decrease. If the new quantity/amount is more than the old quantity/amount the percentage change is positive resulting in percentage increase.

The percentage increase/decrease is obtained by placing the increase/decrease over the old quantity and changing this fraction to a percentage by multiplying by 100.

Example

If population increases from 300m to 400m in a year, calculate the percentage increase.

$$\text{Increase} = 100\text{m}$$

- For conversion of a % into a decimal, move decimal point two spaces to the left, e.g. $40\% = 0.40$

- For conversion of a decimal figure into %, move the decimal point two places to the right, e.g. $0.158 = 15.8\%$

OR

- To convert a decimal to a %, multiply by 100 and add % sign:

$$0.42 = 42\%, 0.047 = 4.7\%$$

$$8.00 = 800\%$$

- To convert a % to a decimal, remove % sign and move decimal point two places to the left:

$$38\% = 0.38, 5.6\% = 0.056, 210\% = 2.10$$

- To convert a fraction into %, divide the numerator by the denominator and change the decimal point to a %, e.g.

Convert $7/8$ to a %

Divide 7 by 8 = 0.87 and 4, i.e.

$$4/8 = 1/2 = 0.875 = 87\frac{1}{2}\%$$

Interest Calculation

For easy and quick calculation of interest problems, note the following points:

- (a) The first day is excluded while calculating interest between the two given dates.

- (b) Year = 365 days or 12 months

- (c) Month = 30 days (unless a particular month is specified)

Simple Interest

Interest calculation involves

P = Principal amount

r = Rate of interest

t = Time (p.a. = 365 days or 23 months or part thereof like half yearly/quarterly, etc.)

Formulae:

$$(a) P = \frac{I}{rt} \quad (b) r = \frac{I}{pt}$$

$$(c) t = \frac{I}{pr} \quad (d) I = P \times t \times r$$

Illustrations

1. Calculate interest for 9 months @ 6 % on Rs 10,000

$$t = 9 \text{ months} = 3/4 \text{ of a year}$$

$$r = 6\% = 3/50$$

$$I = P \times t \times r = 1,000 \times 3/4 \times 3/50 = 50 \times 9 = \text{Rs } 450$$

(Note: When t is not specified, it is always assumed per annum period for calculation of interest. In the above example 6% = 6% p.a.)

2. If Rs 5,000 fetches Rs 300 as interest in two years, calculate rate of interest?
 Rs 300 interest in 2 years = 150 per year

$$150/5,000 = 0.03 = 3\%$$

3. An amount of money fetches an

interest of Rs 180 in $1\frac{1}{2}$ years @ 6%.
calculate the Principal amount
invested?

$$r = 6\% = 6/100$$

$$t = \frac{1}{2} \text{ year} = 1\frac{1}{2} \text{ years} = 3/2 \text{ year}$$

$$6/100 \times 3/2 = 9/100$$

$$180 \div 9/100 = 180 \times 100/9 = \text{Rs } 2000$$

Compound Interest

Compound interest = interest earned during one year is added to the amount (Principal amount = P) at the end of each year. Therefore

(a) Calculate I as for simple interest problems using the period of compounding for the time.

(b) Adding of I to P (Interest + Principal = new P)

(c) Calculation of I on the new principal, i.e., I + P of 1st year.

(d) Adding the new I to form new P again. Continue the process for all periods (t) involved in the questions.

(e) Subtract original P (first P) from the final P to arrive at the compound interest.

Illustration

Calculate compound interest on Rs 6000, compounded quarterly at 6% for 9 months.

$$P = \text{Rs } 6000, r = 6\% = 6/100$$

$$t = \text{quarterly} = 3/12 = 1/4 \text{ year}$$

For $t = 9$ months, I will have to be compounded 3 times.

$$1\text{st quarter} : I = 6000 \times 6/100 \times 1/4 = \text{Rs } 90 \text{ (a) = Rs } 6090$$

$$2\text{nd quarter} : I = 6090 \times 6/100 \times 1/4 = \text{Rs } 90.135 = 90.14 \text{ (b) = } 6090.14$$

$$\text{Rs } 6090 + 90.14 = 6180.14 \text{ (final Principal)}$$

$$3\text{rd quarter} : I = 6180.14 \times 6/100 \times 1/4 = 90.27 \text{ (c)}$$

$$\text{Total Interest} = a + b + c = \text{Rs } 90 + 90.14 + 90.27.$$

$$\text{Compounded Interest} = \text{Rs } 270.41$$

Profit & Loss

Terms

SP = Selling Price, CP = Cost Price

p = Profit, l = Loss

Formulae

$$(i) SP = CP + p \quad (iii) p = SP - CP$$

$$(ii) SP = CP - l \quad (iv) l = CP - SP$$

Illustrations

1. If a book costs Rs 5 and is sold at a profit of Rs 3, what is the selling price?

$$CP = 5 \text{ and } p = 3$$

$$SP = CP (\text{Rs } 5) + p (\text{Rs } 3) = \text{Rs } 8$$

2. A bottle of beer costs Rs 6 and is sold at a loss of Rs 2.40. Calculate the selling price.

$$SP = CP (\text{Rs } 6) - l (\text{Rs } 2.40) = \text{Rs } 3.60$$

3. You buy mangoes @ Rs 6 per kg and sell them at Rs 8 per kg. Calculate the profit.

$$P = SP (\text{Rs } 8) - CP (\text{Rs } 6) = \text{Rs } 2$$

4. You purchase rice @ Rs 10 per kg and sell @ Rs 7.50 per kg. Calculate the loss.

$$l = CP (\text{Rs } 10) - SP (\text{Rs } 7.50) = \text{Rs } 2.50$$

In questions based on percentages of selling price/cost price/loss and profit, note the following:

(a) SP: if p or l is expressed in %, multiply CP by % p or l (as the case may be). Add this product to CP if p is involved or subtract if l is involved.

(b) CP: If SP and % p or l is based on SP. Multiply SP by % of p or l to calculate p or l in terms of money. Subtract the product SP if p is involved and add if l is involved.

(c) CP: If % p or % l is based on CP. Find p or l. Divide p or l by CP and change into %.

(d) %p/%l These are based on SP. Find p or l in terms of money. Divide p or l by SP and change into %.

(e) CP: SP and % p is based on CP. Find the relation between SP and CP, then calculate CP.

(f) SP: p is based on SP. Find the relation between SP and CP and then calculate SP.

Illustrations

1. If a book costing Rs 5 is sold at a loss of 5% of the cost price, what is the selling price?

$$5\% \text{ of Rs } 5 = 0.05 \times 5 = 0.25 = 1$$

$$5 - 0.25 = 4.75$$

$$SP = \text{Rs } 4.75$$

2. If mangoes are sold @ Rs 16 per kg and profit is 10% of selling price, what is CP?

$$10\% \text{ of } 16 = 0.10 \times 16 = 1.60 \text{ profit (p)}$$

$$\text{Rs } 16 - \text{Rs } 1.60 = \text{Rs } 14.40 = \text{CP}$$

3. What is % profit based on CP of an article which is Rs 2.50 per kg and selling price of Rs 3 per kg?

$$SP (\text{Rs } 3) - CP (\text{Rs } 2.50) = p : \text{Rs } 0.50$$

$$\text{Rs } 2.50 \text{ } 0.50 = 250 \text{ } 50 = 20\%$$

4. If you buy apple @ Rs 27 per 5 kg and dispose them of at a profit of 10% of the selling price, work out the selling price?

$$CP (\text{Rs } 27) + p = SP$$

If p is 10% of SP, the CP must be 90 % of the SP. Hence:

$$27.00 = 90\% \text{ of the SP, convert it in decimal figure} = 0.90 \text{ of the SP}$$

$$SP = 27 \div 0.90 = 30 = \text{Rs } 30 \text{ SP for } 5 \text{ kg apple}$$

To sum up, consider the following example:

$$\text{Cost price} = 100 \text{ (CP)}$$

$$\text{Profit} = 10\% \text{ (p)}$$

$$\text{Selling price} = \text{Rs } 110 \text{ (SP)}$$

Fraction of the SP is 10 in above example, i.e. 10/110. Hence p on CP = 10%

$$P \text{ on SP} = 10/110 \times 100 = 9.1\%$$

Trade Discount

Discount is mostly represented by per-

centage and means that part which is to be deducted from the basic or list price. It involves:

(a) List price (basic price) = BP

(b) Discount (% reduction given on list price) = d

(c) Selling Price (SP) = BP - d

To calculate SP when the basic price and discount are given use the following formula:-

Consider BP as 100% and "d" is 5%.

$$SP = BP - d = 100\% - 5\% = 95\% \text{ of basic price}$$

Illustrations

If cost of a towel is Rs 20 per piece as per official price list of DCM and 5% seasonal discount is allowed what is the SP of each piece?

$$100\% - 5\% = 95\% = SP$$

$$95\% \text{ of Rs } 20 = 0.95 \times \text{Rs } 20 = \text{Rs } 19.$$

Ratio And Proportion

Ratio: This is a relation which one quantity bears to another with respect to magnitude, the comparison being made by considering what multiple or what part is one quantity to another. Ratio can be found of only two like quantities. In case of difference in units, we first have to convert them into the same unit in order to calculate the ratio between them. It is expressed by putting two dots (:) between quantities written in a simple fraction form. For example:

$$\text{Ratio of } a \text{ and } b = \frac{a}{b} \text{ (or } a \div b) \text{ and}$$

denoted by a:b

Formulae

To simplify the ratio of two terms containing fractions, decimals or percentage:

(a) divide the first term by the second

(b) write as a fraction in lowest terms

(c) write fraction as ratio.

Example

$$\text{Simplify } \frac{5}{6} : \frac{7}{8} = \frac{5}{6} \div \frac{7}{8} = \frac{5}{6} \times \frac{8}{7} = \frac{20}{21}$$

or 20:21

To solve problems in which ratio is given:

(a) add the terms in the ratio

(b) divide the total amount that is to be put in ratio form by this sum

(c) simplify each term in the ratio by the quotient

Example

If Rs 360 is to be divided between Ram, Sham and Mohan in the ratio of 3:4:5, how much each one would receive?

$$3 + 4 + 5 = 12$$

$$360 \div 12 = 30$$

$$30 \times 3 = 90 \text{ (Ram's share)}$$

$$30 \times 4 = 120 \text{ (Sham's share)}$$

$$30 \times 5 = 150 \text{ (Mohan's share)}$$

$$360$$

Proportion

An equality of two ratios constituting a proportion. For instance: 2 : 4 :: 5 : 10 is

a proportion and is read as 2 is to 4 or 5 is to 10. Similarly a, b, x and y are in proportion of $a : b :: x : y$

Hence proportion is an expression of equality of two equal ratios (two equal fractions). The four quantities are said to be in proportion if the ratio of the first and second term is equal to the ratio of the third and fourth terms. And therefore, there are four terms in a proportion.

Example

First term : Second term =

Third term : Fourth term

$$1 : 4 = 3 : 12 = \frac{1}{4} = \frac{3}{12} \\ = 1 \times 12 = 3 \times 4$$

Work Problems

Work problems involve:

1. **Number of people working** on a job which is directly proportionate to the quantum/amount of work and inversely proportionate to the time. In other words, if more people handle a job, they can handle more quantum of job (and vice versa) and more people take less time (and vice versa).

2. **Time required** to finish a job—the time spent on a job being directly proportionate to the quantum/amount of work done. If more time is spent on a job, more quantum of work can be done.

3. **Quantum/amount of work** which is directly related to the number of people engaged and time given to them.

Units

Time = any unit of time, e.g., minute/hour/day/week etc.

Rate = at which a person works is the amount of work he can do in a given unit of time.

Persons = any unit can be used, e.g. numbers, dozen, etc.

Illustrations

1. Work at equal rates

Formula: No. of persons = x

Time required = t

$x \times t$ = time required by one person to complete a piece of work

$t + x$ = time required by "x" number of persons to complete a piece of work

Examples

(a) It takes 4 persons working at equal rate 30 days to finish the work, then one person will take $x \times t = 30 \times 4 = 120$ days.

(b) If one person can do a job in 20 days, how long will it take four persons to complete the job working at equal rate.

$$20 \div 4 = 5 \text{ days}$$

(c) Four persons are able to finish a given piece of work in 48 days. How long will 3 persons take to complete the same job?

One worker does the job in

$$48 \times 4 = 192 \text{ days}$$

Three workers will do the same job in

$$192 \div 3 = 64 \text{ days}$$

II. Work at unequal rates

When questions are posed containing unequal rates, it is essential to equalise them in order to solve the problem. Comparison is possible of only equal rates. For this, use the following steps:

(a) find out how many equal rates are there

(b) multiply equal rates by the time

(c) divide the sum obtained by the time given

Formula: In general, the work problem in which the workers work at varying rates can be solved by the following formula:

Work done by worker A +
Worker done by worker B =

$$\frac{\text{Time taken by worker B}}{\text{Time taken by worker A}} = \frac{\text{Total work done}}{\text{Total time taken}}$$

The problem below gives five of the above six factors (each given known quantities) and you have to find the unknown factor.

Example

Ram can do the job in 4 hours. Sham can do it in 5 hours. How long will they take to do it together?

$$\frac{1 \text{ job}}{4 \text{ hrs}} + \frac{1 \text{ job}}{5 \text{ hrs}} = \frac{1 \text{ job}}{x \text{ hrs}} \\ \frac{1}{4} + \frac{1}{5} = \frac{1}{x} = \frac{5+4}{20} = \frac{9}{20} = \frac{1}{x} \\ = \frac{20}{9} = \frac{x}{1} = \frac{20}{9} = x$$

Ram and Sham together will take $2\frac{2}{9}$ hours.

Examples

(a) Ram along with 2 other typists, completes a job in 12 days. Ram and one of the typists, work twice as fast as the third. How long would it take one of the fastest typist to complete the work himself?

There are 2 typists (including Ram) who are both fast as compared to the third one who is slow.

1 slow typist will take 12×5 days = 60 days

1 fast typist = 2 slow typists. Therefore he will take $60/2$ or 30 days to complete the job.

Therefore it will take one fast typist 30 days to complete the job

(b) If 40 persons make a 4 km long road in one year, how many persons would it require to build 6 km road in $1/4$ th of the year?

To make 6 km road instead of 4 km in the same amount of time, it would require $6/4$ number of persons. Hence:

$$6/4 \times 60 = 90$$

Now the job has to be completed in 4 months instead of 12, it would require thrice the number of persons. Hence:

$$90 \times 3 = 270 \text{ persons will make 6 km road in 4 months}$$

Distance Problems

Distance or velocity problems are very

commonly included in the quantitative aptitude section. The basic formula to tackle these questions is:

Distance travelled = Rate \times Time

$$D = R \times T \quad \text{or } d = rt$$

It involves:

(a) Distance (in miles/km or any unit of length) = D

(b) Rate (miles per hour or km per hour or any other unit of length per hour/minute or any other unit of time) = R

(c) Time (hours or any unit of time) = T

As it involves three quantities (D, R and T), the questions are also of three types:-

1. Calculation of distance

Multiply rate by time, e.g. $D = R \times T$

● If you are driving @ 30 km/hour for 2 hours, you will travel a distance of $30 \times 2 = 60$ km.

2. Calculation of rate (speed)

The rate = distance covered/travelled in a unit of time. Divide distance travelled by time taken to cover it. $R = D \div T$

● If you drive your scooter covering 200 km in 8 hours, rate (speed) = $200 \div 8 = 25$ km per hour.

3. Calculation of Time (Time taken to cover distance)

Divide distance (D) by Rate (R)
● If you travel a distance of 75 km at the rate of 15 km per hour, you will cover the distance in : $D (75 \text{ km}) \div R (15) = 3$ hours

Down Stream

Another type of question related to distance travelled and speed is rowing or swimming in streams.

Formula : Distance = Speed \times Time

Average speed =

$$\frac{\left(\frac{\text{distance}}{\text{time}} \text{ during up stream}\right) + \left(\frac{\text{distance}}{\text{time}} \text{ during down stream}\right)}{2}$$

Speed of stream = Speed during down stream - average speed

Example

Hari rows downstream a distance of 50 km in 5 hours and upstream 60 km in 10 hours. What is his speed in still water and speed of stream?

$$\text{Average speed} = \frac{\left(\frac{60}{10} + \frac{50}{5}\right)}{2} = \frac{6+10}{2} \\ = 8 \text{ km/hour}$$

$$\text{Speed of stream} = \left(\frac{60}{5}\right) - 8 = 10 - 8 \\ = 2 \text{ km/hour}$$

Powers, Exponents And Roots

The number that is used to give a product is known as a factor. The power of a number is the number of times the number itself is to be taken as a factor, e.g., the expression 5^3 means $5 \times 5 \times 5 = 125$.

Here the number 5 is the base and 3 is the exponent, and 125 is the power. The first power of the number is the number itself, e.g. $3^1 = 3$, $4^1 = 4$.

If the exponent used is 2, the expression means that the base has been squared or raised to the second power. 6^2 means "six squared" or "six raised to the second power".

A number that is the product of a whole number squared is called **perfect square**, e.g., 25 is a perfect square because $25 = 5^2$. When a number has exactly two equal factors, each is called a **square root** of the number and is represented by the sign ($\sqrt{\quad}$). e.g., $\sqrt{9} = 3$ or 3×3 . The square root of most common perfect squares may be found by the following table which should be memorised for quick calculation purposes:

Roots Of Perfect Squares

Num-ber	Per-fect square	Num-ber	Per-fect square	Num-ber	Per-fect square
1	1	8	64	15	225
2	4	9	81	—	—
3	9	10	100	20	400
4	16	11	121	—	—
5	25	12	144	25	625
6	36	13	169	—	—
7	49	14	196	30	900

To find $\sqrt{11}$, note that 121 is the perfect square of 11 or $11^2 = 121$. Therefore: $\sqrt{121} = 11$. Similarly $1^2 = 1$, $2^2 = 4$, $3^2 = 9$, $4^2 = 16$, $5^2 = 25$, $6^2 = 36$, $7^2 = 49$, $8^2 = 64$, $9^2 = 81$, $10^2 = 100$, $11^2 = 121$, $12^2 = 144$, $13^2 = 169$, $14^2 = 196$, $15^2 = 225$, $16^2 = 256$, $17^2 = 289$, $18^2 = 324$, $19^2 = 361$, $20^2 = 400$, $21^2 = 441$, $22^2 = 484$, $23^2 = 529$, $24^2 = 576$, $25^2 = 625$, $26^2 = 676$, $27^2 = 729$, $28^2 = 784$, $29^2 = 841$, $30^2 = 900$, $31^2 = 961$, $32^2 = 1024$, $33^2 = 1089$, $34^2 = 1156$, $35^2 = 1225$, $36^2 = 1296$, $37^2 = 1369$, $38^2 = 1444$, $39^2 = 1521$, $40^2 = 1600$, $41^2 = 1681$, $42^2 = 1764$, $43^2 = 1849$, $44^2 = 1936$, $45^2 = 2025$, $46^2 = 2116$, $47^2 = 2209$, $48^2 = 2304$, $49^2 = 2401$, $50^2 = 2500$, $51^2 = 2601$, $52^2 = 2704$, $53^2 = 2809$, $54^2 = 2916$, $55^2 = 3025$, $56^2 = 3136$, $57^2 = 3249$, $58^2 = 3364$, $59^2 = 3481$, $60^2 = 3600$, $61^2 = 3721$, $62^2 = 3844$, $63^2 = 3969$, $64^2 = 4096$, $65^2 = 4225$, $66^2 = 4356$, $67^2 = 4489$, $68^2 = 4624$, $69^2 = 4761$, $70^2 = 4900$, $71^2 = 5041$, $72^2 = 5184$, $73^2 = 5329$, $74^2 = 5476$, $75^2 = 5625$, $76^2 = 5776$, $77^2 = 5929$, $78^2 = 6084$, $79^2 = 6241$, $80^2 = 6400$, $81^2 = 6561$, $82^2 = 6724$, $83^2 = 6889$, $84^2 = 7056$, $85^2 = 7225$, $86^2 = 7396$, $87^2 = 7569$, $88^2 = 7744$, $89^2 = 7921$, $90^2 = 8100$, $91^2 = 8281$, $92^2 = 8464$, $93^2 = 8649$, $94^2 = 8836$, $95^2 = 9025$, $96^2 = 9216$, $97^2 = 9409$, $98^2 = 9604$, $99^2 = 9801$, $100^2 = 10000$.

Learn squares of 1 to 25. The most common square roots which you may have to deal with in your examination are:

$$\sqrt{2} = 1.4, \sqrt{3} = 1.7, \sqrt{5} = 2.2$$

You may find questions asking you to convert the square roots to their equivalents, since the answer choices will be in the terms of the square roots.

Example

$$\sqrt{54} = ?$$

$$54 = 9 \times 6 \text{ or } \sqrt{54} = \sqrt{9 \times 6} = \sqrt{9} \times \sqrt{6}$$

$$= 3 \times \sqrt{6} \text{ Since } \sqrt{9} = 3, \sqrt{54} = 3\sqrt{6}$$

Geometrical Problems

Angle Relationship

● The sum of the three angles of a triangle is always 180° . Therefore, if two angles are given in the problem, the third angle can be found by addition of the two angles and subtracting the sum from 180° .

● If two sides of a triangle are equal, the angles opposite these sides are equal.

Example

$$CA = CB \text{ then } \angle A = \angle B$$

$$\text{If } CA = CB, \angle B = 70^\circ$$

Find $\angle C$?

$$\angle A = \angle B = 70^\circ$$

$$\angle C = 180^\circ - 70^\circ - 70^\circ = 40^\circ$$

● A triangle having two equal sides is called **isosceles triangle**. The triangle that

has all the 3 sides equal is called **equilateral triangle** in which each angle is 60° .

● Familiarise yourself with the **Pythagoras Theorem** which states that in a right-angled triangle, the square of the hypotenuse (i.e., the side opposite the right angle which is the longest side) equals the sum of the square legs (the other two sides of the triangle). This can be expressed as follows: $AB^2 + BC^2 = AC^2$

Example

In a right triangle the legs are $6''$ and $8''$. Find the hypotenuse.

$$6^2 = 36, 8^2 = 64$$

$$36 + 64 = 100, \sqrt{100} = 10, \text{ i.e. } 10''$$

● **Quadrilateral** is a four sided figure, e.g. parallelograms, rectangles and squares, the sum of angles here is 360° . The opposite sides of the parallelogram as well as the opposite angles are equal. Rectangles have also the same properties. However, in the case of the square, all the four sides are equal plus it has all other qualities of a parallelogram.

● **Perimeter** is the distance around a two-dimensional figure. Perimeter in case of a triangle = addition of all sides. In case of a square it equals one side multiplied by four. (Formula: $P = 4s$). In case of Rectangular, it equals twice the sum of the length and width. Formula = $2(l + w)$.

Example

The two sides of a triangle = $10''$ and $12''$ and the perimeter = 38 . Find the other side.

$$10 + 12 = 22$$

$$38 - 22 = 16 \text{ i.e. } 16''$$

If the sides of a triangle are $4''$, $5''$ and $6''$, the perimeter = $5 + 4 + 6 = 15$, i.e. $15''$.

Circles Relationship

Product of the diameter multiplied by π = Circumference. (Formula: $C = \pi d$). Diameter is twice the radius. The circumference equals twice the radius multiplied by π . Diameter of a circle = the circumference divided by π .

Area Relationship

In two dimensional figures the total

space within the figure is area (A). It is expressed in square denominations, e.g. sq miles/ sq km/ sq ft/sq inch/sq mm, etc.

Examples

Rectangular figure

$$A = bh$$

Square

$$A = s^2$$

Circle

$$A = \pi r^2$$

Triangle

$$A = 1/2 bh$$

Parallelogram

$$A = bh$$

In three-dimensional figures, the total space contained in such figures is equal to volume which is expressed in cubic denominations.

Examples

Rectangular solid $V = l \times w \times h$

Cube

$$V = e^3 \text{ because here } l, h \text{ and } w \text{ all are equal.}$$

Circular cylinder $V = \pi r^2 h$, radius squared + length

$$\text{Spherical figures } V = \frac{4}{3} \pi r^3$$

Practice Tests

In preparing these tests, we have tried to visualise the questions you are likely to face in your actual exam. Great care has been taken to frame questions which are of the same standard as those you'll encounter in your exam.

Rating : Evaluate your performance on the basis of the following score-card :

100 questions in 60 minutes – Excellent

60 questions in 60 minutes – Good

50 questions in 60 minutes – Fair

35 questions in 60 minutes – Poor

Tips : 1. Do not waste time over questions you are not sure about. 2. Give the problems some thought before choosing the answers. 3. Read the directions carefully before answering the questions. 4. Do not try to guess the answer.

Reading Comprehension

FOR CAT

Now that you are familiar with the preparation strategy for sections I & II of the Common Admission Test (CAT), get set to tackle these Reading Comprehension and Mathematical Ability tests in order to sharpen your grey cells and train them for speedy action, under stress.

Time : 35 minutes

Scores : 1. Give yourself one mark for each correct answer. 2. Deduct one mark for each wrong answer.

Then rate yourself as follows :

Excellent...28-23 Very Good...22-17 Good...16-11 Poor...Below 10

DIRECTIONS : For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests.

Directions: Read the following passages carefully and answer the questions that follow them by choosing the most appropriate one out of the four that are provided. (Time: 20 minutes)

Professional men make the same mistake. Several years ago, I walked into the office of a well known nose and throat specialist in Philadelphia. Before he even looked at my tonsils, he asked me what my business was. He wasn't interested in the size of my tonsils. He was interested in the size of my exchequer. His chief concern was not in how much he could help me. His chief concern was in how much he could get out of me. The result was he got nothing. I walked out of his office with contempt for his lack of character.

The world is full of people like that: grabbing, self-seeking. So the rare individual who unselfishly tries to serve others has an enormous advantage. He has little competition. Owen D. Young said, "The man who can put himself in the place of other men, who can understand the workings of their minds, need never worry about what the future has in store for him."

From *How To Win Friends And*

Influence People

- The professional nose and throat specialist asked the author
 - What his trouble was
 - What his business was
 - What his name was
 - What his intention was
- The chief concern of the specialist lay
 - In the nature of the author's illness
 - In how much he could help the author
 - In how much he could get out of the author
 - In how quickly he could cure the author's malady
- The author walked out of the specialist's office
 - With respect for his professional competence
 - With admiration for the professional's straightforwardness
 - With a feeling of indifference towards the professional
 - With a feeling of contempt towards the specialist
- The world is indeed full of people who are
 - Kind and helpful

- Selfish and short-sighted
- Full of the spirit of cooperation
- Ill-tempered

- Owen D. Young said that the man who is
 - Honest always gets success.
 - Selfless reaches the top of his profession
 - Greedy fails miserably in life
 - Able to think from the point of view of others need not have any worry about his future
- The phrase 'grabbing, self-seeking' means
 - Cruel and vicious
 - Selfish and possessive
 - Blunt and arrogant
 - Proud and assertive
- What is the advantage that an unselfish individual has?
 - He is lost in a crowd of selfish people
 - He is not very impractical
 - He does not face much competition in the world
 - As he does not face much competition, he can easily do what others cannot either think or do

There is, in fact, only one reason why underdeveloped societies like ours establish and maintain universities. We do so as an investment for our future. We are spending large and disproportionate amounts of money on a few individuals, so that they should in the future make a disproportionate return to the society. We are investing in a man's brain in just the same way as we invest in a tractor; and just as we expect the tractor to do many times as much work for us as a handhoe, so we expect the student we have trained to make many times as great a contribution to our well being as the man who had not had this good fortune. We are giving to the student while he is at the university, so that we may receive more from him afterwards. There is nothing

affordable about it; poor people cannot afford financial altruism. We have a right to expect things from university graduates and others who have had higher education of any kind; we do not just have hope, but an expectation.

From *The Intellectual Need Society*

8. Underdeveloped societies establish and maintain universities because
 - (a) The universities produce educated manpower.
 - (b) Such societies need highly skilled people
 - (c) There is an acute shortage of skilled people
 - (d) They want to have a bright future
9. How much money is spent on a few individuals in the universities?
 - (a) An adequate amount of money is spent on some individuals in the universities
 - (b) Much more money than underdeveloped societies can really afford is spent on a few individuals
 - (c) Little money is spent on the individuals in the universities
 - (d) Much money is spent on the individuals in the universities
10. How much work is expected from a tractor?
 - (a) A tractor does as much work as a handhoe does
 - (b) A tractor does much more work than is done by four pairs of bullocks
 - (c) A tractor does many times more work than a handhoe
 - (d) A tractor does far more work than any group of farmers can do
11. Why is so much money spent on a student at the university?
 - (a) So that he can concentrate on his studies
 - (b) So that we can get far more from him when he leaves the university
 - (c) So that he can better his professional skill
 - (d) So that he does not have any financial worry
12. What is meant by the phrase 'financial altruism'?
 - (a) It means a careless use of finances
 - (b) It means financial irresponsibility
 - (c) It means financial accountability
 - (d) It means an overgenerous spending of money on others
13. What do we expect from a university graduate in developing societies?
 - (a) We expect a university graduate to maintain high professional standards
 - (b) We expect a university graduate to return to the society far more than he gets from it
 - (c) We expect a university graduate to be forward looking in his

Outlook

- (d) We expect a university graduate to be a man of action.
14. We are investing in a man's brain in just the same way as we invest in a tractor. It means that
 - (a) Spending money on university graduates is as useful as spending on tractors
 - (b) Spending money on university graduates is far more useful than spending money on tractors
 - (c) Spending money on university graduates is exactly with the same intention as spending money on tractors
 - (d) Spending money on university graduates is slightly more useful than spending money on tractors

There is a familiar America. It is celebrated in speeches and advertised on television and in the magazines. It has the highest mass standard of living the world has ever known.

In the 1950's this America worried about itself, yet even its anxieties were products of abundance. The title of a brilliant book was widely misinterpreted, and the familiar America began to call itself the affluent society. There was introspection about the Madison Avenue and tail fins; there was discussion of the emotional suffering taking place in the suburbs. In all this, there was an implicit assumption that the basic grinding economic problems had been solved in the United States. In this theory the nations' problems were no longer a matter of basic human needs, of food, shelter and clothing. Now they were seen as qualitative, a question of learning to live decently amid luxury.

While this discussion was carried on, there existed another America. In it dwelt somewhere between 40,000,000 and 50,000,000 citizens of this land. They were poor. They still are.

To be sure, the other America is not impoverished in the same sense as those poor nations where millions cling to hunger as a defence against starvation. This country has escaped such extremes. That does not change the fact that tens of millions of Americans are, at this very moment, maimed in body and spirit, existing at levels beneath those necessary for human decency. If these people are not starving they are hungry and sometimes fat with hunger, for that is what cheap foods do. They are without adequate housing and education and medical care.

From *The Other America*

15. There is a familiar America
 - (a) Which has the highest per capita

Income in the world

- (b) Which has the highest GNP in the world
- (c) Which has the highest affluence in the world.
- (d) Which has the highest mass standard of living in the world
16. The worries of this America
 - (a) Were a product of the II World War
 - (b) Were a product of world-wide economic crisis
 - (c) Were the result of its wealth
 - (d) Were products of cut-throat competition
17. An assumption implicit in the affluent society was
 - (a) That all people were enjoying affluence
 - (b) That the problem of destitution had been solved
 - (c) That hunger had been abolished.
 - (d) That people were indeed happy..
18. The phrase, 'basic grinding economic problem' means
 - (a) that the basic needs of the people have been solved
 - (b) That the people suffer terribly due to the absence of adequate housing, education and medical care
 - (c) That the people are without adequate housing, education and shelter
 - (d) That the people have become desperate due to widespread poverty
19. The other America
 - (a) Is poor in the same sense as the people of the Third World are
 - (b) Is full of marginal, unemployable people
 - (c) Is poor because it suffers from starvation
 - (d) Is hardly poor in the same sense as those poor nations where millions cannot escape starvation
20. The citizens of the other America
 - (a) Are hungry because they go without any food
 - (b) Are hungry because they do not get a rich diet
 - (c) Are hungry because they get only cheap food
 - (d) Are fat yet hungry because the food that they eat is poor in nutritive value
21. The clause, "where millions cling to hunger as a defence against starvation" means
 - (a) That the people of the poor nations foolishly accept hunger as a barrier against starvation
 - (b) That the people of the poor nations endure both hunger and starvation
 - (c) That the people of the poor nations cannot escape either

hunger or starvation

- (d) That the people of the poor nations try to transcend both hunger and starvation

Directions Questions 1 & 2 consist of groups of sentences followed by suggested sequential arrangements. Select the best possible sequence of sentences.

- 22 (i) The decisions about the suitable mix of fruit trees fodder trees fuelwood trees medicinal plants types of grasses sources of fibres and house construction material should be taken by the villagers themselves
(ii) Only by ensuring that social forestry meets the multifaceted needs of the people can the protected forests be saved
(iii) The forests grown by them must belong to them even where the wasteland belongs to the government
(iv) Social forestry thus far has been led into wrong channels
(v) Village forests must now be of the people for the people and by the people
(a) (i) (ii) (iv) (v) (iii) (c) (iv) (v) (i) (iii) (ii)
(b) (iv) (ii) (iii) (ii) (i) (d) (ii) (i) (v) (iv) (iii)
23 (i) Both developed and developing nations have learned that politically and economically our destinies are intertwined
(ii) New nations are confronted by serious challenges of regional security and economic development
(iii) Our well-being and security are closely interrelated
(iv) The euphoria of the early independence period has given way to a sober appreciation of the long-term problems of nation-building
(v) We face many common challenges and opportunities for the future
(a) (ii) (iii) (v) (iv) (i) (c) (iii) (ii) (v) (i) (iv)
(b) (iv) (i) (i) (iii) (v) (d) (ii) (iv) (v) (iii) (i)

Directions In questions 3-7 the four choices that follow each italicised sentence represent various ways of rewriting it. Select the most appropriate choice.

- 24 *I certainly hope you are having a good time at college this year and realising your potentiality for intellectual growth and development*
(a) I certainly hope you have a good time at college this year and realise your potentiality for intellectual growth and development
(b) I certainly hope you will be having a good time at the college and realising your potentiality for intellectual growth and development
(c) I certainly hope you are having a good time at college this year and

getting a lot out of it

- (d) I am certainly hoping that you are having a good time at college this year and realising your potentiality for intellectual growth and development
25 *He told me what to do and I accomplished the operation.*
(a) He told me what to do and I did it
(b) He told me what to do and I completed the operation
(c) He told me what to do and I fulfilled the operation
(d) He told me what to do and I achieved the operation
26 *That subject, as you have probably guessed, is none other than the question of which is the most interesting to watch—basketball or football*
(a) I shall try to determine which is most interesting to watch—basketball or football
(b) The subject is—which is more interesting to watch basketball or football?
(c) I shall try to determine which is the most interesting basketball or football
(d) The subject as you have probably guessed is none other than the question which is the most interesting basketball or football
27 *The prime minister explained that*

the nations of the West did not want to gang up on the Soviet Union.

- (a) The prime minister explained that the nations of the West did not want to gang up against the Soviet Union
(b) The prime minister explained that the nations of West could not gang up against the Soviet Union
(c) The prime minister explained that the nations of the West did not want to organise and foment trouble against the Soviet Union
(d) The prime Minister explained that the nations of the West did not want to appease the Soviet Union
28 *The maid servant swept the room carefully and the furniture and shelves were dusted.*
(a) The maid servant the room carefully and the furnitures and shelves were dusted
(b) The maid servant swept the room carefully and dusted the furnitures and shelves
(c) The maid servant sweeping the room carefully dusted furnitures and shelves
(d) The maid servant dusted the furniture and shelves and swept the room

N P SINGH

Mathematical Ability

FOR CAT

The following set of questions is calculated to assess your mathematical ability. And hone your grey cells to razor-sharpness.

Time : 25 minutes.

Scores : 1 Deduct one mark for each wrong answer

Then rate yourself as follows :

Excellent...20-25 Very Good...14-19 Good...13-18
Fair...7-12 Poor...Below 7

DIRECTIONS For each of the following questions, tick mark the choice that best answers the questions. Answers are given at the end of these tests

- 1 Rahul borrowed Rs 1 600 @ 10% interest p a for a period of two years. If interest is compounded annually compute compound interest payable after two years
(a) Rs 320 (b) Rs 336
(c) Rs 360 (d) Rs 375
- 2 If interest is compounded quarterly compute compound interest on Rs 1 200 @ 20%
(a) Rs 158 (b) Rs 210
(c) Rs 250 (d) Rs 259
- 3 The ratio of 50 cm and 14 m is
(a) 1 : 14 (b) 1 : 10
(c) 1 : 28 (d) 2 : 10
- 4 The ratio between 3 25 and 8 125 is
(a) 1 : 78 (b) 2 : 8
(c) 1 : 3 (d) 2 : 5
- 5 Rahul, Rakesh and Ramesh started a partnership venture having share ratio of 4 : 5 : 6 respectively. At the year end a profit of Rs 405m was declared. How much will Ramesh get as his share of profit?
(a) Rs 108m (b) Rs 135m
(c) Rs 162m (d) Rs 182m
- 6 If x is 20% less than y then y exceeds x by
(a) 45% (b) 50%
(c) 25% (d) 30%
- 7 Ramesh spends 15% of his salary on house rent, 10% on provident fund

and 5% on convenience. After selling Rs 24,000 p.s., he spends the remaining on his domestic budget. What is his monthly salary?

- (a) Rs 8,500 (b) Rs 6,000
(c) Rs 4,500 (d) Rs 5,000

- 9 In the given figure, what is the ratio of the triangular area $\triangle ACB$ to the area of the rectangle $ABCD$?

- (a) 1:4 (b) 1:2
(c) 1:1 (d) 1:3

- 10 The figure ACB is a semicircle having centre O on the base AB . What is the area of the semicircle?

- (a) $\frac{25\pi}{8}$ (b) $\frac{1}{2}\sqrt{5}$
(c) $\frac{5\pi}{8}$ (d) $\frac{5\pi}{2}$

- 11 Raju travels from a given point x to y at an average speed of 60 km per hour in two hours. He then returns from point y to x at an average speed of 40 km. The distance between x and y is 120 km. What was Raju's average speed for the to and fro trip between the points x and y ?

- (a) 50 km per hour (b) 48 km per hour
(c) 55 km per hour (d) 45 km per hour

- 12 A has a saving bank balance of Rs 3,000. He transfers 45% of this balance to his current account where he has a debit balance of Rs 300. Calculate the credit balance A should have in his current account after this transfer?

- (a) Rs 1,350 (b) Rs 1,500
(c) Rs 1,150 (d) Rs 1,050

- 13 A whole-sale merchant stocked sugar worth Rs 75,000 when it was selling at Rs 7.50 per kg. He sold out his entire stock for Rs 67,500 after six months. Compute his loss percentage.

- (a) 10% (b) less than 10%
(c) more than 10% (d) 8%

- 14 If a sofa set is sold at Rs 540 and the seller incurs a loss of 10%, find the cost price of the sofa set.

- (a) Rs 600 (b) Rs 580
(c) Rs 650 (d) Rs 550

- 15 There is a difference of Rs 3 in selling

an article at 15% and 5% profit. Calculate the cost price of the article.

- (a) Rs 312 (b) Rs 300
(c) Rs 315 (d) Rs 310

- 16 In the triangle ABC , $CP = PA$, PQ is parallel to AB , and is 4 inches in length. Also PA is 3 inches. What is the length of AB ?

- (a) 6 inches (b) 8 inches
(c) 7 inches (d) 10 inches

- 17 If the area of the triangle ABC is 64, find the altitude from B to CA .

- (a) 8 (b) 16
(c) 32 (d) 10

- 18 $ACDB$ is a square in which ABO is an equilateral angle. How many degrees is angle ODB ?

- (a) 60° (b) 75°
(c) 80° (d) 30°

- 19 In the given figure point C is on one side of a square and point B is on the opposite side. If each side of the square is 9 inches (perimeter 36 inches), what is the longest possible length of CB ?

- (a) $9\sqrt{2}$ (b) 9
(c) $9\frac{1}{2}$ (d) 4.5

- 20 In the figure, CO is perpendicular to AB . If $CA = CB = 20$ and $CO = 18$, then AB is

- (a) 16.5 (b) 18.2
(c) 18.2 (d) 22

- 21 In the circle xy is the diameter. If secant xS and tangent $PS = 8$, find the number of units in the diameter of the circle.

- (a) 18 (b) 32
(c) 12 (d) $3\sqrt{2}$

- 22 In the given figure, what percentage of the area of rectangle $ABCD$ is shaded?

- (a) 55% (b) 50%
(c) 30% (d) 25%

- 23 A rectangular figure has 10% of its height and 30% of its width shaded. What percentage of the area remains unshaded?

- (a) 70% (b) 63%
(c) 37% (d) 30%

- 24 An artist makes a sketch on a chart paper of 9" x 12". He leaves 1" margin on both sides and $1\frac{1}{2}$ " margin on top and bottom. What fraction of the chart paper did he use to make his sketch?

- (a) $\frac{9}{12}$ (b) $\frac{7}{12}$
(c) $\frac{7}{9}$ (d) $\frac{9}{7}$

- 25 A rectangular board $ABCD$ has a shaded portion $BOPQ$, the length and width of which is $\frac{2}{3}$ rd of the corresponding parts of the board $ABCD$. $BOC = 12$ " and $BQA = 6$ ". The area of the unshaded part is

- (a) 72 sq inch (b) 40 sq inch
(c) 32 sq inch (d) 24 sq inch

- 26 Akbar, Raju and George invested a sum of Rs 12,000 for four, five and six months respectively. The investment yielded a gross profit of Rs 4,500 after six months. What are their respective shares in this profit amount?

- (a) 1,200/1,500/1,500
(b) 1,200/1,500/1,800
(c) 1,200/1,800/1,500
(d) 1,200/1,800/1,200

E.T.

ANSWERS

Reading Comprehension

- 1 (b) The professional was mainly interested in his bank balance, not in his welfare.
- 2 (c) The same argument is valid.
- 3 (d) The author hated the professional's money-mindedness.
- 4 (b) World is full of selfish people.
- 5 (d) Their future is guaranteed.
- 6 (b) Grabbing means the tendency to have more and more.
- 7 (d) (d) is preferable to (c) because it gives a more elaborate answer. (a) and (b) are simply distractors.
- 8 (d) While (a), (b) and (c) are true in general sense, (d) is the answer appropriate contextually.
- 9 (b) While (a) and (c) are ruled out, (b) is the answer. It contains the appropriate phrase "can really afford" which is equivalent to "disproportionate expenditure"
- 10 (c) Contextually precise.
- 11 (b) Contextually precise.
- 12 (d) Altruism is tendency to help others in the best possible way.
- 13 (b) Contextually precise (a) and (c) are true only in a general sense.
- 14 (c) Contextually precise. (b) and (d) are simple distractors.
- 15 (d) (a) and (b) are simple distractors. It is (d) which contains the precise phrase 'highest mass standard of living'
- 16 (c) It is from its affluence and abundance that the worries of the familiar America arise.
- 17 (b) Contextually precise. Destitution refers to the poverty of the people at the bottom of the social pyramid.
- 18 (b) While (d) and (c) are true in a general sense, (b) is contextually precise. The phrase 'basic grinding economic problem' means the terrible suffering of the people due to poverty.
- 19 (d) The poverty of the other America is different from the poverty of the people of the Third World. They do not suffer from starvation.
- 20 (d) Contextually precise. (They eat and yet they remain hungry. Their food is cheap and devoid of nutrition).
- 21 (a) While (b) and (c) are simply distractors, (a) is the correct answer. It contains the key phrase 'foolishly accept' which is the nearest equivalent to the phrase 'cling to hunger'.
- 22 (c) (iv) (v) (i) (iii) (ii)
- 23 (b) (iv) (ii) (i) (iii) (v)
- 24 (c) It is a specimen of an informal kind of writing in which the clause realising your potentiality for growth and development is not appropriate.
- 25 (a) It is again an informal kind of writing in which the clause 'I completed the operation' is not appropriate. It is a formal kind of expression. As such, the correct answer is (a). (c) and (d) are unacceptable, containing phrase like 'fulfilled the operation' and 'achieved the operation'.
- 26 (b) Most is used in (c) and (d) which does not convey the sense or comparison between basketball and football. (b) is correct answer because 'more' is an adjective of comparative degree.
- 27 (c) (c) and (b) contain the expression gang-up which is not appropriate in formal kind of writing. (d) contains the word 'appease' which does not suit the context. The correct answer is (c). It contains the appropriate expression, 'organise and foment trouble, against the Soviet Union.
- 28 (n) Both the clauses in the sentence are in active voice. In (d) the order of activity is reversed, first Dusting then Sweeping. In (a) and (c) furniture is used which is always against usage. Furniture is always used in the

- 1 (a) $I = p \times r \times t$, $p = \text{Rs } 1,600$, $r = 10\%$, $t = 2$ years
 I for 1st year $= \frac{1,600 \times 10 \times 1}{100} = \text{Rs } 160$ (a)
 p for 2nd year $= \text{Rs } (1,600 + 160) = \text{Rs } 1,760$
 $\therefore I$ for 2nd year $= \frac{1,760 \times 10 \times 1}{100} = \text{Rs } 176$ (b)
 $CI = a + b = \text{Rs } (160 + 176) = \text{Rs } 336$
- 2 (d) $p = \text{Rs } 1,200$, $r = 1/4$ of $20\% = 5\%$ and $n = 4$ (4 conversions)
 $CI = \text{Rs } 1,200 \left(1 + \frac{5}{100}\right)^4 - 1$
 $= \text{Rs } 1,200 \left(\frac{21}{20}\right)^4 - 1$
 $= \text{Rs } 1,200 \left(\frac{441}{400}\right) - 1$
 $= \text{Rs } 1,200 \left(\frac{441}{400} - 1\right) \left(\frac{441}{400} + 1\right)$
 $= \text{Rs } 1,200 \left(\frac{41}{100} \times \frac{841}{400}\right) = \text{Rs } 259$ approximately
- 3 (c) Ratio is between two quantities of the same kind. Therefore convert 14 m into cm $= 1,400$ cm. Hence ratio between 50 cm and 1,400 cm is 1 : 28
- 4 (d) $3.25 : 8.125 = \frac{325}{100} : \frac{8,125}{1,000}$
 $= 3,250 : 8,125$ (multiplying the terms by 1,000)
 Now the HCF of 3,250 and 8,125 $= 1,625 = 2 : 5$
- 5 (c) Share ratios $= 4 : 5 : 6 = 15$
 $= \frac{4}{15} : \frac{5}{15} : \frac{6}{15}$ in profit of Rs 1
 Ramresh's share of profit $= \text{Rs } \left(\frac{6}{15} \times 450\right) = \text{Rs } 182\text{m.}$
- 6 (c) $x = 20\%$ less than y
 If $y = 100$, then $x = (100 - 20) = 80$
 Hence $y = 100$ and $x = 80$ and y exceeds x by
 $100 - 80 = 20 = \frac{20 \times 100}{80}\%$ or 25%
- 7 (d) Rs 5,000 per month
- 8 (b) The triangle and the rectangle have the common base and equal altitudes. Area of triangle $AOB = 1/2 bh$. area of the rectangle $ACDB = bh$. Thus the ratio of the areas $= 1 : 2$.
- 9 (b) Angle ACB is the right angle inscribed in the semicircle. Therefore $(AB)^2 = 1^2 + 2^2 = 5$
 $AB = \sqrt{5}$ and $OB = r = 1/2 \sqrt{5}$
 Area of semicircle $= 1/2 \left(\sqrt{\frac{5}{4}}\right)^2$
 $= \frac{\pi(5)}{2 \times 4} = \frac{5\pi}{8}$
- 10 (b) In the first trip Raju covers 120 km in 2 hrs @ 60 km per hour speed. In the return trip he slows down to 40 km per hour, which should take him 3 hours. Hence total distance covered is 240 km in 5 hours.
 Average speed $= \frac{\text{Total distance}}{\text{Total time}}$
 $= \frac{240}{5\text{hrs}} \text{ km} = 48 \text{ km per hour}$
- 11 (d) Saving bank balance $= \text{Rs } 3,000$
 Current a/c balance $= \text{Rs } 300$
 45% transferred from Saving Bank
 account to current a/c $= \text{Rs } \left(\frac{45}{100} \times 3,000\right) = \text{Rs } 1,350$
 Current a/c balance $= \text{Rs } 1,350 + \text{Rs } 300 = \text{Rs } 1,650$
 i.e. 45% of Rs 3,000 $= \text{Rs } 300 = \text{Rs } 1,650$
- 12 (a) $CP = \text{Rs } 75,000$, $SP = \text{Rs } 67,500$

$$\text{Loss} = \text{Rs } (25,000 - 17,500) = \text{Rs } 7,500$$

$$\text{Loss \%} = \left(\frac{7,500}{17,500} \times 100 \right) = 10\%$$

By adding storage expenses and interest on investment the loss becomes more than 10%.

- 13 (a) SP = Rs 540, loss 10%, value recovered = 90%

$$\text{Hence CP} = \frac{100}{90} \times 540 = \text{Rs } 600$$

- 14 (b) Assume CP = Rs 100. SP at 4% profit = Rs 104 and SP at 5% profit = Rs 105

$$\text{Difference between 2 SPs} = \text{Rs } (105 - 104) = \text{Rs } 1$$

If the difference is Rs 1, CP = Rs 100. Therefore when the difference is Rs 3, CP $(100 \times 3) = \text{Rs } 300$

- 15 (b) Since PQ is parallel to AB, the triangles QCP and CBA are similar. Therefore the corresponding sides are proportional. So PQ is to AB as CP is to CA. Since CP = PA, CP/CA = 1/2. Therefore AB is twice QP or 8 inches.

- 16 (b) Area of triangle = ABC = $\frac{1}{2} (\text{CA} \times \text{altitude})$

$$64 = \frac{1}{2} (8h)$$

$$64 = 4h$$

$$h = 16$$

- 17 (b) Since angle ABO = 60° and angle ABD = 90° therefore angle OBD = 90 - 60 = 30°

Since OB = BD, the base angles of triangle OBD are each = $\frac{180-30}{2} = \frac{150}{2} = 75^\circ$

- 18 (a) The side of the square $\left(\frac{36}{4}\right) = 9$

The largest possible length of CB is obtained by making CB a diagonal of the square. Here $CB = 9\sqrt{2}$

- 19 (b) CO ⊥ AB therefore in right angle COB

$$x^2 + 18^2 = 20^2$$

$$x^2 = 20^2 - 18^2$$

$$= (20 + 18)(20 - 18)$$

$$= 38 \times 2 = 76$$

$$x = 7.6$$

$$\text{Thus AB} = 15.2$$

- 20 (c) In the right angle SPO

$$SO^2 = r^2 + 8^2$$

$$(16 - r)^2 = r^2 + 32$$

$$128 - 32r + r^2 = r^2 + 32$$

$$96 = 32r$$

$$r = 6$$

$$\text{Hence diameter} = 12 = xy$$

- 21 (d) Since $\triangle PBO \cong \triangle COQ$,

it follows that the shaded area =

$$\triangle APO + \triangle PBO = \triangle AOB$$

$$\text{R.H. } \triangle AOB = \frac{1}{2} \triangle ABC = \frac{1}{4}$$

$$ABCD = \frac{1}{4} = 25\%$$

- 22 (b)

Let the blank figure be 10 X 10.

Then new figure 9 by 7 =

$$\frac{63}{100} = 63\%$$

- 23 (b)

$$\text{Drawing space} = 12'' - 3'' = 9''$$

$$\text{long and } 9'' - 2'' = 7'' \text{ wide.}$$

Hence fraction used for making the sketch

$$\frac{9 \times 7}{9 \times 12} = \frac{7}{12}$$

- 24 (b) AD or BOC = 12'', BO = 8'', CD or BOA = 6'', BQ = 4'', Area BOPQ = 32 sq inch; Area ABCD = 72 sq inch; Area unshaded = 72 - 32 = 40 sq inch.

- 25 (b) Ratio : Akbar : Raju : George

$$12,000 \times 4 : 12,000 \times 5 : 12,000 \times 6$$

$$\text{Akbar's share in profit} = \text{Rs } \left(\frac{4}{4+5+6} \right) \times 4,500$$

$$= \text{Rs } \frac{4}{15} \times 4,500 = \text{Rs } 1,200$$

$$\text{Raju's share in profit} = \text{Rs } \frac{5}{15} \times 4,500 = \text{Rs } 1,500$$

$$\text{George's share in profit} = \text{Rs } \frac{6}{15} \times 4,500 = \text{Rs } 1,800$$

LITTLE KNOWN FACTS...

Why does a soldier salute?

Everyone has seen a soldier salute by raising his palm smartly to his forehead. This is an age-old practice which originated in the Middle Ages when knights took part in duels to display their skill in using the spear and the lance. A lady was chosen as queen to give away prizes to the winner and when the victorious knight went up to her throne, he would shield his eyes with his hand, as though her beauty dazzled him. This gesture of reverence to the queen continues till today in the form of a salute.

In what way do hares differ from rabbits?

A hare resembles a rabbit in many ways, yet it is easy to distinguish one from the other. A hare has longer ears and runs at a faster speed than the rabbit. The hind legs of the hare, too, are longer than those of a rabbit and the former

can deal out powerful kicks when the latter is cornered. The young rabbit is born quite blind and without any fur, whereas the hare has fur and the new born hare can see. A hare, unlike a rabbit, does not live in underground warrens but makes a nest in the open.

Why does the sky not fall?

It is impossible for the sky to fall down because there is actually nothing in the sky to fall. What we call the sky is only the reflection of the sun's rays on the belt of the air that encircles the earth.

Why do we shake hands when we meet?

In the olden days there were no street lights and no policemen to patrol the streets. Thieves lurked about in the dark and men carried swords for defence. When two men met on the street it was customary to hold each other's

weapon hand (the right hand) to show that there was no weapon in it and that they met as friends. Thus, through the times, men came to regard holding of each other's hands as a sign of greeting and friendship.

How far can a kangaroo leap?

The kangaroo is the star leaper in the animal world. He can effortlessly jump 70 ft and is known to clear a 15-ft fence.

The springbok, a member of the antelope family is another clever jumper. He can leap 12 ft in the air, with utmost ease. Lions, tigers and leopards are all great jumpers. Even the Morocco goat can clear a fence 12 ft high. Although horses are known to be good jumpers their record falls far behind the kangaroo's. The longest jump by a horse is 37 ft.

R.C. Goyal, Solan

Quantitative Aptitude

BY RAVI PRAKASH & AJAY KUMAR

FOR NDA, CDS EXAMS & CAT

This section is specially formulated for those appearing in the forthcoming CDS, NDA exams and IIM's CAT.

DIRECTIONS: Tick mark the choice that best answers each question. Answers with explanations appear at the end of this test.

- What number if increased by 179 and divided by 13 will give 169?
(a) 1,768 (b) 2,018
(c) 2,108 (d) 2,768
- Divide 99 into three parts so that the first number increased by five the second diminished by five and the third multiplied by five shall be equal to
(a) 35, 45, 19 (b) 38, 48, 13
(c) 30, 60, 9 (d) 40, 50, 9
- A number of two digits exceeds three times the sum of its digits by five. If we add 45 to the number, we get the number obtained by reversing its digits. The number is
(a) 36 (b) 39
(c) 38 (d) 41
- The least number which when divided by 24, 32 and 36 leaves remainder 19 is
(a) 307 (b) 309
(c) 288 (d) 269
- The Sum of three positive numbers in arithmetic progression is 18. If 2, 4, 11 are added to these, the resulting numbers are in continued proportions. The numbers are
(a) 4, 6, 8 (b) 2, 6, 10
(c) 3, 6, 9 (d) 1, 6, 11
- Divide 70 into three numbers which are in continued or geometric proportions and are such that if two extremes are multiplied by 4 and the middle one by 5 the resulting numbers are in arithmetic progression. The numbers are
(a) 10, 20, 40
(b) 5, 20, 45
(c) 15, 20, 35
(d) None of the above
- The sum of three numbers in arithmetic progression is 15 and their product is 80. The numbers are
(a) 2, 5, 8 (b) 3, 5, 7
(c) 4, 5, 6 (d) None of the above
- Largest number of four digits which when divided by 12, 15, 20 or 54 leaves in each case remainder 4 is
(a) 9,994 (b) 9,824
(c) 9,724 (d) 9,624
- Largest four digit number which is a perfect square is
(a) 9,604 (b) 9,936
(c) 9,409 (d) 9,801
- $11^4 - 1$ is divisible by
(a) 20 (b) 30
(c) 40 (d) 50
- Last digit of 9^{99} is
(a) 1 (b) 9
(c) 3 (d) None of the above
- A farmer goes to the market with a certain number of boiled eggs in his basket. To the first of his customers he sells half of the eggs in the basket plus half an egg. To his second customer he sells half of the remaining eggs plus half an egg. He repeats the same thing with his third and fourth customers. After this he had no eggs to sell. How many eggs did the basket contain?
(a) 31 (b) 7
(c) 63 (d) 15
- Which of the following numbers lies between the other two: 31^{11} , 17^{14} , 2^{55}
(a) 31^{11} (b) 17^{14}
(c) 2^{55}
- The greatest number that will divide 719 and 930 leaving remainders five and six respectively is
(a) 62 (b) 42
(c) 92 (d) 44
- The value of $0.8 \times 0.8 \times 0.8 - 0.5 \times 0.5 \times 0.5$
 $0.8 \times 0.8 + 0.8 \times 0.5 + 0.5 \times 0.5$ is
(a) 0.30 (b) 0.24
(c) 0.96 (d) 0.42
- The square root of 0.4 is nearly equal to
(a) 0.02 (b) 0.63
(c) 0.2 (d) 0.81
- A zoo has some birds and animals. If heads are counted they number 100, but if legs are counted they number 280. Find the number of animals in the zoo.
(a) 40 (b) 60
(c) 50 (d) 30
- The approximate value of $\sqrt{\frac{3+\sqrt{8}}{3-\sqrt{8}}}$ is
(a) 5.282 (b) 5.432
(c) 5.828 (d) 5.835
- The sum of two positive numbers is 16 and the sum of their squares is 130. Their product is
(a) 56 (b) 45
(c) 28 (d) 63
- The recurring decimal $0.\overline{36}$ is equal to the fraction
(a) $\frac{3}{11}$ (b) $\frac{9}{50}$
(c) $\frac{4}{11}$ (d) None of the above
- The recurring decimal $0.\overline{27927}$ is equal to the fraction
(a) $\frac{31}{111}$ (b) $\frac{32}{111}$
(c) $\frac{927}{100}$ (d) $\frac{927}{999}$
- The decimal 1.01 001 0001-00001... represents the number
(a) $\frac{12}{11}$ (b) $\frac{13}{12}$
(c) $\frac{14}{13}$ (d) None of the above
- Five years ago the age of the father was thrice the age of his son. Ten years hence, the age of the father will be twice the age of his son. The present ages of the father and son are
(a) 50, 20 (b) 40, 15
(c) 35, 5 (d) 65, 25
- The average monthly income of a person for the first eight months of a year exceeds that for the first seven months of the year by Rs 25. If he earns Rs 1,275 in the eighth month of the year, the average monthly income for the first eight months of the year is
(a) Rs 1,000 (b) Rs 1,200
(c) Rs 1,250 (d) Rs 1,100
- If the price of sugar increases by 25%, by what percentage should a housewife decrease her consumption so that her expenditure on sugar remains the same?
(a) 20% (b) 25%
(c) 10% (d) 30%
- A wholesaler allows a discount of 20% to the retailer. The retailer sells at 5% below the list price. If the customer pays Rs 19 for an article, the percentage profit of the retailer is

- (a) 18.75% (b) 19.5%
(c) 18.25% (d) 18.5%
27. One vessel contains a mixture of milk and water in the proportion of 4:5 and in another vessel they are in the proportion of 5:1. In what proportion should they be mixed to get a mixture of milk and water in the proportion of 5:4
(a) 5:2 (b) 5:1
(c) 2:1 (d) 3:2
28. A rectangular plot of land whose area is 1,107 sqm becomes a square when its length is decreased by 3m and breadth is increased by 11m. Dimensions of the rectangular plot of land are given by
(a) 41, 27 (b) 123, 9
(c) 369, 3 (d) None of the above
29. A fencing is erected along a diagonal of a rectangular park whose dimensions are 12 m and 5m. If Rs 17 is the cost of fencing per metre, then the total cost of fencing is
(a) Rs 305 (b) Rs 221
(c) Rs 307 (d) Rs 225
30. The area of four walls of the hall whose breadth is 15 m and height is 8 m is 1068 sqm. The length of the hall is
(a) 18 m (b) 17 m
(c) 16 m (d) 15.5 m
31. The area of a 29m long rectangular field is 696 sqm. The perimeter of the field is
(a) 104 m (b) 106 m
(c) 108 m (d) 110 m
32. The scale of a plan is 5 cm to 2 km. The area of a town represented by an area 5,625 sqm on the plan is given by
(a) 1,600 sq km
(b) 1,000 sq km
(c) 2,250 sq km
(d) 900 sq km
33. The diameter of a wheel is 98 cm. Number of revolutions it will have to make to cover a distance of 1 km and 540 m is
(a) 500 (b) 600
(c) 700 (d) 800
34. An equilateral triangle of sides 12 cm has the same area as that of a circle. The radius of the circle is approximately equal to
(a) 4.46 cm (b) 4.64 cm
(c) 4.93 cm (d) 4.83 cm
35. The diameter of a circular park is 138 m its area is
(a) 1.4963 hectares
(b) 1.9475 hectares
(c) 1.5497 hectares
(d) 2.1339 hectares
36. The proportion in which two kinds of tea, one costing Rs 44 and the other Rs 39, should be mixed so that the mixture can be sold at Rs 42 is
(a) 3:2 (b) 2:3
(c) 1:4 (d) 4:1
37. A sum of money placed at compound interest doubles itself in six years. It will become eight times itself in
(a) 48 years (b) 24 years
(c) 18 years (d) 12 years
38. The difference between the true discount and banker's discount on a certain sum due four months hence is five paise. If the rate of interest is 6%, the amount of the bill is
(a) Rs 125.50 (b) Rs 127.50
(c) Rs 129.50 (d) Rs 132.50
39. A sum of money invested at compound interest amounts to Rs 10,890 in two years and Rs 11,979 in three years. The sum invested is
(a) Rs 9,500 (b) Rs 9,000
(c) Rs 9,700 (d) Rs 10,000
40. A machine depreciates in value at the rate of 10% of its value at the beginning of the year. If the machine was purchased for Rs 9,000 its value at the end of the third year will be
(a) Rs 6,089 (b) Rs 6,061
(c) Rs 6,561 (d) Rs 6,169
41. The face value of a bill discounted at 5% per annum 73 days earlier than the date of maturity, the banker's gain being Rs 10, is
(a) Rs 101,000
(b) Rs 100,000
(c) Rs 110,000
(d) None of the above
42. A trader mixes three varieties of tea costing Rs 32.50, Rs 40 and Rs 36.50 respectively per kg in the ratio 5:4:1. The selling price of the mixture for the trader to make a profit of 20% should be
(a) Rs 45.08 (b) Rs 43.08
(c) Rs 42.04 (d) Rs 41.04
43. The average age of 10 students in a class increases by 0.4 years when six-year-old boy is replaced by a new boy. The age of the new boy is
(a) 8 years (b) 9 years
(c) 10 years (d) 11 years
44. A man works 8 hours, 9 hours, $7\frac{1}{2}$ hours and $7\frac{1}{2}$ hours on four consecutive days. He is paid at the rate of Rs 8.75 per hour. The average daily earning of the man is
(a) Rs 75 (b) Rs 64
(c) Rs 73 (d) Rs 70
45. The number of hours A, B, and C need to finish a work together if A alone can do it in 6 hours more, B alone in thrice the time and C alone in twice the time, is
(a) 1 hr 10 min (b) 1 hr 7 min
(c) 1 hr 12 min (d) 1 hr 9 min
46. The denominator of a fraction exceeds the numerator by 2. If 5 is added to the numerator, the fraction increases by unity. The fraction is
(a) $\frac{7}{5}$ (b) $\frac{6}{5}$
(c) $\frac{3}{5}$ (d) $\frac{2}{5}$
47. If a sum of Rs 1,960 is divided among A, B and C so that A gets four times as much as B and B half as much as C then B gets
(a) Rs 560 (b) Rs 1,120
(c) Rs 120 (d) Rs 280
48. A stock of food is sufficient for 15 men for 16 days. The food stock will be sufficient for 12 men for
(a) 16 days (b) 18 days
(c) 20 days (d) 22 days
49. One tap fills a tank in 32 minutes and another fills it in 38 minutes and a drain can empty it in 20 minutes. If all these are opened simultaneously the tank will be half filled in
(a) 26 minutes
(b) 27 minutes
(c) 28 minutes
(d) None of the above
50. A ship 66 km from the shore develops a leak which admits $2\frac{1}{2}$ tonnes of water in $5\frac{1}{2}$ minutes; 92 tonnes of water would cause the ship to sink but pumps can throw out 12 tonnes in an hour. The average rate of sailing so that the ship reaches the shore safely is
(a) 6 km/hr
(b) 8 km/hr
(c) 9 km/hr
(d) None of the above
51. After successive discounts of 15% and 4% have been granted the net price of a TV set is Rs 7,344. The listed price is
(a) Rs 8,000 (b) Rs 9,000
(c) Rs 10,000 (d) Rs 10,500
52. Rowing at the rate of 5 km per hour in still water, Rajiv takes three times as much time in going 50 km up the river as in coming 25 km down the river. The river flows at the rate of

- (a) $3\frac{1}{2}$ km/hr
(b) $3\frac{1}{3}$ km/hr
(c) $3\frac{1}{4}$ km/hr
(d) None of the above
53. A hall has dimensions 24m x 8m x 6m. The length of the longest pole which can be accommodated in this hall is
(a) 26 m (b) 28 m
- (c) 30 m (d) 32 m
54. One hundred and forty four oranges are brought for Rs 6 per dozen. Out of these 24 are found to be rotten. The price at which each good orange should be sold in order to give the seller a profit of 25% on the total cost, is
(a) 70 paise (b) 80 paise
(c) 75 paise (d) Rs 1
55. Fifty men can finish $\frac{1}{6}$ of a work in 4 days. Therefore 40 men can finish the remaining work in
(a) 20 days (b) 25 days
(c) 30 days (d) None of the above

ANSWERS

1. (b) Let the number be x . Then

$$\frac{x+179}{13} = 169 \Rightarrow x+179 = 13 \times 169 = 2197$$
Thus $x = 2197 - 179 = 2018$.
2. (d) Let the three numbers be x, y, z . Then $x+y+z=99$ and $x+5=y-5=5z$. Thus $x=5z-5$, $y=5z+5$. Therefore, $5z-5+5z+5+z=99$ or $11z=99$. This gives $z=9$. Hence, $x=40$, $y=50$, $z=9$.
3. (c) Let the unit digit be x and ten's digit be y . Then $10y+x=3(y+x)+5$. This implies $7y-2x=5$. Also, $10y+x+45=10x+y$, which gives $9x-9y=45$ or $x-y=5$. Thus, $7y-2x=5$ and $x-y=5$ on solving give $x=8$, $y=3$. Hence the number is 38.
4. (a) L.C.M. of 24, 32 and 36 is 288. Thus, the required number is $288+19=307$.
5. (c) Let the three numbers be $a-d, a, a+d$. Then $a-d+a+a+d=18$ $3a=18$ $a=6$. Also, $6-d+2, 6+4, 6+d+11$ are in continued proportion. Thus $(8-d)(17+d)=10^2=100$ $136-9d-d^2=100 \Rightarrow d^2+9d-36=0 \Rightarrow (d+12)(d-3)=0$ $d=-12, 3$. We reject $d=-12$. Therefore the numbers are 3, 6, 9.
6. (a) Let the numbers be $\frac{a}{r}, a, ar$. Then $\frac{a}{r}+a+ar=70$. Also $\frac{4a}{r}+4ar=2(5a) \Rightarrow \frac{4}{r}+4r=10$ $2r^2-5r+2=0 \Rightarrow (2r-1)(r-2) \Rightarrow r=2, \frac{1}{2}$. Thus $2a+a+a/2=70$ which implies $a=20$. Hence, the numbers are 10, 20, 40.
7. (a) Let the numbers be $a-d, a, a+d$. Then $(a-d)+a+(a+d)=15$ or $3a=15$ that is, $a=5$. Also $(a-d)a(a+d)=80$ or $25-d^2=16$. Therefore, $d=\pm 3$. Hence, the numbers are 2, 5, 8.
8. (c) L.C.M. of 12, 15, 20 and 54 is 540. Largest four digit number which is divisible by 540 is $18 \times 540 = 9,720$. Hence, the required number is 9,724.
9. (d) We have $100^2 = 10,000$ which is the first five digit number. Hence the required number is $99^2 = 9,801$.
10. (d) We have $11^5-1=(11-1)(11^4+11^3+11^2+11+1)=10(11^4+11^3+11^2+11+1)$. The last digit of $11^4+11^3+11^2+11+1$ is 5, (1 being the last digit of each number in the sum), hence 11^5-1 is divisible by 50.
11. (b) We have $9^{2n} = (81)^n = \underbrace{(81)(81)\dots(81)}_{n \text{ times}}$
Thus, last digit 9^{2n} is 1, therefore last digit of 9^{2n+1} is 9. Since 9^2 is odd, it follows that the last digit of $9^{(2n)^2}$ is 9.
12. (d) Let the number of eggs in the basket be x . Then to the first customer he sells $(\frac{x}{2} + \frac{1}{2})$ eggs. The number of eggs he had after first sale is $x - (\frac{x}{2} + \frac{1}{2}) = \frac{x}{2} - \frac{1}{2}$. To the second customer he sells $\frac{1}{2}(\frac{x}{2} - \frac{1}{2}) + \frac{1}{2}$. Therefore, the number of eggs he had after the second sale is $(\frac{x}{2} - \frac{1}{2}) - [\frac{1}{2}(\frac{x}{2} - \frac{1}{2}) + \frac{1}{2}] = \frac{1}{2}(\frac{x}{2} - \frac{1}{2}) - \frac{1}{2} = \frac{x}{4} - \frac{3}{4}$. After the third sale he had $\frac{x}{4} - \frac{3}{4} - [\frac{1}{2}(\frac{x}{4} - \frac{3}{4}) + \frac{1}{2}] = \frac{x}{8} - \frac{7}{8}$ and after the fourth sale he had $\frac{x}{8} - \frac{7}{8} - \frac{1}{2}[\frac{x}{8} - \frac{7}{8} + \frac{1}{2}] = \frac{x}{16} - \frac{15}{16}$. We must have $\frac{x}{16} - \frac{15}{16} = 0$ which gives $x=15$.
13. (c) We have $31^{11} < 32^{11} = (2^5)^{11} = 2^{55}$ and $17^{14} > 16^{14} = (2^4)^{14} = 2^{56} > 2^{55}$. Hence the required number is 2^{55} .
14. (b) The H.C.F. of 719-5 and 930-6 is 42.
15. (a) We have $a^3-b^3=(a-b)(a^2+b^2+ab)$. Thus,

$$\frac{(0.8)^3-(0.5)^3}{(0.8)^3+(0.8)(0.5)+(0.5)^3} = 0.8 - 0.5 = 0.3$$
16. (b) We have $\sqrt{0.4} = 0.63$.
17. (a) Let the number of animals be x and birds be y . Then $x+y=100$ and $4x+2y=280$. Thus $x+y=100$ and $2x+y=140$ which give $x=40$, $y=60$. Hence number of animals is 40.
18. (c) We have $\frac{3+\sqrt{8}}{3-\sqrt{8}} = \frac{(3+\sqrt{8})(3+\sqrt{8})}{(3-\sqrt{8})(3+\sqrt{8})} = \frac{(3+\sqrt{8})^2}{9-8} = (3+\sqrt{8})^2$. Thus, $\sqrt{\frac{3+\sqrt{8}}{3-\sqrt{8}}} = 3+\sqrt{8} = 3+2.828=5.828$.
19. (a) Let the numbers be x and y . Then $x+y=16$ and $x^2+y^2=130$. We have $xy = \frac{1}{2}[(x+y)^2 - (x^2+y^2)] = \frac{1}{2}(256 - 130) = \frac{1}{2}(126) = 63$.
20. (c) Let $x = 0.\overline{36} = 0.36\ 36\ 36\ 36\dots$. Therefore, $100x = 36.36\ 36\ 36\ 36\dots$. Thus $99x = 36 \Rightarrow x = 36/99 = 4/11$.
21. (a) Let $x = 0.27927 = 0.279279279279\dots$. $1000x = 279.279279279\dots$. Thus, $999x = 279$ which gives $x = 279/999 = 31/111$.

22. (a) $\frac{1000}{308}$ cannot be represented as fraction because it is neither terminating nor a repeating decimal.
23. (a) Let the present age of the father be x and that of son be y . Then $x-5 = 3(y-5)$ and $x+10 = 2(y+10)$. These give, $x-3y = -10$ and $x-2y = 10$. On solving, we obtain $x=50$, $y=20$.
24. (d) Let the average income in the first eighth month be x . We have $8x-1,275 =$ total income for the first seven months. Thus $8x-1,275 = 7(x-25)$ which gives $x=1,100$.
25. (a) Let the price of sugar be Rs 100 per kg and suppose the housewife was spending Rs 100 per month, so that her consumption was 1 kg. After the increase in price her consumption becomes $\frac{100}{125} = 0.8$ kg. Therefore percentage decrease in her consumption is 20%.
26. (a) Let the listed price be Rs x . Selling price of retailer is Rs $0.95x$. Cost price of retailer is Rs $0.8x$. Therefore, profit of the retailer is Rs $0.15x$. Profit of retailer in percentage is $\frac{0.15x \times 100}{0.8x} = 18.75$.
27. (a) Let these be mixed in the proportion $x : y$, then proportion of milk and water in the resulting mixture is

$$\frac{4x}{9} + \frac{5y}{6} : \frac{5x}{9} + \frac{y}{6} = 5 : 4$$

$$\Rightarrow 4\left(\frac{4x}{9} + \frac{5y}{6}\right) = 5\left(\frac{5x}{9} + \frac{y}{6}\right)$$

$$\Rightarrow \frac{16x}{9} + \frac{20y}{6} = \frac{25x}{9} + \frac{5y}{6}$$

$$\Rightarrow \frac{20y}{6} - \frac{5y}{6} = \frac{25x}{9} - \frac{16x}{9}$$

$$\Rightarrow \frac{15y}{6} = x \Rightarrow x : y = 15 : 6 = 5 : 2$$
28. (a) Let the length of the plot be x metre and its breadth be y metres. Then $xy = 1107$ and $x-3 = y+11$. Thus $x = y+14$. Therefore $(y+14)y = 1107$ which implies $y^2 + 14y - 1107 = 0 \Rightarrow (y+41)(y-27) = 0$. Thus $y = -41$ or 27 . But $y = -41$ is not possible. Hence $y = 27$ and so $x = 41$.
29. (b) Length of diagonal $= \sqrt{12^2 + 5^2} = 13$ m
 Total cost of fencing is $13 \times 17 = 221$.
30. (a) Let the length of the hall be x metre, then $2(8x+15x+8 \times 15) = 1068$
 $2(23x+120) = 1068$
 $23x+120 = 534$
 $23x = 414$ $x = 18$.
31. (b) The breadth of the field is $696/29 = 24$ m
 Therefore perimeter of the field is $= 2(29+24) = 106$ m.
32. (d) Area of 4 sq Km is represented by 25 sq cm
 Hence, area of the town is $\frac{5625 \times 4}{25}$ sq km
 $= 900$ sq km.
33. (a) Circumference of the wheel $= 2\pi r$
 $= 2 \times \frac{22}{7} \times \frac{98}{2}$ cm $= 308$ cm $= 3.08$ m
 No. of revolutions required to cover a distance

of 1 km and 340 m $= \frac{1340}{3.08} = 900$

34. (a) Area of the equilateral triangle
 $= \frac{\sqrt{3}}{4} (\text{side})^2 = \frac{\sqrt{3}}{4} (12)^2 = 36\sqrt{3}$ sq cm. Radius of the circle whose area is $36\sqrt{3}$ sq. cm $= \sqrt{\frac{36\sqrt{3}}{\pi}}$
 $= \sqrt{\frac{36 \times 1.732 \times 7}{22}} = \sqrt{19.8393} = 4.46$.
35. (a) Area of the park $= \pi r^2$
 $= \frac{22}{7} \times 69^2 = \frac{22}{7} \times 69 \times 69$
 $= 14963.143$ sq. m $= 1.4963$ hectares.

- Therefore the ratio is 3:2.
37. (c) Let the rate of interest be $r\%$
 Then $P \left(1 + \frac{r}{100}\right)^6 = 2P$
 $\left(1 + \frac{r}{100}\right)^6 = 2$
 $\left(1 + \frac{r}{100}\right)^{18} = 2^3 = 8$
 $P \left(1 + \frac{r}{100}\right)^{18} = 8P$
 Hence the money will become 8 times in 18 years.
38. (b) Let the face value of the bill be Re 1
 Then B.D $= \frac{1 \times 6 \times 4}{100 \times 12} = \frac{1}{50}$
 Present value P of the bill is given by
 $1 = P + \frac{P \times 6 \times 4}{100 \times 12} = P + \frac{P}{50} = \frac{51}{50} P$
 which implies $P = \frac{50}{51}$. Thus true discount
 $= \frac{50 \times 6 \times 4}{51 \times 100 \times 12} = \frac{1}{51}$
 Banker's gain $= \frac{1}{50} - \frac{1}{51} = \frac{51-50}{51 \times 50}$
 $= \frac{1}{51 \times 50}$. If banker's gain is Re. $\frac{1}{51 \times 50}$
 then value of bill is Re 1, if banker's gain Re $\frac{5}{100}$ then face value of the bill is
 $\text{Rs } \frac{5}{100} \times 51 \times 50 = \text{Rs } 127.50$.
39. (b) Let the amount invested be Rs P and the rate of interest be $r\%$ per annum.
 Then $P \left(1 + \frac{r}{100}\right)^3 = 10,890$
 and $P \left(1 + \frac{r}{100}\right)^5 = 11,979$

$$\begin{aligned} \text{This implies } 1 + \frac{11,979}{100} &= \frac{11,979}{10,890} \\ - \frac{11}{10} \cdot \text{Thus } P \left(\frac{11}{10} \right)^2 &= 10,890 \\ = P \cdot \frac{10,890 \times 100}{121} &= 9,000. \end{aligned}$$

40. (c) Depreciated value at the end of three years
 $= 9,000 \left(1 - \frac{10}{100} \right)^3$
 $= 9,000 \times \left(\frac{9}{10} \right)^3 = 6,561.$

41. (c) Let the face value of bill be Re 1. Present value P of this bill is given by
 $1 = P + \frac{73 \times 5 \times P}{365 \times 100} = 101 P$
or $P = \frac{100}{101}$. Banker's discount on the bill is

$$\begin{aligned} \text{discount} &= \frac{1}{101} \cdot \text{Therefore,} \\ \text{a gain on the bill of Re 1 is} \\ \frac{1}{100} - \frac{1}{101} &= \frac{100 \times 101 - 100 \times 101}{100 \times 101} \\ \text{Hence, amount of the given bill is} \\ \frac{10}{100} &= 10 \times 100 \times 101 = \text{Rs } 101,000. \end{aligned}$$

(b) Cost of 10 kg of the mixture is
Rs $(5 \times 32.50 + 4 \times 40 + 36.50) = \text{Rs } 359$
Cost per kg = Rs 35.9
Hence, selling price per kg
= Rs $\left(35.9 + \frac{35.9 \times 120}{100} \right)$
= Rs $\frac{35.9 \times 120}{100} = \text{Rs } 43.08.$

43. (c) Let the age of new boy be x years and the old average be y years
Then $\frac{10y - 6 + x}{10} = y + 0.4$
or $x - 6 = 4$, that is $x = 10$.

44. (d) Total hours worked by the man on 4 days
 $= 8 + 9 + 7\frac{1}{2} + 7\frac{1}{2} = 32$ hours
Total earning = Rs 32×8.75
= Rs 280. Thus average daily income is
Rs $280/4 = \text{Rs } 70$.

45. (c) Suppose A, B and C can finish the work in x hours.
Then $\frac{1}{x+6} + \frac{1}{3x} + \frac{1}{2x} = \frac{1}{x}$
 $\Rightarrow \frac{1}{x+6} - \frac{1}{x} - \frac{1}{2x} - \frac{1}{3x} = \frac{6-3-2}{6x} = \frac{1}{6x}$ Thus
 $6x = x+6$ or $x = 6/5 = 1 \text{ hr } 12 \text{ minutes.}$

46. (c) Let the fraction be x/y. Then $y - x = 2$. Also,
 $\frac{x+5}{y} = \frac{x}{y} + 1$. This gives $\frac{x}{y} + \frac{5}{y} = \frac{x}{y} + 1$ or $y = 5$
Hence $x = 3$. Therefore, the fraction is $3/5$.

47. (d) Suppose B gets Rs x, then A gets Rs 4x and C gets Rs 2x. Thus $4x + x + 2x = 1960$ or $x = 280$.

48. (c) The stock of food is sufficient for one man for 15 X 16 days. Therefore, it is sufficient for 12 men for $\frac{15 \times 16}{12} = 20$ days.

49. (d) In one minute the part of the tank that can be filled is $\frac{1}{32} + \frac{1}{38} = \frac{16+19}{608} = \frac{35}{608}$ where as part of the tank's capacity that can be drained in one minute is $\frac{1}{20}$. Therefore, part of the tank that can be filled in one minute is $\frac{35}{608} - \frac{1}{20}$

$$= \frac{175-152}{3040} = \frac{23}{3040} \cdot \text{Hence, tank can be filled in } \frac{3040}{23} \text{ minutes.}$$

50. (c) Water that enters the ship in one minute is $\frac{2}{3} = \frac{9}{11}$ tonnes whereas the water which can be drained out of it in one minute is $\frac{12}{60} = \frac{1}{5}$ tonnes. Thus the weight of the ship is increasing at the rate of $\frac{9}{22} - \frac{1}{5} = \frac{23}{110}$ tonnes per minute. Therefore the ship will

begin to sink just after $\frac{92}{23/110} = 440$ mins.
Hence, the speed of the ship which will suffice to bring the ship to the shore just before it begins to sink is $\frac{66 \times 60}{440} \text{ km/hour or } 9 \text{ km/hour.}$

51. (b) Let the price of TV be Rs x. then
 $x \left(1 - \frac{15}{100} \right) \left(1 - \frac{4}{100} \right) = 7344$ or
 $\frac{85 \times 96x}{10000} = 7344$ or $x = \frac{7344 \times 10,000}{85 \times 96} = 9000.$

52. (d) Let the speed of the river be x km/hour.
Then $\frac{50}{x-5} = 3 \left(\frac{25}{x+5} \right)$ or $2(x+5) = 3(x-5)$ or $x = 15.$

53. (a) The length of the diagonal of the hall is $\sqrt{24^2 + 8^2 + 6^2} = \sqrt{576 + 64 + 36} = \sqrt{676} = 26 \text{ m}$

54. (c) Cost of 120 good oranges is Rs 72
Selling price of one orange is $\frac{72}{120} \times 100$ paise or 60 paise. In order to get a profit of 25% each orange must be sold at $\frac{60 \times 125}{100} = 75 \text{ p.}$

55. (b) One man can finish $1/6$ th of the work in 200 days and the entire work in 1200 days.
Therefore, 40 men will finish $\frac{5}{6}$ th of the work in $\frac{1200}{40} \times \frac{5}{6} = 25$ days.

THE INDIAN RENAISSANCE-2 ITS VISIONARIES

BY ANITA NARAYAN

Raja Rammohun Roy and Swami Dayanand—the universal message and unique contributions of these two messiahs' have been covered in our last issue. Continuing our series on the great lives' that bestrode the 19th century social reform movement. For the benefit of those appearing in the Civil Services (Mains)

SWAMI VIVEKANANDA (1863-1902)

A great patriot and social reformer of modern India. He was the first person to truly proclaim the greatness of India's culture and civilisation and to convey to the world the universal message of the *Vedanta*. He established the Ramakrishna Mission in memory of his guru Sri Ramakrishna Paramhansa (1836-1886) to spread the gospel of his teacher and also to propagate social reform.

Sri Ramakrishna Paramhansa was a *Kali* temple priest at Dakshineswar Calcutta. Although he hardly had any formal education, his spiritual yearning, intense faith and deep understanding of all religions attracted a galaxy of brilliant young men around him, among whom Swami Vivekananda or Narendranath Dutta as he was then called, was the teacher's most beloved disciple.

After his guru's death, Vivekananda traversed the whole country preaching Sri Ramakrishna's message. His brilliance, eloquence, deep spiritual understanding and dynamic personality brought him close to all sections of society—rich and poor, and it is with their support that in 1893 he sailed for America to attend the Parliament of Religions at Chicago. His first speech there took the country by storm. The message of Sri Ramakrishna, as explained by Swami Vivekananda, spread throughout the world and he was adorned with the mantle of India's spiritual ambassador to the West. He journeyed throughout the US and England, and established Ramakrishna missions at many places. His return to India became a national event and he was given a tumultuous welcome. He established the of the Ramakrishna Order at Belur, near Calcutta, which dedicated

itself to the service of the poor.

Vivekananda was strongly opposed to the caste system and severely criticised the prevalent Hindu preoccupation with rituals and superstitions. He strongly believed in free and rational thinking and took inspiration from the Vedanta, which he declared to be the fountainhead of all true knowledge. He wrote four major treatises on Hindu philosophy—*Jnana-Yoga*, *Karma-Yoga* and *Raja-Yoga*, apart from countless letters and lectures. His unique contribution was that he made the youth of India aware of its responsibilities to build a progressive nation.

The Ramakrishna Mission, founded by Swami Vivekananda, primarily aims at the spiritual uplift of the individual person. It accepts all world religions, as reflected in Sri Ramakrishna's views that though the various religions may express different views, they all expound the same truth. The Ramakrishna Mission also places great emphasis on social service and a number of schools, hospitals, orphanages and libraries are run by it. Further, its dedicated service in times of famines, floods and other calamities is well known. Considering its contributions, the mission's tremendous popularity among the masses is hardly surprising.

JUSTICE RANADE (1842-1901)

The great Maharashtrian social reformer Justice Mahadev Govind Ranade dedicated his entire life to the twin objectives of uplift of women's status and mass education in western India. It was due to Justice Ranade's persistent dedication that the Prarthana Samaj became the foremost organisation of social reform in Maharashtra.

Justice Ranade played a crucial role in the founding of the Widow Remarriage Association in 1861 and the renowned Deccan Education Society begun in 1884, was a product of Ranade's own genius. The basic aim of this society was to educate the youth in a manner that would make them worthy of service to their mother country, an objective which the prevalent method of education did not fulfil. The activities of this society made it possible to begin the Fergusson College and the Willingdon College in Poona and Sangli respectively. The nationalist leader

Gopal Krishna Gokhale, was an active worker of this society.

Justice Ranade possessed an organic view of society and fervently believed that social reform meant the total uplift of society and not just reformative change in certain areas. Since the various spheres of society—social, economic, political and religious—were inter-related, reform in one sphere automatically meant change in the other areas as well. Further, his philosophy incorporated the rationale that social reform did not simply entail a sudden break with the past but also involved a deep understanding of the existing society so that the direction of change would lead to a stable and progressive society. Thus, he stated, 'The true reformer has not to write on a clean slate. His work is more often to complete the half-written sentence.'

Justice Ranade's work is especially significant for his broadness of vision, accommodating the best of both Indian and Western cultures and his sensitive understanding of societal processes, has given his pioneering work an everlasting appeal.

HENRY VIVIAN DEROZIO (1809-1831)

Derazio was a brilliant and patriotic Anglo-Indian teacher and founder of the Young Bengal Movement, which drew its inspiration from the French Revolution. He taught at the Hindu College, which he was compelled to leave because of his radical views. Though he died at the young age of 22, he was probably the earliest nationalistic poet of modern India and with his followers known as Derozians, attacked decadent religious customs, championed women's rights and contributed to national consciousness by encouraging public agitation on social and political issues.

However, the Derozians were not always successful in their efforts as they failed to plan their movements according to the dictates of Indian social reality.

ISHWAR CHANDRA VIDYASAGAR (1820-1891)

One of the towering architects of modern India, Vidyasagar was not simply a great social reformer but an equally great educationist and writer. He was among the earliest to realise the value of education and dedicated his entire life to translate this realisation into reality.

Though born in a poor family, Ishwar Chandra overcame insurmountable odds, educate himself and became a distinguished Sanskrit scholar. His mind was always receptive to new and original ideas.

and it was this quality alongwith his scholarship which secured for him the coveted post of Principal of the Sanskrit College.

Vidyasagar was a champion of the cause of women's uplift. Amidst fierce opposition, he alongwith J.D. Bhattacharya popularised the concept of women's education and in 1949 the first girls' school was opened in Calcutta. Further, in his capacity as Government Inspector of Schools, Vidyasagar was responsible for the opening of 35 girls' schools. Such views were considered out-castes in his time as it was widely believed that once girls were educated they would tyrannize their husbands. Though girls' education was introduced as early as 1821, it was not very popular due to its Christian bias and it was to Vidyasagar's credit that despite the existing prejudices, he was able to make such views more acceptable in his time.

Vidyasagar also waged an incessant battle against child marriage and polygamy. He was appalled by the evil practice in Bengal of marrying young girls to old men, who, upon their aged husbands' death, would become widows at an early age and thereby be forced to lead a life of sorrow and misery. His crowning achievement came in 1855 when despite overwhelming resistance, the Widow Remarriage Act was passed. In 1856, the first Hindu widow remarriage took place in Calcutta under the supervision of Vidyasagar himself. This movement, though it did not gain much popularity, nevertheless drew attention to the racial evil of polygamy.

To bring the benefits of education within the reach of all sections of society, Vidyasagar opened schools where boys of all castes could gain admission, and also enrolled non-Brahmin students to his Sanskrit College. It was he who wrote the first systematic Bengali spelling and grammar book, and also composed a new and more effective method for the learning of Sanskrit. His Sanskrit background notwithstanding, Vidyasagar was receptive to Western ideas and included the study of Western philosophy and applied sciences in his college curriculum.

Despite his innumerable achievements, Vidyasagar always remained modest and simple in his dress and behaviour. He was extremely generous and a great humanitarian filled with infinite compassion for the needy and oppressed. He gave assistance to the renowned nationalist poet, Bengali 'Michael' Madhusudan Dutt, in his later days, and the same poet paid him a fitting tribute when he said, "The man I have appealed to has the wisdom and genius of an ancient sage, the courage of an Englishman and the heart of a Bengali mother."

BHIMRAO RAMJI AMBEDKAR (1891-1956)

Despite being born in a poor untouchable Mahar family, Dr B.R. Ambedkar overcame innumerable odds to establish himself in a society ridden with caste prejudices, and his dedication to the cause of the uplift of the depressed classes won him the admiration of all sections of society.

Apart from being a great leader and social reformer, Ambedkar was also an extremely erudite scholar. He was a highly qualified economist and lawyer, and received academic honours from some of the best universities in India, England, the US and Germany. He also taught as a professor in the renowned Sydenham College and Government Law College in Bombay, and published several articles of academic interest in many international journals. It was in recognition of his erudition that he was appointed the Chairman of the Drafting Committee of the Constituent Assembly of India, being widely hailed as the 'architect of India's Constitution', and also became independent India's first Law Minister.

Ambedkar, in spite of his scholarship, was exposed to the humiliating treatment meted out to members of his community. Moved by a burning desire to make people aware of the social evil of untouchability and also to organise the depressed classes into a united organisation to fight for their basic rights, he started the Depressed Classes Mission, which became the first determined attempt to better the lot of the untouchables. Later in 1924, alongwith Sir Chimanlal Setalwad, he founded the Bahishkrit Hitakarini Sabha (Association For The Welfare Of The Depressed Classes). The activities of this organisation included raising the status of the untouchables to that of human beings, making entry into temples, schools and other public places possible, and also making higher education accessible to the depressed classes. Despite its limitations,

Ambedkar always remained true to his community and openly stated that "whatever I have achieved is entirely due to the strength of my community. I am proud to have been born a Harijan." He was also a champion of women's rights.

Later on in his life he became greatly attracted to the teachings of the Buddha and after founding the Bhartiya Bauddha Mahasabha he himself embraced Buddhism. It was this act of his which led several members of the Mahar caste to adopt Buddhism as their religion, thereby renouncing a religion (Hinduism) which had heaped only injustices upon them. Ambedkar's most significant contribution was that he brought the problem of untouchability within the ambit of national consciousness.

SAYYID AHMAD KHAN (1817-1898)

Apart from being the foremost social reformer of the Muslims, Sayyid Ahmad Khan was also a great protagonist of modernisation. He firmly believed in the principle of rationalism and freedom of thought and greatly opposed blind attachment to traditional values, ignorance and fanaticism. To make these ideas more acceptable, he tried to incorporate them in the teachings of the Koran and supported the view that any interpretation of the Koran, which was inconsistent with the principle of scientific reason, was untrue and, therefore, ought to be rejected.

Sayyid Ahmad Khan believed that society could be transformed by adopting the beneficial elements of modern Western education and remained dedicated to this cause all his life. In 1875, to make the fruits of Western education accessible, he opened the Muhammedan Anglo-Oriental College at Aligarh, which later became the Aligarh Muslim University. He also wished to reform Muslim society and strongly opposed the customs of polygamy and easy divorce and was greatly concerned with improving the status of women.

Initially, Sayyid Ahmad Khan entertained very liberal views. He was against the perpetuation of communal feelings of any kind and espoused the doctrine of religious toleration. Indian students of all communities were enrolled in his college and many Hindus were also recruited as teachers. Further, funds for the establishment of his college were contributed by people from all communities. Later, however, his views changed drastically and he became strongly influenced by communalistic and separatist ideas and even discouraged his followers from joining the growing nationalist movement due to it being Hindu dominated.

(Concluded)

A LION'S TALE

Sheer irony! The Indian lion flourishes, not in India but in the Berlin Zoological Park. Ten years ago, this was the second zoo outside India to succeed in breeding the lions. The fact that today the Berlin Park is the largest breeder and distributor of this species speaks volumes about the Indian preservation effort. Over 40 of the Indian lions born there to date have gone to 14 zoos in 10 countries. Incidentally, the 100th Indian lion took birth in the Berlin haven recently and Guy is his name.

SPACE PROBING MANOEUVRES

... in the uncharted areas high above have been facilitated with the introduction of propellants, launch vehicles, space labs and a whole list of other space systems. Going into the orbit with these systems should help one gauge the degree of advancement made in space technology.

BY DR SHIV PRASAD KOSTA
Director Publications & Public Relations Unit, ISRO

Rockets

Rockets can be classified into the following two categories:

Controlled rockets: These rockets can change their natural trajectories using fuel or orienting their subsystems like Fin, etc after lift-off. Some examples of these are—SLV-3, Thor-Dita 2914, Saturn, Vostok, Inter-cosmos, Ariane, etc.

Uncontrolled rockets: These rockets do not have any provision to change their natural trajectories after lift-off. Examples of these types of rockets are—Tipu's rockets, ISRO's RH-125, Menaka, etc.

Rockets are also sometimes named after their fuel contents. The rockets which use solid propellants are called solid propellant rockets, and rockets which use liquid propellants are called liquid propellant rockets. All the rockets work on the principle of Newton's Third Law which states that action and reaction are equal and opposite.

Solid propellants: In the early stages of rocketry, solid propellants were first developed and used. In general, the solid propellant consists of a suitable polymer and aluminium powder as fuel and ammonium perchlorate as oxidiser. Polymers like Polyvinyl Chloride (PVC) or Polybutadiene Acryl Nitrite (PBAN) or Hydroxyl Terminated Polybutadiene (HTPV), along with aluminium powder are used as fuel. In addition Ammonium Perchlorate is used as oxidiser.

Liquid propellants: These are classified as (i) Bipropellants, Monopropellants; (ii) Hypergolic, Non-hypergolic; (iii) Earth storable, Cryogenic. Monopropellants are those which either have fuel and oxidiser elements in themselves or are structurally so configured that on ignition energy, they decompose exothermically into hot gaseous products. In contrast, bipropellants are those that react only when the two propellant elements 'fuel' and 'oxidiser', vapourise mix and burn.

Such bipropellant combinations can be either hypergolic or non-hypergolic. Hypergolic combinations are those in

which the liquid fuel and oxidiser on contact ignite, release energy and burn away into hot gases. As such, propulsion systems, based on such propellant combinations do not need any ignition system. This feature is of great advantage and is used to increase the propulsion system reliability by adopting hypergolic propellant combinations. Non-hypergolic propellants need, of course, an ignition system.

The difference between cryogenic and earth storable propellants arise depending on whether or not the propellants can be stored at room temperatures without any boil off. Cryogenic combinations need, on the other hand extensive insulation.

Satellite Launch Vehicles (Rockets)

A brief account of the satellite launch vehicle (SLV) is provided below to bring out the mission requirements, the physical problems to be taken into account, and the limitations of the launch site in attaining the final satellite orbital conditions:

- In general, a multi-stage rocket system capable of imparting a velocity of about 7.7 km/sec for low earth orbit payloads; typically three to four stages to take advantage of staging;
- This rocket system has to be con-

trained against disturbances originating from thrust misalignments, aerodynamic disturbances, etc and an autopilot is provided on board to stabilise the vehicle along the chosen path till the satellite is injected into orbit:

- A typical SLV trajectory has the following characteristics:
- Vertical ascent for a few seconds;
- Execution of a gravity turn till the vehicle clears the atmosphere;
- Pitch programme execution above the atmosphere to obtain the terminal injection conditions, especially the orbital altitude;
- Coasting up to the orbital altitude and firing of the last stage to inject the required velocity increment in the satellite;
- Execution of stage separation, ignition by on-board sequence.

SLVs, in general, are equipped with on-board guidance systems which continuously provide the orientation, position, velocity and acceleration of the vehicle with reference to a known frame of reference by means of a gyro-stabilised inertial platform carrying high accuracy accelerometers and onboard computers. Guidance computations are carried out using this information continuously and updating the steering commands to the vehicle auto pilot. While this closed loop onboard guidance is a must for many application satellite launching missions, preprogrammed steering commands stored onboard and issued to the auto pilot can provide the orbital injection accuracy required for simpler low earth orbiting missions.

Attainment of orbit for low earth missions require mostly pitch steering with proper launch azimuth plane choice to provide the correct inclination of the orbit; geostationary missions require orbital transfer operations as described below:

Attainment of an inclined parking orbit of about 200 km altitude; Injection into the inclined synchronous transfer orbit of 200 perigee and 36,000 km

TYPICAL LAUNCH VEHICLES WEIGHT ANALYSIS

Launch Vehicle	Total lift-off weight (tons)	Low-Earth Orbit (tons)	Geo-stationary Transfer Orbit (tons)
PROTON (USSR)	2371.14	22	-
ARIANE (ESA)	210.00	-	1.7
ARIANE 2 (ESA)	222.46	-	2.17
ARIANE 3 (ESA)	240.62	-	2.70
PSLV (India)	256.00	1 (to polar sun synchronous orbit)	-
Space Transportation System (USA)	2010.62 (115 miles orbit 28.5° inclination) Shuttle orbiter	29.48	-

apogee at the first equatorial crossing. Plane charging and circularisation at 36,000 km apogee by on-board rocket carried as part of the satellite.

Space Transportation System

A whole new era of space transportation has come into being with the advent of the Space Transportation System (STS) and its ability to transport routinely a variety of payloads to orbit at relatively lower costs. It is designed to reduce the cost and increase the effectiveness of using space for commercial, scientific, national and international needs. Thus the STS objectives can be enumerated as follows:

- Permit an orderly transition.
- Be price competitive.
- Establish user charges on an equitable basis.
- Accommodate all classes of users.
- Foster development of low-cost operation concepts.
- Minimise payload costs.

The STS consists of

- the space shuttle
- spacelab
- interim upper stage (IUS)

With its versatility and reusability, the space shuttle has truly opened the door to the economical routine use of space. The flying or automated satellite will be deployed and recovered from space orbits.

Space Shuttle Systems: The space shuttle flight system consists of:

- Reusable orbiter
- Reusable two solid rocket boosters (SRBs)
- An external liquid propellant tank (ET)

The space shuttle system can place payloads of 29,500 kg into low-earth orbit. Payloads can be placed into high-earth or into lunar or planetary trajectory utilising IUS in conjunction with the shuttle.

The spacelab, manned space laboratory, developed by the European Space Agency, is capable of carrying out scientific applications, technical and technological experiments in low-earth orbit for about a month's duration. The spacelab may be flown as many as 50 times over a 10-year period.

The three-axis stabilised IUS is utilised to place payloads into higher orbits not attainable by shuttle alone. IUS performance characteristics are

Orbit	Stages required	Payload wt (kg)
Geo-synchronous	2	2,270
Sun synchronous	2	1,820
Planetary	4	500

Space Transportation System-STS Parameters

The following are estimated characteristics for STS shuttle flights:

ON ORBIT

	Maximum	Minimum	Typical
Crew	6-7	3	3-4
Duration	30 days	<1 day	3-4 days
Inclination	56°	28-1/2°	30-35°
Altitude	>400 MN	120 NM	150-160 NM
Period (minutes)	>100	89	90
% of time in earth shadow	40%	32%	36-38%
Temperature of nearby structure	200°F	-250°F	+150 to -50°F
Steady-state acceleration	10 ⁻⁶ g	10 ⁻¹⁰ g	10 ⁻⁶ to 10 ⁻⁷ g
Acceleration in manoeuvres	0.4g	-1	TBD

Some flights will have the payload bay generally oriented toward the earth; some, away from the earth; some, a mixture.

Ascent

	Maximum	Typical
Duration of powered flight	12 min.	8 min.
Longitudinal Acceleration	3.7g	3g
Transverse Acceleration	3.9g	1.2g
Angular Acceleration	3rad/sec ²	< 1 rad/sec ²
Noise	{ 145 db 5-10 seconds	130 db
Vibration	{ .1g ² /Hz 20 seconds	.04g/Hz
Temperature of nearby structure	100°F	80-90°F

Pre-launch, the cargo bay atmosphere is filtered air of nitrogen at 70° and less than 50% R.H. The cargo bay doors are opened between one and four hours after lift-off and remain open throughout the mission.

Entry and landing

The cargo bay doors are closed between one and four hours before landing.

During de-orbit and entry, acceleration/vibrations/temperatures are within the values described above for ascent, except that the longitudinal accelerations range between 0 and 1.1g forward.

At touchdown, design accelerations are:

4.2g vertical These include dynamic 1.8g forward transient effects and may 1.2g lateral occur simultaneously.

During a 15-minute period after touchdown, temperature of the nearby structure rises to the order of 180°F. It drops to ambient within another half-hour. During this time, there is forced air circulation at approximately ambient temperature.

NEWS CAPSULE

AWARDED

1985 Jawaharlal Nehru Award for strengthening Indo-Soviet friendship to academician V A Kotelnikov, novelist Chinghiz Aitmatov, onetologist G K Shirokov and idologist L V Mitrokhim. The award is sponsored by the Government of India.

Vishwa Gurjar Awards carrying a Rs 1,000 cash prize, to economist I G Patel, nuclear scientist H N Sethna, and industrialist Nanubhai Amin for their contribution in their respective fields. Patel will be given the international award while Sethna and Amin will be given the national and state-level awards.

APPOINTED

Air Marshal Man Mohan Singh, Air Officer-in-Charge Personnel at Air Headquarters, as the air officer Commanding-in-Chief of Western Air Command. He replaces Air Chief Marshal D A Le Fontaine, now chief of Air Staff.

K.K. Mathew, former Supreme Court Judge, to head the commission of inquiry constituted by the government to determine the specific Hindi speaking areas of Punjab which shall be transferred to Haryana in lieu of Chenab. The Commission will submit its report by Oct 3.

M. Narasimham, former RBI governor, as the Vice President of the Asian Development Bank (ADB) based in Manila.

Satish Dutt Pandey as the Director-General of Punjab police, replacing K.S. Dhilon who has been reverted to this parent cadre of MP.

ELECTED

J.R. Nirmath, India's permanent representative to the UN Industrial Development Organisation (UNIDO), as one of the three vice presidents of the Vienna-based world body.

VISITED

Julius K. Nyerere, President of Tanzania, on Aug 24 on a four-day visit aimed at building goodwill to Indian leaders before he relinquishes office later this year. Given a Doctor of Laws (LLD) degree by the JNU.

Sridath Rampal, Commonwealth Secretary-General, on Aug 24 on a four-day visit for talks with Indian government leaders on the forthcoming Commonwealth Heads of Government Meeting in the Bahamas.

SCIENCE

Liver cancer cure? Researchers at Johns Hopkins University in Baltimore, USA, have found the first effective treatment for advanced liver cancer which until now has almost always been fatal. Dr Gregory Cort, who headed the research, said the treatment involved injecting antibodies with drugs and radiation to wipe the chances of a cure. The treatment which delivers radiation directly to the tumour

in the liver has shrunk tumours by at least 30% and in some cases there was no evidence of cancerous tissue remaining. Exactly how the treatment works is not understood.

Healthy baby rats after space odyssey: The Soviet Union claimed a first for its space programme on Aug 19 by announcing that healthy baby rats have been born on earth after a period of gestation in space. It said rats aboard the Cosmos 1667 space flight launched on Jul 10 later bore healthy strong offspring although a large part of the gestation time was spent in the unusual state of weightlessness. The Cosmos 1667 flight was carried out in cooperation with scientists from the US, France and some East Bloc nations.

NEIGHBOURS

Nepal blasts: Investigations have reportedly revealed that former legislator Reje Ram Prasad Singh was responsible for the June bomb blasts in Nepal. Incidentally Singh's Jan wadi Morche had claimed responsibility for the blasts which left seven people dead and 30 injured.

DEFENCE

No US camera for Pakistan: The US cancelled last July a deal to supply a sophisticated industrial camera to Pakistan, fearing that the purchase was linked to Islamabad's nuclear weapons plans. The camera, capable of taking pictures at extremely short intervals, was sought by Pakistan for calibrating artillery guns. A slightly more advanced machine is used in designing an atomic bomb when scientists need to know whether nuclear material is compressed properly at the point of detonation. American officials reportedly became concerned when Pakistan named two nuclear experts for training in the use of the camera.

EDUCATION

New Educational Policy: A paper prepared by the Union Education Ministry and presented to Parliament on Aug 20 said the new educational policy should seek to integrate the requirements of universalisation of elementary education, production of sophisticated manpower to deal with new technologies, diversified vocationalisation and the creation of an environment for development through adult and continuing education. Entitled *Challenge Of Education—A Policy Perspective*, it places emphasis on vocational programmes as part of the 10+2 stage of secondary education. Vocationalisation should not be linked only with employment in industry but also with agriculture, the services sector and self-employment. The paper said the system cannot be improved with marginal changes and a "radical transformation" was called for.

On Aug 30, Union Education Minister, K.C. Pant announced that the national policy on education will be announced by March 1986. Meanwhile, one group will go into resource availability and another into projecting future

manpower needs in the field of science and technology.

Allocation for human resources: The Planning Commission has allocated Rs 1,500 crore for human resources development, a major chunk of which will go towards education. PM Rajiv Gandhi told a conference of state education ministers on Aug 30 that the additional allocation had been made in recognition of the great role of education in developing human resources. In his speech the PM said education should take note of the need for a specialised labour force which would deal with sophisticated technology in 1990 or 2,000.

ENVIRONMENT

India on the road to ecological disaster: The *State Of Environment—1985* report prepared by the Centre for Science and Environment, New Delhi, warns that India could be heading for serious social, economic and ecological disaster if environmental destruction went unchecked. Without proper environmental management, India will not even be able to feed the existing population, though its resource base is strong enough to feed three times the number. The country is losing 1.3m hectares of forest land every year, leading to a fuel and fodder famine. The flood-drought cycle was also being accentuated as a result. Not only the genetic diversity but also the genetic quality of Indian crops, plants, trees and animals was being seriously threatened by development programmes promoted under the banner of green, blue and white revolutions. Less than three decades ago, India grew over 30,000 varieties of rice, but by the end of the century there will be no more than 50 varieties.

ECONOMY—National

India's weak financial system: A World Bank study has identified proliferation of financial institutions as a major weakness of the Indian financial system and called for a review of their role. Other weaknesses include low direct mobilisation of savings by development finance institutions, low profitability of the commercial banking system and the high level of overdues, particularly in agricultural finance agencies. The study, entitled *India's Financial System—An Overview Of Its Principal Features*, calls for a careful assessment of the viability of financial institutions to strengthen the system. Most institutions depended heavily on the government for funds instead of mobilising resources from the public. This was because of the combined effect of regulation and lack of appropriate returns to the investors. The low profitability of Indian banks has been traced to loan overdues, overstaffing and low efficiency due to outmoded procedures and high degree of risk absorption. The study said efforts should be directed at improving the financial health of the banking system.

Growth-led, experts versus export-led growth: A report sponsored by the Union Commerce Ministry has recommended that India follow a course of growth-led exports rather than the Export-led model of exports.

PERSONS

Shiv Shankar: Visited Bangladesh as India's special envoy to resolve the Ganga waters issue.

Arvind Singhvi: Head of Gujarat's Cabinet Sub-committee negotiating with striking government employees.

U.N. Bachchawat: Chairman of wage boards for working and non-working journalists.

Mohamed Bensassi: Moroccan special envoy brought King Hassan's message to PM Rajiv Gandhi Aug 6.

Desmond Tutu: South Africa's 1984 Nobel Peace Prize winning social crusader, defied government ban on anti-apartheid speeches at funerals Aug 6.

Ibrahim Shihab: Speaker, Majlis of Maldives, visited India Aug 7, to strengthen bilateral ties.

U Nu Win: The Burmese leader reelected Chairman of the ruling Burmese Socialist Programme Party.

Meinuddin Shahbaz: Afghanistan's Deputy Minister for State Planning signed Aug 7 an agreement of cultural exchange with India.

A.W. Clausen: World Bank President toured India to explore the possible role of the Bank in the country's development.

Muridhar Devdas Antre: Received the 1985 Ramon Magsaysay award for public service.

Harold Watson: US missionary, chosen for this year's Magsaysay award for international understanding.

Lino Borka: Filipino movie director awarded the 1985 Magsaysay award for journalism, literature and creative communication.

Zafarullah Chaudhury: Bangladesh physician recipient of Magsaysay award for community development.

A.N.B. Hazi Zakaria: Malaysian Auditor-General winner of this year's Magsaysay award for distinguished government service.

Nareshwar Dayal: Appointed India's Ambassador to Bhutan.

K.P. Fabian: The new Indian Ambassador to Finland.

S.D. Pandey: Replaced K.S. Dhillon as Director-General of Punjab Police.

P.W. Botha: South African President rejected pleas for equal voting rights to blacks.

Wee Kim Wee: Named President of Singapore by PM Lee Kuan Yew.

S.C. Chandrasekaran: Sri Lanka's Tamil Eelam activist successfully sought asylum in India.

Nelson Mandela: Black nationalist leader imprisoned since emergency was imposed on South Africa by the racist regime.

Paulo Muwanga: Former Vice President and Defence Minister of Uganda is its new President.

D.A. Desai: Retired Supreme Court Judge appointed Chief of reconstituted Law Commission.

T.S. Avinashilingam: Veteran Gandhian selected for the 1985 Jamnalal Bajaj award for outstanding contribution in the field of constructive work.

Sanjit Roy: The 1985 Jamnalal Bajaj award winner for application of science and technology for rural development.

Humayun Rashid Chowdhury: Bangladesh Foreign Minister elected President of the UN General Assembly's 41st session.

less growth. The problem of Indian exports is very much a problem of production and it is unrealistic to believe that exports would grow faster than the real national income, says the report prepared by former Commerce Secretary Abid Hussain. Import liberalisation, by itself, is neither necessary nor sufficient to stimulate competition in the domestic economy. A quantum jump in exports is necessary to attain the objective of self reliance. And what is good for exports should be good for domestic production and vice-versa. The report calls for a balance between export promotion and import substitution, with a marginal preference for the export sector. The report also recommends that the real effective exchange rate of the rupee should not be allowed to appreciate and should be maintained at a level considered appropriate for ensuring competitiveness of exports. Many of the recommendations of the report are expected to be accepted by the Centre.

EVENTS—National

Erosion of press freedom? Reported attacks on the press in Tamil Nadu, Punjab, MP, West Bengal, Gujarat, Orissa, and elsewhere, are causing concern to those committed to the ideal of a free press. The Editor's Guild of India, which met in New Delhi on Aug 16, said in a resolution that the attacks included refusal by police to register cases of assault against journalists, police indifference to appeals for protection against anti-social elements, the "hyper sensitivity" of certain legislators towards press comments, and so on. It also rejected recent pronouncements by several ministers, favouring a code of conduct for the press.

ESMA gets extension: The Essential Services Maintenance Act (ESMA) has got a new lease of life, with the Lok Sabha on Aug 19 voting for its extension by five years. Home Minister, S.B. Chavan, said the act will be invoked only as the last resort.

ECONOMY—International

Africa's bleak food outlook: "Africa is the only region in the world that is currently failing to keep food production ahead of population growth," the UN Food and Agricultural Organisation (FAO) says in its 1985 food report. Food production in the world rose by more than 4% last year but in Africa the output was much less, having fallen by 1% a year since 1970. Drought, world recession and civil and military strife had all contributed to the crisis but the root cause lay in structural defects in the African food system, including failure to support rural development. "The situation is likely to get worse before it can get better."

EVENTS—International

South Africa's racist rationale: South African President P.W. Botha, on Aug 16, rejected the one-man, one-vote principle and said there was no alternative to the policy of racial separation in the country. "Destroy white South Africa and our influence and this country will drift into factional strife, chaos and poverty," Botha said in a speech to his National Congress Party. The party has been in office since 1948 and devised the apartheid system that denies the vote to South Africa's 24m blacks. Botha made

PLACES

Helsinki: Finnish capital where foreign ministers of 10 European Common Market countries agreed in a meeting to recall their envoys from South Africa.

Johannesburg: In South Africa where black students burnt President Botha's effigy to protest curbs imposed on funerals of anti-apartheid strike victims.

Penang: The northern state of Malaysia, linked to the mainland by Asia's longest bridge—13.5 km long.

Alexandria: Town on Egypt's border with Libya the scene of joint US-Egypt military manoeuvres.

Port Elizabeth and Uitenhage: The blacks of these eastern South African provinces boycotting white business centres to secure nationalist leaders' release.

Thanjavur: A significant oil find in the Cauvery basin off this Tamil Nadu town.

Rarotonga: Eleven independent island nations, including New Zealand and Australia, met at this island on the Pacific and declared South Pacific "a nuclear free zone".

New Delhi: Will host conference of youth organisations of non-aligned countries.

Durban: South African town, the scene of unending racial fighting that has claimed over 600 lives in the past 11 months.

Casablanca City: In Morocco, 17 representatives of the Arab League held an emergency meeting here in a bid to save the organisation.

Kalpakkam: Second unit of Madras Atomic Power Plant located in this Tamil Nadu town—ment went critical on Aug 13.

Tokyo: A jumbo crashed in mountains on the outskirts of the Japanese capital killing 521 people.

Bahamas: Islands off the west coast of the US, host of the forthcoming Commonwealth Heads of Government Meeting (CHOGM).

Cork: A memorial service for the Al Jumbo crash victims held in this Irish city.

Luanda: Capital of Angola, venue of the non-aligned countries' ministerial conference.

Sharpur: Punjab village where Sant Harchand Singh Longowal was assassinated.

two concessions in his speech: he termed it "outdated and too costly" the system of influx control requiring blacks to secure special permission to work and live near white areas. Botha also pledged 1b rand to improve black cities and townships.

Tanzania's successor-President: Ali Hassan Mwinyi, Tanzania's 65-year-old Vice President, has been named successor to President Julius Nyerere, the country's leader for 24 years. Mwinyi was chosen the presidential candidate at a meeting of the ruling party Chama Cha Mapinduzi (CCM) in Dar-es-Salaam on Aug 15. Nyerere is the third African leader to relinquish power voluntarily.

STATES

Green mantle for Himachal: The Planning Commission has cleared a Himachal Government plan to cover half the state's area with a mantle of green by 2,000 AD. Named "Project Umbrella", the plan will be assisted by the World Bank with an outlay of Rs. 62 crores. During the current year, the project will cost Rs

and forestry and cover 2,100 hectares of

Andhra Pradesh to reinstate employees: The Supreme Court has ordered the Andhra Pradesh Government to reinstate all employees of the state government who were retired from service on attaining the age of 55 from Feb 28 1983 to Aug 23, 1984. The court ordered that all employees who were not entitled to reinstatement on completing 58 years on or before Oct 31 this year would be eligible for compensation equal to the emoluments they would have received had they been in service. In February 1983, the NTR Ministry reduced the retirement age from 58 to 55 years. In August 1984, the Bhaskar Rao Ministry restored the retirement age to 58 years, which was retained by the NTR Government when it returned to power. Several employees who had been retired following the reduction had then moved the Supreme Court.

Plans for Bhopal: The MP Government has prepared a Rs 322-crore plan to develop Bhopal on the pattern of the Japanese city of Hiroshima. It envisages development of an airport, expansion of the railway station, construction of 11 college buildings, two working women's hostels and a number of welfare and community centres. The plan, part of the state's relief and rehabilitation measures for the benefit of the Bhopal gas disaster victims, envisages the introduction of electric trolley buses for city

CAREER NEWS

Venik Research Awards

A greater involvement in the area of industrial research is the need of the hour. The Vividh Auyogik Samhodhan Vikas Kendra has instituted Industrial Research Awards, each comprising Rs 25,000 in cash, a citation and a gold medal to be awarded to an individual or a group of individuals, who has made outstanding contributions to the advancement of science and technology leading directly to national prosperity in India.

A special award for women scientists known as SMT carrying a cash prize of Rs 11,001, a citation and a gold medal has also been instituted.

For details please see *The Statesman*, Aug 19, 1985 or write to P O Box No 9037, Patel Vanka, Western Express Highway Goregaon (East), Bombay-400063.

Probationary Officers

Opportunities knock for those eager to become probationary officers in associate banks of State Bank of India. The Central Recruitment Board (State Bank Group) has invited applications from Indian aspirants for further details please see *The Hindustan Times*, Sep 10, 1985.

INBA Scholarships

The Indian Naval Benevolent Association (INBA) invites applications from the children of retired and serving naval personnel for the award of 220 scholarships to post-class XII education. The scholarships range from Rs 450 to Rs 1,500 p.a. for day scholars and boarders respectively.

For further details write to the Secretary, INBA Naval Headquarters, New Delhi and Zila Sank Boards. Last date for receipt of completed forms is Sep 30, 1985.

transport, development of recreational and health care facilities. It will be implemented in five years' time.

Clean bill to Bhajan Lal: Haryana CM Bhajan Lal has been cleared of charges of corruption, nepotism and misuse of office. Justice Jaswant Singh, former Supreme Court Judge who examined the charges, concluded that there was no *prima facie* case against Bhajan Lal and his close relatives. Opposition leaders

had submitted a 42-page memorandum to the PM on Jul 4 accusing Bhajan Lal of turning the official apparatus into a 'money minting industry'.

DIED

Justice Murtaza Fazal Ali, 64, judge of the Supreme Court, on Aug 19 in New Delhi of a heart attack. A P

Answers to

TEST YOUR WORD POWER

amenities: C things circumstances surroundings that make life easy or pleasant. If there is one person in government who is today at the bottom of the scale in wages, amenities and excessive duties, it is the police constable.

blight: D evil influence. As far as the Americans are concerned, there seems to be a blight on the French Open men's singles title for two decades: no US player has been able to claim the crown.

choke: A to block up fill partly or completely something that is usually clear. The Ganga, a symbol of purity and an inspiration to millions, is today being choked by the tons of dangerous chemicals and organic wastes which are emptied into it everyday.

diminutive: B unusually small. Despite the vivid images relayed by the Viking landers in the mid-1970s, Mars to most people remains a planet of the imagination as unlikely a home for humans as it is for diminutive green men.

elate: A to make happy raise the spirits of stimulate. French President Francois Mitterand has not yet taken to running through the streets of Paris but he has reason enough to be elated over the progress of his proposed Eureka project, a transnational joint venture that he hopes will usher in a golden era in West European research and technology.

espouse: A to support (a cause, theory, etc). The African national Congress, which espouses socialism, accuses Zulu chief Gatsha Buthelezi of being a capitalist.

forum: C any place for public discussion. Imaginatively conceived and handled, *Janvani* has been a forum where the electorate can register their complaints about administrative lacunae and governmental corruption.

furor: D a fit of great rage maniacal fury. Any radical analysis of Bhagavad-Gita much less criticism invariably creates a furor among outraged Hindus who perceive in this a blasphemy of the holy text.

hoax: B an act intended to dupe or trick, imposture, deceptive or mischievous trick played on somebody for a joke. Sensational stories regarding the blinding of 60 children in a remote Kashmir village in the recent past turned out to be something of a hoax.

hush: A to sing with closed lips. The (American) generation that could turn TV jingles before it could hum the national anthem and shake never to trust anyone over 30 is becoming middle-aged.

intransigent: C uncompromising specially in politics, refusing to abandon an extreme position or attitude. The United Democratic Front

- of Africa calls Zulu chief Gatsha Buthelezi arrogant and intransigent.
- 12 **intrepid:** B fearless, undaunted, unusually brave. The bleak performance of the airline industry in the recent past has ruffled even the most intrepid ears and now is raising disturbing issues about flight overcrowding and inattention to safety.
- 13 **pelt:** A to strike with missiles hurt throw. Trouble erupted at Salt Lake Stadium (Calcutta) when Mohammedan Sporting officials were pelted with stones by East Bengal supporters after their team scored the equaliser in the second half.
- 14 **perpetrate:** A to commit a crime. In rural India the rigid caste and feudal structure continues to perpetrate atrocities on anyone who dares to defy it.
- 15 **prosecute:** A to start legal proceedings against to try by law. The US does not have an extradition treaty with Lebanon, but under international law Lebanon is theoretically obliged to prosecute hijackers or turn them over for extradition.
- 16 **quadruple:** A to make or become four times as much. Scarcely a dozen years ago, in the short span of two months, the Organisation of Petroleum Exporting Countries arrogantly assaulted the industrialised world by quadrupling oil prices to \$11.65 per barrel.
- 17 **revere:** B enthusiastic praise. Celebrated novelist R.K. Narayan's latest book, a collection of short stories *Under The Banyan Tree*, has received rave reviews in the international press.
- 18 **rubble:** B bits of broken stone, rock or brickwork that to which buildings are reduced when destroyed. On an August morning in 1945, time stopped for Hiroshima at 8.16—the moment at which the first atomic bomb reduced a city to rubble and made all humankind endangered species.
- 19 **serf:** A treated almost like a slave, one class of labourers bound to land. The *madrigal* (f. hamais) of Karamchedu were not killed because they were Hahjans, but because they were landless serfs who had dared to protest for their rights to break out of the enforced subservience.
- 20 **skirmish:** C small battle, short argument or contest of wit, fight between small parties, raked with a long tradition of protest. In South Korean student activists that have routinely provoked skirmishes with police, the government of President Chun Doo Hwan last year embarked on a resolute confrontational course.

THE FREEDOM MOVEMENT

(Continued from page 17)

came back to active politics and took the reins of the Congress at the Calcutta session in December 1928. At the historic Lahore session in December 1929, the Congress passed a resolution declaring *Purna Swaraj* (complete independence) the ultimate objective. A newly adopted tri-colour flag was hoisted on Dec 31, 1929. Jan 26 was declared Independence Day in 1930 and the day was to be celebrated every year. Civil disobedience movement was to be launched.

On Mar 12, 1930, Gandhiji launched the second civil disobedience with his famous Dandi March; he and 78 chosen followers walked a distance of 320 kms from Sabarmati to Dandi, a village on the Gujarat sea-coast to make salt to violate salt law. This symbolised India's refusal to live under the British Raj. The movement, brutally suppressed by the government, spread like wild fire. The Congress was declared illegal, mass arrests were made and repression wasteloose.

The Britishers summoned a Round Table Conference (RTC) in London in 1930. The Congress boycotted it. Realising that a Conference on India without Congress was meaningless, the government became conciliatory and negotiated with the Congress to attend the RTC. Lord Irwin and Gandhiji negotiated a settlement in March 1931 known as the Gandhi-Irwin Pact, making Congress agreeable to attend the RTC. According to the Pact, the government would release all political prisoners who had remained non-violent and the Congress would suspend the civil disobedience movement. Though many Congressmen opposed the Pact, Gandhiji persuaded the Congress to accept it in the Karachi session. The session was also important for resolutions on Fundamental rights and National Economic Programmes.

Gandhiji left for England in September 1931 to attend the second RTC. The British Government refused to accede to the major Congress demand for the immediate grant of Dominion status. On his return, Gandhiji resumed the civil disobedience movement. The government was able to crush the movement as Indian leaders were divided on communal and other issues. The movement gradually waned and the Congress officially suspended it in May 1932. It was withdrawn a year later. Gandhiji once again pulled himself out from active politics. Frustration and depression set in causing a fall in the Congress membership to less than five lakhs.

The third RTC in November 1932 in London was held when the Congress was in the thick of the civil disobedience movement. The Congress, therefore, did not participate in the conference. Its discussion eventually led to the Government of India Act 1935, which provided for a federal structure of the government. Communal representation continued. The Congress considered the Act as "totally disappointing". The federal aspect of the Act was never introduced but the provincial part

was put into operation. The Congress participated in elections, though it opposed the Act, winning overwhelming majorities in most of the provinces. Congress ministries were formed in July 1933 in seven out of 11 provinces. Coalition ministries were formed in two other provinces. Only Bengal and Punjab had non-Congress ministries. Congress ministries did commendable work but could not change the basic imperial character of the British administration.

Socialist ideas rapidly grew within and outside the Congress in the 1930s for which Jawaharlal Nehru and Subhash Chandra Bose were particularly responsible. In 1938, Bose was re-elected the Congress President despite opposition by Gandhiji. He, however, resigned as he found that the Working Committee, dominated by Gandhiji, did not allow him to work. He and his left-wing followers founded the Forward Block.

Since 1929, it had become a regular feature at Congress sessions to record its view on world events. It condemned Fascism in Italy and Nazism in Germany, and expressed its support to Spain, Czechoslovakia and China when these countries were attacked. Indians were asked to boycott Japanese goods when Japan attacked China in 1937. The Congress also supported the freedom movements in the native states.

When World War II broke out, the Congress publicly declared that it was against Fascism, Nazism and militarism. The Government of India, however, joined the war without consulting the INC or the elected members of the Central Legislature. Congress was willing to support the forces of democracy but not the Britishers. It, therefore, demanded that India be declared free (or at best power be put in Indian hands) before it could participate in the war. The British Government refused to accept this demand and the Congress asked its ministers to resign. In October 1940, Gandhiji gave a call for a limited *satyagraha* as a mass upheaval would embarrass the British Government.

Germany after capturing Poland, Belgium, Holland, Norway and France attacked the Soviet Union on Jun 22, 1941. Japan attacked the USA on Dec 7, 1941 at Pearl Harbour and quickly overran Philippines, Indo-China, Indonesia, Malaya and Burma. It occupied Rangoon in March 1942. Thus war was at India's door step. The British Government sought the support of the Indians in its war-effort. A mission headed by a Cabinet Minister, Sir Stafford Cripps, was sent to India. Cripps declared that the aim of the British policy in India was "the earliest possible realisation of self-government". Negotiations with the Congress, however, failed because it wanted immediate transfer of effective power for which the British Government was not ready. The failure of the Cripps Mission embittered the people of India. The Congress then decided to take steps to compel the Britishers to accept its demands. The AICC met at Bombay on Aug 8, 1942 and passed the famous 'Quit

India' Resolution. It proposed a non-violent mass struggle under Gandhiji's leadership to achieve this aim. But before the Congress could start such a movement, the government arrested Congress leaders including Gandhiji. The Congress was declared illegal. The 1942 movement was crushed ruthlessly. Repression knew no bounds. The press was strangled. The government succeeded and there was hardly any political activity till the war ended in 1945.

There was, however, a development outside India. Bose had escaped from India in March 1941 with a view to freeing India with the help of Britain's enemies. He went to Germany and then in a submarine to Japan. He formed the Indian National Army (INA) out of the prisoners-of-war of the British Indian Army and also of the Indians living in South East Asia. The INA had almost reached the borders of the eastern India. When Japan surrendered to the USA, INA was forced to withdraw. Bose, while going to Tokyo, died in an air crash. The officers and men of INA were captured. The three Generals of the INA Shah Nawaz, Gurdial Singh Dhillon and Prem Sehgal, who had earlier been officers in the British Indian Army, were put to trial for treason in the famous Red Fort of Delhi. The British Government because of popular demand had to withdraw its cases.

The British attitude changed after the war. Several factors were responsible. War had changed the balance of power in the world. The US and the USSR emerged as superpowers, both supporting India's freedom. Britain, shattered militarily and economically, was relegated to an inferior position. It also could no longer depend on the Indian army. The Congress had spread political consciousness to such an extent that Britain could not effectively rule India. The government in England also changed. Britain decided that it was better to transfer power, peacefully and amicably, to the Indians. This could ensure safety to British interests in India. The vast India could also remain a source of raw materials and a market for finished goods.

A Cabinet Mission came in March 1946 to negotiate with the Indian leaders the terms for the transfer of power. The negotiation dragged on. The Muslim League was adamant on claiming Pakistan and Jinnah insisted on the 'two-nation theory'. The League resorted to 'direct action' and communal riots broke out in many parts of the country. Ultimately, the Congress agreed to the partition but not to the 'two-nation theory'. India became free on Aug 15, 1947 but not in one piece. Gandhiji was isolated and felt disillusioned.

The Congress has been ruling India since independence except for a brief period. It not only led India's struggle for independence but has also been an effective instrument for developing India on secular, socialist and democratic lines. It has also served as a beacon light for freedom struggles in other Asian and African countries. Few political parties have such a record in human history.

(For personalities, look up our November issue.)

CURRENT EVENTS-NATIONAL

(Continued from page 21)

Keeping in view India's dwindling concessional credit—the IDA credit has declined from a peak of US \$1.6b in 1980-81 to \$650m in 1984-85, even as average interest rose from 2.4% in 1970 to 6% in 1983—Clausen has assured India of a greater access to loans from the International Bank of Reconstruction and Development (IBRD) which would be expanding its lending programmes. The IBRD assistance which stood at US \$11.4b in June 1985, is expected to go up by 10% by June 1986 and by 1987 its lending is expected to reach \$14b to \$15b. In the meantime its lending rate has been brought down to 8.82% from 9.89%.

The International Finance Corporation (IFC), also a World Bank affiliate, which lends directly to the private sector, has embarked on a five-year expansion programme. And the doubling of the US \$1.3b to IFC's capital will ensure the Indian private sector's easy access to IFC funds. Three possible areas for IFC involvement are business ventures where technological innovation or transfer and development are important; mobilising foreign exchange, financing of large projects and helping the private financial sector through investment in leasing, housing finance, etc.

Nevertheless the fact remains that commercial borrowings have floating rates of interest which makes the borrower vulnerable to any increase in debt servicing when interest rates rise due to international monetary fluctuations. This leaves India with little choice but to improve exports to the tune of \$91.1b over the next five years as against \$58.4b during the Sixth Plan period—an uphill task, indeed!

EDUCATION POLICY

A NEW LOOK

In 1911, the first major official document on education was presented. Since then, there have been three more documents. After Independence three education commissions—Radhakrishnan Commission on university education, Mudaliar Commission on secondary education and Kothari Commission on total education—were appointed. Parliament also took initiative to constitute a Parliamentary Committee. All this led to the 1968 national education policy.

The policy sought to relate the education system more closely to the lives of the people, provide expanded opportunities, initiate sustained effort to improve quality of education at all stages, emphasise development of science and technology and cultivate moral and social values. The basic objective of the policy was to create an ethos that would produce cultured young men and women committed to national service and development.

The policy achieved limited success. Owing to high cost of implementation the goals were often postponed. The social cost of a no-change option however, was seldom taken into account. Excessive emphasis was laid on degrees and rote-learning. Examinations and grades lost much of their credibility and education became dysfunctional. There was a progressive erosion of values.

The new government realised that complete reorganisation of education was needed if its major social and economic goals were to be achieved.

A high-powered panel was set up by PM Rajiv Gandhi in early February this year to suggest a new education policy. On the PM's initiative, the Union Education Minister, K.C. Pant, undertook an exercise and published a

document entitled *Challenge of Education: A Policy Perspective* on Aug 20. The document provides an overview of the present quantitative and qualitative aspects of elementary, secondary, vocational, higher, technical, adult and teachers education along with statutory and policy alternatives. The document suggests four main objectives for the education policy. These are: access, equity and minimum threshold; social relevance; diversification and quality; and methodology and management.

The paper suggests that a multi-pronged strategy should be adopted for the new policy which should integrate the requirements of the universalisation of elementary education, produce sophisticated manpower to deal creatively with new techniques, diversify vocationalisation and create an overall environment for development through adult and continuing education. The high points of the policy are:-

(i) The present 10+2+3 system should be changed in such a way that vocationalisation begins at class VI level. A holistic model should be adopted with three year pre-primary education. The child should get primary education upto class V at the same location. Further continuation should be decided after a public examination. (ii) Vocationalisation should start earlier than the 10+2 stage. It can be started after a public examination even before class VI. It should be linked, besides industries, with agriculture and the tertiary sector. Special emphasis should be given to self-employment. (iii) Higher education should not be universalised. It should be available to those who have academic aptitudes. The entry to higher education may be restructured by insisting on a scholastic aptitude test before admissions to universities and by delinking jobs from degrees. (iv) Efforts should be made to improve the relevance and quality of higher education. Several ways have been suggested to achieve this. The colleges may not be affiliated to universities but may be granted autonomy. Continuing evaluation system may be adopted. The courses in humanities, sciences and arts

SEVENTH PLAN

WHAT THE FUTURE HOLDS

The plan document for the Seventh Plan is in its final stages now. In order to meet the Plan resources an additional Rs 2,000 crores will have to be raised during the next five years through higher direct taxes. The biggest increase in investment outlays have been reserved for areas such as social services, forestry, special area programmes, development of backward areas, family planning and nutrition. Family planning alone gets a record 135% and nutrition a mammoth 335% increase in outlay. Additional resources will also be diverted to comparatively neglected sectors like railways, power and oil.

The Seventh Plan also aims at decreasing the dependence on public sector outlay. It will now constitute no more than 48% of the total investment in sharp contrast to 60% during the Third and Fourth Plans and 53% in the Sixth Plan.

The Plan document envisages an overall growth target of 5% for the next five years and the target for industry, a slightly optimistic 8%. It proposes a total investment of Rs 3,22,386 crores and projects ambitious double digit growth rates for newsprint, sugar, aluminium, cement, fertilisers, polyester and viscose staple fibre and filament yarn, commercial vehicles, machine tools, electricity generation and wide range of chemical products. It also forecasts a drop in the percentage of population below the poverty line from 36.9% last year to 25.8% annually.

Still the document predicts an overall strain on Indian cities, as almost 60% of population growth between now and the year 2000 will be concentrated in cities.

J.S.

may be restructured on a modular pattern with much greater inbuilt flexibility to establish close links with the student's interests, society and the world at large. Colleges based on traditional patterns should not be allowed to be established. Only those colleges may be set up which have vocational bias and are linked with identified multi-disciplinary tasks, offering integrated courses in agriculture, urban planning, public management and office management. (v) Suitable voluntary agencies should be entrusted the responsibility for formal and non-formal education. (vi) The education may be made more expensive. Higher education should not be subsidised by the states.

The policy background has not been able to bring out the real issues. Probably it has been left to the nation to formulate and debate the basic issues. The debate in the following months should concentrate on the following issues:

(a) What should be the basic objective of education—training of the mind or preparing an individual only for the job market?

(b) What sort of value system should education cultivate in a person?

(c) Whose responsibility should education be—the state government's, the Union Government's or the private organisations?

(d) Who should bear the cost of education—the tax payer, or the person who is receiving education?

(e) What should the link between education and employment be?

(f) What should the medium of instruction at different levels of education be?

However sound the education policy may be, its ultimate success depends upon the availability of dedicated teachers, conscientious students, responsible parents and honest bureaucrats. *Readers are invited to write on the above issues which would be forwarded to the Ministry of Education.*

Look for statistics on state of education in India in our *General Knowledge* feature (November issue).

SPORTS/Young Masters Of The Game

GEET SETHI

TOP OF THE TABLE

BY V. KRISHNASWAMY

Youth triumphed over experience. Tall and handsome, Geet Sethi, barely 24 years of age, crowned himself the world amateur champion in billiards, outclassing Bob Marshall, who in his career spanning more than twice Sethi's age has grabbed the same Arthur Walker Trophy no less than four times. In fact, the last time Marshall had his name inscribed on the trophy, Sethi was a one-year-old toddler.

The success story of Sethi is one of determination, dedication and genius. But as compared to most other champions of the game, the nuances of billiards seem to come more naturally to him. He had picked up a cue for the first time in his life in 1974 and within two years he was the national junior champion.

Curiosity stirred up Sethi to take up billiards. A member of the Ahmedabad Gymkhana, located very close to his house, he used to accompany his elder brother for swimming. While the younger Sethi swam, the older one played billiards. And the club rules did not permit anyone below 16 to play billiards. Geet was confined to just observing. Then came a change in club rules and Sethi's future took a new turn. And once he started on the game, there was no turning back. "The game is so very interesting and addictive that I could not bear to give it up," recalled Sethi.

In a country where parents seem to place paramount importance on academics, Sethi was extremely lucky to have sports loving parents. "My father told me that I could play as much as I wanted as long as I maintained a first division. That I did. So there was no problem whatsoever," said a smiling Sethi.

After his first win in the junior nationals at Jamshedpur in 1976, Sethi went through a slump for a couple of years before winning the junior crown again in 1978. But this time he kept possession of the crown till 1981 when he finally moved out of the junior ranks.

In 1981 came the first senior title. In that same year he had done the double of billiards and snooker among juniors. And this year Sethi grabbed a double in the seniors too.

Coming to his adroitness at both the table games, Sethi said, "I manage to concentrate on either as and according to the demands." What about the preparations for the coming World Snooker Championships to be held in Blackpool in November? "From now on I am going to play only snooker till November. I don't think I should have any problems."

And if he does it even there, Sethi will become the only player ever to win both the billiards and snooker championships of the world in the same year. It shall be yet another feather in his already well-decorated cap.

Though Sethi had taken part in some international tournaments in England and Scotland in both billiards and snooker, his first inter-

national tournament where he represented India was the Asian Snooker Championships in Singapore this year. And would you believe it, it was a miserable tournament for young Sethi. He just could not find his touch and failed to make even the semi-final grade.

Came the world championships and Sethi was back to his winning ways. Before the start of the world meet in Delhi, everyone accepted that there were as many as five players, holder Michael Ferreira, Subhash Agrawal, Latif Amir Bux of Pakistan, Marshall and Sethi, who had a chance on paper of winning the title. But only the first three were given a realistic chance. Marshall was after all 75 and returning to the billiards scene after a lapse of 23 years and Sethi was playing his first world championship. Moreover, maturity is a much-called-for factor in this game which can at times become monotonous for not only the watcher but also the player. But as the tournament progressed, pundits were proved wrong. Marshall and Sethi were a cut above the rest. And they met in the final.

At the league stage the talking points were the consistency of the four-times champion, Marshall, the unimpressive showing of the reigning champion, Ferreira and the record-breaking spree of Agrawal. But at the same time Sethi was methodically slicing through his rivals. And then came the clash between Sethi and Agrawal. "A case of poor play making a good match" is what Sethi said about the match.

But Sethi came through with flying colours. Trailing for most of the match, Sethi never crumbled under pressure. Agrawal bungled at crucial moments and on the penultimate visit to the table he left Sethi on with all three balls on the table. A 68 at this stage saw Sethi through. And then came a bonecrusher against Ferreira in the semi-finals. Midway through the six-hour match, Sethi was in arrears by almost 800 points. He not only pulled a level but went on to win by nearly 100 points. These two matches made everyone sit up. For one so young, Sethi had displayed astonishing maturity and will to fight back from almost an impossible situation. Winning, as he said in an interview to *The Telegraph*, depends a lot on the mind. You have to keep thinking that you have to do it. It is his determination that ultimately prevailed over that of the others.

From the other side, Marshall moved up unbeaten, pushing aside Latif Bux, Ferreira and then Agrawal. And so the stage was set. Marshall, with steel plates and pins in his body, following an operation for arthritis, took on Sethi. During the first session the septuagenarian had things going his way. But Sethi reversed the trend in the second session. And by the third Sethi was up by fantastic margins to reduce the final session to mere formality.

Sethi in the process of his victory had set up a series of firsts. He became the only unseeded player to win the world crown and also the first to do it on his debut. Not only that, he also had the highest break of the tournament and also the fastest one. If Boris Becker is West Germany's pride, Sethi is our very own.

Winning depends a lot on the mind. You have to keep thinking that you have
